eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

Note 1 — The Company and Summary of Significant Accounting Policies

The Company

We are a global technology company that enables commerce through two reportable segments: Marketplaces and Payments. Our Marketplaces segment includes our eBay.com platform and its localized counterparts and our other online platforms, such as our online classifieds sites and StubHub. Our Payments segment is comprised of our PayPal business.

During the second quarter of 2015, our Board of Directors approved a plan to sell the businesses underlying our Enterprise segment. As a result, we have classified the results of our Enterprise segment as discontinued operations in our condensed consolidated statement of income for all periods presented. Additionally, the related assets and liabilities associated with the discontinued operations are classified as held for sale in our condensed consolidated balance sheet. On July 16, 2015, we signed a definitive agreement to sell these businesses and, subject to customary closing conditions, we expect to close this transaction in the second half of 2015. See "Note 4 - Discontinued Operations" for additional information.

On September 30, 2014, we announced that our Board of Directors, following a strategic review of our growth strategies and structure, approved a plan to separate PayPal (consisting of our Payments segment) into an independent publicly traded company. On July 17, 2015, we completed the distribution of 100% of the outstanding common stock of PayPal Holdings, Inc. to our stockholders (the "Distribution"). See "Note 18 - Subsequent Events" for additional information.

We are required to comply with various regulations worldwide in order to operate our businesses, particularly our Payments business. We also partner with banks and other financial institutions to offer our Payments services globally. Changes in laws or regulations, non-compliance with laws or regulations or loss of key bank or financial institution partners could have a significant adverse impact on our ability to operate our Payments business; therefore, we monitor these areas closely with the goal of mitigating potential adverse impacts.

When we refer to "we," "our," "us" or "eBay" in this document, we mean the current Delaware corporation (eBay Inc.) and its California predecessor, as well as all of our consolidated subsidiaries, unless otherwise expressly stated or the context otherwise requires.

Use of estimates

The preparation of condensed consolidated financial statements in conformity with U.S. generally accepted accounting principles (GAAP) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. On an ongoing basis, we evaluate our estimates, including those related to provisions for transaction and loan losses, legal contingencies, income taxes, revenue recognition, stock-based compensation, goodwill and the recoverability of intangible assets. We base our estimates on historical experience and on various other assumptions that we believe to be reasonable under the circumstances. Actual results could differ from those estimates.

Principles of consolidation and basis of presentation

The accompanying condensed financial statements are consolidated and include the financial statements of eBay Inc., our wholly and majority-owned subsidiaries and variable interest entities (“VIE”) where we are the primary beneficiary. All intercompany balances and transactions have been eliminated in consolidation. Minority interests are recorded as a noncontrolling interest. A qualitative approach is applied to assess the consolidation requirement for VIEs. Investments in entities where we hold at least a 20% ownership interest and have the ability to exercise significant influence, but not control, over the investee are accounted for using the equity method of accounting. For such investments, our share of the investees' results of operations is included in interest and other, net and our investment balance is included in long-term investments. Investments in entities where we hold less than a 20% ownership interest are generally accounted for using the cost method of accounting, and our share of the investees' results of operations is included in our condensed consolidated statement of income to the extent dividends are received.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

These condensed consolidated financial statements and accompanying notes should be read in conjunction with the audited consolidated financial statements and accompanying notes included in our Annual Report on Form 10-K for the year ended December 31, 2014. We have evaluated all subsequent events through the date these condensed consolidated financial statements were issued. In the opinion of management, these condensed consolidated financial statements reflect all adjustments, consisting only of normal recurring adjustments, which are necessary for fair presentation of the condensed consolidated financial statements for interim periods.

Recent Accounting Pronouncements

In 2014, the FASB issued new guidance related to reporting discontinued operations. This new standard raises the threshold for a disposal to qualify as a discontinued operation and requires new disclosures of both discontinued operations and certain other disposals that do not meet the definition of a discontinued operation. The new standard is now effective for the Company. The standard impacted the presentation of our Enterprise segment during the second quarter of 2015 related to the financial statement presentation of assets held for sale and required additional disclosures as presented in "Note 4 - Discontinued Operations." In a similar manner, the standard will also impact our financial statements that are issued after the Distribution.

In 2014, the FASB issued new accounting guidance related to revenue recognition. This new standard will replace all current GAAP guidance on this topic and eliminate all industry-specific guidance. The new revenue recognition guidance provides a unified model to determine when and how revenue is recognized. The core principle is that a company should recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration for which the entity expects to be entitled in exchange for those goods or services. This guidance can be applied either retrospectively to each period presented or as a cumulative-effect adjustment as of the date of adoption. In July 2015, the FASB voted to defer the effective date to January 1, 2018 with early adoption beginning January 1, 2017. We are evaluating the impact of adopting this new accounting guidance on our financial statements.

In 2014, the FASB issued new guidance related to development-stage entities. The new standard removes all incremental financial reporting requirements from GAAP for development-stage entities. The accounting standards update also removes an exception provided to development stage entities in consolidations for determining whether an entity is a variable interest entity. As of the first annual period beginning after December 15, 2014, the presentation and disclosure requirements in Topic 915 will no longer be required. The revised consolidation standards are effective one year later, for fiscal years beginning after December 15, 2015. Early adoption is permitted. The adoption of the presentation and disclosure requirements in Topic 915 did not have a material impact on our financial statements. We are evaluating the impact, if any, of adopting the remaining new accounting guidance on our financial statements.

In 2014, the FASB issued new guidance on the disclosures related to going concern. The new standard provides guidance around management's responsibility to evaluate whether there is substantial doubt about an entity's ability to continue as a going concern and to provide related footnote disclosures. The new standard is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2016. Early adoption is permitted. The adoption of this standard is not expected to have a material impact on our financial statements.

In 2014, the FASB issued new guidance related to pushdown accounting. The new guidance provides an acquired entity with an option to apply pushdown accounting in its separate financial statements upon occurrence of an event in which an acquirer obtains control of the acquired entity. The amendments are effective on November 18, 2014. We adopted this guidance, as required, on November 18, 2014. The adoption of this guidance did not have a material

impact on our financial statements.

In 2015, the FASB issued new guidance related to consolidations. The new standard amends the guidelines for determining whether certain legal entities should be consolidated and reduces the number of consolidation models. The new standard is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2015. Early adoption is permitted. We are evaluating the impact, if any, of adopting this new accounting guidance on our financial statements.

In 2015, the FASB issued new guidance related to presentation of debt issuance costs. The new standard requires that debt issuance costs related to a recognized debt liability be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability. The new standard is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2015. Early adoption is permitted. The adoption of this standard is not expected to have a material impact on our financial statements.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

In 2015, the FASB issued new guidance related to accounting for fees paid in a cloud computing arrangement. The new standard provides guidance to customers about whether a cloud computing arrangement includes a software license. If a cloud computing arrangement includes a software license, then the customer should account for the software license element of the arrangement consistent with the acquisition of other software licenses. If a cloud computing arrangement does not include a software license, the customer should account for the arrangement as a service contract. The new standard is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2015. Early adoption is permitted. We are evaluating the impact, if any, of adopting this new accounting guidance on our financial statements.

In 2015, the FASB issued new guidance related to pushdown accounting. The new guidance removes references to the SEC guidance on pushdown accounting from the FASB Accounting Standards Codification. The amendments therefore conform the FASB's guidance on pushdown accounting with the SEC's guidance. The adoption of this guidance did not have a material impact on our financial statements.

Note 2 — Net Income (loss) Per Share

Basic net income (loss) per share is computed by dividing net income (loss) for the period by the weighted average number of common shares outstanding during the period. Diluted net income (loss) per share is computed by dividing net income (loss) for the period by the weighted average number of shares of common stock and potentially dilutive common stock outstanding during the period. The dilutive effect of outstanding options and equity incentive awards is reflected in diluted net income (loss) per share by application of the treasury stock method. The calculation of diluted net income (loss) per share excludes all anti-dilutive common shares. The following table sets forth the computation of basic and diluted net income (loss) per share for the periods indicated:

	Three Months Ended June 30, 2015		Six Months Ended June 30, 2014	
	2015	2014	2015	2014
	(In millions, except per share amounts)			
Numerator:				
Income (loss) from continuing operations	\$682	\$720	\$1,353	\$(1,575)
Loss from discontinued operations, net of income taxes	(599)	(44)	(644)	(75)
Net income (loss)	\$83	\$676	\$709	\$(1,650)
Denominator:				
Weighted average shares of common stock - basic	1,217	1,258	1,217	1,267
Dilutive effect of equity incentive awards	8	9	10	—
Weighted average shares of common stock - diluted	1,225	1,267	1,227	1,267
Income (loss) per share - basic:				
Continuing operations	\$0.56	\$0.57	\$1.11	\$(1.24)
Discontinued operations	\$(0.49)	\$(0.03)	\$(0.53)	\$(0.06)
Net income (loss) per share - basic	\$0.07	\$0.54	\$0.58	\$(1.30)
Income (loss) per share - diluted:				
Continuing operations	\$0.56	\$0.57	\$1.10	\$(1.24)
Discontinued operations	\$(0.49)	\$(0.04)	\$(0.52)	\$(0.06)
Net income (loss) per share - diluted	\$0.07	\$0.53	\$0.58	\$(1.30)
Common stock equivalents excluded from income per diluted share because their effect would have been anti-dilutive	3	17	3	54

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Note 3 — Business Combinations

During the three months ended June 30, 2015, we completed two acquisitions in our Payments segment for aggregate purchase consideration of approximately \$281 million, consisting primarily of cash. The acquisition of Paydiant is intended to expand PayPal's capabilities in mobile payments. Using Paydiant's platform, PayPal's merchant partners can create their own branded wallets to accelerate mobile-in-store payments and drive consumer engagement through mobile payments, loyalty, offers and the prioritization of preferred payment types, such as store branded credit cards and gift cards. The acquisition of CyActive is intended to further enhance PayPal's risk assessment capabilities used to protect merchants and consumers on our Payments Platform. CyActive is a cybersecurity firm that specializes in technology that predicts how malware will develop. The allocation of the aggregate purchase consideration resulted in purchased intangible assets of \$57 million and goodwill of \$224 million. Acquired intangible assets included marketing-related and technology-based assets. We generally do not expect goodwill to be deductible for income tax purposes. The allocations of the respective purchase prices for these acquisitions have been prepared on a preliminary basis and changes to those allocations may occur as additional information becomes available. The condensed consolidated financial statements include the operating results of the acquired businesses since the respective dates of the acquisitions. Pro forma results of operations have not been presented because the effect of the acquisitions were not material to our financial results.

Note 4 — Discontinued Operations

Enterprise

During the second quarter of 2015, our Board of Directors approved a plan to sell the businesses underlying our Enterprise segment. On July 16, 2015, we signed a definitive agreement to sell these businesses for \$925 million and, subject to customary closing conditions, we expect to close this transaction in the second half of 2015. Based on the expected sales proceeds from bids received during the second quarter, we recorded a goodwill impairment of \$786 million. We have classified the results of our Enterprise segment as discontinued operations in our condensed consolidated statement of income for all periods presented. Additionally, the related assets and liabilities associated with the discontinued operations are classified as held for sale in our condensed consolidated balance sheet. The assets and liabilities as of June 30, 2015 are classified as current in our condensed consolidated balance sheet as we expect to close the transaction discussed above within one year.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

The financial results of our Enterprise business through June 30, 2015 are presented as loss from discontinued operations, net of income taxes on our condensed consolidated statement of income. The following table presents financial results of the Enterprise business:

	Three Months Ended June 30,		Six Months Ended June 30,

Goodwill

The following table presents goodwill balances and adjustments to those balances for each of our reportable segments during the six months ended June 30, 2015:

	December 31, 2014	Goodwill Acquired	Adjustments	June 30, 2015
	(In millions)			
Reportable segments:				
Marketplaces	\$4,677	\$—	\$(135)	\$4,542
Payments	\$3,130	\$224	\$6	\$3,360
	\$7,807	\$224	\$(129)	\$7,902

The adjustments to goodwill during the six months ended June 30, 2015 were due primarily to foreign currency translations.

Intangible Assets

The components of identifiable intangible assets are as follows:

	June 30, 2015				December 31, 2014			
	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Weighted Average Useful Life (Years)	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Weighted Average Useful Life (Years)
	(In millions, except years)

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Expected future intangible asset amortization as of June 30, 2015 is as follows (in millions):

Fiscal years:

Remaining 2015	\$77
2016	116
2017	64
2018	23
2019	3
Thereafter	—
	\$283

Note 6 — Segments

We have two reportable segments: Marketplaces and Payments. We allocate resources to and assess the performance of each reportable segment using information about its revenue and operating income (loss). We do not evaluate operating segments using discrete asset information. We do not allocate gains and losses from equity investments, interest and other income, or taxes to our reportable segments. During the second quarter, we have classified the results of our Enterprise segment as discontinued operations in our condensed consolidated statement of income for all periods presented. Additionally, the related assets and liabilities associated with the discontinued operations are classified as held for sale in our condensed consolidated balance sheet. See "Note 4 - Discontinued Operations" for additional information. The corporate and other category includes income, expenses and charges such as:

- results of operations of various initiatives which support all of our reportable segments;
- corporate management costs, such as human resources, finance and legal, not allocated to our segments;
- amortization of intangible assets;
- separation related expenses;
- restructuring charges; and
- stock-based compensation expense.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

The following tables summarize the financial performance of our reportable segments and provide a reconciliation to our consolidated operating results for the periods reflected below:

	Three Months Ended June 30,		Six Months Ended June 30,

Equity and cost method investments

We have made multiple equity and cost method investments which are reported in long-term investments on our consolidated balance sheet. As of June 30, 2015 and December 31, 2014, our equity and cost method investments totaled \$166 million and \$215 million, respectively. During the second quarter of 2015, we sold our equity interest in craigslist, Inc and the resulting gain is recorded in Interest and other, net on our condensed consolidated statement of income.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Note 8 — Fair Value Measurement of Assets and Liabilities

The following tables summarize our financial assets and liabilities measured at fair value on a recurring basis as of June 30, 2015 and December 31, 2014:

Derivatives	\$27	\$—	\$27

Our financial assets and liabilities are valued using market prices on both active markets (level 1) and less active markets (level 2). Level 1 instrument valuations are obtained from real-time quotes for transactions in active exchange markets involving identical assets. Level 2 instrument valuations are obtained from readily available pricing sources for comparable instruments, identical instruments in less active markets, or models using market observable inputs. The majority of our derivative instruments are valued using pricing models that take into account the contract terms as well as multiple inputs where applicable, such as equity prices, interest rate yield curves, option volatility and currency rates. We did not have any transfers of financial instruments between valuation levels during the six months ended June 30, 2015.

Cash and cash equivalents are short-term, highly liquid investments with original or remaining maturities of three months or less when purchased and are comprised primarily of bank deposits, certificates of deposit and commercial paper. We had total funds receivable and customer accounts of \$11.4 billion as of June 30, 2015, of which \$5.8 billion was invested in time deposits and U.S. and foreign government and agency securities. We elect to account for certain customer accounts, including foreign-currency denominated available-for-sale investments, under the fair value option. Election of the fair value option allows us to significantly reduce the accounting asymmetry that would otherwise arise when recognizing foreign exchange gains and losses relating to available-for-sale investments and the corresponding customer liabilities.

In addition, we had cost and equity method investments of approximately \$166 million and \$215 million included in long-term investments on our condensed consolidated balance sheet at June 30, 2015 and December 31, 2014, respectively.

Our derivative instruments vary in duration depending on contract type. Our foreign exchange derivative contracts are primarily short-term in nature, generally one month to one year in duration. Certain foreign currency contracts designated as cash flow hedges may have a duration of up to 18 months. The duration of our interest rate derivative contracts match the duration of the fixed rate notes due 2019, 2021 and 2024.

As of June 30, 2015 and December 31, 2014, we held no direct investments in auction rate securities, collateralized debt obligations, structured investment vehicles or mortgage-backed securities.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Other financial instruments, including accounts receivable, loans and interest receivable, accounts payable, funds receivable, certain customer accounts, funds payable and amounts due to customers, are carried at cost, which approximates their fair value because of the short-term nature of these instruments.

Note 9 — Derivative Instruments

Summary of Derivative Instruments

Our primary objective in holding derivatives is to reduce the volatility of earnings and cash flows associated with changes in foreign currency exchange rates and interest rates. Our derivatives expose us to credit risk to the extent that the counterparties may be unable to meet the terms of the arrangement. We seek to mitigate such risk by limiting our counterparties to, and by spreading the risk across, major financial institutions. In addition, the potential risk of loss with any one counterparty resulting from this type of credit risk is monitored on an ongoing basis. To further limit credit risk, we also enter into collateral security arrangements related to certain interest rate derivative instruments whereby collateral is posted between counterparties if the fair value of the derivative instrument exceeds certain thresholds. Additional collateral would be required in the event of a significant credit downgrade by either party.

Foreign Exchange Contracts

We transact business in various foreign currencies and have significant international revenues as well as costs denominated in foreign currencies, which subjects us to foreign currency risk. We use foreign currency exchange contracts, generally with maturities of 18 months or less, to reduce the volatility of cash flows primarily related to forecasted revenues, expenses, assets and liabilities denominated in foreign currencies. The objective of the foreign exchange contracts is to better ensure that the U.S. dollar-equivalent cash flows are not adversely affected by changes in the applicable U.S. dollar/foreign currency exchange rate. For derivative instruments that are designated as cash flow hedges, the effective portion of the derivative's gain or loss is initially reported as a component of accumulated other comprehensive income (loss) and subsequently reclassified into earnings in the same period the forecasted transaction affects earnings. The ineffective portion of the unrealized gains and losses on these contracts, if any, is recorded immediately in earnings. We evaluate the effectiveness of our foreign exchange contracts on a quarterly basis. We do not use any foreign exchange contracts for trading purposes.

For our derivative instruments designated as cash flow hedges, the amounts recognized in earnings related to the ineffective portion were not material in each of the periods presented, and we did not exclude any component of the changes in fair value of the derivative instruments from the assessment of hedge effectiveness. As of June 30, 2015, we have estimated that approximately \$109 million of net derivative gains related to our cash flow hedges included in accumulated other comprehensive income will be reclassified into earnings within the next 12 months.

Interest Rate Contracts

In connection with the July 2014 issuance of our fixed rate notes due 2019, 2021 and 2024, we entered into certain interest rate swap agreements that have the economic effect of modifying the fixed interest obligations associated with \$2.4 billion of these notes so that the interest payable on these senior notes effectively became variable based on London InterBank Offered Rate (LIBOR) plus a spread. We have designated these swap agreements as qualifying hedging instruments and are accounting for them as fair value hedges. These transactions are characterized as fair value hedges for financial accounting purposes because they protect us against changes in the fair value of certain of our fixed rate borrowings due to benchmark interest rate movements. Changes in the fair values of these interest rate

swap agreements are recognized in other assets or other liabilities with a corresponding increase or decrease in long-term debt. Each quarter we pay interest based on LIBOR plus a spread to the counterparty and on a semi-annual basis receive interest from the counterparty per the fixed rate of these senior notes. The net amount is recognized as interest expense in interest and other, net. The ineffective portion of the unrealized gains and losses on these contracts, if any, is recorded immediately in earnings. We evaluate the effectiveness of our contracts on a quarterly basis. We do not use any interest rate swap agreements for trading purposes.

For our derivative instruments designated as fair value hedges, the amounts recognized in earnings related to the ineffective portion were not material in each of the periods presented, and we did not exclude any component of the changes in fair value of the derivative instruments from the assessment of hedge effectiveness.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Fair Value of Derivative Contracts

The fair values of our outstanding derivative instruments as of June 30, 2015 and December 31, 2014 were as follows:

	Balance Sheet Location	June 30, 2015 (In millions)	December 31, 2014
Derivative Assets:			
Foreign exchange contracts designated as cash flow hedges	Other Current Assets	\$ 125	\$ 170
Foreign exchange contracts not designated as hedging instruments	Other Current Assets	35	27
Interest rate contracts designated as fair value hedges	Other Assets	21	22
Total derivative assets		\$ 181	\$ 219
Derivative Liabilities:			
Foreign exchange contracts designated as cash flow hedges	Other Current Liabilities	\$ 20	\$ 2
Foreign exchange contracts not designated as hedging instruments	Other Current Liabilities	41	25
Total derivative liabilities		\$ 61	\$ 27
Total fair value of derivative instruments		\$ 120	\$ 192

Under the master netting agreements with the respective counterparties to our derivative contracts, subject to applicable requirements, we are allowed to net settle transactions of the same type with a single net amount payable by one party to the other. However, we have elected to present the derivative assets and derivative liabilities on a gross basis on our condensed consolidated balance sheet. As of June 30, 2015, the potential effect of rights of set-off associated with the foreign exchange contracts discussed above would be an offset to both assets and liabilities by \$51 million, resulting in net derivative assets and derivative liabilities of \$109 million and \$10 million, respectively. We are not required to pledge, nor are we entitled to receive, collateral related to our foreign exchange derivative transactions. As of June 30, 2015, we had neither pledged nor received collateral related to our interest rate derivative transactions.

Effect of Derivative Contracts on Accumulated Other Comprehensive Income

The following table summarizes the activity of derivative contracts that qualify for hedge accounting as of June 30, 2015 and December 31, 2014, and the impact of these derivative contracts on accumulated other comprehensive income for the six months ended June 30, 2015:

December 31, 2014	Amount of gain (loss) recognized in other comprehensive income (effective portion)	Amount of gain (loss) reclassified from accumulated other comprehensive income to net revenue and operating expense	June 30, 2015

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Senior Notes

In July 2014, we issued senior unsecured notes, or senior notes, in an aggregate principal amount of \$3.5 billion. These senior notes consist of \$450 million aggregate principal amount of floating rate notes due 2017, \$400 million aggregate principal amount of floating rate notes due 2019, \$1.15 billion aggregate principal amount of 2.2% fixed rate notes due 2019, \$750 million aggregate principal amount of 2.875% fixed rate notes due 2021 and \$750 million aggregate principal amount of 3.45% fixed rate notes due 2024. The floating rate notes due 2017 bear interest at a floating rate equal to the 3-month LIBOR plus 0.20%. The floating rate notes due 2019 bear interest at a floating rate equal to the 3-month LIBOR plus 0.48%. Interest on the floating rate notes due 2017 is paid quarterly on January 28, April 28, July 28 and October 28 of each year. Interest on the floating rate notes due 2019 is paid quarterly on February 1, May 1, August 1 and November 1 of each year. Interest on the fixed rate notes due 2019, 2021 and 2024 is payable semi-annually on February 1 and August 1. The floating rate notes are not redeemable prior to maturity. We may redeem some or all of the fixed rate notes of each series at any time and from time to time prior to their maturity, generally at a make-whole redemption price.

To help achieve our interest rate risk management objectives, in connection with the July 2014 issuance of senior notes, we entered into interest rate swap agreements that effectively converted \$2.4 billion of our fixed rate debt to floating rate debt based on LIBOR plus a spread. These swaps were designated as fair value hedges against changes in the fair value of certain fixed rate senior notes resulting from changes in interest rates. The gains and losses related to changes in the fair value of interest rate swaps substantially offset changes in the fair value of the hedged portion of the underlying debt that are attributable to changes in market interest rates.

The effective interest rates for our senior notes include the interest payable, the amortization of debt issuance costs and the amortization of any original issue discount on these senior notes. Interest on these senior notes is payable either quarterly or semiannually. Interest expense associated with our senior notes, including amortization of debt issuance costs, during the three months ended June 30, 2015 and 2014 was approximately \$46 million and \$26 million, respectively. At June 30, 2015, the estimated fair value of these senior notes was approximately \$7.4 billion.

The indenture pursuant to which the senior notes were issued includes customary covenants that, among other things and subject to exceptions, limit our ability to incur, assume or guarantee debt secured by liens on specified assets or enter into sale and lease-back transactions with respect to specified properties, and also includes customary events of default.

Other Indebtedness

Our other indebtedness is comprised of overdraft facilities. We have formal overdraft facilities in India bearing interest on drawn balances at a rate of approximately 9% to 10% per annum. Drawn balances are expected to be repaid in less than one year.

Commercial Paper

We have an up to \$2 billion commercial paper program pursuant to which we may issue commercial paper notes with maturities of up to 397 days from the date of issue in an aggregate principal amount at maturity of up to \$2 billion outstanding at any time. As of June 30, 2015, there were no commercial paper notes outstanding.

Credit Agreement

As of June 30, 2015, no borrowings or letters of credit were outstanding under our \$3 billion credit agreement. However, as described above, we have an up to \$2 billion commercial paper program and therefore maintain \$2 billion of available borrowing capacity under our credit agreement in order to repay commercial paper borrowings in the event we are unable to repay those borrowings from other sources when they become due. As a result, at June 30, 2015, \$1 billion of borrowing capacity was available for other purposes permitted by the credit agreement. The credit agreement includes customary representations, warranties, affirmative and negative covenants, including a financial

covenant, events of default and indemnification provisions in favor of the banks. The negative covenants include restrictions regarding the incurrence of liens, subject to certain exceptions. The financial covenant requires us to meet a quarterly financial test with respect to a minimum consolidated interest coverage ratio.

We were in compliance with all covenants in our outstanding debt instruments for the three-month period ended June 30, 2015.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Note 11 — Commitments and Contingencies

Commitments

As of June 30, 2015, approximately \$22.1 billion of unused credit was available to PayPal Credit accountholders. While this amount represents the total unused credit available, we have not experienced, and do not anticipate, that all of our PayPal Credit accountholders will access their entire available credit at any given point in time. In addition, the individual lines of credit that make up this unused credit are subject to periodic review and termination by the chartered financial institutions that are the issuers of PayPal Credit products based on, among other things, account usage and customer creditworthiness. When a consumer makes a purchase using a PayPal Credit product, the chartered financial institution extends credit to the consumer, funds the extension of credit at the point of sale and advances funds to the merchant. We subsequently purchase the consumer receivables related to the consumer loans and as a result of that purchase, bear the risk of loss in the event of loan defaults. However, we subsequently sell a participation interest in the entire pool of consumer loans to the chartered financial institution that extended the consumer loans, and beginning in May 2015, to other third-party investors. Although the chartered financial institution continues to own each customer account, we own and bear the risk of loss on the related consumer receivables, less the participation interest held by the chartered financial institution and other investors, and PayPal is responsible for all servicing functions related to the customer account balances. As of June 30, 2015, the total outstanding principal balance of this pool of consumer loans was \$3.1 billion, net of which the chartered financial institution and other investors owned a participation interest of \$876 million, or 22% of the total outstanding balance of the consumer loans as of that date.

In addition, in June 2014, we agreed, subject to certain conditions, that PayPal, one of its affiliates or a third party partner will purchase a portfolio of consumer loan receivables relating to the customer accounts arising out of our current credit program agreement with Synchrony (formerly GE Capital Retail Bank) for a price based on the book value of the consumer loan receivables portfolio at the time of the purchase (expected to be October 2016), subject to certain adjustments and exclusions. As of December 31, 2014, Synchrony had a net receivables portfolio under the credit program agreement of approximately \$1.5 billion.

Litigation and Other Legal Matters

Overview

We are involved in legal and regulatory proceedings on an ongoing basis. Many of these proceedings are in early stages and may seek an indeterminate amount of damages. If we believe that a loss arising from such matters is probable and can be reasonably estimated, we accrue the estimated liability in our financial statements. If only a range of estimated losses can be determined, we accrue an amount within the range that, in our judgment, reflects the most likely outcome; if none of the estimates within that range is a better estimate than any other amount, we accrue the low end of the range. For those proceedings in which an unfavorable outcome is reasonably possible but not probable, we have disclosed an estimate of the reasonably possible loss or range of losses or we have concluded that an estimate of the reasonably possible loss or range arising directly from the proceeding (i.e., monetary damages or amounts paid in judgment or settlement) are not material. If we cannot estimate the probable or reasonably possible loss or range of losses arising from a proceeding, we have disclosed that fact. In assessing the materiality of a proceeding, we evaluate, among other factors, the amount of monetary damages claimed, as well as the potential impact of non-monetary remedies sought by plaintiffs (e.g., injunctive relief) that may require us to change our business practices in a manner that could have a material adverse impact on our business. With respect to the matters disclosed in this Note 11, we are unable to estimate the possible loss or range of losses that could potentially result from the application of such

non-monetary remedies.

On July 17, 2015, we completed the Distribution to eBay stockholders of 100% of the shares of common stock of PayPal Holdings, Inc., pursuant to which PayPal Holdings, Inc. became an independent company. Pursuant to the terms of the separation and distribution agreement entered into between us and PayPal Holdings, Inc. on June 26, 2015, assets related to the PayPal business were transferred to, and liabilities related to the PayPal business were retained or assumed by, PayPal Holdings, Inc.

Amounts accrued for legal and regulatory proceedings for which we believe a loss is probable were not material for the six months ended June 30, 2015. Except as otherwise noted for the proceedings described in this Note 11, we have concluded, based on currently available information, that reasonably possible losses arising directly from the proceedings (i.e., monetary damages or amounts paid in judgment or settlement) in excess of our recorded accruals are also not material. However, legal and regulatory proceedings are inherently unpredictable and subject to significant uncertainties. If one or more matters were

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

resolved against us in a reporting period for amounts in excess of management's expectations, the impact on our operating results or financial condition for that reporting period could be material.

Litigation

eBay Inc., eBay Domestic Holdings, Inc., Pierre Omidyar and Joshua Silverman have been sued by craigslist, Inc. in California Superior Court in San Francisco (Case No.: CGC - 08 - 475276). craigslist filed suit on May 13, 2008 alleging that we engaged in conduct designed to harm craigslist's business while we negotiated to become and while we were a minority shareholder in craigslist. craigslist's allegations include that we (i) misrepresented, concealed, suppressed and failed to disclose facts in order to induce craigslist to take detrimental action; (ii) interfered with craigslist's business operations; (iii) improperly disseminated and misused confidential and proprietary information from craigslist that we received as a minority investor; (iv) infringed and diluted craigslist's trademark and trade name; and (v) breached duties owed to craigslist. The complaint seeks significant compensatory and punitive damages, rescission and other relief. In addition, in September 2014, craigslist filed an amended complaint alleging trade secret misappropriation and seeking new and additional compensatory and punitive damages. The matter was settled in June 2015 and the lawsuit has been dismissed.

In March 2015, StubHub filed suit against Ticketmaster and the Golden State Warriors, alleging antitrust and various state law violations arising out of the defendants' restrictive ticketing practices, which include prohibiting the resale of Warriors tickets on StubHub or any other non-Ticketmaster secondary exchange (StubHub, Inc. v. Golden State Warriors, LLC et al, N.D. Cal. No. 3:15-cv-01436). StubHub filed a First Amended Complaint on June 30, 2015. Discovery has not yet started and no trial date has been set.

Regulatory Proceedings

In May 2014, we publicly announced that criminals were able to penetrate our network and steal certain data, including user names, encrypted user passwords and other non-financial user data, from eBay's Marketplaces business unit. Upon making this announcement, eBay Marketplaces required all buyers and sellers on the Marketplaces platform to reset their passwords in order to login to their account. In addition to making this public announcement, we proactively approached a number of regulatory and governmental bodies, including those with the most direct supervisory authority over our data privacy and data security programs, to specifically inform them of the incident and our actions to protect our customers in response. Certain of those regulatory agencies have requested us to provide further, more detailed information regarding the incident, and we believe that we have fully cooperated in all of those requests. To date, we have not been informed by any regulatory authority of an intention to bring any enforcement action arising from this incident; however, in the future we may be subject to fines or other regulatory action. In addition, in July 2014, a putative class action lawsuit was filed against us for alleged violations and harm resulting from the incident. The lawsuit was recently dismissed with leave to amend.

General Matters

Other third parties have from time to time claimed, and others may claim in the future, that we have infringed their intellectual property rights. We are subject to patent disputes, and expect that we will increasingly be subject to additional patent infringement claims involving various aspects of our Marketplaces and Enterprise businesses as our products and services continue to expand in scope and complexity. Such claims may be brought directly or indirectly against our companies and/or against our customers (who may be entitled to contractual indemnification under their contracts with us), and we are subject to increased exposure to such claims as a result of our recent acquisitions,

particularly in cases where we are entering into new lines of business or acquiring new technologies in connection with such acquisitions. We have in the past been forced to litigate such claims. We may also become more vulnerable to third-party claims as laws such as the Digital Millennium Copyright Act, the Lanham Act and the Communications Decency Act are interpreted by the courts, and as we expand the scope of our businesses (both in terms of the range of products and services that we offer and our geographical operations) and become subject to laws in jurisdictions where the underlying laws with respect to the potential liability of online intermediaries like ourselves are either unclear or less favorable. We believe that additional lawsuits alleging that we have violated patent, copyright or trademark laws will be filed against us. Intellectual property claims, whether meritorious or not, are typically time consuming and costly to defend and resolve, could require expensive changes in our methods of doing business or could require us to enter into costly royalty or licensing agreements on unfavorable terms.

From time to time, we are involved in other disputes or regulatory inquiries that arise in the ordinary course of business, including suits by our users (individually or as class actions) alleging, among other things, improper disclosure of our prices, rules or policies, that our practices, prices, rules, policies or customer/user agreements violate applicable law or that we have acted unfairly and/or not acted in conformity with such prices, rules, policies or agreements. Further, the number and

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

significance of these disputes and inquiries are increasing as our company has grown larger, our businesses have expanded in scope (both in terms of the range of products and services that we offer and our geographical operations) and our products and services have increased in complexity. Any claims or regulatory actions against us, whether meritorious or not, could be time consuming, result in costly litigation, damage awards (including statutory damages for certain causes of action in certain jurisdictions), injunctive relief or increased costs of doing business through adverse judgment or settlement, require us to change our business practices in expensive ways, require significant amounts of management time, result in the diversion of significant operational resources or otherwise harm our business.

Indemnification Provisions

In the ordinary course of business, we have included limited indemnification provisions in certain of our agreements with parties with which we have commercial relations, including our standard marketing, promotions and application-programming-interface license agreements. Under these contracts, we generally indemnify, hold harmless and agree to reimburse the indemnified party for losses suffered or incurred by the indemnified party in connection with claims by a third party with respect to our domain names, trademarks, logos and other branding elements to the extent that such marks are applicable to our performance under the subject agreement. In certain cases, we have agreed to provide indemnification for intellectual property infringement. It is not possible to determine the maximum potential loss under these indemnification provisions due to our limited history of prior indemnification claims and the unique facts and circumstances involved in each particular provision. To date, losses recorded in our statement of income in connection with our indemnification provisions have not been significant, either individually or collectively.

Off-Balance Sheet Arrangements

As of June 30, 2015, we had no off-balance sheet arrangements that have, or are reasonably likely to have, a current or future material effect on our consolidated financial condition, results of operations, liquidity, capital expenditures or capital resources.

We have various cash pooling arrangements with financial institutions for cash management purposes. These arrangements allow for cash withdrawals from these financial institutions based upon our aggregate operating cash balances held within the same financial institutions (“Aggregate Cash Deposits”). These arrangements also allow us to withdraw amounts exceeding the Aggregate Cash Deposits up to an agreed-upon limit. The net balance of the withdrawals and the Aggregate Cash Deposits are used by these financial institutions as a basis for calculating our net interest expense or income under these arrangements. As of June 30, 2015, we had a total of \$4.4 billion in cash withdrawals offsetting our \$4.4 billion in Aggregate Cash Deposits held within these financial institutions under these cash pooling arrangements.

Protection Programs

Through our Payments segment, we provide customers with protection programs on substantially all transactions completed through PayPal's payments network, except for transactions using PayPal's payment gateway businesses. These programs protect customers from loss primarily due to fraud and counterparty performance.

The maximum potential exposure under PayPal's protection programs is estimated to be the portion of total eligible transaction volume for which customer protection claims may be raised under existing PayPal user agreements. Since

eligible transactions are typically completed in a period significantly shorter than the period under which disputes may be opened, and based on our historical losses to date, we do not believe that that the maximum potential exposure is representative of our actual potential exposure. We record a liability with respect to losses under PayPal's protection programs when they are probable and the amount can be reasonably estimated.

The following table provides management's estimate of the maximum potential exposure related to PayPal's protection programs as of June 30, 2015 and December 31, 2014:

	Maximum potential exposure		Allowance for Transaction Losses	
	June 30, 2015 (In millions)	December 31, 2014	June 30, 2015	December 31, 2014
Protection Programs	\$73,250	\$75,833	\$190	\$166

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Note 12 — Stock Repurchase Programs

In January 2014, our board of directors authorized a stock repurchase program that provided for the repurchase of up to an additional \$5 billion of our common stock, with no expiration from the date of authorization. In January 2015, our board of directors authorized an additional \$2 billion stock repurchase program, with no expiration from the date of authorization. The stock repurchase programs are intended to offset the impact of dilution from our equity compensation programs and, subject to market conditions and other factors, to make opportunistic repurchases of our common stock to reduce our outstanding share count. Any share repurchases under our stock repurchase programs may be made through open market transactions, block trades, privately negotiated transactions (including accelerated share repurchase transactions) or other means at times and in such amounts as management deems appropriate and will be funded from our working capital or other financing alternatives.

Our stock repurchase programs may be limited or terminated at any time without prior notice. The timing and actual number of shares repurchased will depend on a variety of factors, including corporate and regulatory requirements, price and other market conditions and management's determination as to the appropriate use of our cash.

The stock repurchase activity under our stock repurchase programs during the six months ended June 30, 2015 is summarized as follows:

	Shares Repurchased	Average Price per Share ⁽¹⁾	Value of Shares Repurchased	Remaining Amount Authorized
(In millions, except per share amounts)				
Balance as of January 1, 2015				\$985
Authorization of additional plan in January 2015				2,000
Repurchase of shares of common stock	18	\$56.95	1,000	(1,000)
Balance as of June 30, 2015				\$1,985

(1) Stock repurchase activity excludes broker commissions.

As of June 30, 2015, a total of approximately \$2 billion remained available for future repurchases of our common stock under our January 2015 stock repurchase program. These repurchased shares of common stock were recorded as treasury stock and were accounted for under the cost method. No repurchased shares of common stock have been retired.

In July 2015, our board of directors authorized an additional \$1 billion stock repurchase program, with no expiration from the date of authorization. This new stock repurchase program, together with approximately \$2 billion remaining under our January 2015 stock repurchase program, brings the total repurchase authorization as of July 2015 to approximately \$3 billion.

Note 13 — Stock-Based Plans

Stock Option Activity

The following table summarizes stock option activity for the six months ended June 30, 2015:

Options
(In millions)

Edgar Filing: EBAY INC - Form 10-Q

Outstanding as of January 1, 2015	10	
Granted and assumed	2	
Exercised	(3)
Forfeited/expired/canceled	—	
Outstanding as of June 30, 2015	9	

The weighted average exercise price of stock options granted during the period was \$50.37 per share and the related weighted average grant date fair value was \$13.39 per share.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Restricted Stock Unit Activity

The following table summarizes restricted stock unit ("RSU") activity for the six months ended June 30, 2015:

	Units (In millions)	
Outstanding as of January 1, 2015	36	
Awarded and assumed	16	
Vested	(10)
Forfeited	(4)
Outstanding as of June 30, 2015	38	

The weighted average grant date fair value for RSUs awarded during the period was \$57.15 per share.

Stock-Based Compensation Expense

The impact on our results of operations of recording stock-based compensation expense for the three and six months ended June 30, 2015 and 2014 was as follows:

	Three Months Ended June		Six Months Ended June 30,	
	30, 2015	2014	2015	2014
	(In millions)			
Cost of net revenues	\$20	\$16	\$38	\$30
Sales and marketing	39	41	82	79
Product development	58	57	113	106
General and administrative	81	48	137	92
Total stock-based compensation expense	\$198	\$162	\$370	\$307
Capitalized in product development	\$5	\$4	\$9	\$8

Stock Option Valuation Assumptions

We calculated the fair value of each stock option award on the date of grant using the Black-Scholes option pricing model. The following weighted average assumptions were used for the three and six months ended June 30, 2015 and 2014:

	Three Months Ended June 30,		Six Months Ended June 30,		
	2015	2014	2015	2014	
Risk-free interest rate	1.35	% 1.18	% 1.36	% 1.18	%
Expected life (in years)	3.9	4.1	4.0	4.1	
Dividend yield	—	% —	% —	% —	%
Expected volatility	27	% 29	% 27	% 29	%

Our computation of expected volatility is based on a combination of historical and market-based implied volatility from traded options on our common stock. Our computation of expected life is based on historical experience of similar awards, giving consideration to the contractual terms of the stock-based awards, vesting schedules and expectations of future employee behavior. The interest rate for periods within the contractual life of the award is based on the U.S. Treasury yield curve in effect at the time of grant.

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

Note 14 — Loans and Interest Receivable, Net

Loans and interest receivable primarily represent purchased consumer receivables arising from loans made by our partner chartered financial institutions to individual consumers to purchase goods and services using our PayPal Credit products. Although a chartered financial institution continues to own each respective customer account, we own the related consumer receivable and PayPal is responsible for all servicing functions related to the customer accounts. Effective August 2013, ownership of most of the existing customer accounts was transitioned from WebBank to a new chartered financial institution, Comenity Capital Bank. As part of the arrangement, we sell Comenity Capital Bank a participation interest in the entire pool of consumer receivables outstanding under the customer accounts. In May 2015, we concluded an arrangement with certain investors under which we sold a participation interest of approximately \$710 million in a portion of these receivables, resulting in a gain of \$30 million in marketing services and other revenues in our condensed consolidated statement of income. During the three months ended June 30, 2015 and 2014, we purchased approximately \$1.5 billion and \$1.2 billion, respectively, in consumer receivables. As of June 30, 2015, the total outstanding principal balance of this pool of consumer receivables was \$3.1 billion, net of which Comenity Capital Bank and other investors owned a participation interest of \$876 million, or 22% of the total outstanding balance of the consumer receivables at that date. Comenity Capital Bank and these investors have no recourse against us related to their respective participation interests for failure of debtors to pay when due. The participation interest held by Comenity Capital Bank and these investors have the same priority to the interests held by us and are subject to the same credit, prepayment, and interest rate risk associated with the consumer receivables.

Loans and interest receivable are reported at their outstanding principal balances, net of participation interest sold and pro-rata allowances, including unamortized deferred origination costs and estimated collectible interest and fees. We use a consumer's FICO score, among other measures, in evaluating the credit quality of our consumer receivables. A FICO score is a type of credit score that lenders use to assess an applicant's credit risk and whether to extend credit. Individual FICO scores generally are obtained each quarter the consumer has an outstanding consumer receivable owned by PayPal Credit. The weighted average consumer FICO score related to the pool of consumer receivables and interest receivable balance outstanding as of June 30, 2015 and December 31, 2014 was 687. As of June 30, 2015 and December 31, 2014, approximately 54.2%, for both periods, of the pool of consumer receivables and interest receivable balance was due from consumers with FICO scores greater than 680, which is generally considered "prime" by the consumer credit industry. As of June 30, 2015 and December 31, 2014, approximately 9.6% and 9.2%, respectively, of the pool of consumer receivables and interest receivable balance was due from customers with FICO scores below 599. As of June 30, 2015 and December 31, 2014, approximately 90% and 89%, respectively, of the portfolio of consumer receivables and interest receivable was current.

During 2013, we began working with a chartered financial institution, for the chartered financial institution to offer working capital loans to selected merchant sellers. We subsequently purchase the related merchant receivable from the chartered financial institution and, as a result, bear the risk of loss in the event the loan defaults. Under the program, participating merchants can borrow a certain percentage of their annual payment volume processed by PayPal and are charged a fixed fee for the loan. As of June 30, 2015, the total outstanding balance of this pool of merchant receivables was approximately \$187 million.

The following table summarizes the activity in the allowance for loans and interest receivable, net of participating interest sold, for the periods indicated:

Six Months Ended June 30,	
2015	2014
(In millions)	

Edgar Filing: EBAY INC - Form 10-Q

Charge-offs	(164) (139
Recoveries	14	13
Provision	162	140
Balance as of June 30	\$185	\$160

Note 15 — Income Taxes

We are subject to both direct and indirect taxation in the U.S. and various states and foreign jurisdictions. We are under examination by certain tax authorities for the 2003 to 2013 tax years. We believe that adequate amounts have been reserved for

eBay Inc.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

any adjustments that may ultimately result from these or other examinations. The material jurisdictions where we are subject to potential examination by tax authorities for certain tax years after 2002 include, among others, the U.S. (Federal and California), France, Germany, Italy, Korea, Israel, Switzerland, Singapore, United Kingdom and Canada.

Although the timing of the resolution and/or closure of audits is highly uncertain, it is reasonably possible that the balance of gross unrecognized tax benefits could significantly change in the next 12 months. However, given the number of years remaining subject to examination and the number of matters being examined, we are unable to estimate the full range of possible adjustments to the balance of gross unrecognized tax benefits.

Note 16 — Accumulated Other Comprehensive Income

The following table summarizes the changes in accumulated balances of other comprehensive income for the three months ended June 30, 2015:

	Unrealized Gains (Losses) on Cash Flow Hedges (In millions)	Unrealized Gains on Investments	Foreign Currency Translation	Estimated tax (expense) benefit	Total

Note 17 — Restructuring

In January 2015, at a regular meeting of our Board of Directors (the “Board”), the Board approved a plan to implement a strategic reduction of our existing global workforce. As a result, we reduced our workforce globally. The reduction was completed in the first half of 2015. The restructuring costs are aggregated in general and administrative expenses in the condensed consolidated statement of income.

The following table summarizes by segment the restructuring costs recognized during the three months ended June 30, 2015 and 2014:

	Three Months Ended June 30, 2015			Three Months Ended June 30, 2014		
	Employee Severance and Benefits (In millions)	Other Associated Costs	Total	Employee Severance and Benefits	Other Associated Costs	Total

Accrued liability as of June 30, 2015	\$16	\$—	\$16

(1) The adjustments during the six months ended June 30, 2015 were due to foreign currency translations.

Note 18 — Subsequent Events

On July 1, 2015, PayPal announced an agreement to acquire Xoom Corporation (NASDAQ:XOOM) for approximately \$890 million net of cash. This acquisition is expected to close in the fourth quarter of 2015, subject to customary closing conditions, including regulatory approvals. Xoom allows users to transfer money, pay bills, and reload prepaid mobile phones domestically and internationally through its web and mobile platforms. The acquisition of Xoom is intended to enable PayPal to offer a broader range of services to its global customer base, increase customer engagement, and expand its presence in international markets.

During the second quarter of 2015, our Board of Directors approved a plan to sell the businesses underlying our Enterprise segment. On July 16, 2015, we signed a definitive agreement to sell these businesses for \$925 million and, subject to customary closing conditions, we expect to close this transaction in the second half of 2015.

On June 26, 2015, the Board of Directors of eBay Inc. approved the separation of PayPal (consisting primarily of our Payments segment) through the distribution of 100% of the outstanding common stock, par value \$0.0001 per share, of PayPal Holdings, Inc., a wholly owned subsidiary of eBay, to eBay's stockholders. To consummate the distribution, the eBay Board declared a pro rata dividend of PayPal Holdings, Inc. common stock to eBay's stockholders of record as of the close of business on July 8, 2015 (the "Record Date"). Each eBay stockholder received one (1) share of PayPal Holdings, Inc. common stock for every share of eBay common stock held at the close of business on the Record Date. The Distribution occurred on July 17, 2015 (the "Distribution Date"). Immediately following the Distribution, PayPal became an independent, publicly traded company and is listed on The NASDAQ Stock Market under the ticker "PYPL." eBay will continue to trade on The NASDAQ Stock Market under the ticker "EBAY." The historical financial position and results of operations of PayPal will be reported as discontinued operations in the third

quarter of 2015.

In connection with the Distribution, eBay and PayPal have entered into a separation and distribution agreement as well as various other agreements that will govern the relationships between the parties going forward, including an operating agreement, transition services agreement, tax matters agreement, employee matters agreement, intellectual property matters agreement and colocation services agreements. The separation and distribution agreement was entered into on June 26, 2015. The other agreements were entered into on the Distribution Date. Under the tax matters agreement, eBay generally will be responsible for all taxes (and will be entitled to all related refunds of taxes) imposed on eBay and its subsidiaries (including subsidiaries that will be transferred to PayPal pursuant to the separation) with respect to the taxable periods (or portions thereof) ending on or prior to the Distribution Date.

Item 2: Management's Discussion and Analysis of Financial Condition and Results of Operations

FORWARD-LOOKING STATEMENTS

This Quarterly Report on Form 10-Q contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934, including statements that involve expectations, plans or intentions (such as those relating to future business, future results of operations or financial condition, the separation of our eBay and PayPal businesses into independent publicly traded companies, new or planned features or services, or management strategies). You can identify these forward-looking statements by words such as “may,” “will,” “would,” “should,” “could,” “expect,” “anticipate,” “believe,” “estimate,” “intend,” “plan” and other similar expressions. These forward-looking statements involve risks and uncertainties that could cause our actual results to differ materially from those expressed or implied in our forward-looking statements. Such risks and uncertainties include, among others, those discussed in “Part II — Item 1A: Risk Factors” of this Quarterly Report on Form 10-Q as well as in our condensed consolidated financial statements, related notes, and the other information appearing elsewhere in this report and our other filings with the Securities and Exchange Commission, or the SEC. We do not intend, and undertake no obligation, to update any of our forward-looking statements after the date of this report to reflect actual results or future events or circumstances. Given these risks and uncertainties, readers are cautioned not to place undue reliance on such forward-looking statements.

You should read the following Management's Discussion and Analysis of Financial Condition and Results of Operations in conjunction with the unaudited condensed consolidated financial statements and the related notes that appear elsewhere in this report.

When we refer to “we,” “our,” “us” or “eBay” in this Quarterly Report on Form 10-Q, we mean the current Delaware corporation (eBay Inc.) and its California predecessor, as well as all of our consolidated subsidiaries, unless otherwise expressly stated or the context otherwise requires.

Overview

We are a global technology company that enables commerce through two reportable segments: Marketplaces and Payments. Our Marketplaces segment includes our eBay.com platform and its localized counterparts and our other online platforms, such as our online classifieds sites and StubHub. Our Payments segment is comprised of our PayPal business.

During the second quarter of 2015, our Board of Directors approved a plan to sell the businesses underlying our Enterprise segment. As a result, we have classified the results of our Enterprise segment as discontinued operations in our condensed consolidated statement of income for all periods presented. Additionally, the related assets and liabilities associated with the discontinued operations are classified as held for sale in our condensed consolidated balance sheet. On July 16, 2015, we signed a definitive agreement to sell these businesses and, subject to customary closing conditions, we expect to close this transaction in the second half of 2015.

On September 30, 2014, we announced that our Board of Directors, following a strategic review of our growth strategies and structure, had approved a plan to separate PayPal (consisting of our Payments segment) into an independent publicly traded company. On July 17, 2015, we completed the distribution of 100% of the outstanding common stock of PayPal Holdings, Inc. to our stockholders. The historical results of operations and the financial position of PayPal will be reported as discontinued operations in the third quarter of 2015.

We have incurred significant costs in connection with the separation of our PayPal business. These costs relate primarily to third-party advisory and consulting services, retention payments to certain employees, incremental

stock-based compensation and other costs directly related to the separation. Costs related to employees for retention or stock-based compensation are classified on a basis consistent with their regular compensation charges and included within cost of net revenues, sales and marketing, product development or general and administrative in our consolidated statement of income as applicable. Costs other than those paid to employees are included within general and administrative in our consolidated statement of income. We incurred approximately \$149 million and \$236 million related to separation costs during the three and six months ended June 30, 2015, respectively.

In January 2015, at a regular meeting of our Board of Directors (the “Board”), the Board approved a plan to implement a strategic reduction of our existing global workforce. As a result, we reduced our workforce globally. The reduction was completed in the first half of 2015 and is expected to generate annual savings of more than \$300 million across the Company, primarily impacting sales and marketing and product development expenses. The savings in these line items are expected to be offset by additional expenses as we reinvest back into these areas of the business to drive additional growth.

Net revenues for the three months ended June 30, 2015 increased 7% to \$4.4 billion compared to the same period of the prior year, driven primarily by increases in net revenues from our Payments segment. For the three months ended June 30, 2015, our operating margin decreased to 17% from 21% in the same period of the prior year due to higher general and administrative costs and a greater proportion of our revenue being derived from our Payments segment, which has lower margins than our Marketplaces segment. For the three months ended June 30, 2015, our diluted earnings per share from continuing operations decreased to \$0.56, a \$0.01 decrease compared to the same period of the prior year. For the three months ended June 30, 2015 and 2014, we generated cash flow from continuing operating activities of \$1.1 billion and \$1.5 billion, respectively.

Our Marketplaces segment total net revenues decreased \$58 million, or 3%, for the three months ended June 30, 2015 compared to the same period of the prior year. Gross Merchandise Volume (GMV) (as defined below) decreased 2% for the three months ended June 30, 2015 compared to the same period of the prior year. The decrease in total net revenues was driven primarily by a negative impact from foreign currency movements relative to the U.S. dollar. Our Marketplaces segment operating margin decreased by 0.5 percentage points for the three months ended June 30, 2015 compared to the same period of the prior year, due primarily to continued investments in our site operations and business initiatives and a negative impact due to foreign currency movements relative to the U.S. dollar.

Our Payments segment total net revenues increased \$314 million, or 16%, for the three months ended June 30, 2015 compared to the same period of the prior year. The increase in total net revenues was driven primarily by an increase in net total payment volume (Net TPV) (as defined below) of 20%. Our Payments segment operating margin increased by 1.6 percentage points for the three months ended June 30, 2015 compared to the same period of the prior year due primarily to operating efficiencies.

We define GMV as the total value of all successfully closed transactions between users on Marketplaces platforms (excluding eBay's classifieds websites, brands4friends and Shopping.com) during the applicable period regardless of whether the buyer and seller actually consummated the transaction; excludes vehicles and real estate gross merchandise volume. We believe that GMV provides a useful measure of the overall volume of closed transactions that flow through our Marketplaces trading platforms in a given period, notwithstanding the inclusion in GMV of closed transactions that are not ultimately consummated. We define Net TPV as the total dollar volume of payments, net of payment reversals, successfully completed through our payments networks, including PayPal Credit, Venmo and payments processed through Braintree's full stack payments platform during the period; excludes payments sent or received through PayPal's and Braintree's payment gateway businesses. We define Merchant Services Net TPV as the total dollar volume of payments, net of payment reversals, successfully completed through our payments networks, including PayPal Credit, Venmo and payments processed through Braintree's full stack payments platform, during the period; excludes PayPal's and Braintree's payment gateway businesses and payments for transactions on our Marketplaces platforms. We define On eBay Net TPV as the total dollar volume of payments, net of payment reversals, successfully completed through our payments networks, including PayPal Credit, during the period for transactions on our Marketplaces platforms.

Results of Operations

Summary of Net Revenues

We generate two types of net revenues: net transaction revenues and marketing services and other revenues. Our net transaction revenues are derived principally from listing fees and final value fees (which are fees payable on transactions closed on our Marketplaces platforms), fees paid by merchants for payment processing services and ecommerce service fees. Our marketing services revenues are derived principally from the sale of advertisements, revenue sharing arrangements, classifieds fees, marketing service fees and lead referral fees. Other revenues are derived principally from interest and fees earned on the PayPal Credit portfolio of receivables from loans, interest earned on certain PayPal customer account balances and fees from contractual arrangements with third parties that provide services to our users.

The following table sets forth the breakdown of net revenues by type and geography for the periods presented:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2015	2014	2015	2014
	(In millions)			
Net Revenues by Type:				
Net transaction revenues				
Marketplaces	\$1,684	\$1,722	\$3,356	\$3,449
Payments	2,006	1,741	3,946	3,441
Total net transaction revenues	3,690	3,463	7,302	6,890
Marketing services and other revenues				
Marketplaces	432	452	829	880
Payments	254	205	422	350
Total marketing services and other revenues	686	657	1,251	1,230
Elimination of inter-segment net revenue and other (1)	3	(17)	(4)	(20)
Total net revenues	\$4,379	\$4,103	\$8,549	\$8,100
Net Revenues by Geography:				
U.S.	\$2,007	\$1,792	\$3,884	\$3,534
International	2,372	2,311	4,665	4,566
Total net revenues	\$4,379	\$4,103	\$8,549	\$8,100

(1) Represents net revenue generated between our reportable segments and other revenues.

Revenues are attributed to U.S. and international geographies based primarily upon the country in which the seller, payment recipient, customer, website that displays advertising, or other service provider, as the case may be, is located.

Because we generated a majority of our net revenues internationally in recent periods, including the three months ended June 30, 2015 and 2014, we are subject to the risks of doing business in foreign countries as discussed under "Part II - Item 1A - Risk Factors." In that regard, fluctuations in foreign currency exchange rates impact our results of operations. We have a foreign exchange risk management program that is designed to reduce our exposure to fluctuations in foreign currencies; however, the effectiveness of this program in mitigating the impact of foreign currency fluctuations on our results of operations varies from period to period, and in any given period our operating results are usually affected, sometimes significantly, by changes in currency exchange rates. Fluctuations in exchange rates also directly affect our cross-border revenue. We calculate the year-over-year impact of foreign currency movements on our business using prior period foreign currency rates applied to current year transactional currency amounts.

For the three months ended June 30, 2015, foreign currency movements relative to the U.S. dollar negatively impacted net revenues by \$224 million (inclusive of a positive impact of approximately \$62 million from hedging activities included in Payments net revenue). On a business segment basis, for the three months ended June 30, 2015, foreign currency movements relative to the U.S. dollar negatively impacted Marketplaces and Payments net revenues by approximately \$171 million and \$53 million, respectively (net of the positive impact of hedging activities noted above in the case of Payments net revenues).

For the six months ended June 30, 2015, foreign currency movements relative to the U.S. dollar negatively impacted net revenues by \$456 million (inclusive of a positive impact of approximately \$112 million from hedging activities included in

Payments net revenue). On a business segment basis, for the six months ended June 30, 2015, foreign currency movements relative to the U.S. dollar negatively impacted Marketplaces and Payments net revenues by approximately \$323 million and \$133 million, respectively (net of the positive impact of hedging activities noted above in the case of Payments net revenues).

The following table sets forth, for the periods presented, certain key operating metrics that we believe are significant factors affecting our net revenues:

	Three Months Ended June 30, 2015			Six Months Ended June 30, 2015		
	2015	2014	Percent Change	2015	2014	Percent Change
(In millions, except percentage changes)						
Supplemental Operating Data:						
Marketplaces Segment: ⁽¹⁾						
GMV ⁽²⁾	\$20,061	\$20,485	(2)%	\$40,256	\$41,030	(2)%
Marketplaces Transaction Take Rate ⁽³⁾	8.39%	8.41%	(0.02)%	8.34%	8.41%	(0.07)%
Payments Segment:						
Merchant Services Net TPV ⁽⁴⁾	\$51,425	\$40,371	27%	\$98,157	\$77,533	27%
On eBay Net TPV ⁽⁵⁾	\$14,511	\$14,675	(1)%	\$29,192	\$29,519	(1)%
Net TPV ⁽⁶⁾	\$65,936	\$55,046	20%	\$127,349	\$107,052	19%
Payments Take Rate ⁽⁷⁾	3.43%	3.53%	(0.10)%	3.43%	3.54%	(0.11)%

(1) eBay's classifieds websites, brands4friends and Shopping.com are not included in these metrics.

Total value of all successfully closed transactions between users on Marketplaces platforms during the applicable

(2) period regardless of whether the buyer and seller actually consummated the transaction; excludes vehicles and real estate gross merchandise volume.

(3) Total net transaction revenues earned through our Marketplaces segment, divided by Gross Merchandise Volume.

Total dollar volume of payments, net of payment reversals, successfully completed through our payments networks, including PayPal Credit, Venmo and payments processed through Braintree's full stack payments platform, during the period; excludes PayPal's and Braintree's payment gateway businesses and payments for transactions on our Marketplaces platforms.

(4) Total dollar volume of payments, net of payment reversals, successfully completed through our payments networks, including PayPal Credit, during the period for transactions on our Marketplaces platforms.

Total dollar volume of payments, net of payment reversals, successfully completed through our payments networks, including PayPal Credit, Venmo and payments processed through Braintree's full stack payments platform during the period; excludes payments sent or received through PayPal's and Braintree's payment gateway businesses.

(5) Total net revenues earned through our payments networks, including PayPal Credit, Braintree, Venmo, PayPal's payment gateway business, subscription fees and other net revenues, divided by Net TPV.

Seasonality

The following table sets forth, for the periods presented, our total net revenues and the sequential quarterly movements of these net revenues:

	Three Months Ended				
	March 31	June 30	September 30	December 31	
	(In millions, except percentage changes)				
2014					
Net revenues	\$3,997	\$4,103	\$4,100	\$4,485	
Percent change from prior quarter	(4)% 3	% 0	% 9	%
2015					
Net revenues	\$4,170	\$4,379	—	—	
Percent change from prior quarter	(7)% 5	% —	% —	%

We expect transaction activity patterns on our websites to mirror general consumer buying patterns. We expect that these trends will continue.

Marketplaces Net Transaction Revenues

Marketplaces net transaction revenues decreased \$38 million, or 2%, while GMV decreased 2% during the three months ended June 30, 2015 compared to the same period in the prior year. The decrease in total net transaction revenues was driven primarily by a negative impact from foreign currency movements relative to the U.S. dollar. The Marketplaces transaction take rate was flat during the three months ended June 30, 2015 compared to the same period in the prior year.

Marketplaces net transaction revenues decreased \$93 million, or 3%, while GMV decreased 2% during the six months ended June 30, 2015 compared to the same period in the prior year. The decrease in total net transaction revenues and GMV was driven primarily by a negative impact from foreign currency movements relative to the U.S. dollar. The Marketplaces transaction take rate was lower during the six months ended June 30, 2015 compared to the same period in the prior year due to a shift in geographical and vertical mix to transactions with a lower take rate.

Marketplaces net transaction revenues earned internationally totaled \$943 million and \$1.9 billion during the three and six months ended June 30, 2015, respectively, representing 56% of total Marketplaces net transaction revenues during both those respective periods. Marketplaces net transaction revenues earned internationally totaled \$1.0 billion and \$2.0 billion during the three and six months ended June 30, 2014, respectively, representing 58% of total Marketplaces net transaction revenues during those respective periods.

Payments Net Transaction Revenues

Payments net transaction revenues increased \$265 million, or 15%, during the three months ended June 30, 2015 compared to the same period of the prior year, due primarily to an increase in Net TPV of 20% partially offset by a negative impact from foreign currency movements relative to the U.S. dollar. The growth in Payments net transaction revenues was lower than the growth in Net TPV due to a lower take rate. The increase in Net TPV was due primarily to growth in consumer and merchant use of PayPal and growth in volume through our Braintree products. The lower take rate was due primarily to a higher portion of Merchant Services volume. Merchant Services volume includes a higher concentration of Net TPV from larger merchants who generate higher volume at lower take rates. Additionally, Merchant Services volume includes Net TPV generated through our unbranded products such as Braintree where we generally earn lower take rates. We expect the concentration of Merchant Services volume to continue to increase.

Our Merchant Services Net TPV increased 27% during the three months ended June 30, 2015 compared to the same period of the prior year, and represented 78% of PayPal's Net TPV for the three months ended June 30, 2015 compared to 73% in the same period of the prior year. On eBay Net TPV decreased 1% during the three months ended June 30, 2015 compared to the same period of the prior year, and represented 22% of PayPal's Net TPV for the three months ended June 30, 2015 compared to 27% in the same period of the prior year.

Payments net transaction revenues increased \$505 million, or 15%, during the six months ended June 30, 2015 compared to the same period of the prior year, due primarily to an increase in Net TPV of 19% partially offset by a negative impact from foreign currency movements relative to the U.S. dollar. The growth in Payments net transaction revenues was lower than the growth in Net TPV due to a lower take rate. The increase in Net TPV was due primarily to growth in consumer and merchant

use of PayPal and growth in volume through our Braintree products. The lower take rate was due primarily to a higher portion of Merchant Services volume. Merchant Services volume includes a higher concentration of Net TPV from larger merchants who generate higher volume at lower take rates. Additionally, Merchant Services volume includes Net TPV generated through our unbranded products such as Braintree where we generally earn lower take rates. We expect the concentration of Merchant Services volume to continue to increase. Our Merchant Services Net TPV increased 27% during the six months ended June 30, 2015 compared to the same period of the prior year, and represented 77% of PayPal's Net TPV for the six months ended June 30, 2015 compared to 72% in the same period of the prior year. On eBay Net TPV decreased 1% during the six months ended June 30, 2015 compared to the same period of the prior year, and represented 23% of PayPal's Net TPV for the six months ended June 30, 2015 compared to 28% in the same period of the prior year.

Payments net transaction revenues earned internationally totaled \$1.1 billion and \$2.2 billion during the three and six months ended June 30, 2015, respectively, representing 55% and 56% of total Payments net transaction revenues during those respective periods. Payments net transaction revenues earned internationally totaled \$979 million and \$1.9 billion during the three and six months ended June 30, 2014, respectively, representing 56% of total Payments net transaction revenues during those respective periods.

Marketing Services and Other Revenues

Marketing services and other revenues decreased \$29 million, or 4%, during the three months ended June 30, 2015 compared to the same period of the prior year, and represented 16% of total net revenues during both of those periods. The decrease was driven primarily by a negative impact from foreign currency movements relative to the U.S. dollar. The decrease was offset by an increase due primarily to growth in our PayPal Credit portfolio of receivables from loans and a gain of \$30 million recognized on the sale of the participation interest of approximately \$710 million in a portion of our consumer receivables, as well as increased revenue from advertising.

Marketing services and other revenues decreased \$21 million, or 2%, during the six months ended June 30, 2015 compared to the same period of the prior year, and represented 15% of total net revenues during both of those periods. The decrease was driven primarily by a negative impact from foreign currency movements relative to the U.S. dollar. The decrease was partially offset by an increase due primarily to growth in our PayPal Credit portfolio of receivables from loans and a gain of \$30 million recognized on the sale of the participation interest of approximately \$710 million in a portion of our consumer receivables, as well as increased revenue from advertising.

Summary of Cost of Net Revenues

The following table summarizes changes in cost of net revenues for the periods presented:

	Three Months Ended June 30,		Change from 2014 to 2015		Six Months Ended June 30,		Change from 2014 to 2015		
	2015	2014	in Dollars	in %	2015	2014	in Dollars	in %	
(In millions, except percentages)									
Cost of net revenues:									
Marketplaces	\$435	\$421	\$14	3 %	\$854	\$825	\$29	4 %	
As a percentage of total Marketplaces net revenues	20.6	% 19.4	%		20.4	% 19.1	%		
Payments	911	762	149	20 %	1,731	1,506	225	15 %	
As a percentage of total Payments net	40.3	% 39.2	%		39.6	% 39.7	%		

Edgar Filing: EBAY INC - Form 10-Q

revenues												
Corporate and other	2	(2)	4	—	%	—	(1)	1	—	%
Total cost of net	\$1,348	\$1,181		\$167	14	%	\$2,585	\$2,330		\$255	11	%
revenues												
As a percentage of	30.8	%	28.8	%			30.2	%	28.8	%		
net revenues												

Cost of net revenues consists primarily of costs associated with payment processing, customer support, site operations, and fulfillment. Significant components of these costs include bank transaction fees, credit card interchange and assessment fees, interest expense on indebtedness incurred to finance the purchase of consumer loan receivables related to PayPal Credit accounts, employee compensation, contractor costs, facilities costs, depreciation of equipment and amortization expense.

For the three months ended June 30, 2015, foreign currency movements relative to the U.S. dollar positively impacted cost of net revenues by \$64 million (inclusive of a positive impact of approximately \$5 million from hedging activities). For the

three months ended June 30, 2015, foreign currency movements relative to the U.S. dollar positively impacted Marketplaces and Payments cost of net revenues by approximately \$25 million and \$44 million, respectively, and negatively impacted Corporate and other by \$5 million.

For the six months ended June 30, 2015, foreign currency movements relative to the U.S. dollar positively impacted cost of net revenues by \$123 million (inclusive of a positive impact of approximately \$11 million from hedging activities). For the six months ended June 30, 2015, foreign currency movements relative to the U.S. dollar positively impacted Marketplaces and Payments cost of net revenues by approximately \$49 million and \$84 million, respectively, and negatively impacted Corporate and other by \$10 million.

Marketplaces

Marketplaces cost of net revenues increased \$14 million and \$29 million, or 3% and 4%, during the three and six months ended June 30, 2015, compared to the same period of the prior year. The increase was due primarily to continued investment in our site operations and data centers offset by a favorable impact due to foreign currency movements relative to the U.S. dollar. Marketplaces cost of net revenues as a percentage of Marketplaces net revenues increased by 1.2 and 1.3 percentage points during the three and six months ended June 30, 2015, compared to the same period in the prior year.

Payments

Payments cost of net revenues increased \$149 million and \$225 million, or 20% and 15%, during the three and six months ended June 30, 2015, compared to the same period of the prior year. The increase was due primarily to the impact of growth in Net TPV offset in part by a favorable impact due to foreign currency movements relative to the U.S. dollar. Payments cost of net revenues as a percentage of Payments net revenues increased by 1.1 and decreased by 0.1 percentage points during the three and six months ended June 30, 2015, compared to the same period in the prior year.

Summary of Operating Expenses, Non-Operating Items and Provision for Income Taxes

The following table summarizes changes in operating expenses, non-operating items and provision for income taxes for the periods presented:

	Three Months Ended		Change from		Six Months Ended June		Change from		
	2015	2014	in Dollars	in %	2015	2014	in Dollars	in %	
	(In millions, except percentage changes)								
Sales and marketing	\$836	\$885	(49)	(6)%	\$1,600	\$1,661	(61)	(4)%

Edgar Filing: EBAY INC - Form 10-Q

The following table summarizes operating expenses, non-operating items and provision for income taxes as a percentage of net revenues for the periods presented:

	Three Months Ended June 30,		Six Months Ended June 30,		
	2015	2014	2015	2014	
Sales and marketing	19	% 22	% 19	% 21	%
Product development	11	% 11	% 11	% 11	%
General and administrative	16	% 11	% 15	% 11	%
Provision for transaction and loan losses	6	% 6	% 6	% 5	%
Amortization of acquired intangible assets	1	% 1	% 1	% 1	%
Interest and other, net	3	% —	% 2	% —	%
Provision for income taxes	4	% 4	% 4	% 41	%

For the three months ended June 30, 2015, foreign currency movements relative to the U.S. dollar positively impacted operating expenses by \$85 million (inclusive of a positive impact of approximately \$7 million from hedging activities). For the three months ended June 30, 2015, foreign currency movements relative to the U.S. dollar positively impacted Marketplaces, Payments and Corporate and other operating expenses by approximately \$49 million, \$34 million, and \$2 million, respectively.

For the six months ended June 30, 2015, foreign currency movements relative to the U.S. dollar positively impacted operating expenses by \$179 million (inclusive of a positive impact of approximately \$21 million from hedging activities). For the six months ended June 30, 2015, foreign currency movements relative to the U.S. dollar positively impacted Marketplaces, Payments and Corporate and other operating expenses by approximately \$110 million and \$68 million and \$1 million, respectively.

Sales and Marketing

Sales and marketing expenses consist primarily of advertising costs and marketing programs (both online and offline), employee compensation, contractor costs, facilities costs and depreciation on equipment. Online marketing expenses represent traffic acquisition costs in various channels such as paid search, affiliates marketing and display advertising. Offline advertising includes brand campaigns, buyer/seller communications and general public relations expenses.

Sales and marketing expenses decreased \$49 million, or 6%, during the three months ended June 30, 2015 compared to the same period of the prior year. The decrease in sales and marketing expense was due primarily to the impact from foreign currency movements relative to the U.S. dollar and employee-related savings from our global workforce reduction. Sales and marketing expense as a percentage of net revenues was 19% and 22%, respectively, for the three months ended June 30, 2015 and 2014.

Sales and marketing expenses decreased \$61 million, or 4%, during the six months ended June 30, 2015 compared to the same period of the prior year. The decrease in sales and marketing expense was due primarily to the impact from foreign currency movements relative to the U.S. dollar and employee-related savings from our global workforce reduction. Sales and marketing expense as a percentage of net revenues was 19% and 21%, respectively, for the six months ended June 30, 2015 and 2014.

Product Development

Product development expenses consist primarily of employee compensation, contractor costs, facilities costs and depreciation on equipment. Product development expenses are net of required capitalization of major site and other

product development efforts, including the development of our next generation platform architecture, migration of certain platforms, seller tools and Payments services projects. Our top technology priorities include mobile, user experience, search, platform and products.

Capitalized internal use and website development costs were \$107 million and \$195 million in the three and six months ended June 30, 2015 compared to \$87 million and \$161 million in the three and six months ended June 30, 2014 and are primarily reflected as a cost of net revenues when amortized in future periods.

Product development expenses increased \$17 million, or 4%, during the three months ended June 30, 2015 compared to the same period of the prior year due primarily to investments in our Payments platforms. Product development expenses as a percentage of net revenues were 11% for both the three months ended June 30, 2015 and 2014.

Product development expenses increased \$20 million, or 2%, during the six months ended June 30, 2015 compared to the same period of the prior year due primarily to higher employee-related costs and to investments in our Payments platforms. Product development expenses as a percentage of net revenues were 11% for both the six months ended June 30, 2015 and 2014.

General and Administrative

General and administrative expenses consist primarily of employee compensation, contractor costs, facilities costs, depreciation of equipment, employer payroll taxes on stock-based compensation, legal expenses, restructuring, insurance premiums and professional fees. Our legal expenses, including those related to various ongoing legal proceedings, may fluctuate substantially from period to period.

General and administrative expenses increased \$235 million, or 52%, during the three months ended June 30, 2015 compared to the same period of the prior year. The increase was due primarily to costs related to the separation of our PayPal business (as discussed in Overview above) and expenses related to craigslist, Inc. litigation proceedings. General and administrative expenses as a percentage of net revenues were 16% and 11% for the three months ended June 30, 2015 and 2014, respectively.

General and administrative expenses increased \$422 million, or 47%, during the six months ended June 30, 2015 compared to the same period of the prior year. The increase was due primarily to restructuring costs related to our global workforce reduction and costs related to our separation of our PayPal business (as discussed above). General and administrative expenses as a percentage of net revenues were 15% and 11% for the six months ended June 30, 2015 and 2014, respectively.

Provision for Transaction and Loan Losses

Provision for transaction and loan losses consists primarily of transaction loss expense associated with our customer protection programs, fraud and chargebacks; credit losses associated with our consumer and merchant loan receivables; and bad debt expense associated with our accounts receivable balance. We expect our provision for transaction and loan loss expense to fluctuate depending on many factors, including macroeconomic conditions, our customer protection programs and the impact of regulatory changes.

Provision for transaction and loan losses increased \$33 million and \$87 million, or 14% and 20%, during the three and six months ended June 30, 2015 compared to the same period of the prior year. Provision for transaction and loan losses as a percentage of net revenues was 6% for both the three months ended June 30, 2015 and 2014, and 6% and 5% for the six months ended June 30, 2015 and 2014, respectively.

Marketplaces provision for transaction losses decreased by \$10 million and \$4 million, or 14% and 3%, during the three and six months ended June 30, 2015, compared to the same period of the prior year. This decrease was driven primarily by increased expenses in 2014 that did not recur in 2015 related to additional enhanced customer protection measures as a result of the cyberattack that occurred in the second quarter of 2014, as well as enhancements in our fraud detection models.

Payments provision for transaction and loan losses increased by \$43 million and \$91 million, or 28% and 31%, during the three and six months ended June 30, 2015 compared to the same period of the prior year. This increase was due

primarily to higher transaction volume. The increase was also due to growth in our PayPal Credit portfolio of receivables from consumer loans. Modifications to our PayPal Credit acceptable risk parameters did not have a material impact on our provision for loan losses.

Amortization of Acquired Intangible Assets

From time to time we have purchased, and we expect to continue to purchase, assets and businesses. These purchase transactions generally result in the creation of acquired intangible assets with finite lives and lead to a corresponding increase in our amortization expense in periods subsequent to acquisition. We amortize intangible assets over the period of estimated benefit, using the straight-line method and estimated useful lives ranging from one to eight years. Amortization of acquired intangible assets is also impacted by our sales of assets and businesses and timing of acquired intangible assets becoming fully amortized. See "Note 5 - Goodwill and Intangible Assets" to our condensed consolidated financial statements included in this report.

Amortization of acquired intangible assets decreased by \$14 million and \$35 million, or 37% and 43%, during the three and six months ended June 30, 2015 compared to the same period of the prior year. The decrease was due to certain intangible assets becoming fully amortized during 2014.

Interest and Other, Net

Interest and other, net consists primarily of interest earned on cash, cash equivalents and investments, as well as foreign exchange transaction gains and losses, our portion of operating results from investments accounted for under the equity method of accounting, investment gain/loss on acquisitions and interest expense, consisting of interest charges on any amounts borrowed and commitment fees on unborrowed amounts under our credit agreement and interest expense on our outstanding debt securities and commercial paper, if any. Interest and other, net excludes interest expense on borrowings incurred to finance PayPal Credit's portfolio of loan receivables, which is included in cost of net revenues.

Interest and other, net increased \$116 million during the three months ended June 30, 2015 compared to the same period of the prior year. The increase in interest and other, net was due primarily to a gain on sale of investments partially offset by an unfavorable impact from foreign currency activity.

Interest and other, net increased \$130 million during the six months ended June 30, 2015 compared to the same period of the prior year. The increase in interest and other, net was due primarily to a gain on sale of investments partially offset by an unfavorable impact from foreign currency activity.

Provision for Income Taxes

Our effective tax rate was 21% for the three months ended June 30, 2015 compared to 17% for the same period in the prior year. The increase in our effective tax rate for the three months ended June 30, 2015 compared to the same period of the prior year was primarily related to gains on sale of investments and separation-related costs incurred in the second quarter of 2015.

Our effective tax rate was 19% for the six months ended June 30, 2015 compared to 188% for the same period in the prior year. The decrease in our effective tax rate for the six months ended June 30, 2015 compared to the same period in the prior year was due primarily to a first quarter 2014 accrual of approximately \$3.0 billion of U.S. income and applicable foreign withholding taxes on \$9.0 billion of undistributed foreign earnings of certain of our foreign subsidiaries for 2013 and prior years.

From time to time, we engage in certain intercompany transactions and legal entity restructurings. We consider many factors when evaluating these transactions, including the alignment of our corporate structure with our organizational objectives and the operational and tax efficiency of our corporate structure, as well as the long-term cash flows and cash needs of our different businesses. These transactions may impact our overall tax rate and/or result in additional

cash tax payments. The impact in any period may be significant. These transactions may be complex and the impact of such transactions on future periods may be difficult to estimate.

We are regularly under examination by tax authorities both domestically and internationally. We believe that adequate amounts have been reserved for any adjustments that may ultimately result from these examinations, although we can provide no assurances that this will be the case given the inherent uncertainties in these examinations. Due to the ongoing tax examinations, we believe it is impractical to determine the amount and timing of these adjustments.

Discontinued Operations

During the second quarter of 2015, our Board of Directors approved a plan to sell the businesses underlying our Enterprise segment. As a result, we have classified the results of our Enterprise segment as discontinued operations in our condensed consolidated statement of income for all periods presented. Additionally, the related assets and liabilities associated with the discontinued operations are classified as held for sale in our condensed consolidated balance sheet. On July 16, 2015, we signed a definitive agreement to sell these businesses and, subject to customary closing conditions, we expect to close this transaction in the second half of 2015. See "Note 4 - Discontinued Operations" to our condensed consolidated financial statements included in this report.

Liquidity and Capital Resources

Cash Flows

	Six Months Ended June 30,	
	2015	2014
	(In millions)	
Net cash provided by (used in):		
Operating activities	\$2,307	\$2,668
Investing activities	(2,420)	(1,129)
Financing activities	(978)	(2,238)
Effect of exchange rates on cash and cash equivalents	(250)	39
Net increase (decrease) in cash and cash equivalents	\$(1,341)	\$(660)

Operating Activities

The net cash provided by operating activities of \$2.3 billion in the six months ended June 30, 2015 was due primarily to net income of \$709 million with adjustments for loss from discontinued operations of \$644 million, \$634 million in depreciation and amortization, \$519 million in provision for transaction and loan losses, \$370 million in stock-based compensation and \$200 million from proceeds on sale of loans held for sale, and a decrease of \$196 million from purchases of loans held for sale, \$132 million gain on sale of investments and loans held for sale, \$28 million in deferred income taxes and \$418 million in changes in assets and liabilities, net of acquisition effects.

The net cash provided by operating activities of \$2.7 billion in the six months ended June 30, 2014 was due primarily to net loss of \$1.7 billion with adjustments for loss from discontinued operations of \$75 million, \$615 million in depreciation and amortization, \$432 million in provision for transaction and loan losses, \$307 million in stock-based compensation and \$3.0 billion in deferred income taxes, and a decrease of \$95 million in changes in assets and liabilities, net of acquisition effects.

Investing Activities

The net cash used in investing activities of \$2.4 billion in the six months ended June 30, 2015 was due primarily to cash paid for purchases of investments of \$6.1 billion, purchases of property and equipment of \$720 million and net cash paid for acquisition of businesses of \$273 million, partially offset by proceeds of \$4.4 billion from the maturities and sale of investments and \$714 million in proceeds from the sale of loans originated for investment.

The net cash used by investing activities of \$1.1 billion in the six months ended June 30, 2014 was due primarily to cash paid for the purchases of investments of \$3.6 billion partially offset by proceeds of \$3.3 billion from the maturities and sale of investments, as well as purchases of property and equipment of \$421 million.

Financing Activities

The net cash used in financing activities of \$978 million in the six months ended June 30, 2015 was due primarily to cash outflows \$1 billion to repurchase common stock and cash paid for tax withholdings in the amount of \$180 million related to net share settlements of restricted stock units and awards. These cash outflows were partially offset by cash inflows of \$146 million from the issuance of common stock in connection with the exercise of stock options and the effect of \$56 million of excess tax benefits from stock-based compensation.

The net cash used in financing activities of \$2.2 billion in the six months ended June 30, 2014 was due primarily to cash outflows of \$3.5 billion to repurchase common stock and cash paid for tax withholdings in the amount of \$210 million related to net share settlements of restricted stock units and awards. These cash outflows were partially offset by cash inflows from \$1.2 billion of net borrowings under our commercial paper program, \$154 million from the issuance of common stock in connection with the exercise of stock options and the effect of \$86 million of excess tax benefits from stock-based compensation.

The negative effect of exchange rate movements on cash and cash equivalents during the six months ended June 30, 2015 was due to the strengthening of the U.S. dollar against other currencies, primarily the Euro.

Stock Repurchases

In January 2014, our Board authorized a stock repurchase program that provided for the repurchase of up to an additional \$5 billion of our common stock, with no expiration from the date of authorization. In January 2015, our Board authorized an additional \$2 billion stock repurchase program, with no expiration from the date of authorization. The stock repurchase programs are intended to offset the impact of dilution from our equity compensation programs and, subject to market conditions and other factors, to make opportunistic repurchases of our common stock to reduce outstanding share count. Any share repurchases under our stock repurchase programs may be made through open market transactions, block trades, privately negotiated transactions (including accelerated share repurchase transactions) or other means at times and in such amounts as management deems appropriate and will be funded from our working capital or other financing alternatives.

During the six months ended June 30, 2015, we repurchased approximately \$1.0 billion of our common stock under our stock repurchase programs. As of June 30, 2015, a total of approximately \$2.0 billion remained available for future repurchases of our common stock under our January 2015 repurchase program. In July 2015, eBay Inc.'s board of directors authorized an additional \$1 billion stock repurchase program, with no expiration from the date of authorization. This new stock repurchase program, together with approximately \$2 billion remaining under our January 2015 stock repurchase program, brings the total repurchase authorization as of July 2015 to approximately \$3.0 billion.

We expect, subject to market conditions and other uncertainties, to continue making opportunistic repurchases of our common stock. However, our stock repurchase programs may be limited or terminated at any time without prior notice. The timing and actual number of shares repurchased will depend on a variety of factors including corporate and regulatory requirements, price and other market conditions and management's determination as to the appropriate use of our cash.

Shelf Registration Statement and Long-Term Debt

At June 30, 2015, we had an effective shelf registration statement on file with the Securities and Exchange Commission that allows us to issue various types of debt securities, as well as common stock, preferred stock, warrants, depositary shares representing fractional interest in shares of preferred stock, purchase contracts and units from time to time in one or more offerings. Each issuance under the shelf registration statement will require the filing of a prospectus supplement identifying the amount and terms of the securities to be issued. The registration statement does not limit the amount of securities that may be issued thereunder. Our ability to issue securities is subject to market conditions and other factors including, in the case of our debt securities, our credit ratings and compliance with the covenants in our credit agreement.

In July 2014, we issued \$3.5 billion of senior unsecured notes, or senior notes, in an underwritten public offering. These senior notes remain outstanding and consist of \$450 million aggregate principal amount of floating rate notes

due 2017, \$400 million aggregate principal amount of floating rate notes due 2019, \$1.15 billion aggregate principal amount of 2.2% fixed rate notes due 2019, \$750 million aggregate principal amount of 2.875% fixed rate notes due 2021 and \$750 million aggregate principal amount of 3.45% fixed rate notes due 2024. The net proceeds from the sale of these senior notes were used for general corporate purposes, including, among other things, the repayment of outstanding commercial paper borrowings.

To help achieve our interest rate risk management objectives, in connection with the July 2014 issuance of senior unsecured notes, we entered into interest rate swap agreements that effectively converted \$2.4 billion of those fixed rate notes to floating rate debt based on the London InterBank Offered Rate (LIBOR) plus a spread. These swaps were designated as fair value hedges against changes in the fair value of certain fixed rate senior notes resulting from changes in interest rates.

We previously issued senior notes in underwritten public offerings under prior registration statements, of which \$250 million aggregate principal amount of 0.70% notes due 2015, \$1.0 billion aggregate principal amount of 1.35% notes due 2017, \$1.0 billion aggregate principal amount of 2.60% notes due 2022, \$750 million aggregate principal amount of 4.00% notes due

2042, \$600 million aggregate principal amount of 1.625% notes due 2015 and \$500 million aggregate principal amount of 3.250% notes due 2020 remained outstanding as of June 30, 2015.

The indenture pursuant to which the senior notes were issued includes customary covenants that, among other things and subject to exceptions, limit our ability to incur, assume or guarantee debt secured by liens on specified assets or enter into sale and lease-back transactions with respect to specified properties, and also includes customary events of default.

Commercial Paper

We have a \$2 billion commercial paper program pursuant to which we may issue commercial paper notes with maturities of up to 397 days from the date of issue in an aggregate principal amount at maturity of up to \$2 billion at any time outstanding. As of June 30, 2015, there were no commercial paper notes outstanding. We have in the past used proceeds from the issuance of commercial paper notes for general corporate purposes, including funding share repurchases. We may elect, subject to market conditions, to issue additional commercial paper notes from time to time in the future.

Credit Agreement

As of June 30, 2015, no borrowings or letters of credit were outstanding under our \$3 billion credit agreement. As described above, we have an up to \$2 billion commercial paper program and maintain \$2 billion of available borrowing capacity under our credit agreement in order to repay commercial paper borrowings in the event we are unable to repay those borrowings from other sources when they become due. As a result, at June 30, 2015, \$1 billion of borrowing capacity was available for other purposes permitted by the credit agreement. The credit agreement contains customary representations, warranties, affirmative and negative covenants, including a financial covenant, events of default and indemnification provisions in favor of the banks. The negative covenants include restrictions regarding the incurrence of liens, subject to certain exceptions. The financial covenant requires us to meet a quarterly financial test with respect to a minimum consolidated interest coverage ratio.

Other Indebtedness

In addition to the debt described above, as of June 30, 2015, we had \$15 million of borrowings outstanding under our overdraft facilities.

We were in compliance with all covenants in our outstanding debt instruments for the three-month period ended June 30, 2015.

Credit Ratings

As of January 1, 2014, our long-term debt and short-term funding were rated investment grade by Standard and Poor's Financial Services, LLC (long-term rated A, short-term rated A-1, with a stable outlook), Moody's Investor Service (long-term rated A2, short-term rated P-1, with a stable outlook), and Fitch Ratings, Inc. (long-term rated A, short-term rated F-1, with a stable outlook). Following the September 2014 announcement of our planned separation of our PayPal business, Standard and Poor's Financial Services, LLC and Moody's Investor Service placed our long-term debt and short-term funding ratings under review with negative implications, while Fitch Ratings, Inc. downgraded our long-term debt from A to A- and short-term funding from F-1 to F-2, retaining our investment grade status, and placed the long-term rating under review with negative implications. As of April 1, 2015, Fitch Ratings, Inc. affirmed the short-term funding rating at F-2. We did not experience any material operational, funding, or liquidity impacts from this rating downgrade. As of July 20, 2015, we were rated investment grade by Standard and Poor's Financial Services, LLC (long-term rated BBB+, short-term rated A-2, with a stable outlook), Moody's Investor

Service (long-term rated Baa1, short-term rated P-2, with a stable outlook), and Fitch Ratings, Inc. (long-term rated BBB, short-term rated F-2, with a stable outlook). We disclose these ratings to enhance the understanding of our sources of liquidity and the effects of our ratings on our costs of funds. Our borrowing costs depend, in part, on our credit ratings and the actions already taken by these credit rating agencies as described above will likely increase, and any further downgrades would likely increase, our borrowing costs.

Commitments

As of June 30, 2015, approximately \$22.1 billion of unused credit was available to PayPal Credit accountholders. While this amount represents the total unused credit available, we have not experienced, and do not anticipate, that all of our PayPal Credit accountholders will access their entire available credit at any given point in time. In addition, the individual lines of credit that make up this unused credit are subject to periodic review and termination by the chartered financial institutions that

are the issuers of PayPal Credit products based on, among other things, account usage and customer creditworthiness. When a consumer makes a purchase using a PayPal Credit product, the chartered financial institution extends credit to the consumer, funds the extension of credit at the point of sale and advances funds to the merchant. We subsequently purchase the consumer receivables related to the consumer loans and as a result of that purchase, bear the risk of loss in the event of loan defaults. However, we subsequently sell a participation interest in the entire pool of consumer loans to the chartered financial institution that extended the consumer loans. Although the chartered financial institution continues to own the customer accounts, we own and bear the risk of loss on the related consumer receivables, less the participation interest held by the chartered financial institution, and PayPal Credit is responsible for all servicing functions related to the customer account balances. As of June 30, 2015, the total outstanding principal balance on this pool of consumer loans was \$3.1 billion, net of which the chartered financial institution owned a participation interest of \$876 million, or 22% of the total outstanding balance of the consumer loans as of that date.

Liquidity and Capital Resource Requirements

As of June 30, 2015 and December 31, 2014, we had assets classified as cash and cash equivalents, as well as short-term and long-term non-equity investments, in an aggregate amount of \$15.1 billion and \$14.6 billion, respectively. As of June 30, 2015, \$10.3 billion of our cash and cash equivalents, as well as short-term and long-term non-equity investments, was held by our non-U.S. subsidiaries. Of the \$10.3 billion held by our non-U.S. subsidiaries, approximately \$8.0 billion was available for use in the U.S. without incurring additional U.S. income taxes in excess of the amounts already accrued in our financial statements as of June 30, 2015. The remaining amount of non-U.S. cash and cash equivalents, as well as short-term and long-term non-equity investments, have been indefinitely reinvested and, therefore, no U.S. current or deferred taxes have been accrued as this amount is necessary to support our planned ongoing investments in our foreign operations. We believe our U.S. sources of cash and liquidity are sufficient to meet our business needs in the U.S., and we do not expect that we will need to repatriate the funds we have designated as indefinitely reinvested outside the U.S. Under current tax laws, should our plans change and we were to choose to repatriate some or all of the funds we have designated as indefinitely reinvested outside the U.S., such amounts would be subject to U.S. income taxes and applicable non-U.S. income and withholding taxes.

In connection with our separation of PayPal, we reviewed our capital allocation strategy to ensure that each of PayPal and eBay will be well capitalized at separation. As part of this strategy, we contributed approximately \$3.8 billion of cash to PayPal during the second quarter of 2015. This contribution consisted of approximately \$1.8 billion of domestic sources and \$2.0 billion of international sources.

In July 2015, PayPal, Inc. announced its agreement to acquire Xoom Corporation (NASDAQ:XOOM) for approximately \$890 million net of cash. This acquisition is expected to close in the fourth quarter of 2015, subject to customary closing conditions, including regulatory approvals. The cash used for this acquisition will be paid by PayPal, Inc.

We actively monitor all counterparties that hold our cash and cash equivalents and non-equity investments, focusing primarily on the safety of principal and secondarily on improving yield on these assets. We diversify our cash and cash equivalents and investments among various counterparties in order to reduce our exposure should any one of these counterparties fail or encounter difficulties. To date, we have not experienced any material loss or lack of access to our invested cash, cash equivalents or short-term investments; however, we can provide no assurances that access to our invested cash, cash equivalents or short-term investments will not be impacted by adverse conditions in the financial markets. At any point in time we have funds in our operating accounts and customer accounts that are deposited and invested with third party financial institutions.

We currently fund the expansion of the PayPal Credit portfolio of loan receivables with domestic and international cash resources and borrowings. To the extent that our PayPal Credit or other credit products become more widely available through improved and more comprehensive product integrations with eBay, PayPal and other channels, and as we further promote PayPal Credit or other credit products, customer adoption and usage of such products may expand. Any resulting growth in the portfolio of PayPal Credit or other loan receivables would increase our liquidity needs and any failure to meet those liquidity needs could adversely affect the PayPal Credit products. In May 2015, we concluded an arrangement with certain investors under which we sold a participation interest of approximately \$710 million in a portion of these consumer receivables, resulting in a gain of \$30 million. Comenity Capital Bank and these investors have no recourse against us related to their respective participation interests for failure of debtors to pay when due. The participation interest held by Comenity Capital Bank and these investors have the same priority to the interests held by us and are subject to the same credit, prepayment, and interest rate risk associated with the consumer receivables. We will continue to consider alternative sources of funding of our credit portfolio through our strategic and financial partners.

In June 2014, we agreed, subject to certain conditions, that PayPal, one of its affiliates or a third party partner will purchase a portfolio of consumer loan receivables relating to the customer accounts arising out of our current credit program agreement with Synchrony (formerly GE Capital Retail Bank) for a price based on the book value of the consumer loan receivables portfolio at the time of the purchase (expected to be October 2016), subject to certain adjustments and exclusions. As of December 31, 2014, Synchrony had a net receivables portfolio under the credit program agreement of approximately \$1.5 billion.

In January 2015, at a regular meeting of our Board of Directors (the “Board”), the Board approved a plan to implement a strategic reduction of our existing global workforce. As a result, we reduced our workforce globally. The reduction was completed in the first half of 2015. The savings expected to be realized as a result of the global workforce reduction are expected to be offset by additional expenses as we reinvest back into other areas of the business to drive additional growth. During the six months ended June 30, 2015, we recognized total restructuring expenses of approximately \$112 million for which approximately \$98 million was paid during the same period. Substantially all of the remaining accrued liability as of June 30, 2015 is expected to be paid during the third quarter of 2015.

We believe that our existing cash, cash equivalents and short-term and long-term investments, together with cash expected to be generated from operations, borrowings available under our credit agreement and commercial paper program, and our access to capital markets, will be sufficient to fund our operating activities, anticipated capital expenditures, PayPal Credit portfolio of loan receivables and stock repurchases for the foreseeable future.

Off-Balance Sheet Arrangements

As of June 30, 2015, we had no off-balance sheet arrangements that have, or are reasonably likely to have, a current or future material effect on our consolidated financial condition, results of operations, liquidity, capital expenditures or capital resources.

We have various cash pooling arrangements with financial institutions for cash management purposes. These arrangements allow for cash withdrawals from these financial institutions based upon our aggregate operating cash balances held within the same financial institution (“Aggregate Cash Deposits”). These arrangements also allow us to withdraw amounts exceeding the Aggregate Cash Deposits up to an agreed-upon limit. The net balance of the withdrawals and the Aggregate Cash Deposits are used by these financial institutions as a basis for calculating our net interest expense or income under these arrangements. As of June 30, 2015, we had a total of \$4.4 billion in cash withdrawals offsetting our \$4.4 billion in Aggregate Cash Deposits held within these financial institutions under these cash pooling arrangements.

Indemnification Provisions

In the ordinary course of business, we have included limited indemnification provisions in certain of our agreements with parties with which we have commercial relations, including our standard marketing, promotions and application-programming-interface license agreements. Under these contracts, we generally indemnify, hold harmless and agree to reimburse the indemnified party for losses suffered or incurred by the indemnified party in connection with claims by a third party with respect to our domain names, trademarks, logos and other branding elements to the extent that such marks are applicable to our performance under the subject agreement. In certain cases, we have agreed to provide indemnification for intellectual property infringement. It is not possible to determine the maximum potential loss under these indemnification provisions due to our limited history of prior indemnification claims and the unique facts and circumstances involved in each particular provision. To date, losses recorded in our consolidated statement of income in connection with our indemnification provisions have not been significant, either individually or collectively.

Item 3: Quantitative and Qualitative Disclosures About Market Risk

The information in this section should be read in connection with the information on financial market risk related to changes in interest rates and non-U.S. currency exchange rates in Part II, Item 7A, “Quantitative and Qualitative Disclosures About Market Risk,” in our Annual Report on Form 10-K for the year ended December 31, 2014. Our market risk profile has not changed significantly during the first six months of 2015.

Interest Rate Risk

We are exposed to interest rate risk relating to our investment portfolio and our outstanding debt. We seek to reduce earnings volatility that may result from changes in interest rates.

As of June 30, 2015, approximately 30% of our total cash and investment portfolio was held in cash and cash equivalents. As such, changes in interest rates will impact interest income. As discussed below, fixed rate securities may have their fair market value adversely affected due to a rise in interest rates, and we may suffer losses in principal if we are forced to sell securities that have declined in market value due to changes in interest rates.

As of December 31, 2013, 100% of the outstanding senior notes bore interest at fixed rates. In July 2014, we issued additional senior notes in an aggregate principal amount of \$3.5 billion comprised of \$850 million of floating rate notes and \$2.65 billion of fixed rate notes, as described in the “Shelf Registration Statement and Long-Term Debt” section of Management’s Discussion and Analysis of Financial Condition and Results of Operations (Item 2) in this Quarterly Report. In order to reduce volatility that may result from changes in interest rates, we entered into \$2.4 billion of interest rate swap agreements that have the economic effect of modifying the fixed interest obligations associated with \$1.15 billion of our 2.2% senior notes due July 2019, \$750 million of our 2.875% senior notes due July 2021, and \$500 million of our 3.450% senior notes due July 2024 so that the interest payable on those notes effectively became variable based on LIBOR plus a spread. Further changes in interest rates will impact interest expense on any borrowings under our revolving credit facility, which bear interest at floating rates, and the interest rate on any commercial paper borrowings we make and any debt securities we may issue in the future and, accordingly, will impact interest expense or cost of net revenues (or both).

As of June 30, 2015, we held no direct investments in auction rate securities, collateralized debt obligations, structured investment vehicles or mortgage-backed securities.

Investments in both fixed-rate and floating-rate interest-earning instruments carry varying degrees of interest rate risk. The fair market value of our fixed-rate investment securities may be adversely impacted due to a rise in interest rates. In general, fixed-rate securities with longer maturities are subject to greater interest-rate risk than those with shorter maturities. While floating-rate securities generally are subject to less interest rate risk than fixed-rate securities, floating-rate securities may produce less income than expected if interest rates decrease and may also suffer a decline in market value if interest rates increase. Due in part to these factors, our investment income may fall short of expectations or we may suffer losses in principal if we sell securities that have declined in market value due to changes in interest rates. As of June 30, 2015, the balance of our government bond and corporate debt securities portfolio was \$10.0 billion, which represented approximately 61% of our total cash and investment portfolio.

Investment Risk

The primary objective of our investment activities is to preserve principal while at the same time improving yields without significantly increasing risk. To achieve this objective, we maintain our portfolio of cash equivalents and short-term and long-term investments in a variety of asset types, including bank deposits, government bonds and corporate debt securities.

As of June 30, 2015, our cost and equity method investments totaled \$166 million, which represented approximately 1% of our total cash and investment portfolio, and were primarily related to equity method investments in privately held companies. We review our investments for impairment when events and circumstances indicate a decline in fair value of such assets below carrying value is other-than-temporary. Our analysis includes a review of recent operating results and trends, recent sales/acquisitions of the securities in which we have invested and other publicly available data.

Equity Price Risk

We are exposed to equity price risk on marketable equity instruments due to market volatility. As of June 30, 2015, the total fair value of our marketable equity instruments (primarily related to our equity holdings in MercadoLibre) was \$1.2 billion, which represented approximately 7% of our total cash and investment portfolio.

Foreign Currency Risk

We have significant operations internationally that are denominated in foreign currencies, primarily the Euro, British Pound, Korean Won and Australian Dollar, subjecting us to foreign currency risk which may adversely impact our financial results. We transact business in various foreign currencies and have significant international revenues as well as costs. In addition, we charge our international subsidiaries for their use of intellectual property and technology and for certain corporate services provided by eBay and by PayPal. Our cash flow, results of operations and certain of our intercompany balances that are exposed to foreign exchange rate fluctuations may differ materially from expectations and we may record significant gains or losses due to foreign currency fluctuations and related hedging activities.

We have a foreign exchange exposure management program designed to identify material foreign currency exposures, manage these exposures and reduce the potential effects of currency fluctuations on our reported consolidated cash flows and results of operations through the purchase of foreign currency exchange contracts. These foreign currency exchange contracts are accounted for as derivative instruments; for additional details related to our derivative instruments, please see “Note 9 – Derivative Instruments” to the condensed consolidated financial statements included in this report.

We use foreign exchange derivative contracts to protect our forecasted U.S. dollar-equivalent earnings from adverse changes in foreign currency exchange rates. These hedging contracts reduce, but do not entirely eliminate, the impact of adverse currency exchange rate movements. Most of these contracts are designated as cash flow hedges for accounting purposes. For qualifying cash flow hedges, the effective portion of the derivative’s gain or loss is initially reported as a component of accumulated other comprehensive income (AOCI) and subsequently reclassified into revenue in the same period the forecasted transaction affects earnings. The ineffective portion of the unrealized gains and losses on these contracts, if any, is recorded immediately in earnings. For contracts not designated as cash flow hedges for accounting purposes, the derivative's gain or loss is recognized immediately in Interest and other, net, in our condensed consolidate statement of income.

We considered the historical trends in currency exchange rates and determined that it was reasonably possible that changes in exchange rates of 20% for all currencies could be experienced in the near term. If the U.S. dollar weakened by 20% at June 30, 2015, the amount recorded in AOCI related to our foreign exchange derivative contracts qualifying as cash flow hedges, before tax effect, would have been approximately \$424 million lower. The amount recorded in Interest and other, net related to our foreign exchange derivative contracts not qualifying as cash flow hedges would have been approximately \$3 million lower. If the U.S. dollar strengthened by 20% at June 30, 2015, the amount recorded in AOCI related to our foreign exchange derivative contracts qualifying as cash flow hedges, before tax effect, would have been approximately \$424 million higher. The amount recorded in Interest and other, net related to our foreign exchange derivative contracts not qualifying as cash flow hedges would have been approximately \$108 million higher.

In addition, we use foreign exchange contracts to offset the foreign exchange risk on our assets and liabilities denominated in currencies other than the functional currency of our subsidiaries. These contracts reduce, but do not entirely eliminate, the impact of currency exchange rate movements on our assets and liabilities. The foreign currency gains and losses on the assets and liabilities are recorded in Interest and other, net, which are offset by the gains and losses on the foreign exchange contracts.

We considered the historical trends in currency exchange rates and determined that it was reasonably possible that adverse changes in exchange rates of 20% for all currencies could be experienced in the near term. These changes would have resulted in an adverse impact on income before income taxes of approximately \$50 million at June 30, 2015 without considering the offsetting effect of hedging. Foreign exchange forwards in place as of June 30, 2015 would have resulted in an offsetting effect of approximately \$43 million, resulting in a net positive impact of approximately \$7 million. These reasonably possible adverse changes in exchange rates of 20% were applied to total monetary assets and liabilities denominated in currencies other than the functional currencies of our subsidiaries at the balance sheet dates to compute the adverse impact these changes would have had on our income before income taxes in the near term.

European Debt Exposures

We actively monitor our exposure to the European markets, including the impact of sovereign debt issues associated with Cyprus, Greece, Ireland, Italy, Portugal and Spain. As of June 30, 2015, we did not have any direct investments in the sovereign debt of these countries or in debt securities issued by corporations or financial institutions organized

in these countries. We maintain a small number of operating bank accounts with local and foreign banks in the aforementioned countries that have balances that we do not consider material.

Item 4: Controls and Procedures

(a) Evaluation of disclosure controls and procedures. Based on the evaluation of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e)) under the Securities Exchange Act of 1934) required by Rules 13a-15(b) or 15d-15(b) under the Securities Exchange Act of 1934, our Chief Executive Officer and our Chief Financial Officer have concluded that as of the end of the period covered by this report, our disclosure controls and procedures were effective.

(b) Changes in internal controls. There were no changes in our internal control over financial reporting that occurred during the period covered by this report that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II: OTHER INFORMATION

Item 1: Legal Proceedings

The information set forth under “Note 11 — Commitments and Contingencies — Litigation and Other Legal Matters” to the condensed consolidated financial statements included in Part I, Item 1 of this report is incorporated herein by reference.

Item 1A: Risk Factors

You should carefully review the following discussion of the risks that may affect our business, results of operations and financial condition, as well as our consolidated financial statements and notes thereto and the other information appearing in this report, for important information regarding risks that affect us.

Risk Factors That May Affect our Business, Results of Operations and Financial Condition

Our operating and financial results are subject to various risks and uncertainties that could adversely affect our business, financial condition, results of operations and cash flows, as well as the trading price of our common stock and debt securities.

Our operating and financial results have varied on a quarterly basis during our operating history and may continue to fluctuate significantly as a result of a variety of factors, including as a result of the risks set forth in this “Risk Factors” section. It is difficult for us to forecast the level or source of our revenues or earnings (loss) accurately. In view of the rapidly evolving nature of our business, period-to-period comparisons of our operating results may not be meaningful, and you should not rely upon them as an indication of future performance. We do not have backlog, and substantially all of our net revenues each quarter come from transactions involving sales during that quarter. Due to the inherent difficulty in forecasting revenues, it is also difficult to forecast expenses as a percentage of net revenues. Quarterly and annual expenses as a percentage of net revenues reflected in our consolidated financial statements may be significantly different from historical or projected rates. Our operating results in one or more future quarters may fall below the expectations of securities analysts and investors. The trading price of our common stock and debt securities could decline, perhaps substantially, as a result of the factors described in this paragraph.

Substantial and increasingly intense competition worldwide in the ecommerce may harm our business.

We currently and potentially compete with a wide variety of online and offline companies providing goods and services to consumers and merchants. The Internet and mobile networks provide new, rapidly evolving and intensely competitive channels for the sale of all types of goods and services. We compete in two-sided markets, and must attract both buyers and sellers to use our platforms. Consumers who purchase or sell goods and services through us have more and more alternatives, and merchants have more channels to reach consumers. We expect competition to continue to intensify. Online and offline businesses increasingly are competing with each other and our competitors include a number of online and offline retailers with significant resources and well-established brands. Moreover, the barriers to entry into these channels can be low, and businesses easily can launch online sites or mobile platforms and applications at nominal cost by using commercially available software or partnering with any of a number of successful ecommerce companies. As we respond to changes in the competitive environment, we may, from time to time, make pricing, service or marketing decisions or acquisitions that may be controversial with and lead to dissatisfaction among sellers, which could reduce activity on our websites and harm its profitability.

We face increased competitive pressure online and offline. In particular, the competitive norm for, and the expected level of service from, ecommerce and mobile commerce has significantly increased, due to, among other factors, improved user experience, greater ease of buying goods, lower (or no) shipping costs, faster shipping times and more favorable return policies. Also, certain platform businesses, such as Alibaba, Apple, Google and Facebook, many of whom are larger than us or have greater capitalization, have a dominant and secure position in other industries or certain significant markets, and offer other goods and services to consumers and merchants that we do not offer. If we are unable to change our products, offerings and services in ways that reflect the changing demands of the ecommerce and mobile commerce marketplaces, particularly the higher growth of sales of fixed-price items and higher expected service levels (some of which depend on services provided by sellers on our platforms), or compete effectively with and adapt to changes in larger platform businesses, our business will suffer.

Competitors with other revenue sources may also be able to devote more resources to marketing and promotional campaigns, adopt more aggressive pricing policies and devote more resources to website, mobile platforms and applications

and systems development than we can. Other competitors may offer or continue to offer faster and/or free shipping, delivery on Sunday, same-day delivery, favorable return policies or other transaction-related services which improve the user experience on their sites and which could be impractical or inefficient for our sellers to match. Competitors may be able to innovate faster and more efficiently, and new technologies may increase the competitive pressures by enabling competitors to offer more efficient or lower-cost services.

Some of our competitors control other products and services that are important to our success, including credit card interchange, Internet search, and mobile operating systems. Such competitors could manipulate pricing, availability, terms or operation of service related to their products and services in a manner that impacts our competitive offerings. For example, Google, which operates a shopping platform service, has from time to time made changes to its search algorithms that reduced the amount of search traffic directed to us from searches on Google. If we are unable to use or adapt to operational changes in such services, we may face higher costs for such services, or face integration or technological barriers, it could raise our costs and our business will suffer.

Consumers who might use our sites to buy goods have a wide variety of alternatives, including traditional department, warehouse, boutique, discount and general merchandise stores (as well as the online and mobile operations of these traditional retailers), online retailers and their related mobile offerings, online and offline classified services and other shopping channels, such as offline and online home shopping networks. In the United States, these include Amazon.com (which recently opened an experimental brick-and-mortar store in New York City and continues to expand into new geographies and lines of business), Google, Wal-Mart, Target, Sears, Macy's, JC Penney, Costco, Office Depot, Staples, OfficeMax, Sam's Club, Buy.com (owned by Rakuten), Yahoo! Shopping, MSN, QVC and Home Shopping Network, among others. In addition, consumers have a large number of online and offline channels focused on one or more of the categories of products offered on our site.

Consumers also can turn to many companies that offer a variety of services that provide other channels for buyers to find and buy items from sellers of all sizes, including online aggregation and classifieds websites, such as craigslist, Oodle.com and a number of international websites operated by Schibsted ASA or Naspers Limited. Consumers also can turn to shopping-comparison sites, such as Google Shopping. In certain markets, our fixed-price listing and traditional auction-style listing formats increasingly are being challenged by other formats, such as classifieds.

Our classifieds websites offer classifieds listings in the United States and a variety of local international markets. In many markets in which they operate, including in the United States, these classifieds platforms compete for customers and for advertisers against more established online and offline classifieds platforms.

Our online shopping comparison websites (Shopping.com) compete with sites such as Google Shopping, Buy.com, Nextag.com, Pricegrabber.com, Shopzilla, Buscapé in Latin America (owned by Naspers) and Yahoo! Product Search, which offer shopping search engines that allow consumers to search the Internet for specified products. In addition, sellers are increasingly utilizing multiple sales channels, including the acquisition of new customers by paying for search-related advertisements on horizontal search engine sites, such as Google, Yahoo!, Naver and Baidu. We use product search engines and paid search advertising to help users find our sites, but these services also have the potential to divert users to other online shopping destinations. Consumers may choose to search for products and services with a horizontal search engine or shopping comparison website, and such sites may also send users to other shopping destinations.

Consumers and merchants who might use our sites to sell goods also have many alternatives, including general online ecommerce sites, such as Amazon and Alibaba, and more specialized sites, such as Etsy. Our international sites also compete for sellers with general and specialized online ecommerce sites. Sellers may also choose to sell their goods through other channels, such as classifieds sites. Consumers and merchants also can create and sell through their own sites, and may choose to purchase online advertising instead of using our services. In some countries, there are online

sites that have larger customer bases and greater brand recognition, as well as competitors that may have a better understanding of local culture and commerce. We increasingly may compete with local competitors in developing countries that have unique advantages, such as a greater ability to operate under local regulatory authorities.

In addition, certain manufacturers may limit or cease distribution of their products through online channels, such as our sites. Manufacturers may attempt to use contractual obligations or existing or future government regulation to prohibit or limit ecommerce in certain categories of goods or services. Manufacturers may also attempt to enforce minimum resale price maintenance or minimum advertised price arrangements to prevent distributors from selling on our websites or on the Internet generally, or at prices that would make us less attractive relative to other alternatives. The adoption by manufacturers of policies, or their use of laws or regulations, in each case discouraging or restricting the sales of goods or services over the Internet, could force our users to stop selling certain products on our websites, which could result in reduced operating margins, loss of market share and diminished value of our brands.

The principal competitive factors for us include the following:

- ability to attract, retain and engage buyers and sellers and user engagement;
- volume of transactions and price and selection of goods;
- trust in the seller and the transaction;
- customer service;
- brand recognition;
- community cohesion, interaction and size;
- website, mobile platform and application ease-of-use and accessibility;
- system reliability;
- reliability of delivery and payment, including customer preference for fast delivery and free shipping and returns;
 - level of service fees;
 - and
- quality of search tools.

We may be unable to compete successfully against current and future competitors. Some current and potential competitors have longer operating histories, larger customer bases and greater brand recognition in other business and Internet sectors than we do.

Global and regional economic conditions could harm our business.

Our operations and performance depend significantly on global and regional economic conditions. Adverse economic conditions and events (including volatility or distress in the equity and/or debt or credit markets) have in the past negatively impacted regional and global financial markets and will likely continue to do so from time to time in the future. Uncertainties relating to the ability of Greece to remain in the European Monetary Union may adversely impact the economy of the European Union, which is an important market in which we do business. These events and conditions could have a negative and adverse impact on companies and customers with which we do business. In addition, financial turmoil affecting the banking system or financial markets could cause additional consolidation of the financial services industry, or significant financial service institution failures, new or incremental tightening in the credit markets, low liquidity, and extreme volatility in fixed income, credit, currency, and equity markets. Adverse impacts to the companies and customers with which we do business, the banking system, or financial markets could have a material adverse effect on our business, including a reduction in the volume and prices of transactions on our commerce platforms.

We are exposed to fluctuations in foreign currency exchange rates.

Because we generate the majority of our revenues outside the United States but report our financial results in U.S. dollars, our financial results are impacted by fluctuations in foreign currency exchange rates, or foreign exchange rates. The results of operations of many of our internationally focused websites are exposed to foreign exchange rate fluctuations as the financial results of the applicable subsidiaries are translated from the local currency into U.S. dollars for financial reporting purposes. If the U.S. dollar weakens against foreign currencies, the translation of these foreign currency denominated revenues or expenses will result in increased U.S. dollar denominated revenues and expenses. Similarly, if the U.S. dollar strengthens against foreign currencies, particularly the Euro, British pound, Korean won, Australian dollar, or Canadian dollar, our translation of foreign currency denominated revenues or expenses will result in lower U.S. dollar denominated net revenues and expenses. In addition to this translation effect, a strengthening U.S. dollar will typically adversely affect the volume of goods being sold by U.S. sellers to Europe, Australia and Canada more than it positively affects the volume of goods being sold by sellers in those geographies to buyers in the United States, thereby further negatively impacting our financial results.

While from time to time we enter into transactions to hedge portions of our foreign currency translation exposure, it is impossible to predict or eliminate the effects of this exposure. Fluctuations in foreign exchange rates could significantly impact our financial results, which may have a significant impact on the trading price of our common stock and debt securities.

Our international operations are subject to increased risks, which could harm our business.

Our international businesses, especially in the United Kingdom, Germany, Australia and Korea, and cross-border business from greater China, have generated a majority of our net revenues in recent years. In addition to uncertainty about our ability to generate revenues from our foreign operations and expand into international markets, there are risks inherent in doing business internationally, including:

• expenses associated with localizing our products and services and customer data, including offering customers the

ability to transact business in the local currency and adapting our products and services to local preferences (e.g., payment methods) with which we may have limited or no experience;

- trade barriers and changes in trade regulations;
- difficulties in developing, staffing, and simultaneously managing a large number of varying foreign operations as a result of distance, language, and cultural differences;
- stringent local labor laws and regulations;
- credit risk and higher levels of payment fraud;
- profit repatriation restrictions, foreign currency exchange restrictions or extreme fluctuations in foreign currency exchange rates for a particular currency;
- political or social unrest, economic instability, repression, or human rights issues;
- geopolitical events, including natural disasters, public health issues, acts of war, and terrorism;
- import or export regulations;
- compliance with U.S. laws such as the Foreign Corrupt Practices Act, and foreign laws prohibiting corrupt payments to government officials, as well as U.S. and foreign laws designed to combat money laundering and the financing of terrorist activities;
- antitrust and competition regulations;
- potentially adverse tax developments and consequences;
- economic uncertainties relating to sovereign and other debt;
- different, uncertain, or more stringent user protection, data protection, privacy, and other laws;
- risks related to other government regulation or required compliance with local laws;
- national or regional differences in macroeconomic growth rates;
- local licensing and reporting obligations; and
- increased difficulties in collecting accounts receivable.

Violations of the complex foreign and U.S. laws and regulations that apply to our international operations may result in fines, criminal actions, or sanctions against us, our officers, or our employees; prohibitions on the conduct of our business; and damage to our reputation. Although we have implemented policies and procedures designed to promote compliance with these laws, there can be no assurance that our employees, contractors, or agents will not violate our policies. These risks inherent in our international operations and expansion increase our costs of doing business internationally and could harm our business.

Any factors that reduce cross-border trade or make such trade more difficult could harm our business.

Cross-border trade is an important source of both revenue and profits for us. Cross-border transactions generally provide higher revenues and gross margins than similar transactions that take place within a single country or market. Cross-border trade also represents our primary (or in some cases, only) presence in certain important markets, such as Brazil/Latin America, China, and various other countries. In addition, our cross-border trade is also subject to, and may be impacted by, foreign exchange rate fluctuations.

The interpretation and application of specific national or regional laws, such as those related to intellectual property rights of authentic products, selective distribution networks, and sellers in other countries listing items on the Internet, and the potential interpretation and application of laws of multiple jurisdictions (e.g., the jurisdiction of the buyer, the seller, and/or the location of the item being sold) are often extremely complicated in the context of cross-border trade. The interpretation and/or application of such laws could impose restrictions on, or increase the costs of, purchasing, selling, shipping, or returning goods across national borders.

The shipping of goods across national borders is often more expensive and complicated than domestic shipping. Customs and duty procedures and reviews, including duty-free thresholds in various key markets, the interaction of national postal systems, and security related governmental processes at international borders, may increase costs,

discourage cross-border purchases, delay transit and create shipping uncertainties. Any factors that increase the costs of cross-border trade or restrict, delay, or make cross-border trade more difficult or impractical would lower our revenues and profits and could harm our business.

Our business may be adversely affected by geopolitical events, natural disasters, seasonal factors and other factors that cause our users to spend less time on our websites or mobile platforms and applications, including increased usage of other websites.

Our users may spend less time on our websites and our applications for mobile devices as a result of a variety of diversions, including: geopolitical events, such as war, the threat of war, or terrorist activity; natural disasters; power shortages or outages, major public health issues, including pandemics; social networking or other entertainment websites or mobile

applications; significant local, national or global events capturing the attention of a large part of the population; and seasonal fluctuations due to a variety of factors. If any of these, or any other factors, divert our users from using of our websites or mobile applications, our business could be materially adversely affected.

The separation may not achieve some or all of the anticipated benefits and may adversely affect our business.

We may not realize some or all of the anticipated benefits from the separation and the separation may in fact adversely affect our business. As independent, publicly traded companies, eBay and PayPal will be smaller, less diversified companies with a narrower business focus and may be more vulnerable to changing market conditions, which could materially and adversely affect their respective businesses, financial condition and results of operations. Separating the businesses may also eliminate or reduce synergies that existed prior to the separation, which could harm each business.

There can be no assurance that the combined value of the common stock of the two publicly-traded companies following the completion of the proposed separation will be equal to or greater than what the value of our common stock would have been had the proposed separation not occurred.

Our success depends to a large degree on our ability to successfully address the rapidly evolving market for transactions on mobile devices.

Mobile devices are increasingly used for ecommerce transactions. A significant and growing portion of our users access our platforms through mobile devices. We may lose users if we are not able to continue to meet our users' mobile and multi-screen experience expectations. The variety of technical and other configurations across different mobile devices and platforms increases the challenges associated with this environment. In addition, a number of other companies with significant resources and a number of innovative startups have introduced products and services focusing on mobile markets.

Our ability to successfully address the challenges posed by the rapidly evolving market for mobile transactions is crucial to our continued success, and any failure to continuously increase the volume of mobile transactions effected through our platforms could harm our business.

If we cannot keep pace with rapid technological developments to provide new and innovative programs, products and services, the use of our products and our revenues could decline.

Rapid, significant technological changes continue to confront the industries in which we operate. We cannot predict the effect of technological changes on our business. In addition to our own initiatives and innovations, we rely in part on third parties, including some of our competitors, for the development of and access to new technologies. We expect that new services and technologies applicable to the industries in which we operate will continue to emerge. These new services and technologies may be superior to, or render obsolete, the technologies we currently use in our products and services. Incorporating new technologies into our products and services may require substantial expenditures and take considerable time, and ultimately may not be successful. In addition, our ability to adopt new services and develop new technologies may be inhibited by industry-wide standards, new laws and regulations, resistance to change from clients or merchants, or third parties' intellectual property rights. Our success will depend on our ability to develop new technologies and adapt to technological changes and evolving industry standards.

Our business is subject to extensive government regulation and oversight.

We are subject to laws and regulations affecting our domestic and international operations in a number of areas, including consumer protection, data privacy requirements, intellectual property ownership and infringement,

prohibited items and stolen goods, resale of event tickets, tax, anti-competition, export requirements, anti-corruption, labor, advertising, digital content, real estate, billing, ecommerce, promotions, quality of services, telecommunications, mobile communications and media, environmental, and health and safety regulations, as well as laws and regulations intended to combat money laundering and the financing of terrorist activities.

Compliance with these laws, regulations, and similar requirements may be onerous and expensive, and variances and inconsistencies from jurisdiction to jurisdiction may further increase the cost of compliance and doing business. Any such costs, which may rise in the future as a result of changes in these laws and regulations or in their interpretation, could individually or in the aggregate make our products and services less attractive to our customers, delay the introduction of new products or services in one or more regions, or cause us to change or limit our business practices. We have implemented policies and procedures designed to ensure compliance with applicable laws and regulations, but there can be no assurance that our employees, contractors, or agents will not violate such laws and regulations or our policies and procedures.

Regulation in the areas of privacy and protection of user data could harm our business.

We are subject to laws relating to the collection, use, retention, security, and transfer of personally identifiable information about our users around the world. Much of the personal information that we collect, especially financial information, is regulated by multiple laws. User data protection laws may be interpreted and applied inconsistently from country to country. In many cases, these laws apply not only to third-party transactions, but also to transfers of information between or among ourselves, our subsidiaries, and other parties with which we have commercial relations. These laws continue to develop in ways we cannot predict and that may harm our business.

Regulatory scrutiny of privacy, user data protection, use of data and data collection is increasing on a global basis. We are subject to a number of privacy and similar laws and regulations in the countries in which we operate and these laws and regulations will likely continue to evolve over time, both through regulatory and legislative action and judicial decisions. Some of these laws impose requirements that are inconsistent with one another, yet regulators may claim that both apply. Complying with these varying national requirements could cause us to incur substantial costs or require us to change our business practices in a manner adverse to our business and violations of privacy-related laws can result in significant penalties. In addition, compliance with these laws may restrict our ability to provide services to our customers that they may find to be valuable. A determination that there have been violations of laws relating to our practices under communications-based laws could expose us to significant damage awards, fines and other penalties that could, individually or in the aggregate, materially harm our business. In particular, because of the enormous number of texts, emails and other communications we send to our users, communications laws that provide a specified monetary damage award or fine for each violation (such as those described below) could result in particularly large awards or fines.

For example, the Federal Communications Commission amended certain of its regulations under the Telephone Consumer Protection Act, or TCPA, in 2012 and 2013 in a manner that could increase our exposure to liability for certain types of telephonic communication with customers, including but not limited to text messages to mobile phones. Under the TCPA, plaintiffs may seek actual monetary loss or statutory damages of \$500 per violation, whichever is greater, and courts may treble the damage award for willful or knowing violations. We are regularly subject to class-action lawsuits, as well as individual lawsuits, containing allegations that our businesses violated the TCPA. These lawsuits, and other private lawsuits not currently alleged as class actions, seek damages (including statutory damages) and injunctive relief, among other remedies. Given the enormous number of communications we send to our users, a determination that there have been violations of the TCPA or other communications-based statutes could expose us to significant damage awards that could, individually or in the aggregate, materially harm our business.

We post on our websites our privacy policies and practices concerning the collection, use and disclosure of user data. Any failure, or perceived failure, by us to comply with our posted privacy policies or with any regulatory requirements or orders or other federal, state or international privacy or consumer protection-related laws and regulations could result in proceedings or actions against us by governmental entities or others (e.g., class action privacy litigation), subject us to significant penalties and negative publicity, require us to change our business practices, increase our costs and adversely affect our business. Data collection, privacy and security have become the subject of increasing public concern. If Internet and mobile users were to reduce their use of our websites, mobile platforms, products, and services as a result of these concerns, our business could be harmed. As noted above, we are also subject to the possibility of security breaches, which themselves may result in a violation of these laws.

Other laws and regulations could harm our business.

It is not always clear how laws and regulations governing matters relevant to our business, such as property ownership, copyrights, trademarks, and other intellectual property issues, parallel imports and distribution controls, taxation, libel and defamation, and obscenity apply to our businesses. Many of these laws were adopted prior to the advent of the Internet, mobile, and related technologies and, as a result, do not contemplate or address the unique issues of the Internet and related technologies. Many of these laws, including some of those that do reference the Internet are subject to interpretation by the courts on an ongoing basis and the resulting uncertainty in the scope and application of these laws and regulations increases the risk that we will be subject to private claims and governmental actions alleging violations of those laws and regulations.

As our activities, the products and services we offer, and our geographical scope continue to expand, regulatory agencies or courts may claim or hold that we or our users are subject to additional requirements (including licensure) or prohibited from conducting our business in their jurisdiction, either generally or with respect to certain actions. Financial and political events have increased the level of regulatory scrutiny on large companies, and regulatory agencies may view matters or interpret laws and regulations differently than they have in the past and in a manner adverse to our businesses. Our success and increased

visibility have driven some existing businesses that perceive us to be a threat to their businesses to raise concerns about our business models to policymakers and regulators. These businesses and their trade association groups employ significant resources in their efforts to shape the legal and regulatory regimes in countries where we have significant operations. They may employ these resources in an effort to change the legal and regulatory regimes in ways intended to reduce the effectiveness of our businesses and the ability of users to use our products and services. These established businesses have raised concerns relating to pricing, parallel imports, professional seller obligations, selective distribution networks, stolen goods, copyrights, trademarks and other intellectual property rights and the liability of the provider of an Internet marketplace for the conduct of its users related to those and other issues. Any changes to the legal or regulatory regimes in a manner that would increase our liability for third-party listings could negatively impact our business.

Numerous U.S. states and foreign jurisdictions, including the State of California, have regulations regarding “auctions” and the handling of property by “secondhand dealers” or “pawnbrokers.” Several states and some foreign jurisdictions have attempted to impose such regulations upon us or our users, and others may attempt to do so in the future. Attempted enforcement of these laws against some of our users appears to be increasing and we could be required to change the way we or our users do business in ways that increase costs or reduce revenues, such as forcing us to prohibit listings of certain items or restrict certain listing formats in some locations. We could also be subject to fines or other penalties, and any of these outcomes could harm our business.

A number of the lawsuits against us relating to trademark issues seek to have our websites subject to unfavorable local laws. For example, “trademark exhaustion” principles provide trademark owners with certain rights to control the sale of a branded authentic product until it has been placed on the market by the trademark holder or with the holder’s consent. The application of “trademark exhaustion” principles is largely unsettled in the context of the Internet, and if trademark owners are able to force us to prohibit listings of certain items in one or more locations, our business could be harmed.

As we expand and localize our international activities, we are increasingly becoming obligated to comply with the laws of the countries or markets in which we operate. In addition, because our services are accessible worldwide and we facilitate sales of goods and provide services to users worldwide, one or more jurisdictions may claim that we or our users are required to comply with their laws based on the location of our servers or one or more of our users, or the location of the product or service being sold or provided in an ecommerce transaction. For example, we were found liable in France, under French law, for transactions on some of our websites worldwide that did not involve French buyers or sellers. Laws regulating Internet, mobile and ecommerce technologies outside of the United States are generally less favorable to us than those in the United States. Compliance may be more costly or may require us to change our business practices or restrict our service offerings, and the imposition of any regulations on us or our users may harm our business. In addition, we may be subject to multiple overlapping legal or regulatory regimes that impose conflicting requirements on us (e.g., in cross-border trade). Our alleged failure to comply with foreign laws could subject us to penalties ranging from criminal prosecution to significant fines to bans on our services, in addition to the significant costs we may incur in defending against such actions.

We are regularly subject to general litigation, regulatory disputes, and government inquiries.

We are regularly subject to claims, lawsuits (including class actions and individual lawsuits), government investigations, and other proceedings involving competition and antitrust, intellectual property, privacy, consumer protection, accessibility claims, securities, tax, labor and employment, commercial disputes, content generated by our users, services and other matters. The number and significance of these disputes and inquiries have increased as our company has grown larger, our businesses have expanded in scope and geographic reach, and our products and services have increased in complexity.

The outcome and impact of such claims, lawsuits, government investigations, and proceedings cannot be predicted with certainty. Regardless of the outcome, such investigations and proceedings can have an adverse impact on us because of legal costs, diversion of management resources, and other factors. Determining reserves for our pending litigation is a complex, fact-intensive process that is subject to judgment calls. It is possible that a resolution of one or more such proceedings could require us to make substantial payments to satisfy judgments, fines or penalties or to settle claims or proceedings, any of which could harm our business. These proceedings could also result in reputational harm, criminal sanctions, consent decrees, or orders preventing us from offering certain products, or services, or requiring a change in our business practices in costly ways, or requiring development of non-infringing or otherwise altered products or technologies. Any of these consequences could harm our business.

We are subject to regulatory activity and antitrust litigation under competition laws.

We are subject to scrutiny by various government agencies under U.S. and foreign laws and regulations, including competition laws. Some jurisdictions also provide private rights of action for competitors or consumers to assert claims of anti-

competitive conduct. Other companies and government agencies have in the past and may in the future allege that our actions violate the antitrust or competition laws of the United States, individual states, the European Commission or other countries, or otherwise constitute unfair competition. An increasing number of governments are regulating competition law activities, including increased scrutiny in large markets such as China. Our business partnerships or agreements or arrangements with customers or other companies could give rise to regulatory action or antitrust litigation. Some regulators, particularly those outside of the United States, may perceive our business to be used so broadly that otherwise uncontroversial business practices could be deemed anticompetitive. Certain competition authorities have conducted market studies of our industries. Such claims and investigations, even if without foundation, may be very expensive to defend, involve negative publicity and substantial diversion of management time and effort and could result in significant judgments against us or require us to change our business practices.

We are subject to patent litigation.

We have repeatedly been sued for allegedly infringing other parties' patents. We are a defendant in a number of patent suits and have been notified of several other potential patent disputes. We expect that we will increasingly be subject to patent infringement claims because, among other reasons:

- our products and services continue to expand in scope and complexity;
- we continue to expand into new businesses, including through acquisitions; and
- the universe of patent owners who may claim that we, any of the companies that we have acquired, or our customers infringe their patents, and the aggregate number of patents controlled by such patent owners, continues to increase.

Such claims may be brought directly against us and/or against our customers whom we may indemnify either because we are contractually obligated to do so or we choose to do so as a business matter. We believe that an increasing number of these claims against us and other technology companies have been, and continue to be, initiated by third parties whose sole or primary business is to assert such claims. In addition, we have seen significant patent disputes between operating companies in some technology industries. Patent claims, whether meritorious or not, are time-consuming and costly to defend and resolve, and could require us to make expensive changes in our methods of doing business, enter into costly royalty or licensing agreements, make substantial payments to satisfy adverse judgments or settle claims or proceedings, or cease conducting certain operations, which would harm our business.

We are exposed to fluctuations in interest rates.

Investments in both fixed-rate and floating-rate interest-earning instruments carry varying degrees of interest rate risk. The fair market value of our fixed-rate investment securities may be adversely impacted due to a rise in interest rates. In general, fixed-rate securities with longer maturities are subject to greater interest-rate risk than those with shorter maturities. While floating rate securities generally are subject to less interest-rate risk than fixed-rate securities, floating-rate securities may produce less income than expected if interest rates decrease and may also suffer a decline in market value if interest rates increase. Due in part to these factors, our investment income may decline or we may suffer losses in principal if securities are sold that have declined in market value due to changes in interest rates. In addition, relatively low interest rates limit our investment income. Fluctuations in interest rates that increase the cost of our current or future indebtedness, cause the market value of our assets to decline or reduce our investment income could adversely affect our financial results.

Our tickets business is subject to regulatory, competitive and other risks that could harm this business.

Our tickets business, which includes our StubHub business, is subject to numerous risks, including:

-

Some jurisdictions, in particular jurisdictions outside the United States, prohibit the resale of event tickets (anti-scalping laws) at prices above the face value of the tickets or at all, or highly regulate the resale of tickets, and new laws and regulations or changes to existing laws and regulations imposing these or other restrictions could limit or inhibit our ability to operate, or our users' ability to continue to use, our tickets business.

Regulatory agencies or courts may claim or hold that we are responsible for ensuring that our users comply with these laws and regulations.

In many jurisdictions, our tickets business depends on commercial partnerships with event organizers or licensed ticket vendors, which we must develop and maintain on acceptable terms for our tickets business to be successful.

Our tickets business is subject to seasonal fluctuations and the general economic and business conditions that impact the sporting events and live entertainment industries.

A portion of the tickets inventory sold by sellers on the StubHub website is processed by StubHub in digital form.

Systems failures, security breaches, theft or other disruptions that result in the loss of such sellers' tickets inventory,

could result in significant costs and a loss of consumer confidence in our tickets business.

Lawsuits alleging a variety of causes of actions have in the past, and may in the future, be filed against StubHub and eBay by venue owners, competitors, ticket buyers, and unsuccessful ticket buyers. Such lawsuits could result in significant costs and require us to change our business practices in ways that negatively affect our tickets business.

Our tickets business also faces significant competition from a number of sources, including ticketing service companies, event organizers, ticket brokers, and online and offline ticket resellers. Some ticketing service companies, event organizers, and professional sports teams have begun to issue event tickets through various forms of electronic ticketing systems that are designed to restrict or prohibit the transferability (and by extension, the resale) of such event tickets either to favor their own resale affiliates or to discourage resale or restrict resale of season tickets to a preferred, designated website. Ticketing service companies have also begun to use market-based pricing strategies or dynamic pricing to charge much higher prices, and impose additional restrictions on transferability, for premium tickets.

Some sports teams have threatened to revoke the privileges of season ticket owners if they resell their tickets through a platform that is not affiliated with, or approved by, such sports teams. In March 2015, StubHub filed suit against Ticketmaster and the Golden State Warriors, alleging antitrust and various state law violations arising out of the defendants' restrictive ticketing practices, which include prohibiting the resale of Warriors tickets on StubHub or any other non-Ticketmaster secondary exchange.

The listing or sale by our users of items that allegedly infringe the intellectual property rights of rights owners, including pirated or counterfeit items, may harm our business.

The listing or sale by our users of unlawful, counterfeit or stolen goods or unlawful services, or sale of goods or services in an unlawful manner, has resulted and may continue to result in allegations of civil or criminal liability for unlawful activities against us (including the employees and directors of our various entities) involving activities carried out by users through our services. In a number of circumstances, third parties, including government regulators and law enforcement officials, have alleged that our services aid and abet violations of certain laws, including laws regarding the sale of counterfeit items, laws restricting or prohibiting the transferability (and by extension, the resale) of digital goods (e.g., event tickets, books, music and software), the fencing of stolen goods, selective distribution channel laws, customs laws, distance selling laws, anti-scalping laws with respect to the resale of tickets, and the sale of items outside of the United States that are regulated by U.S. export controls. For example:

In Turkey, local prosecutors and courts are investigating our liability for allegedly illegal actions by users of our Turkish Marketplaces business (GittiGidiyor). In accordance with local law and custom, they have indicted one or more members of the board of directors of our local Turkish subsidiary. We intend to defend vigorously against any such actions and a growing number of these cases have been dismissed by the relevant courts.

In August 2012, we were informed that U.S. listings of footwear with religious imagery were visible on our local Indian site and we immediately removed these listings. In September 2012, a criminal case was registered against us in India in regard to these listings, and we are challenging the prosecution of this case.

In addition, allegations of infringement of intellectual property rights, including but not limited to counterfeit items, have resulted in threatened and actual litigation from time to time by rights owners, including the following luxury brand owners: Tiffany & Co. in the United States; Rolex S.A. and Coty Prestige Lancaster Group GmbH in Germany; Louis Vuitton Malletier and Christian Dior Couture in France; and L'Oréal SA, Lancôme Parfums et Beauté & Cie, and Laboratoire Garnier & Cie in several European countries. Plaintiffs in these and similar suits seek, among other remedies, injunctive relief and damages. Statutory damages for copyright or trademark violations could range up to \$150,000 per copyright violation and \$2,000,000 per trademark violation in the United States, and may be even higher in other jurisdictions. In the past, we have paid substantial amounts in connection with resolving certain trademark and copyright suits. These and similar suits may also force us to modify our business practices in a manner that increases

costs, lowers revenue, makes our websites and mobile platforms less convenient to customers, and requires us to spend substantial resources to take additional protective measures or discontinue certain service offerings in order to combat these practices. In addition, we have received significant media attention relating to the listing or sale of illegal or counterfeit goods, which could damage our reputation, diminish the value of our brand names, and make users reluctant to use our products and services.

We are subject to risks associated with information disseminated through our services.

Online services companies may be subject to claims relating to information disseminated through their services, including claims alleging defamation, libel, breach of contract, invasion of privacy, negligence, copyright or trademark infringement, among other things. The laws relating to the liability of online services companies for information disseminated through their

services are subject to frequent challenges both in the United States and foreign jurisdictions. Any liabilities incurred as a result of these matters could require us to incur additional costs and harm our reputation and our business.

Our potential liability to third parties for the user-provided content on our sites, particularly in jurisdictions outside the United States where laws governing Internet transactions are unsettled, may increase. If we become liable for information provided by our users and carried on our service in any jurisdiction in which we operate, we could be directly harmed and we may be forced to implement new measures to reduce our exposure to this liability, including expending substantial resources or discontinuing certain service offerings, which could harm our business.

Changes to our programs to protect buyers and sellers could increase our costs and loss rate.

Our eBay buyer protection programs represent the means by which we compensate users who believe that they have been defrauded, have not received the item that they purchased or have received an item different from what was described. We expect to continue to receive communications from users requesting reimbursement or threatening or commencing legal action against us if no reimbursement is made. Our liability for these sort of claims is slowly beginning to be clarified in some jurisdictions and may be higher in some non-U.S. jurisdictions than it is in the U.S. litigation involving liability for any such third-party actions could be costly and time consuming for us, divert management attention, result in increased costs of doing business, lead to adverse judgments or otherwise harm our business. In addition, affected users will likely complain to regulatory agencies that could take action against us, including imposing fines or seeking injunctions.

We may be unable to adequately protect or enforce our intellectual property rights, or third parties may allege that we are infringing their intellectual property rights.

We believe the protection of our intellectual property, including our trademarks, patents, copyrights, domain names, trade dress, and trade secrets, is critical to our success. We seek to protect our intellectual property rights by relying on applicable laws and regulations in the United States and internationally, as well as a variety of administrative procedures. We also rely on contractual restrictions to protect our proprietary rights when offering or procuring products and services, including confidentiality and invention assignment agreements entered into with our employees and contractors and confidentiality agreements with parties with whom we conduct business.

However, effective intellectual property protection may not be available in every country in which our products and services are made available, and contractual arrangements and other steps we have taken to protect our intellectual property may not prevent third parties from infringing or misappropriating our intellectual property or deter independent development of equivalent or superior intellectual property rights by others. Trademark, copyright, patent, domain name, trade dress and trade secret protection is very expensive to maintain and may require litigation. We must protect our intellectual property rights and other proprietary rights in an increasing number of jurisdictions, a process that is expensive and time consuming and may not be successful in every jurisdiction. Also, we may not be able to discover or determine the extent of any unauthorized use of our proprietary rights. We have licensed in the past, and expect to license in the future, certain of our proprietary rights, such as trademarks or copyrighted material, to others. These licensees may take actions that diminish the value of our proprietary rights or harm our reputation. Any failure to adequately protect or enforce our intellectual property rights, or significant costs incurred in doing so, could materially harm our business.

As the number of products in the software industry increases and the functionality of these products further overlap, and as we acquire technology through acquisitions or licenses, we may become increasingly subject to infringement claims, including patent, copyright, and trademark infringement claims. Litigation may be necessary to determine the validity and scope of the patent and other intellectual property rights of others. The ultimate outcome of any allegation is uncertain and, regardless of the outcome, any such claim, with or without merit, may be time-consuming, result in

costly litigation, divert management's time and attention from our business, require us to stop selling, delay shipping, or redesign our products, or require us to pay substantial amounts to satisfy judgments or settle claims or lawsuits or to pay substantial royalty or licensing fees, or to satisfy indemnification obligations that we have with some of our customers. Our failure to obtain necessary license or other rights, or litigation or claims arising out of intellectual property matters, may harm our business.

Failure to deal effectively with fraudulent activities on our websites would increase our loss rate and harm our business, and could severely diminish merchant and consumer confidence in and use of our services.

We face risks with respect to fraudulent activities on its websites and periodically receive complaints from buyers and sellers who may not have received the goods that they had contracted to purchase or payment for the goods that a buyer had contracted to purchase. In some European and Asian jurisdictions, buyers may also have the right to withdraw from a sale made by a professional seller within a specified time period. While we can, in some cases, suspend the accounts of users who fail to

fulfill their payment or delivery obligations to other users, we do not have the ability to require users to make payment or deliver goods, or otherwise make users whole other than through its buyer protection program, which in the United States we refer as the eBay Money Back Guarantee. Although we have implemented measures to detect and reduce the occurrence of fraudulent activities, combat bad buyer experiences and increase buyer satisfaction, including evaluating sellers on the basis of their transaction history and restricting or suspending their activity, there can be no assurance that these measures will be effective in combating fraudulent transactions or improving overall satisfaction among sellers, buyers, and other participants. Additional measures to address fraud could negatively affect the attractiveness of our services to buyers or sellers, resulting in a reduction in the ability to attract new users or retain current users, damage to our reputation, or a diminution in the value of our brand names.

We have substantial indebtedness, and we may incur substantial additional indebtedness in the future, and we may not generate sufficient cash flow from our business to service our indebtedness. Failure to comply with the terms of our indebtedness could result in the acceleration of our indebtedness, which could have an adverse effect on our cash flow and liquidity.

We have a substantial amount of outstanding indebtedness and we may incur substantial additional indebtedness in the future, including under our commercial paper program and revolving credit facility or through public or private offerings of debt securities. Our outstanding indebtedness and any additional indebtedness we incur may have significant consequences, including, without limitation, any of the following:

- requiring the dedication of a significant portion of our cash flow from operations to service our indebtedness, thereby reducing the amount of cash flow available for other purposes, including capital expenditures and acquisitions;
- our indebtedness and leverage may increase our vulnerability to downturns in our business, to competitive pressures, and to adverse changes in general economic and industry conditions;
- adverse changes in the ratings assigned to our debt securities by credit rating agencies will likely increase our borrowing costs;
- our ability to obtain additional financing for working capital, capital expenditures, acquisitions, share repurchases or other general corporate and other purposes may be limited; and
- our flexibility in planning for, or reacting to, changes in our business and our industry may be limited.

Our ability to make payments of principal of and interest on our indebtedness depends upon our future performance, which will be subject to general economic conditions, industry cycles and financial, business and other factors affecting our consolidated results of operations and financial condition, many of which are beyond our control. If we are unable to generate sufficient cash flow from operations in the future to service our debt, we may be required to, among other things:

- repatriate funds to the United States at substantial tax cost;
- seek additional financing in the debt or equity markets;
- refinance or restructure all or a portion of our indebtedness;
- sell selected assets; or
- reduce or delay planned capital or operating expenditures.

Such measures might not be sufficient to enable us to service our debt. In addition, any such financing, refinancing or sale of assets might not be available on economically favorable terms or at all.

Our revolving credit facility and the indenture pursuant to which certain of our outstanding debt securities were issued contain, and any debt instruments we enter into in the future may contain, financial and other covenants that restrict or could restrict, among other things, our business and operations. If we fail to pay amounts due under, or breach any of the covenants in, a debt instrument, then the lenders would typically have the right to demand immediate repayment of

all borrowings thereunder (subject in certain cases to grace or cure period). Moreover, any such acceleration and required repayment of or default in respect of any of our indebtedness could, in turn, constitute an event of default under other debt instruments, thereby resulting in the acceleration and required repayment of that other indebtedness. Any of these events could materially adversely affect our liquidity and financial condition.

A downgrade in our credit ratings could materially adversely affect our business.

The credit ratings assigned to our debt securities could change based upon, among other things, our results of operations and financial condition. These ratings are subject to ongoing evaluation by credit rating agencies, and there can be no assurance that any rating will not be changed or withdrawn by a rating agency in the future. Moreover, these credit ratings are not recommendations to buy, sell or hold any of our debt securities. Actual or anticipated changes or downgrades in our credit

ratings, including any announcement that our ratings are under review for a downgrade or have been assigned a negative outlook, would likely increase our borrowing costs, which could in turn have a material adverse effect on our financial condition, results of operations, cash flows, and could harm our business.

As of January 1, 2014, our long-term debt and short-term funding were rated investment grade by Standard and Poor's Financial Services, LLC (long-term rated A, short-term rated A-1, with a stable outlook), Moody's Investor Service (long-term rated A2, short-term rated P-1, with a stable outlook), and Fitch Ratings, Inc. (long-term rated A, short-term rated F-1, with a stable outlook). Following the September 2014 announcement of our planned separation of our PayPal business, Standard and Poor's Financial Services, LLC and Moody's Investor Service placed our long-term debt and short-term funding ratings under review with negative implications, while Fitch Ratings, Inc. downgraded our long-term debt from A to A- and short-term funding rating from F-1 to F-2, retaining our investment grade status, and placed the long-term rating under review with negative implications. As of April 1, 2015, Fitch Ratings, Inc. affirmed the short-term funding rating at F-2. We did not experience any material operational, funding, or liquidity impacts from this rating downgrade. As of July 20, 2015, we were rated investment grade by Standard and Poor's Financial Services, LLC (long-term rated BBB+, short-term rated A-2, with a stable outlook), Moody's Investor Service (long-term rated Baa1, short-term rated P-2, with a stable outlook), and Fitch Ratings, Inc. (long-term rated BBB, short-term rated F-2, with a stable outlook). We disclose these ratings to enhance the understanding of our sources of liquidity and the effects of our ratings on our costs of funds. Our borrowing costs depend, in part, on our credit ratings and the actions already taken by these credit rating agencies as described above will likely increase, and any further downgrades would likely increase, our borrowing costs.

Our business and users may be subject to sales tax and other taxes.

The application of indirect taxes (such as sales and use tax, value-added tax (VAT), goods and services tax, business tax and gross receipt tax) to ecommerce businesses and to our users is a complex and evolving issue. Many of the fundamental statutes and regulations that impose these taxes were established before the adoption and growth of the Internet and ecommerce. In many cases, it is not clear how existing statutes apply to the Internet or ecommerce. In addition, governments are increasingly looking for ways to increase revenues, which has resulted in discussions about tax reform and other legislative action to increase tax revenues, including through indirect taxes. There are many transactions that occur during the ordinary course of business for which the ultimate tax determination is uncertain.

We do not collect taxes on the goods or services sold by users of our services. However, some jurisdictions have implemented, or may implement, laws that require out-of-state sellers of tangible personal property to collect and remit taxes. In particular, the Streamlined Sales Tax Project (an ongoing, multi-year effort by U.S. state and local governments to pursue federal legislation that would require collection and remittance of sales tax by out-of-state sellers) could allow states that meet certain simplification and other criteria to require out-of-state sellers to collect and remit sales taxes on goods purchased by in-state residents. The adoption of such legislation could result in a use tax collection responsibility for certain of our sellers. This collection responsibility and the additional costs associated with complex use tax collection, remittance and audit requirements would make selling on our websites and mobile platforms less attractive for small business retailers and would harm our business, and the proliferation of state legislation to expand sales and use tax collection on Internet sales could adversely affect some of our sellers and indirectly harm our business.

Several proposals have been made at the U.S. state and local levels that would impose additional taxes on the sale of goods and services over the Internet. These proposals, if adopted, could substantially impair the growth of ecommerce and our brands, and could diminish our opportunity to derive financial benefit from our activities. While the U.S. federal government's moratorium on state and local taxation of Internet access or multiple or discriminatory taxes on ecommerce has been extended through October 2015, this moratorium does not prohibit federal, state or local authorities from collecting taxes on our income or from collecting certain taxes that were in effect prior to the enactment of the moratorium and/or one of its extensions.

From time to time, some taxing authorities in the United States have notified us that they believe we owe them certain taxes imposed on our services. These notifications have not resulted in any significant tax liabilities to date, but there is a risk that some jurisdiction may be successful in the future, which would harm our business.

Similar issues exist outside of the United States, where the application of VAT or other indirect taxes on ecommerce providers is complex and evolving. While we attempt to comply in those jurisdictions where it is clear that a tax is due, some of our subsidiaries have, from time to time, received claims relating to the applicability of indirect taxes to our fees. We have been paying VAT on fees charged to certain of our users in the European Union based on the service provider's location. On January 1, 2015, changes to the rules determining the place of supply (and thus the country of taxation) for all European Union based providers of electronically supplied services were implemented that require that we pay VAT based on the residence or normal place of business of our customers. These changes may result in our paying a higher rate of VAT on such fees. Additionally, we

pay input VAT on applicable taxable purchases within the various countries in which we operate. In most cases, we are entitled to reclaim this input VAT from the various countries. However, because of our unique business model, the application of the laws and rules that allow such reclamation is sometimes uncertain. A successful assertion by one or more countries that we are not entitled to reclaim VAT could harm our business.

In certain jurisdictions, we collect and remit indirect taxes on our fees and pay taxes on our purchases of goods and services. However, tax authorities may raise questions about our calculation, reporting and collection of taxes and may ask us to remit additional taxes, as well as the proper calculation of such taxes. Should any new taxes become applicable or if the taxes we pay are found to be deficient, our business could be harmed.

A taxing authority may seek to impose a tax collection, reporting or record-keeping obligation on companies that engage in or facilitate ecommerce. Any failure by us to meet these requirements could result in substantial monetary penalties and other sanctions and could harm our business. Taxing authorities may also seek to impose tax collection or reporting obligations based on the location of the product or service being sold or provided in an ecommerce transaction, regardless of where the respective users are located. Some jurisdictions could assert that we are responsible for tax on the underlying goods or services sold on our sites. Imposition of a record keeping or tax collecting requirement could decrease seller activity on our sites and would harm our business. Tax authorities may also require us to help ensure compliance by our users by promulgating legislation regulating professional sellers, including tax reporting and collection requirements. In addition, we have periodically received requests from tax authorities in many jurisdictions for information regarding the transactions of large classes of sellers on our sites, and in some cases we have been legally obligated to provide this data. The imposition of any requirements on us to disclose transaction records for all or a class of sellers to tax or other regulatory authorities or to file tax forms on behalf of any sellers, especially requirements that are imposed on us but not on alternative means of ecommerce, and any use of those records to investigate, collect taxes from or prosecute sellers, could decrease seller activity on our sites and harm our business.

We may have exposure to greater than anticipated tax liabilities.

The determination of our worldwide provision for income taxes and other tax liabilities requires estimation and significant judgment, and there are many transactions and calculations where the ultimate tax determination is uncertain. Like many other multinational corporations, we are subject to tax in multiple U.S. and foreign tax jurisdictions and have structured our operations to reduce our effective tax rate. Our determination of our tax liability is always subject to audit and review by applicable domestic and foreign tax authorities, and we are currently undergoing a number of investigations, audits and reviews by taxing authorities throughout the world, including with respect to our tax structure. Any adverse outcome of any such audit or review could harm our business, and the ultimate tax outcome may differ from the amounts recorded in our financial statements and may materially affect our financial results in the period or periods for which such determination is made. While we have established reserves based on assumptions and estimates that we believe are reasonable to cover such eventualities, these reserves may prove to be insufficient.

In addition, our future income taxes could be adversely affected by earnings being lower than anticipated (or by the incurrence of losses) in jurisdictions that have lower statutory tax rates and higher than anticipated in jurisdictions that have higher statutory tax rates, by changes in the valuation of our deferred tax assets and liabilities, as a result of gains on our foreign exchange risk management program, or changes in tax laws, regulations, or accounting principles, as well as certain discrete items.

In light of continuing fiscal challenges in certain U.S. states and in many countries in Europe, various levels of government are increasingly focused on tax reform and other legislative action to increase tax revenue, including corporate income taxes. For example, the economic downturn reduced tax revenues for United States federal and state

governments, and a number of proposals to increase taxes from corporate entities have been implemented or are being considered at various levels of government. These include a number of proposals to modify the U.S. federal income tax laws applicable to companies, like ours, operating in multiple U.S. and foreign jurisdictions which, if enacted, could materially increase our effective tax rate. A number of U.S. states have attempted to increase corporate tax revenues by taking an expansive view of corporate presence to attempt to impose corporate income taxes and other direct business taxes on companies that have no physical presence in their state, and taxing authorities in foreign jurisdictions may take similar actions. Many U.S. states are also altering their apportionment formulas to increase the amount of taxable income or loss attributable to their state from certain out-of-state businesses. Similarly, in Europe, and elsewhere in the world, there are various tax reform efforts underway designed to ensure that corporate entities are taxed on a larger percentage of their earnings. Companies that operate over the Internet, such as eBay, are a target of some of these efforts. If more taxing authorities are successful in applying direct taxes to Internet companies that do not have a physical presence in their respective jurisdictions, this could increase our effective tax rate.

We may be subject to sales reporting and record-keeping obligations.

One or more states, the U.S. federal government or foreign countries may seek to impose reporting or record-keeping obligations on companies that engage in or facilitate ecommerce. Such an obligation could be imposed by legislation intended to improve tax compliance (and legislation to such effect has been contemplated by several states and a number of foreign jurisdictions) or if one of our companies was ever deemed to be the legal agent of the users of our services by a jurisdiction in which it operates. Certain of our companies are required to report to the Internal Revenue Service (IRS) on customers subject to U.S. income tax who receive more than \$20,000 in payments and more than 200 payments in a calendar year. As a result, we are required to request tax identification numbers from certain payees, track payments by tax identification number and, under certain conditions, withhold a portion of payments and forward such withholding to the IRS. We have modified our systems to meet these requirements and expect increased operational costs and changes to our user experience in connection with complying with these reporting obligations. Any failure by us to meet these requirements could result in substantial monetary penalties and other sanctions and could harm our business.

Our business is subject to online security risks, including security breaches.

Our businesses involve the storage and transmission of users' personal financial information. In addition, a significant number of our users authorize us to bill their payment card accounts directly for all transaction and other fees charged by us. An increasing number of websites, including those owned by several other large Internet and offline companies, have disclosed breaches of their security, some of which have involved sophisticated and highly targeted attacks on portions of their websites or infrastructure. The techniques used to obtain unauthorized access, disable, or degrade service, or sabotage systems, change frequently, may be difficult to detect for a long time, and often are not recognized until launched against a target. Certain efforts may be state sponsored and supported by significant financial and technological resources and therefore may be even more difficult to detect. As a result, we may be unable to anticipate these techniques or to implement adequate preventative measures. Unauthorized parties may also attempt to gain access to our systems or facilities through various means, including hacking into our systems or facilities, fraud, trickery or other means of deceiving our employees, contractors and temporary staff. A party that is able to circumvent our security measures could misappropriate our or our users' personal information, cause interruption in our operations, damage our computers or those of our users, or otherwise damage our reputation. In addition, our users have been and likely will continue to be targeted by parties using fraudulent "spoof" and "phishing" emails to misappropriate user names, passwords, payment card numbers, or other personal information or to introduce viruses or other malware through "trojan horse" programs to our users' computers. Our information technology and infrastructure may be vulnerable to cyberattacks or security incidents and third parties may be able to access our users' proprietary information and payment card data that are stored on or accessible through our systems. Any security breach at a company providing services to us or our users could have similar effects.

In May 2014, we publicly announced that criminals were able to penetrate and steal certain data, including user names, encrypted user passwords and other non-financial user data. Upon making this announcement, we required all buyers and sellers on our platform to reset their passwords in order to log into their account. The breach and subsequent password reset have negatively impacted the business. In July 2014, a putative class action lawsuit was filed against us for alleged violations and harm resulting from the breach. The lawsuit was recently dismissed with leave to amend. In addition, we have received requests for information and are subject to investigations regarding this incident from numerous regulatory and other government agencies across the world.

We may also need to expend significant additional resources to protect against security breaches or to redress problems caused by breaches. These issues are likely to become more difficult and costly as we expand the number of markets where we operate. Additionally, our insurance policies carry low coverage limits, which may not be adequate to reimburse us for losses caused by security breaches and we may not be able to fully collect, if at all, under these

insurance policies.

Systems failures and resulting interruptions in the availability of our websites, applications, products or services could harm our business.

Our systems may experience service interruptions or degradation because of hardware and software defects or malfunctions, computer denial-of-service and other cyberattacks, human error, earthquakes, hurricanes, floods, fires, natural disasters, power losses, disruptions in telecommunications services, fraud, military or political conflicts, terrorist attacks, computer viruses, or other events. Our systems are also subject to break-ins, sabotage and intentional acts of vandalism. Some of our systems are not fully redundant and our disaster recovery planning is not sufficient for all eventualities. In addition, as a provider of payments solutions, we are subject to increased scrutiny by regulators that may require specific business continuity and disaster recovery plans and more rigorous testing of such plans. This increased scrutiny may be costly and time consuming and may divert our resources from other business priorities.

63

We have experienced and will likely continue to experience system failures, denial of service attacks and other events or conditions from time to time that interrupt the availability or reduce the speed or functionality of our websites and mobile applications. These events have resulted and likely will result in loss of revenue. A prolonged interruption in the availability or reduction in the speed or other functionality of our websites and mobile applications could materially harm our business. Frequent or persistent interruptions in our services could cause current or potential users to believe that our systems are unreliable, leading them to switch to our competitors or to avoid our sites, and could permanently harm our reputation and brands. In addition, agreements between our Enterprise business and some of its clients contain commitments regarding availability. If our Enterprise business is unable to meet these commitments, its relationship with its clients could be damaged and may trigger a client's right to terminate their contract with our Enterprise business and/or financial penalty provisions payable by our Enterprise business. Moreover, to the extent that any system failure or similar event results in damages to our customers or their businesses, these customers could seek significant compensation from us for their losses and those claims, even if unsuccessful, would likely be time-consuming and costly for us to address. We also rely on facilities, components and services supplied by third parties and our business may be materially adversely affected to the extent these components or services do not meet our expectations or these third parties cease to provide the services or facilities. In particular, a decision by any of our third party hosting providers to close a facility that we use could cause system interruptions and delays, result in loss of critical data and cause lengthy interruptions in our services. We do not carry business interruption insurance sufficient to compensate us for losses that may result from interruptions in our service as a result of systems failures and similar events.

We also rely on facilities, components and services supplied by third parties and our business may be materially adversely affected to the extent these components or services do not meet our expectations or these third parties cease to provide the services or facilities. In particular, a decision by any of our third party hosting providers to close a facility that we use could cause system interruptions and delays, result in loss of critical data and cause lengthy interruptions in our services. We do not carry business interruption insurance sufficient to compensate us for losses that may result from interruptions in our service as a result of systems failures and similar events.

Acquisitions, joint ventures, and strategic investments could result in operating difficulties and could harm our business.

We have acquired a significant number of businesses of varying size and scope, technologies, services, and products. We also expect to continue to evaluate and consider a wide array of potential strategic transactions as part of our overall business strategy, including business combinations, acquisitions, and dispositions of businesses, technologies, services, products, and other assets, as well as strategic investments and joint ventures. In that regard, we recently agreed to sell our Enterprise business. This sale is subject to customary closing conditions, and if these conditions are not satisfied or waived, the transaction could be delayed or not take place.

These transactions, and in particular the sale of our Enterprise business, may involve significant challenges and risks, including:

- the potential loss of key customers, merchants, vendors and other key business partners of the companies we acquire, or dispose of, following and continuing after announcement of our transaction plans;
- declining employee morale and retention issues affecting employees of companies that we acquire or dispose of, which may result from changes in compensation, or changes in management, reporting relationships, future prospects or the direction of the acquired or disposed business;
- difficulty making new and strategic hires of new employees;
- diversion of management time and a shift of focus from operating the businesses to the transaction, and in the case of an acquisition, integration and administration;

the need to integrate the operations, systems (including accounting, management, information, human resource and other administrative systems), technologies, products and personnel of each acquired company, which is an inherently risky and potentially lengthy and costly process;

the inefficiencies and lack of control that may result if such integration is delayed or not implemented, and unforeseen difficulties and expenditures that may arise as a result;

the need to implement or improve controls, procedures and policies appropriate for a larger public company at companies that prior to acquisition may have lacked such controls, procedures and policies or whose controls, procedures and policies did not meet applicable legal and other standards;

risks associated with our expansion into new international markets;

derivative lawsuits resulting from the acquisition;

liability for activities of the acquired company before the acquisition, including intellectual property and other litigation claims or disputes, violations of laws, rules and regulations, commercial disputes, tax liabilities and other known and unknown liabilities;

- the potential loss of key employees following the transaction;
- the acquisition of new customer and employee personal information, which in and of itself may require regulatory approval and or additional controls, policies and procedures and subject us to additional exposure; and
- our dependence on the acquired business' accounting, financial reporting, operating metrics and similar systems, controls and processes and the risk that errors or irregularities in those systems, controls and processes will lead to errors in our consolidated financial statements or make it more difficult to manage the acquired business.

At any given time we may be engaged in discussions or negotiations with respect to one or more of these types of transactions and any of these transactions could be material to our financial condition and results of operations. In addition, it may take us longer than expected to fully realize the anticipated benefits of these transactions, and those benefits may ultimately be smaller than anticipated or may not be realized at all, which could adversely affect our business and operating results. Any acquisitions or dispositions may also require us to issue additional equity securities, spend our cash, or incur debt (and increased interest expense), liabilities, and amortization expenses related to intangible assets or write-offs of goodwill, which could adversely affect our results of operations and dilute the economic and voting rights of our stockholders.

We have made certain investments, including through joint ventures, in which we have a minority equity interest and/or lack management and operational control. The controlling joint venture partner in a joint venture may have business interests, strategies, or goals that are inconsistent with ours, and business decisions or other actions or omissions of the controlling joint venture partner or the joint venture company may result in harm to our reputation or adversely affect the value of our investment in the joint venture. Our strategic investments may also expose us to additional risks. Any circumstances, which may be out of our control, that adversely affect the value of our investments, or cost resulting from regulatory action or lawsuits in connection with our investments, could harm our business or negatively impact our financial results.

Our success largely depends on key personnel. Because competition for our key employees is intense, we may not be able to attract, retain, and develop the highly skilled employees we need to support our business. The loss of senior management or other key personnel could harm our business.

Our future performance depends substantially on the continued services of our senior management and other key personnel, including key engineering and product development personnel, and our ability to attract, retain, and motivate key personnel. Competition for key personnel is intense, especially in the Silicon Valley where our corporate headquarters are located, and we may be unable to successfully attract, integrate, or retain sufficiently qualified key personnel. In making employment decisions, particularly in the Internet and high-technology industries, job candidates often consider the value of the equity awards they would receive in connection with their employment and fluctuations in our stock price may make it more difficult to attract, retain, and motivate employees. In addition, we do not have long-term employment agreements with any of our key personnel and do not maintain any "key person" life insurance policies. The loss of the services of any of our senior management or other key personnel, or our inability to attract highly qualified senior management and other key personnel, could harm our business.

Problems with or price increases by third parties who provide services to us or to our users could harm our business.

A number of third parties provide services to us or to our users. Such services include seller tools that automate and manage listings, merchant tools that manage listings and interface with inventory management software, storefronts that help our users list items and shipping providers that deliver goods sold on our platform, among others. Financial or regulatory issues, labor issues (e.g., strikes, lockouts, or work stoppages), or other problems that prevent these companies from providing services to us or our users could harm our business.

Price increases by, or service terminations, disruptions or interruptions at, companies that provide services to us and our users and clients could also reduce the number of listings on our websites or make it more difficult for our sellers to complete transactions or for us to timely fulfill and ship products sold on the websites operated by Enterprise clients, thereby harming our business. Some third parties who provide services to us may have or gain market power and be able to increase their prices to us without competitive constraint. In addition, the U.S. Postal Service, which is facing ongoing fiscal challenges, has instituted postal rate increases and announced that it is considering closing thousands of local post offices and ending Saturday mail delivery. While we continue to work with global carriers to offer our sellers a variety of shipping options and to enhance their shipping experience, postal rate increases may reduce the competitiveness of certain sellers' offerings, and postal service changes could require certain sellers to utilize alternatives which could be more expensive or inconvenient, which could in turn decrease the number of transactions on our sites, thereby harming our business.

We have outsourced certain functions to third-party providers, including some customer support and product development functions, which are critical to our operations. If our service providers do not perform satisfactorily, our operations could be

disrupted, which could result in user dissatisfaction and could harm our business.

There can be no assurance that third parties who provide services directly to us or our users will continue to do so on acceptable terms, or at all. If any third parties were to stop providing services to us or our users on acceptable terms, including as a result of bankruptcy, we may be unable to procure alternatives from other third parties in a timely and efficient manner and on acceptable terms, or at all.

Our developer platforms, which are open to merchants and third-party developers, subject us to additional risks.

We provide third-party developers with access to application programming interfaces, software development kits and other tools designed to allow them to produce applications for use, with a particular focus on mobile applications. There can be no assurance that merchants or third-party developers will develop and maintain applications and services on our open platforms on a timely basis or at all, and a number of factors could cause such third-party developers to curtail or stop development for our platforms. In addition, our business is subject to many regulatory restrictions. It is possible that merchants and third-party developers who utilize our development platforms or tools could violate these regulatory restrictions and we may be held responsible for such violations, which could harm our business.

Our Enterprise business is subject to substantial competition.

Our Enterprise business provides a modular, integrated portfolio of commerce technology solutions and services, omnichannel operations solutions and commerce marketing solutions that enable companies to operate and integrate their ecommerce offering and their omnichannel business, including physical stores, in order to sell to consumers across the entire sales journey, from awareness to conversion, delivery and retention. The market for such products and services is continuously evolving and intensely competitive. Many of our Enterprise business's prospective clients may choose to manage all or some aspects of an omnichannel business with internal resources. As a result, the Enterprise business often competes with in-house solutions promoted and supported by internal information technology staffs, marketing departments, merchandising groups and other internal corporate constituencies, as well as with external technology and interactive marketing service providers that supply one or more components that allow prospective clients to develop and operate their omnichannel business in-house. This group of providers may include the prospective client itself and companies that offer one or more of the following: web platforms; customer care/call center services; fulfillment and logistics; systems integration services and technology products and services; email management and data aggregation; online marketing and design services; and other interactive marketing services. Low barriers to entry in the interactive marketing industry could also increase the number of competitors we may face.

The Enterprise business has competitors with longer operating histories, larger customer bases, greater brand recognition and greater financial, marketing, and other resources. Those competitors may be able to secure components of their technology and services on more favorable terms and devote more resources to technology development and marketing than the Enterprise business. In addition, to the extent that we expand our Enterprise business internationally, it will face increased competition from global and local companies, which may have a greater understanding of, and focus on, the local customer.

Our Enterprise business exposes us to additional risks.

Our Enterprise business faces its own risks and challenges. Competition for Enterprise's existing and potential clients is intense, and our Enterprise business may not be able to add new clients or keep existing clients on favorable terms, or at all. For example, a change in the management of an Enterprise client could adversely affect our relationship with that client. In addition, many of Enterprise's client contracts contain service level commitments. If our Enterprise

business is unable to meet these commitments, its relationships with its clients could be damaged, and client rights to terminate their contracts with our Enterprise business and/or financial penalty provisions payable by our Enterprise business may be triggered. These contracts contain provisions under which our Enterprise business has agreed to indemnify Enterprise clients against certain claims by third parties regarding our products and services. If any existing Enterprise clients (in particular, the large merchants and brands that our Enterprise business serves) were to exit the business we provide services to, be acquired, declare bankruptcy, suffer other financial difficulties, make indemnification claims against us, fail to pay amounts owed to our Enterprise business and/or terminate or modify their relationships with our Enterprise business in an unfavorable manner, our Enterprise business could be adversely affected.

A portion of Enterprise's net transaction revenue is derived from the value of ecommerce transactions that flow through its suite of commerce technologies. Accordingly, growth in Enterprise's net transaction revenue depends upon the continued growth of the online businesses of its clients. Our Enterprise business may be substantially impacted by any adverse conditions in the offline businesses of an Enterprise client that negatively impact that client's online businesses. Any impairment of the

offline business of Enterprise clients, whether due to financial difficulties, impairment of client brands, reduction in marketing efforts, reduction in the number of client retail stores or otherwise, could negatively affect consumer traffic and sales through Enterprise clients' websites, which would result in lower revenues generated by our Enterprise business. Our Enterprise business also relies on its clients' ability to accurately forecast product demand and select and buy the inventory for their corresponding online businesses. Under such arrangements, the client establishes product prices and pays our Enterprise business fees based either on a fixed or variable percentage of revenues, or on the activity performed. As a result, if Enterprise clients fail to accurately forecast product demand or optimize or maintain access to inventory, the client's ecommerce business (and, in turn, our Enterprise fees) could be adversely affected.

Our Enterprise business holds some inventory on behalf of its clients. If our Enterprise business is unable to effectively manage and handle this inventory, this may result in unexpected costs that could adversely affect our Enterprise business. Any theft of such inventory, or damage or interruption to such inventory, including as a result of earthquakes, hurricanes, floods, fire, power loss, labor disputes, terrorist attacks and similar events and disruptions, could result in losses related to such inventory and disruptions to the businesses of Enterprise clients, which could in turn adversely affect our Enterprise business. While we have insurance coverage to protect against such losses, it may be inadequate to cover all losses, and we may not be able to fully collect, if at all, under these insurance policies.

Our Enterprise business processes personal information on behalf of its clients. The personal information on customers of certain websites operated by Enterprise clients may be regulated under applicable privacy laws and regulations. In some cases, Enterprise's use or disclosure of that information may be restricted by contractual terms, laws and regulations, and any misuse or unpermitted disclosure of that information could negatively impact our Enterprise business and its clients.

Our Enterprise business is in the process of enhancing its marketing solutions platform and plans to migrate existing clients to its new marketing solutions platform. Our Enterprise business could be negatively impacted if this project is delayed, the functionality of the new marketing solutions platform is not accepted by existing or new clients, or the new marketing solutions platform does not operate as expected.

Our Enterprise business utilizes email marketing to drive consumer traffic to the websites operated by some of its clients. Email could become a less effective means of communicating with and marketing to consumers for a variety of reasons, including: problems with technology that make Enterprise's email communications more difficult to deliver and for consumers to read (e.g., the inability of some mobile devices to adequately display email); consumers may disregard marketing emails due to the large volume of such emails they receive; the inability of filters to effectively screen for unwanted emails, resulting in increased levels of junk mail, or "SPAM," which may overwhelm consumers' email accounts; increased use of social networking sites, which may result in decreased use of email as a primary means of communication; continued security concerns regarding Internet usage in general from viruses, worms or similar problems; and increased governmental regulation or restrictive policies adopted by Internet service providers that make it more difficult or costly to utilize email for marketing communications. If any of our Enterprise entities were to end up on SPAM lists or lists of entities that have been involved in sending unwanted, unsolicited emails, their ability to contact customers through email could be significantly restricted. If any of the foregoing were to occur, the demand for Enterprise email marketing solutions could decrease and our Enterprise business could be harmed. Our Enterprise business also utilizes mobile messaging as a means of communicating with consumers, which carries risks similar to those described above for email marketing.

Our Enterprise business has relationships with search engines, comparison shopping sites, affiliate marketers, online advertising networks, and other websites to provide content, advertising banners, and other links to its clients' ecommerce businesses. Our Enterprise business relies on these relationships as significant sources of traffic to its clients' ecommerce businesses. If we are unable to maintain these relationships or enter into new relationships on acceptable terms, our ability to attract new customers could be harmed.

eBay and our Enterprise businesses are party to certain acquisition agreements relating to entities purchased by GSI Commerce prior to our acquisition of GSI Commerce. These agreements could subject us to liabilities, which could harm our Enterprise business.

Item 2: Unregistered Sales of Equity Securities and Use of Proceeds

Stock repurchase activity during the three months ended June 30, 2015 was as follows:

Period Ended	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Programs	Maximum Dollar Value that May Yet be Purchased Under the Programs ^(a)
April 30, 2015	—	\$—	—	\$1,984,542,829
May 31, 2015	—	\$—	—	\$1,984,542,829
June 30, 2015	—	\$—	—	\$1,984,542,829
	—		—	

In January 2015, our Board authorized an additional \$2 billion stock repurchase program, with no expiration from the date of authorization. The stock repurchase programs are intended to offset the impact of dilution from our equity compensation programs and, subject to market conditions and other factors, to make opportunistic (a) repurchases of our common stock to reduce our outstanding share count. Any share repurchases under our stock repurchase programs may be made through open market transactions, block trades, privately negotiated transactions (including accelerated share repurchase transactions) or other means at times and in such amounts as management deems appropriate and will be funded from our working capital or other financing alternatives.

Our stock repurchase programs may be limited or terminated at any time without prior notice. The timing and actual number of shares repurchased will depend on a variety of factors, including corporate and regulatory requirements, price and other market conditions and management's determination as to the appropriate use of our cash.

As of June 30, 2015, a total of approximately \$2.0 billion remained available for future repurchases of our common stock under our January 2015 stock repurchase program. In July 2015, our board of directors authorized an additional \$1 billion stock repurchase program, with no expiration from the date of authorization. This new stock repurchase program, together with approximately \$2 billion remaining under our January 2015 stock repurchase program, brings the total repurchase authorization as of July 2015 to approximately \$3.0 billion. For further details, please see "Part I, Item 2: Management's Discussion and Analysis of Financial Condition and Results of Operations - Liquidity and Capital Resources - Stock Repurchases."

Item 3: Defaults Upon Senior Securities

Not applicable.

Item 4: Mine Safety Disclosures

Not applicable.

Item 5: Other Information

Not applicable.

Item 6: Exhibits
