STERLING BANCORP AND SUBSIDIARIES
Notes to Consolidated Financial Statements
(Unaudited)

1. The consolidated financial statements include the accounts of Sterling Bancorp (the parent company) and its subsidiaries, principally Sterling National Bank and its subsidiaries (the bank), after elimination of material intercompany transactions. The term the Company refers to Sterling Bancorp and its subsidiaries. The consolidated financial statements as of and for the interim periods ended March 31, 2005 and 2004 are unaudited; however, in the opinion of management, all adjustments, consisting of normal recurring accruals, necessary for a fair presentation of such periods have been made. Certain reclassifications have been made to the 2004 consolidated financial statements to conform to the current presentation. The interim consolidated financial statements should be read in conjunction with the Company s annual report on Form 10-K for the year ended December 31, 2004. The Company effected a six-for-five stock split on December 8, 2004, a five-for-four stock split on September 10, 2003 and paid stock dividends as follows: 20% on December 9, 2002; 10% on December 10, 2001; 10% on December 11, 2000; and 5% on December 14, 1999. Fractional shares were cashed-out and payments were made to shareholders in lieu of fractional shares. All capital and share amounts as well as basic and diluted average number of shares outstanding and earnings per average common share information for all prior reporting periods have been restated to reflect the effect of the stock splits and stock dividends.
2. At March 31, 2005, the Company has a stock-based employee compensation plan, which is described more fully in Note 1 and Note 15 of the Company s annual report on Form 10-K for the year ended December 31, 2004. The Company accounts for this plan under the recognition and measurement principles of Accounting Principles Board (APB) Opinion No. 25, *Accounting for Stock Issued to Employees*, and related Interpretations. No stock-based employee compensation cost is reflected in net income, as all options granted under those plans had an exercise price equal to the market value of the underlying common stock on the date of grant. In accordance with SFAS No. 148, the following table illustrates the effect on net income and earnings per average common share if the Company had applied the fair value recognition provisions of Statement of Financial Accounting Standards (SFAS) No. 123, *Accounting for Stock-Based Compensation*, to the stock-based employee compensation plans.

<u>Three Months Ended March 31,</u>	<u>2005</u>	<u>2004</u>
Net income available for common shareholders	\$ 5,766,723	\$ 5,206,934
Deduct: Total stock-based employee compensation expense determined under fair value based method for all awards, net of related tax effects	(61,395)	(59,488)
Pro forma, net income	\$ 5,705,328	\$ 5,147,446
Earnings per average common share:

3. The major components of domestic loans held for sale and loans held in portfolio are as follows:

	March 31,	
	2005	2004
Loans held for sale		
Real estate-mortgage	\$ 26,614,855	\$ 48,426,817
Loans held in portfolio		
Commercial and industrial	\$ 556,229,669	\$ 509,376,472
Lease financing	186,476,009	173,423,983
Real estate-mortgage	241,517,928	163,288,645
Real estate-construction	2,313,541	2,354,375
Installment	13,372,051	16,012,469
Loans to depository institutions		10,000,000
Loans held in portfolio, gross	999,909,198	874,455,944
Less unearned discounts	23,301,243	21,448,240
Loans held in portfolio, net of unearned discounts	\$ 976,607,955	\$ 853,007,704

4. SFAS No. 131, *Disclosures about Segments of an Enterprise and Related Information*, established standards for the way that public business enterprises report and disclose selected information about operating segments in interim financial statements provided to stockholders.

The Company provides a broad range of financial products and services, including commercial loans, asset-based financing, factoring and accounts receivable management services, trade financing, equipment leasing, corporate and consumer deposit services, commercial and residential mortgage lending and brokerage, trust and estate administration and investment management services. The Company's primary source of earnings is net interest income, which represents the difference between interest earned on interest-earning assets and the interest incurred on interest-bearing liabilities. The Company's 2005 year-to-date average interest-earning assets were 58.2% loans (corporate lending was 68.4% and real estate lending was 28.1% of total loans, respectively) and 40.6% investment securities and money market investments. There are no industry concentrations exceeding 10% of loans, gross, in the corporate loan portfolio. Approximately 67% of loans are to borrowers located in the metropolitan New York area. In order to comply with the provisions of SFAS No. 131, the Company has determined that it has three reportable operating segments: corporate lending, real estate lending and company-wide treasury.

STERLING BANCORP AND SUBSIDIARIES
Notes to Consolidated Financial Statements

The Company previously disclosed in its financial statements for the year ended December 31, 2004, that it expected to contribute approximately \$3,000,000 to the defined benefit pension plan in 2005. No contribution has been made as of March 31, 2005.

8. In April, 2005, the Securities and Exchange Commission (the "SEC") delayed the compliance date of SFAS No. 123R, *Share-Based Payment*. SFAS No. 123R was originally scheduled to be effective as of the first interim or annual reporting period beginning after June 15, 2005. As a result of the SEC's action, SFAS No. 123R will be effective for the Company beginning January 1, 2006. SFAS No. 123R provides alternative transition methods and the Company has not yet determined which transition method it will apply upon adoption of SFAS No. 123R. The impact on the Company's consolidated financial statements will depend on the transition method selected.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following commentary presents management's discussion and analysis of the financial condition and results of operations of Sterling Bancorp (the parent company), a financial holding company under the Gramm-Leach-Bliley Act of 1999, and its subsidiaries, principally Sterling National Bank (the bank). Throughout this discussion and analysis, the term the Company refers to Sterling Bancorp and its subsidiaries. This discussion and analysis should be read in conjunction with the consolidated financial statements and supplemental data contained elsewhere in this quarterly report and the Company's annual report on Form 10-K for the year ended December 31, 2004. Certain reclassifications have been made to prior years' financial data to conform to current financial statement presentations as well as to reflect the effect of the six-for-five stock split effected on December 8, 2004.

OVERVIEW

The Company provides a broad range of financial products and services, including business and consumer loans, commercial and residential mortgage lending and brokerage, asset-based financing, factoring/accounts receivable management services, deposit services, trade financing, equipment leasing, trust and estate administration, and investment management services. The Company has operations in New York, Virginia and North Carolina and conducts business throughout the United States. The general state of the U.S. economy and, in particular, economic and market conditions in the metropolitan New York area have a significant impact on loan demand, the ability of borrowers to repay these loans and the value of any collateral securing these loans and may also affect deposit levels. Accordingly, future general economic conditions are a key uncertainty that management expects will materially affect the Company's results of operations.

For the three months ended March 31, 2005, the bank's average earning assets represented approximately 96.5% of the Company's average earning assets. Loans represented 58.2% and investment securities represented 40.6% of the bank's average earning assets for the first quarter of 2005.

The Company's primary source of earnings is net interest income, and its principal market risk exposure is interest rate risk. The Company is not able to predict market interest rate fluctuations, and its asset-liability management strategy may not prevent interest rate changes from having a material adverse effect on the Company's results of operations and financial condition.

Although management endeavors to minimize the credit risk inherent in the Company's loan portfolio, it must necessarily make various assumptions and judgments about the collectibility of the loan portfolio based on its experience and evaluation of economic conditions. If such assumptions or judgments prove to be incorrect, the current allowance for loan losses may not be sufficient to cover loan losses and additions to the allowance may be necessary, which would have a negative impact on net income.

There is intense competition in all areas in which the Company conducts its business. The Company competes with banks and other financial institutions, including savings and loan associations, savings banks, finance companies and credit unions. Many of these competitors have substantially greater resources and lending limits and provide a wider array of banking services. To a limited extent, the Company also competes with other providers of financial services, such as money market mutual funds, brokerage firms, consumer finance companies and insurance companies. Competition is based on a number of factors, including prices, interest rates, service, availability of products, and geographic location.

The Company regularly evaluates acquisition opportunities and conducts due diligence activities in connection with possible acquisitions. As a result, acquisition discussions, and in some cases negotiations, regularly take place and future acquisitions could occur.

INCOME STATEMENT ANALYSIS

Net interest income, which represents the difference between interest earned on interest-earning assets and interest incurred on interest-bearing liabilities, is the Company's primary source of earnings. Net interest income can be affected by changes in market interest rates as well as the level and composition of assets, liabilities and shareholders' equity. Net interest spread is the difference between the average rate earned, on a tax-equivalent basis, on interest-earning assets and the average rate paid on interest-bearing liabilities. The net yield on interest-earning assets (net interest margin) is calculated by dividing tax-equivalent net interest income by average interest-earnings assets. Generally, the net interest margin will exceed the net interest spread because a portion of interest-earning assets are funded by various noninterest-bearing sources, principally noninterest-bearing deposits and shareholders' equity. The increases (decreases) in the components of interest income and interest expense, expressed in terms of fluctuation in average volume and rate, are provided in the Rate/Volume Analysis shown on Page 22. Information as to the components of interest income and interest expense and average rates is provided in the Average Balance Sheets shown on page 21.

Comparisons of the Three Months Ended March 31, 2005 and 2004

The Company reported net income for the three months ended March 31, 2005 of \$5.8 million, representing \$0.30 per share, calculated on a diluted basis, compared to \$5.2 million, or \$0.27 per share calculated on a diluted basis, for the first quarter of 2004. This increase reflects continued growth in net interest income and a lower provision for income taxes which more than offset a decrease in noninterest income and increases in the provision for loan losses and in noninterest expenses.

Net Interest Income

Net interest income on a tax-equivalent basis, increased to \$20.7 million for the first quarter of 2005 from \$19.2 million for the 2004 period, due to higher average earning assets outstanding coupled with lower average cost of funding partially offset by higher rates paid on interest-bearing deposit balances. The net interest margin, on a tax-equivalent basis, was 4.91% for the first three months of 2005 compared to 4.90% for the 2004 period. The increase in the net interest margin was primarily the result of the impact of the higher interest rate environment in 2005, and of an increase in average loan outstandings partially offset by the impact of higher average interest-bearing deposits.

Total interest income, on a tax-equivalent basis, aggregated \$26.4 million for the first three months of 2005, up from \$23.8 million for the 2004 period. The tax-equivalent yield on interest-earning assets was 6.32% for the first quarter of 2005 compared to 6.09% for the 2004 period.

Interest earned on the loan portfolio amounted to \$18.4 million for the first three months of 2005, up \$3.3 million from a year ago. Average loan balances amounted to \$993.0 million an increase of \$130.4 million from an average of \$862.6 million in the prior year period. The increase in average loans, (across virtually all segments of the Company's loan portfolio), primarily due to the Company's business development activities and the ongoing consolidation of banks in the Company's marketing area, accounted for \$2.2 million of the \$3.3 million increase in interest earned on loans. The increase in the yield on the domestic loan portfolio to 7.72% for the first quarter of 2005 from 7.22% for the 2004 period was primarily attributable to the mix of outstanding balances on average among the components of the loan portfolio and the higher interest rate environment in 2005.

Interest earned on the securities portfolio, on a tax-equivalent basis, decreased to \$7.9 million for the first quarter of 2005 from \$8.6 million in the prior year period. The decrease in yields on most of the securities portfolio reflects the impact of purchases made during the lower rate environment on average in 2004. Average outstandings decreased to \$692.6 million (40.6% of average earning assets for the first quarter of 2005) from \$695.1 million (43.9% of average earning assets) in the prior year period. The average life of the securities portfolio was approximately 4.3 years at March 31, 2005 compared to 3.4 years at March 31, 2004, reflecting the impact of purchases made during 2004.

Total interest expense increased to \$5.7 million for the first three months of 2005 from \$4.5 million for the 2004 period, primarily due to higher rates paid for interest-bearing deposits and for borrowed funds and higher average balances for interest-bearing deposits.

Interest expense on deposits increased to \$3.5 million for the first quarter of 2005 from \$2.5 million for the 2004 period due to an increase in average balances, primarily for time deposits, coupled with an increase in the cost of those funds. Average interest-bearing deposit balances increased to \$894.2 million for the first quarter of 2005 from \$793.7 million in the 2004 period primarily the result of the Company's branching initiatives and other business development activities. Average rate paid on interest-bearing deposits was 1.57%

which was 32 basis points higher than the prior year period. The increase in average cost of deposits reflects higher interest rate environment during 2005.

Provision for Loan Losses

Based on management's continuing evaluation of the loan portfolio (discussed under *Asset Quality* below), the provision for loan losses for the first three months of 2005 increased to \$2.6 million from \$2.4 million for the prior year period. Factors affecting the level of provision included the growth in the loan portfolios, changes in general economic conditions and the amount of nonaccrual loans.

Noninterest Income

Noninterest income decreased to \$8.0 million for the first quarter of 2005 from \$8.2 million in the 2004 period, primarily due to lower gains on sales of available for sale securities. Partially offsetting this decrease were higher revenues from mortgage banking activities and fees for deposit services.

Noninterest Expenses

Noninterest expenses increased \$1.0 million for the first quarter of 2005 when compared to the 2004 period. The increase was primarily due to higher professional fees related to compliance efforts and investments in the Sterling franchise, including the new branches, with higher expenses related to salaries and occupancy costs.

Provision for Income Taxes

The provision for income taxes for the first quarter of 2005 decreased by \$0.5 million from the 2004 period because a greater portion of employee benefits expense for the first quarter of 2005 is deductible for income tax purposes.

BALANCE SHEET ANALYSIS

Securities

The Company's securities portfolios are comprised principally of U.S. government and U.S. government corporation and agency guaranteed mortgage-backed securities along with other debt and equity securities. In 2004, the Company undertook certain balance sheet initiatives designed to reduce the risks associated with rising interest rates and to react to a flattening yield curve. Since January 1, 2004 the Company sold approximately \$87.3 million of mortgage-backed securities with average lives ranging between 4 years and 7 years and with yields between 4.25% and 5.94%. The proceeds from these sales along with principal prepayments were utilized to purchase mortgage-backed securities with average lives ranging between 1.8 years and 5.2 years at yields between 3.56% and 5.03%. At March 31, 2005, the Company's portfolio of securities totaled \$706.6 million, of which U.S. government corporation and agency guaranteed mortgage-backed securities and collateralized mortgage obligations having an average life of approximately 4.7 years amounted to \$599.6 million. The Company has the intent and ability to hold to maturity securities classified as held to maturity. These securities are carried at cost, adjusted for amortization of premiums and accretion of discounts. The gross unrealized gains and losses on held to

Edgar Filing: STERLING BANCORP - Form 10-Q

maturity securities were \$2.2 million and \$8.1 million, respectively. Securities classified as available for sale may be sold in the future, prior to maturity. These securities are carried at market value. Net aggregate unrealized gains or losses on these securities are included in a valuation allowance account and are shown net of taxes, as a component of shareholders' equity.

Available for sale securities included gross unrealized gains of \$1.2 million and gross unrealized losses of \$4.6 million. Given the generally high credit quality of the portfolio, management expects to realize all of its investment upon the maturity of such instruments and thus believes that any market value impairment is temporary.

The following table presents information regarding securities available for sale:

<u>March 31, 2005</u>	<u>Gross Amortized Cost</u>	<u>Gross Unrealized Gains</u>	<u>Gross Unrealized Losses</u>	<u>Market Value</u>
Obligations of U.S. government corporations and agencies mortgage-backed securities	\$ 120,542,814	\$ 573,969	\$ 2,001,289	\$ 119,115,494

Loan Portfolio

A management objective is to maintain the quality of the loan portfolio. The Company seeks to achieve this objective by maintaining rigorous underwriting standards coupled with regular evaluation of the creditworthiness of and the designation of lending limits for each borrower. The portfolio strategies include seeking industry and loan size diversification in order to minimize credit exposure and originating loans in markets with which the Company is familiar.

The Company's commercial and industrial loan portfolio represents approximately 55% of all loans. Loans in this category are typically made to small and medium-sized businesses and range between \$25,000 and \$10 million. Sources of repayment are from the borrower's operating profits, cash flows and liquidation of pledged collateral. Based on underwriting standards, loans may be secured in whole or in part by collateral such as liquid assets, accounts receivable, equipment, inventory, and real property. The Company's real estate loan portfolio, which represents approximately 27% of all loans, is secured by mortgages on real property located principally in the states of New York and Virginia. The Company's leasing portfolio, which consists of finance leases for various types of business equipment, represents approximately 16% of all loans. The collateral securing any loan may vary in value based on market conditions.

The following table sets forth the composition of the Company's loans held for sale and loans held in portfolio:

	March 31,			
	2005		2004	
	(\$ in thousands)			
	Balances	% of Total	Balances	% of Total

<hr/>				
Loans, net of unearned discounts	\$ 1,003,223	100.0%	\$ 901,435	100.0%

Asset Quality

Intrinsic to the lending process is the possibility of loss. In times of economic slowdown, the risk of loss inherent in the Company's portfolio of loans may be increased. While management endeavors to minimize this risk, it recognizes that loan losses will occur and that the amount of these losses will fluctuate depending on the risk characteristics of the loan portfolio which in turn depend on current and expected economic conditions, the financial condition of borrowers, the realization of collateral, and the credit management process.

Management views the allowance for loan losses as a critical accounting policy due to its subjectivity. The allowance for loan losses is maintained through the

provision for loan losses, which is a charge to operating earnings. The adequacy of the provision and the resulting allowance for loan losses is determined by a management evaluation process of the loan portfolio, including identification and review of individual problem situations that may affect the borrower's ability to repay, review of overall portfolio quality through an analysis of current charge-offs, delinquency and nonperforming loan data, estimates of the value of any underlying collateral, an assessment of current and expected economic conditions and changes in the size and character of the loan portfolio. Other data utilized by management in determining the adequacy of the allowance for loan losses includes, but is not limited to, the results of regulatory reviews, the amount of, trend of and/or borrower characteristics on loans that are identified as requiring special attention as part of the credit review process, and peer group comparisons. The impact of this other data might result in an allowance which will be greater than that indicated by the evaluation process previously described. The allowance reflects management's evaluation both of loans presenting identified loss potential and of the risk inherent in various components of the loan portfolio, including loans identified as impaired as required by SFAS No. 114. Thus, an increase in the size of the portfolio or in any of its components could necessitate an increase in the allowance even though there may not be a decline in credit quality or an increase in potential problem loans. A significant change in any of the evaluation factors described above could result in future additions to the allowance. At March 31, 2005, the ratio of the allowance to loans held in portfolio, net of unearned discounts, was 1.72% and the allowance was \$16.8 million. At such date, the Company's nonaccrual loans amounted to \$3.4 million; \$1.1 million of such loans was judged to be impaired within the scope of SFAS No. 114. Loans 90 days past due and still accruing amounted to \$1.3 million. Nonaccrual loans and loans 90 days past due and still accruing include leases, in the amount of \$0.7 million and \$1.1 million, respectively, of telecommunications equipment from a company that went into bankruptcy in July 2004. The service provider to the lessees discontinued service, resulting in the failure of certain lessees to make payments. While pursuing collection of the lease payments, past due amounts accrue. Legal action is typically commenced against lessees whose accounts are not paid within 180 days and are placed in nonaccrual status. Lessees remain unconditionally obligated to make payments. All are creditworthy and personally guaranteed; the reported delinquencies are not due to credit issues. Based on the foregoing, as well as management's judgment as to the current risks inherent in loans held in portfolio, the Company's allowance for loan losses was deemed adequate to absorb all reasonably anticipated losses on specifically known and other possible credit risks associated with the portfolio as of March 31, 2005. Net losses within loans held in portfolio are not statistically predictable and changes in conditions in the next twelve months could result in future provisions for loan losses varying from the level taken in the first quarter of 2005. Potential problem loans, which are loans that are currently performing under present loan repayment terms but where known information about possible credit problems of borrowers causes management to have serious doubts as to the ability of the borrowers to continue to comply with the present repayment terms, aggregated \$3.8 million at March 31, 2005.

Edgar Filing: STERLING BANCORP - Form 10-Q

Deposits

A significant source of funds for the Company continues to be deposits, consisting of demand (noninterest-bearing), NOW, savings, money market and time deposits (principally certificates of deposit).

The following table provides certain information with respect to the Company's deposits:

March 31,				
2005		2004		
(\$ in thousands)				
	Balances	% of Total	Balances	% of Total
Domestic				
Demand	\$ 468,714	33.7%	\$ 429,297	35.1%
NOW	152,607	11.0	133,189	10.9
Savings	28,864	2.1	34,216	2.8
Money market	251,105	18.1	199,206	16.3
Time deposits	484,283	34.9	424,389	34.7
<hr/>				
Total domestic deposits	1,385,573	99.8	1,220,297	99.8
<hr/>				
Foreign				
Time deposits	3,010	0.2	3,000	0.2
<hr/>				
Total deposits	\$ 1,388,583	100.0%	\$ 1,223,297	100.0%
<hr/>				

Fluctuations of balances in total or among categories at any date may occur based on the Company's mix of assets and liabilities as well as on customers' balance sheet strategies. Historically, however, average balances for deposits have been relatively stable. Information regarding these average balances is presented on page 21.

CAPITAL

The Company and the bank are subject to risk-based capital regulations which quantitatively measure capital against risk-weighted assets, including certain off-balance sheet items. These regulations define the elements of the Tier 1 and Tier 2 components of Total Capital and establish minimum ratios of 4% for Tier 1 capital and 8% for Total Capital for capital adequacy purposes. Supplementing these regulations is a leverage requirement. This requirement establishes a minimum leverage ratio (at least 3% to 5%) which is calculated by dividing Tier 1 capital by adjusted quarterly average assets (after deducting goodwill). Information regarding the Company's and the bank's risk-based capital is presented on page 23. In addition, the bank is subject to the Federal Deposit Insurance Corporation Improvement Act of 1981 (FDICIA) which imposes a number of mandatory supervisory measures. Among other matters, five capital categories, ranging from well capitalized to critically under capitalized, are used by regulatory agencies to determine a bank's deposit insurance premium, approval of applications authorizing institutions to increase their asset size or otherwise expand business activities or acquire other institutions. Under FDICIA, a well capitalized bank must maintain minimum leverage, Tier 1 and Total Capital ratios of 5%, 6% and 10%, respectively. The Federal Reserve Board applies comparable tests for holding companies such as the Company. At March 31, 2005, the Company and the bank exceeded the requirements for well capitalized institutions.

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING STATEMENTS

Certain statements contained in this quarterly report, including but not limited to, statements concerning future results of operations or financial position, borrowing capacity and future liquidity, future investment results, future credit exposure, future loan losses and plans and objectives for future operations, and other statements contained herein regarding matters that are not historical facts, are forward-looking statements as defined in the Securities Exchange Act of 1934. These statements are not historical facts but instead are subject to numerous assumptions, risks and uncertainties, and represent only our belief regarding future events, many of which, by their nature, are inherently uncertain and outside our control. Any forward-looking statements we may make speak only as of the date on which such statements are made. Our actual results and financial position may differ materially from the anticipated results and financial condition indicated in or implied by these forward-looking statements.

Factors that could cause our actual results to differ materially from those in the forward-looking statements include, but are not limited to, the following: inflation, interest rates, market and monetary fluctuations; geopolitical developments including acts of war and terrorism and their impact on economic conditions; the effects of, and changes in, trade, monetary and fiscal policies and laws, including interest rate policies of the Board of Governors of the Federal Reserve System; changes, particularly declines, in general economic conditions and in the local economies in which the Company operates; the financial condition of the Company's borrowers; competitive pressures on loan and deposit pricing and demand; changes in technology and their impact on the marketing of new products and services and the acceptance of these products and services by new and existing customers; the willingness of customers to substitute competitors' products and services for the Company's products and services; the impact of changes in the financial services laws and regulations (including laws concerning taxes, banking, securities and insurance); changes in accounting principles, policies and guidelines; the success of the Company at managing the risks involved in the foregoing as well as other risks and uncertainties indicated from time to time in press releases and other public filings. The foregoing list of important factors is not exclusive, and we will not update any forward-looking statement, whether written or oral, that may be made from time to time.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

ASSET/LIABILITY MANAGEMENT

The Company's primary earnings source is its net interest income; therefore the Company devotes significant time and has invested in resources to assist in the management of interest rate risk and asset quality. The Company's net interest income is affected by changes in market interest rates, and by the level and composition of interest-earning assets and interest-bearing liabilities. The Company's objectives in its asset/liability management are to utilize its capital effectively, to provide adequate liquidity and to enhance net interest income, without taking undue risks or subjecting the Company unduly to interest rate fluctuations.

The Company takes a coordinated approach to the management of its liquidity, capital and interest rate risk. This risk management process is governed by policies and limits established by senior management which are reviewed and approved by the Asset/Liability Committee. This committee, which is comprised of members of senior management, meets to review, among other things, economic conditions, interest rates, yield curve, cash flow projections, expected customer actions, liquidity levels, capital ratios and repricing characteristics of assets, liabilities and financial instruments.

Market Risk

Market risk is the risk of loss in a financial instrument arising from adverse changes in market indices such as interest rates, foreign exchange rates and equity prices. The Company's principal market risk exposure is interest rate risk, with no material impact on earnings from changes in foreign exchange rates or equity prices.

Interest rate risk is the exposure to changes in market interest rates. Interest rate sensitivity is the relationship between market interest rates and net interest income due to the repricing characteristics of assets and liabilities. The Company monitors the interest rate sensitivity of its balance sheet positions by examining its near-term sensitivity and its longer-term gap position. In its management of interest rate risk, the Company utilizes several financial and statistical tools, including traditional gap analysis and sophisticated income simulation models.

A traditional gap analysis is prepared based on the maturity and repricing characteristics of interest-earning assets and interest-bearing liabilities for selected time bands. The mismatch between repricings or maturities within a time band is commonly referred to as the "gap" for that period. A positive gap (asset sensitive) where interest rate sensitive assets exceed interest rate sensitive liabilities generally will result in the net interest margin increasing in a rising rate environment and decreasing in a falling rate environment. A negative gap (liability sensitive) will generally have the opposite result on the net interest margin. However, the traditional gap analysis does not assess the relative sensitivity of assets and liabilities to changes in interest rates and other factors that could have an impact on interest rate sensitivity or net interest income. The Company utilizes the gap analysis to complement its income simulations modeling, primarily focusing on the longer-term structure of the balance sheet.

The Company's balance sheet structure is primarily short-term in nature with a substantial portion of assets and liabilities repricing or maturing within one year. The Company's gap analysis at March 31, 2005, presented on page 28, indicates that net interest income would increase during periods of rising interest rates and decrease during periods of falling interest rates, but, as mentioned above, gap analysis may not be an accurate predictor of net interest income.

As part of its interest rate risk strategy, the Company may use financial instrument derivatives to hedge the interest rate sensitivity of assets with the corresponding amortization reflected in the yield of the related balance sheet assets being hedged. The Company has written policy guidelines, approved by the Board of Directors, governing the use of financial instruments, including approved counterparties, risk limits and appropriate internal control procedures. The credit risk of derivatives arises principally from the potential for a counterparty to fail to meet its obligation to settle a contract on a timely basis. During the first quarter of 2005, the Company did not enter into any derivative contracts to hedge its interest rate risk. At March 31, 2005 and 2004, the Company was not a party to any derivative contracts to hedge its interest rate risk.

The Company utilizes income simulation models to complement its traditional gap analysis. While the Asset/Liability Committee routinely monitors simulated net interest income sensitivity over a rolling two-year horizon, it also utilizes additional tools to monitor potential longer-term interest rate risk.

The income simulation models measure the Company's net interest income volatility or sensitivity to interest rate changes utilizing statistical techniques that allow the Company to consider various factors which impact net interest income. These factors include actual maturities, estimated cash flows, repricing characteristics, deposits growth/retention and, most importantly, the relative sensitivity of the Company's assets and liabilities to changes in market interest rates. This relative sensitivity is important to consider as the Company's core deposit base has not been subject to the same degree of interest rate sensitivity as its assets. The core deposit costs are internally managed and tend to exhibit less sensitivity to changes in interest rates than the Company's adjustable rate assets whose yields are based on external indices and generally change in concert with market interest rates.

The Company's interest rate sensitivity is determined by identifying the probable impact of changes in market interest rates on the yields on the Company's assets and the rates that would be paid on its liabilities. This modeling technique involves a degree of estimation based on certain assumptions that management believes to be reasonable. Utilizing this process, management projects the impact of changes in interest rates on net interest margin. The Company has established certain policy limits for the potential volatility of its net interest margin assuming certain levels of changes in market interest rates with the objective of maintaining a stable net interest margin under various probable rate scenarios. Management generally has maintained a risk position well within the policy limits. As of March 31, 2005, the model indicated the impact of a 200 basis point parallel and pro rata rise in rates over 12 months would approximate a 2.3% (\$1.9 million) increase in net interest income, while the impact of a 200 basis point decline in rates over the same period would approximate a 2.8% (\$2.3 million) decline from an unchanged rate environment.

The preceding sensitivity analysis does not represent a Company forecast and should not be relied upon as being indicative of expected operating results. These hypothetical estimates are based upon numerous assumptions including: the nature and timing of interest rate levels including yield curve shape, pre-payments on loans and securities, deposit decay rates, pricing decisions on loans and deposits, reinvestment/replacement of asset and liability cash flows, and others. While assumptions are developed based upon current economic and local market conditions, the Company cannot provide any assurances as to the predictive nature of these assumptions, including how customers preferences or competitor influences might change.

Also, as market conditions vary from those assumed in the sensitivity analysis, actual results will also differ due to: pre-payment/refinancing levels likely deviating from those assumed, the varying impact of interest rate change caps or floors on adjustable rate assets, the potential effect of changing debt service levels on customers with adjustable rate loans, depositor early withdrawals and product preference changes, and other variables. Furthermore, the sensitivity analysis does not reflect actions that the Asset/Liability Committee might take in responding to or anticipating changes in interest rates.

The shape of the yield curve can cause downward pressure on net interest income. In general, if and to the extent that the yield curve is flatter (*i.e.*, the differences between interest rates for different maturities are relatively smaller) than previously anticipated, then the yield on the Company's interest-earning assets and its cash flows will tend to be lower. Management believes that a relatively flat yield curve shape could adversely affect the Company's results in 2005.

Liquidity Risk

Liquidity is the ability to meet cash needs arising from changes in various categories of assets and liabilities. Liquidity is constantly monitored and managed at both the parent company and the bank levels. Liquid assets consist of cash and due from banks, interest-bearing deposits in banks and Federal funds sold and securities available for sale. Primary funding sources include core deposits, capital market funds and other money market sources. Core deposits included domestic noninterest-bearing and interest-bearing retail deposits, which historically have been relatively stable. The parent company and the bank believe that they have significant unused borrowing capacity. Contingency plans exist which we believe could be implemented on a timely basis to mitigate the impact of any dramatic change in market conditions.

While the parent company generates income from its own operations, it also depends for its cash requirements on funds maintained or generated by its subsidiaries, principally the bank. Such sources have been adequate to meet the parent company's cash requirements throughout its history.

Various legal restrictions limit the extent to which the bank can supply funds to the parent company and its nonbank subsidiaries. All national banks are limited in the payment of dividends without the approval of the Comptroller of the Currency to an amount not to exceed the net profits as defined, for the year to date combined with its retained net profits for the preceding two calendar years.

At March 31, 2005, the parent company's short-term debt, consisting principally of commercial paper used to finance ongoing current business activities, was approximately \$39.2 million. The parent company had cash, interest-bearing deposits with banks and other current assets aggregating \$30.6 million. The parent company also has back-up credit lines with banks of \$24.0 million. Since 1979, the parent company has had no need to use the available back-up lines of credit.

Within the time period required by the Securities and Exchange Commission and the New York Stock Exchange, we will post on our web site any amendment to the Code of Business Conduct and Ethics and any waiver applicable to our senior financial officers, as defined in the Code, or our executive officers or directors. In addition, information concerning purchases and sales of our equity securities by our executive officers and directors is posted on our web site.

STERLING BANCORP AND SUBSIDIARIES
Interest Rate Sensitivity

To mitigate the vulnerability of earnings to changes in interest rates, the Company manages the repricing characteristics of assets and liabilities in an attempt to control net interest rate sensitivity. Management attempts to confine significant rate sensitivity gaps predominantly to repricing intervals of a year or less so that adjustments can be made quickly. Assets and liabilities with predetermined repricing dates are classified based on the earliest repricing period. Amounts are presented in thousands.

ITEM 4. CONTROLS AND PROCEDURES

An evaluation was carried out under the supervision and with the participation of the Company's management, including the Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures (as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934) as of the end of the period covered by this quarterly report. Based upon that evaluation, and the identification of a material weakness in the Company's internal control over financial reporting as of December 31, 2004 (relating to inadequate resources for controls over the accounting for Company-owned split-dollar life insurance policies on the lives of certain officers of the Company) described in Item 9A of the Company's annual report on Form 10-K for the fiscal year ended December 31, 2004, as amended by Amendment No. 1 on Form 10-K/A, the Company's management, including the Chief Executive Officer and Chief Financial Officer, have concluded that, as of the end of the period covered by this quarterly report, the Company's disclosure controls and procedures were not effective to ensure that information required to be disclosed by the Company in reports that it files or submits under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms. For a discussion of the reasons and matters on which this conclusion was based, see Item 9A of the Company's annual report on Form 10-K for the fiscal year ended December 31, 2004, as amended by Amendment No. 1 on Form 10-K/A.

The Company is currently working to eliminate the material weakness referred to above, and the following changes in the Company's internal control over financial reporting (as defined in Rule 13a-15(f) under the Securities Exchange Act of 1934) occurred during the quarter ended March 31, 2005: The Company developed and implemented procedures for monthly expensing of premiums paid and or prepaid for Company-owned split-dollar life insurance policies on the lives of certain officers of the Company, retained actuarial assistance in determining the appropriate amounts to be expensed in respect of the Company's obligations to pay future premiums on split-dollar life insurance policies issued as part of a transaction in which an officer relinquishes his right to receive pension payments in exchange for the insurance policy and in respect of the Company's obligations to pay future post-retirement premiums on certain split-dollar life insurance policies, and retained life insurance consultants for assistance in determining the appropriate amounts to be credited in respect of increases in the cash surrender values of these various policies.

The Company will conduct tests of these new procedures and other changes to its internal control over financial reporting. The Company intends also to add personnel with greater expertise in accounting for employee benefits and related transactions under generally accepted accounting principles.

PART II - OTHER INFORMATION

Item 6. Exhibits

The following exhibits are filed as part of this report:

3. (i) Restated Certificate of Incorporation filed with the State of New York Department of State, October 28, 2004 (Filed as Exhibit 3(i) to the Registrant's Form 10-Q for the quarter ended September 30, 2004 and incorporated herein by reference).
- (ii) By-Laws as in effect on August 5, 2004 (Filed as Exhibit 3(ii)(A) to the Registrant's Form 10-Q for the quarter ended June 30, 2004 and incorporated herein by reference).
11. Statement Re: Computation of Per Share Earnings.
31. Certifications of the CEO and CFO pursuant to Exchange Act Rule 13a-14(a).
32. Certifications of the CEO and CFO required by Section 1350 of Chapter 63 of Title 18 of the U.S. Code.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.
