(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2013

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from to

Commission File Number 000-52646

GEOVIC MINING CORP.

(Exact name of registrant as specified in its charter)

Delaware
(State or other jurisdiction of
incorporation or organization)

20-5919886
(I.R.S. Employer
Identification No.)

5500 E. Yale Ave. Suite 302

Denver, Colorado
(Address of principal executive offices)

80222
(Zip Code)

Registrant's telephone number, including area code: (303) 476-6455

Securities registered pursuant to Section 12(b) of the Exchange Act:

None

Securities registered pursuant to Section 12(g) of the Exchange Act:

Common Stock, par value \$0.0001 per share

Title of each class to be so registered

Indicate by check mark whether the Registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the Registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the Registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the Registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the Registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of Registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the Registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company.

Large Accelerated Filer

Accelerated Filer

Non-accelerated Filer

Smaller Reporting Company

Indicate by check mark whether the Registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the Registrant's common stock held by non-affiliates, computed by reference to the closing price of the common stock as of June 28, 2013, the last business day of the Registrant's most recently completed second fiscal quarter, was approximately \$2,494,753.

At March 20, 2014, there were 106,719,602 shares of the Registrant's common stock outstanding.

CAUTIONARY LANGUAGE ABOUT FORWARD-LOOKING STATEMENTS

Certain statements in this report constitute forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, Section 21E of the Securities and Exchange Act of 1934 and applicable Canadian securities laws. Certain, but not necessarily all, of such forward-looking statements can be identified by the use of forward-looking terminology such as believes, expects, may, will, should, or anticipates or the negative thereof or other variations thereon or comparable terminology, or by discussions of strategy that involve risks and uncertainties. All statements other than statements of historical fact, included in this report regarding our financial position, business and plans or objectives for future operations are forward-looking statements. Without limiting the broader description of forward-looking statements above, we specifically note the forward looking statements with respect to exploration and mine development, construction and expansion plans, costs, grade, production and recovery rates, permitting, financing needs, the availability of financing on acceptable terms or other sources of funding, the timing of additional tests, feasibility studies and environmental permitting, estimates of mineral reserves and mineralized material; our expectations regarding the amount of capital required prior to production at the Nkamouna Project and our ability to source the required capital; success of exploration activities; permitting time lines; construction and capital costs; operating expenses; currency fluctuations; requirements for additional capital; our expectations regarding processing and marketing of future production from the Nkamouna Project; our ability to enter into off-take arrangements; government regulation of mining operations; environmental risks; unanticipated reclamation expenses; title disputes or claims; limitations on insurance coverage; commencement of mine production, anticipated expenditures in 2014; and our expectations regarding securing a potential strategic investor for, or a sale of our interest in, the Nkamouna Project and future debt and equity financing for the Project, and our ability to satisfy our cash requirements. Forward-looking statements involve known and unknown risks, uncertainties, and other factors which may cause the actual results, performance, or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such risks and other factors include, among others, the risk factors discussed below in Item 1A Risk Factors, and other factors described herein and in other filings with the U.S. Securities and Exchange Commission (the SEC) and Canadian securities regulatory authorities. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. The forward-looking statements in this annual report speak only as of the date hereof. The Company does not undertake any obligation to release publicly any revisions to these forward-looking statements to reflect new information, events or circumstances except as may be required under applicable securities laws.

CAUTIONARY NOTE REGARDING DISCLOSURE OF MINERAL PROPERTIES

Geovic Mining Corp. is subject to the reporting requirements of the Securities Exchange Act of 1934, as amended (Exchange Act), and applicable Canadian securities laws, and as a result we report our mineral reserves according to two different standards. Canadian reporting requirements for disclosure of mineral properties are governed by National Instrument 43-101 Standards of Disclosure for Mineral Projects (NI 43-101). The definitions of NI 43-101 are adopted from those given by the Canadian Institute of Mining, Metallurgy and Petroleum. U.S. reporting requirements are governed by the SEC Industry Guide 7 (Guide 7). These reporting standards have similar goals in terms of conveying an appropriate level of confidence in the disclosures being reported, but embody different approaches and definitions. Under Guide 7, mineralization may not be classified as a reserve unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made.

We disclose mineral reserves and mineral resources according to the definitions set forth in NI 43-101 and modify them as appropriate to conform to Guide 7 for reporting in the United States. In this Form 10-K, we use the term

mineralized material to describe the amount of mineralization in mineral deposits that do not constitute reserves by United States standards. This is substantially equivalent to the total measured mineral resources and indicated mineral resources (disclosed as exclusive of reserves), which we disclose for reporting purposes in Canada. U.S. investors are cautioned that, while the terms measured mineral resources, indicated mineral resources and inferred mineral resources are recognized and required by Canadian securities laws, rules adopted by the SEC do not recognize them. U.S. investors are also cautioned not to assume that all or any part of measured or indicated resources will ever be converted into Guide 7 compliant reserves.

Table of Contents

PART I

ITEM 1. BUSINESS

The entity now known as Geovic Mining Corp. was incorporated under the Business Corporations Act (Alberta, Canada) on August 27, 1984, was continued into Ontario in 2001, and was domesticated as a Delaware corporation under the name Geovic Mining Corp. on November 21, 2006. In this Form 10-K, the Company, Geovic Mining, our and us refer to Geovic Mining Corp. and one or more of its subsidiaries as indicated by the context.

We completed a reverse take-over transaction (the RTO) on December 1, 2006, with the result that we hold 100% of the issued and outstanding shares of Geovic, Ltd., a Cayman Islands corporation (Geovic). Geovic owns 60.5% of Geovic Cameroon PLC (GeoCam), a private corporation existing under the laws of the Republic of Cameroon which holds our mining prospect in Cameroon.

Intercorporate Relationships

The following chart illustrates the inter-corporate relationships among the Company and its subsidiaries as of March 20, 2014.

(1) GeoCam minority interest owners are described below under GeoCam Shareholder and other Agreements. Our principal business has been conducted through Geovic by which we hold our interest in rights to several cobalt-nickel-manganese deposits in the Republic of Cameroon in Africa through the ownership interest in GeoCam. Our principal business focus from 1994 to 2013 has been to advance our interest in the deposits. GeoCam's Mining Permit (the Mining Permit) establishes exclusive mining rights to develop the Nkamouna, Mada and other cobalt-nickel-manganese deposits within a 1,250 square kilometer area in southeastern Cameroon (the Cameroon Properties). The Cameroon Properties are described in Item 2. Properties. GeoCam had planned to develop and mine the Nkamouna and Mada deposits (together, the Nkamouna Project or the Project) before the other deposits are developed. Since early 2012 we have been seeking to 1) realize value for the Cameroonian assets and 2) shift the Company's focus to a prospect generation and strategic investment business model. Because our position in GeoCam will likely be significantly diminished or completely eliminated through strategic investment, the future direction for the Company will be to identify new exploration prospects, minimally develop and prioritize these prospects, and sell or joint venture further exploration and development of these prospects to others.

Business Operations in Cameroon

Qualified independent consulting firms identified and retained by either Geovic or GeoCam completed engineering pre-feasibility studies and technical reports on the Nkamouna deposit in 2006, a feasibility study in November 2007, a NI 43-101 compliant technical report in January 2008, a feasibility optimization study in September 2008 (2008 OS), an updated NI 43-101 compliant technical report on the Nkamouna Project in November 2009 (the 2009 Nkamouna Technical Report), a final feasibility study (the Feasibility Study) in April 2011 and a NI 43-101 Technical Report describing the results of the Feasibility Study in June 2011.

Table of Contents

Beginning in late 2008 and continuing through early 2011, several process improvement programs were initiated to enhance the Nkamouna Project's economics and reduce technical and financial risks. These included adopting conventional leaching technology and demonstrating the processes through readily available batch and continuous pilot scale laboratory testing programs, which were completed in 2011 by independent third parties. These testing programs have validated the process improvements and planned production presented in the Feasibility Study.

In mid-2009 GeoCam retained three well-known, highly qualified and experienced metallurgical and chemical engineers to serve as its Technical Advisory Panel (TAP). The TAP was engaged to provide high-level metallurgical processing input to the Geovic technical design team as well as provide independent expert feedback to GeoCam and its shareholders. Based on recommendations of the TAP and the results of preliminary marketing performed, GeoCam planned to produce two intermediate products (a mixed cobalt and nickel sulfide product, referred to as MSP, and manganese carbonate) at the mine site. These intermediate products would be shipped offshore and sold in the international marketplace for processing into finished products. These decisions were made in an effort to limit initial process plant capital costs and process risk at the remote mine site, and to address product preferences expressed by potential off-take customers.

In December 2009 GeoCam engaged Lycopodium Pty Ltd. (Lycopodium), an independent international engineering firm based in Perth, Australia to prepare the Feasibility Study for the Nkamouna Project. The Feasibility Study was completed in April 2011. The Feasibility Study included estimated construction and capital costs, operating expenses and future net cash flow from mining operations for the Nkamouna Project. After the Feasibility Study was completed, we continued work with GeoCam to seek Project financing options and product sales agreements, including negotiating with potential strategic investors in the Nkamouna Project.

During 2011 after completion of the Feasibility Study and during 2012, GeoCam undertook additional activities to advance the Nkamouna Project as follows:

Completed a Technical Report for the Nkamouna and Mada Deposits to meet the requirements of NI 43-101;

Completed specialty evaluations on elemental deportation in the metallurgical process, critical habitats and sensitive fauna species, and glauber salt and hydrosizer processes;

Completed an update to the Project Environmental and Social Assessment (ESA), which is aligned with the Feasibility Study;

Continued to work with the Public Liaison Committee and Nkamouna area stakeholders to guide and focus community development initiatives;

Continued to assist socio-humanitarian programs in the local communities in the health, education, agriculture and animal husbandry disciplines;

Assisted with the due diligence of potential strategic partners who have indicated an interest in a potential equity investment and/or have indicated an interest in purchasing the commodities produced;

Assisted with the due diligence efforts of the independent engineering and environmental and social consultants of potential project financing lenders; and

Arranged for numerous product samples to be shipped to potential offtake partners to determine compatibility with their metallurgical processes.

Based on the Feasibility Study and the observations of GeoCam's financial advisor, the estimated construction and capital costs for the Project including financing costs during construction and initial operations totaled approximately \$800 million at the time the Feasibility Study was completed. Lower commodity prices for cobalt, nickel and manganese since the Feasibility Study was completed have diminished the near-term revenue and cash flow expectations from the Project. As a result of these market conditions, during 2012, we and the minority shareholders of GeoCam determined that it would be challenging to finance the amounts required for Project construction and initial operating costs. We, therefore, have shifted our focus to developing a relationship with a strategic partner or selling all or a portion of our interest in the Project, which could lead to our position in GeoCam being significantly diminished or completely eliminated.

Refer to Item 2. Properties for more detailed information on the Nkamouna Project and other deposits held by GeoCam.

Other Exploration Activities

The Company has discovered new mineralization on a number of its mineral properties in the United States and Asia-Pacific regions.

Table of Contents

We have identified multiple chromite deposits in New Caledonia, a French overseas collectivity northeast of Australia in the South Pacific region. In 2010 through a Geovic subsidiary we applied for exploration licenses covering approximately 100 square kilometers. These licenses were granted in late 2010 and early 2011. We devoted the balance of 2011 and early 2012 seeking authorizations to drill these properties. In mid-2012 we commenced exploration activities on these licenses resulting in the augering of 434 holes on 9 of the 31 license areas held by the Company. Since late 2012 an additional 120 holes have been reported for resource analysis on three additional properties of the 31 Company properties. Further auger drilling was carried out in 2013 on some of the other license areas, although such activities were limited due to financial constraints.

In 2012 we conducted a preliminary exploratory test drill hole for gold in southeastern Arizona on our existing mineral holdings. Based on the drilling results and other surface testing and geophysical surveys, the Company has increased its land holdings from approximately 48 square miles to over 70 square miles. Further permitting of other drill sites was completed in early December 2012 covering 5 drill targets for an additional 14 drill holes. Due to financial constraints and other factors activities have been limited in 2013.

In late 2010 the Company discovered zirconium and other related advanced metals and rare earth elements in southeast New Mexico. Later in 2011 and early 2012 the Company carried out a limited subsurface drill program. Based on this drilling and subsequent preliminary metallurgical testing we have obtained a minimal impact drilling permit for 7 drill locations, totaling approximately 28 drill holes on the Wind Mountain property.

During 2013 the Company entered into the Wind Mountain Joint Venture (WMJV) with The Joe Scott Group (JS Group) for exploring, defining, developing and marketing of mining claims the Company owns in New Mexico. The funding will be provided by the JS Group in three phases and the Company has agreed to convey and transfer all right, title and interest of 60% of the mining claims to the JS Group in such phases dependent upon continuation of the project and funding.

In March 2012 we were awarded an exploration permit in Papua New Guinea for minerals over a license area covering 178 square miles. Since that time we have carried out multiple exploration reconnaissance activities. Surface sampling, auger drilling and subsequent analyses of the mineral occurrences has resulted in the discovery of near surface chromite and gold on the property. No drilling has been carried out over the gold mineralized areas to date. GeoAid representatives have visited the license area on several occasions over the past two years. Their work has provided Geovic with considerable good will amongst the local native population in the district.

Through our subsidiary Geovic Energy Corp. we acquired uranium leases, exploration permits and claims in Colorado and Wyoming between 2007 and 2010. During 2011 we completed analysis of these properties using existing available historic data. We are now holding these properties at minimal cost to the Company under fully paid up mineral leases expiring beginning in 2017. We do not expect to further explore or develop these properties at this time due to present market conditions.

Please refer to [Item 2. Properties](#) for more information on these other mineral prospects.

GeoCam Shareholder and Other Agreements

Geovic is party to a 2007 shareholders agreement with the other GeoCam shareholders, Societe Nationale d Investissement du Cameroun (SNI) (the owner of a 20% interest in GeoCam), and four Cameroonian individuals (collectively, the owners of a 19.5% interest in GeoCam and represented by SNI) (the Shareholders Agreement). The Shareholders Agreement reflects the historic ownership and management arrangements among the shareholders and sets forth the terms, conditions and fiscal arrangement for continued participation by the shareholders in GeoCam. The

Shareholders Agreement includes provisions in accordance with Cameroon business laws for all shareholders to contribute their proportionate share of capital required by GeoCam to meet its annual operating expenditures, as approved periodically by the GeoCam Board of Directors.

As provided in the Shareholders Agreement, in 2007 GeoCam began to operate autonomously from Geovic. Geovic and GeoCam entered into annual Technical Services Contracts for each year from 2008 through 2011 under which Geovic provided certain staff, services and management to assist GeoCam to carry out its budgeted work program at rates set forth in the Technical Services Contracts. SNI also provided services to GeoCam under similar annual agreements during those years. There were no Technical Services Contracts during 2013 and 2012.

All the Cameroon Properties are held by GeoCam, and the Mining Convention and Mining Permit are issued to GeoCam. Pursuant to the Shareholders Agreement, the GeoCam Board of Directors consists of five directors, three of whom are selected by Geovic and two by the other Cameroonian shareholders. Geovic is entitled to nominate the General Manager and one Deputy General Manager while other shareholders are entitled to nominate a second Deputy General Manager. Although we are a majority shareholder and our representatives form a majority of the Board of Directors of GeoCam, we generally seek concurrence from the other shareholders for material policy and operational decisions.

Table of Contents

Nkamouna Project Financing and Sale Activities

In December 2009, we engaged Standard Chartered Bank as the Company's financial advisor in connection with preparing and planning for project financing, reviewing documentation, considering early-stage efforts to locate potential purchasers of the MSP and manganese carbonate products we expect that GeoCam will produce, and related activities. In August 2010, GeoCam assumed the engagement with Standard Chartered Bank. Commencing in 2010, and continuing to the present time, we met with various large international businesses that have indicated an interest in a potential strategic investment in, or purchase of the Company's interest in, the Project in order to secure the future off-take from the Nkamouna Project. Such a potential strategic investment, if it occurs, may offset some of the entire equity funding obligation of the GeoCam shareholders.

On July 23, 2013 we announced that we had agreed to the terms and conditions of a Definitive Agreement (DA) with Jiangxi Rare Metals Tungsten Holdings Group Company Ltd. (JXTC) of Nanchang, Jiangxi Province, China. JXTC is a state owned large-scale industrial enterprise with significant mining and industrial operations in cobalt, copper, tungsten, and other rare metals. We agreed to the terms and conditions of the DA with JXTC and SNI along with our subsidiaries Geovic Ltd. and GeoCam. GeoCam plans to develop the Nkamouna cobalt-nickel-manganese Project in Cameroon, Africa.

The transaction contemplated by the DA establishes JXTC's intent to acquire 60.5% of the existing shares of GeoCam pursuant to the execution of a share purchase agreement between JXTC and Geovic which is expected to be subject to a variety of conditions and approvals, many of which are outside our control. There is no assurance that this agreement will be finalized, or that the transaction contemplated therein will be completed. This proposed transaction would result in the complete disposition of the Company's interest in GeoCam and the Nkamouna Project. In addition to acquiring 60.5% interest in GeoCam, JXTC would also secure 100% of the mixed cobalt-nickel sulphide product to be produced by the Nkamouna Project. The share purchase agreement is not yet finalized and would require the approval of the stockholders of the Company.

If we are successful in selling some or all of our interest in the Project to a third party, our future requirement to fund GeoCam and Project construction would be reduced or eliminated. If an agreement is reached, it will be subject, among other matters, to approval of our stockholders. If we are unable to complete and close an agreement to sell a significant interest in the Nkamouna project to a strategic partner in a timely manner, our plan is to place the Nkamouna Project on a care and maintenance status and significantly further reduce our level of expenditures in Cameroon. In such event, we would not have sufficient resources to maintain our interest in the Project indefinitely and we could lose our interest in the Project. In such a scenario, our cash resources would likely be insufficient to sustain our other business activities.

Cameroon Properties

Our business plan had been to use our available management, technical expertise and talent to develop our interests in the Cameroon Properties into a high quality mining and mineral production operation. Assuming external financing in sufficient amounts to complete construction and start-up activities had been available on a timely basis, we would have continued to focus on the Nkamouna Project where our plan was to begin initial mine production approximately three years after completion of Project financing. Instead, our more immediate focus has been to secure one or more qualified strategic investors for the Nkamouna Project to acquire an interest in GeoCam or the Nkamouna Project for cash, and obtaining the financing required to construct and commission the mine and plant facilities. We expect that any such strategic investment will result in a significant dilution or elimination of our ownership interest and a change in control of the Project. In such event we may not be involved in future management of the Nkamouna Project.

We presently have no current revenue from operations and we expect to continue to generate losses and negative cash flows. See Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

Corporate Strategy

Since 2012 we have been seeking to 1) realize value for the Cameroonian assets and 2) shift the Company's focus to a prospect generation and strategic investment business model. Since our position in GeoCam will likely be significantly diminished or completely eliminated through strategic investment upon completion of a financing or sale transaction, the future direction for the Company will be to identify new exploration prospects, minimally develop and prioritize existing and new prospects, and sell or joint venture further exploration and development of those prospects to others. The Company expects to take prospects to a level where they can be timely monetized through strategic investments by others who have the resources and staying ability to complete advanced exploration, permitting and development.

Competitive Conditions

We expect that GeoCam will compete with other cobalt and nickel producers around the world, including those with projects now under development. Other producers with ongoing operations have established production and demonstrated feasibility and have greater financial strength than we do. These competitors include such current producers as Glencore Xstrata, Vale, Freeport and

Table of Contents

Sherritt/Dynatec. Significant mines either producing or expected to produce cobalt as a by-product during the next few years include Ambatovy (Sherritt, Sumitomo, Korea Resources and SNC Lavalin), Weda Bay (Eramet), Tenke Fungurume (Freeport McMoRan, Lundin Mining Corp. and Gecamines), and Goro Nouvelle-Calédonie (Vale). Operating expenses, reserve quantities and qualities, operating efficiencies, and location may affect the long-term success of all competing producers, including GeoCam. Competition in the mineral exploration business is intense, as many other persons and businesses are actively involved in prospecting and exploring for potentially recoverable minerals. Geovic faces competition on acquiring permits and licenses associated with the exploration for chromium, olivine, iron, platinum, gold, zirconium and related advanced metals and rare earth elements.

Social and Environmental Policies

Geovic Mining Corp. is committed to sustainable resource development and social responsibility in our activities. We understand that our long-term business security is directly related to the welfare of the people and communities in the areas where we operate. We are also committed to excellence in stewardship of the environment. We believe that a strong sense of corporate social and environmental responsibility is essential for our success.

Applicable environmental protection requirements will affect the financial condition, operating performance and earnings of the Company as a result of capital expenditures and operating costs required to meet or exceed these requirements. These expenditures and costs may also have an impact on our competitive position to the extent that our competitors may be subject to less rigorous requirements or may be less willing to voluntarily target a similarly high level of environmental and social performance. GeoCam is subject to ongoing obligations under its mining and environmental permits in Cameroon to provide social and educational assistance to persons and in areas impacted by the mining activities. These obligations have been performed both directly and by engaging third parties. No third parties were engaged in 2013 and 2012.

An Environmental and Social Assessment (ESA), comprised of an Environmental and Social Impact Assessment (ESIA) and an Environmental and Social Action Plan (ESAP), was prepared by GeoCam. The ESA documents the existing environmental and social conditions, describes the proposed operations, identifies potential impacts, and develops mitigation measures and required actions to reduce or minimize the impacts of the proposed operation. Knight Piésold and Co. (Knight Piésold) and Rainbow Environment Consult (REC) developed the ESA for GeoCam. The ESA was completed and submitted to the Cameroon Ministry of Environment and Protection of Nature (the Ministry) in 2006 and approved by the Ministry in May 2007.

Since approval of the ESA, GeoCam diligently moved the Project forward toward construction. As part of that process, a number of Project elements have been modified and optimized since finalizing the ESA in 2006. Consequently, Knight Piésold and REC prepared the Geovic Cameroon PLC, Nkamouna Project, Environmental and Social Assessment 2010 Update (the Update Report) dated March 31, 2010 based on more recent Project plans. The Update Report was presented to the Ministry in May 2010.

The Ministry notified GeoCam in September 2010 that the Update Report provides an appropriate demonstration that the Project continues to move forward and therefore remains in conformity with regulatory requirements. However, the Ministry required that GeoCam consolidate the 2007 ESA, the Update Report, and any other Project modifications that were contained in the final Feasibility Study into a single document. Following the issuance of the final Feasibility Study in April 2011, GeoCam finalized the consolidation of the updated ESA and reissued it to the Ministry at the end of April 2011. Given that the Ministry has already acknowledged that the Project remains in full conformity with the regulatory requirements and we have received no communication to date, any review process for the Update Report is expected to be routine.

Employees

As of March 20, 2014 we had 8 full time employees and 1 part time employee in our offices in the United States. As of March 20, 2014, GeoCam had 25 full time employees and no contract worker in its administrative offices in Yaoundé, and no contract workers and 16 full time employees at the Nkamouna Project location in the East Province in the Republic of Cameroon.

Offices

Our principal corporate head office is located at 5500 E. Yale Avenue, Suite 302, Denver, Colorado 80222, telephone (303) 476-6455. We also maintain an exploration office in Grand Junction, Colorado. GeoCam maintains its head office in the capital city of Yaoundé and a mine area office at Kongo Camp in the East Province, both in the Republic of Cameroon.

Available Information

Our website address is www.geovic.net. Available on this website under Investor Relations free of charge, are links to our annual reports on Form 10-K, quarterly reports on Form 10-Q including our interactive data files, current reports on Form 8-K, Forms 3, 4 and 5 filed on behalf of directors and executive officers and amendments to those reports after such materials are electronically filed with or furnished to the SEC.

Table of Contents

Also posted on our website, and available in print upon request made by any stockholder to the Secretary, are charters for the Board's Audit Committee, Human Resources and Compensation Committee, and Nominating and Corporate Governance Committee. Copies of the Code of Business Conduct and Ethics (Ethics Code) and our Whistleblower Policy are also posted on our website under the About Geovic-Committee Charters section. Within the time period required by the SEC, we will post on our website any modifications to the Ethics Code and any waivers applicable to senior officers as defined in the Ethics Code, as required by the Sarbanes-Oxley Act of 2002.

ITEM 1A. RISK FACTORS

We consider the risks set out below to be the most significant risks facing the Company, although these risks should not be considered to be comprehensive. If any of these risks materialize into actual events or circumstances or other possible additional risks and uncertainties of which we are currently unaware or which we consider not to be material in relation to our business, actually occur, our assets, liabilities, financial condition, results of operations (including future results of operations), business and business prospects, may be materially and adversely affected, and as a result, the trading price of our common stock and warrants could be materially and adversely impacted. These risk factors should be read in conjunction with other information set forth in this report, including our Consolidated Financial Statements and the related Notes.

We may run out of cash before we are able to arrange financing or complete a transaction for one of our projects.

We will receive no proceeds from a sale or other transaction for one of our projects until all conditions have been satisfied. We expect to nearly exhaust our cash resources during March 2014, and we face the risk that we may be unable to secure additional financing to fund our overhead, continuing operations and project transaction costs. We plan to continue our efforts to secure additional financing but we presently do not have agreements from any source under which such funding will be received. If no additional funding can be secured, we may not be able to remain in business or complete a project sale or other transaction.

We are an exploration stage company and have no history as an operating company. Any future revenues and profits are uncertain.

We have no history of mining or refining any mineral products or metals and none of our properties is currently producing. There can be no assurance that the Nkamouna Project will be successfully placed into production, produce minerals in commercial and processing quantities or otherwise generate operating earnings, or that we will secure a strategic investor in the Project or sell any or all of our interest in it. We will continue to incur losses at least until we sell some or all of our interest in the Project or other projects or mining activities successfully reach commercial production levels and generate sufficient revenue to fund continuing operations. There is no certainty that we will produce revenue from any source, operate profitably or provide a return on investment in the future. If we do not generate revenue or raise capital by the end of the first quarter of 2014, we may lack sufficient cash resources to continue business operations. If we are unable to generate revenues or profits, our stockholders may not realize returns on their investment in our common stock. Even if we do achieve profitability, we may not be able to sustain or increase profitability on a quarterly, annual or sustaining basis.

We have a history of losses and if we are unable to secure additional financing our ability to continue as a going concern may be at risk.

As an exploration stage company, we have a history of losses, deficits and negative operating cash flows and do not expect to generate any revenue from ongoing operations in the foreseeable future. As of December 31, 2013, we had

an accumulated stockholders' deficiency of approximately \$121 million. To date, we have been unable to secure project financing for the Nkamouna Project or to consummate a sale of some or all of our interests in the Project and we face significant challenges in securing needed additional working capital. These factors, among others, raise doubt about our ability to continue as a going concern. Our Consolidated Financial Statements included in this report do not include any adjustments related to recoverability and classification of asset carrying amounts or the amount and classification of liabilities that might result should we be unable to continue as a going concern.

We continue to actively seek project financing and sale opportunities for our Nkamouna Project and new sources of working capital. We cannot assure we will be able to obtain sufficient additional funds when needed, or that such funds, if available, will be obtainable on terms satisfactory to us.

We have limited cash resources.

Our consolidated unrestricted cash balance at December 31, 2013 was approximately \$0.2 million. We have been closely monitoring our fixed and variable costs and intend to restrict such costs to those expenses that are necessary to complete activities related to securing financing for the Nkamouna Project or the sale of some or all of our interest in the Project, identifying opportunities to generate cash from our existing exploration properties and identifying additional sources of working capital in support of such activities.

Table of Contents

We expect to nearly exhaust our cash resources during March 2014. If we are unable to obtain additional capital, we will need to further curtail our operations in order to preserve working capital, which could materially harm our business and our ability to achieve cash flow in the future, including delaying or reducing implementation of certain aspects of our business plans, and we may ultimately need to cease operations.

In addition, if we are unable to obtain additional capital, we will be unable to repay and may be unable to refinance our short-term debt. Failure to repay our short-term debt when due could force us into bankruptcy or liquidation. We continue to actively seek new sources of working capital. Our financial statements do not include any adjustments that might be necessary if we are unable to continue as a going concern.

We may be unable to complete a disposition of some or all of our interest in the Nkamouna Project in Cameroon

On July 23, 2013 the Company announced that it had agreed to the terms and conditions of a Definitive Agreement (DA) JXTC of Nanchang, Jiangxi Province, China. JXTC is a state owned large-scale industrial enterprise with significant mining and industrial operations in cobalt, copper, tungsten, and other rare metals. The terms and conditions of the DA were agreed amongst JXTC, SNI (the National Investment Corporation of Cameroon) that owns or represents 39.5% of GeoCam, the Company, Geovic Ltd. and GeoCam.

The transaction contemplated by the DA establishes JXTC s intent to acquire 60.5% of the existing shares of GeoCam pursuant to the execution of a share purchase agreement between JXTC and the Company, which is expected to be subject to a variety of conditions and approvals, many of which are outside the control of the Company. There is no assurance that this agreement will be finalized or that the transaction contemplated therein will be completed. This proposed transaction would result in the complete disposition of the Company s interest in GeoCam and the Nkamouna Project. In addition to acquiring 60.5% interest in GeoCam, JXTC would also secure 100% of the mixed cobalt-nickel sulphide product to be produced by the Nkamouna Project.

If an agreement is reached, it will be subject, among other matters, to approval of our stockholders. If we are unable to complete and close an agreement to sell a significant interest in the Nkamouna project to a strategic partner in a timely manner, our plan is to place the Nkamouna Project on a care and maintenance status and significantly further reduce our level of expenditures in Cameroon. In such event, we would not have sufficient resources to maintain our interest in the Project indefinitely and we could lose our interest in the Project. In such a scenario, our cash resources would likely be insufficient to sustain our other business activities.

Unless we obtain significant additional external financing, enter into a strategic alliance or sell all or a portion of our interest in GeoCam, we will be unable to develop the Nkamouna Project.

The Nkamouna Project requires capital start up and financing expenditures and contingency reserves of at least \$800 million to construct mining and processing facilities and related infrastructure. Development and construction of mining and processing facilities will require significant debt and equity financing which we have been unable to obtain. Alternatively, the Company continues to consider the sale of some or all of its interest in GeoCam and/or the sale by GeoCam of an interest in GeoCam or in one or more of the other Cameroon deposits. The Company has also considered strategic alliance transactions and combinations of these alternatives. We have intended that GeoCam will seek financing from international institutions with significant experience in financing large natural resource ventures in remote locations such as southeastern Cameroon. Such financiers would likely require GeoCam and its owners to comply with costly conditions as a requirement to completion of project financing, including significant additional equity contributions to GeoCam. These financing options may not be available on acceptable terms, or at all. The failure to obtain adequate financing on a timely basis will have a material adverse effect on development and value of the Nkamouna Project and our growth strategy, results of operations and future financial condition.

The development of the Nkamouna Project will require the commitment of substantial financial resources. The amount and timing of these costs will depend on a number of factors, some of which are beyond our control.

GeoCam will be subject to all of the risks associated with discovering, exploring and establishing new mining operations and business enterprises including: the availability of funds to finance construction and development activities; timing and cost of the construction of mining and processing facilities; the efficacy of planned mineral processing; the availability and costs of skilled labor and mining equipment; the availability and cost of appropriate processing materials and equipment; the need to obtain in a timely manner additional governmental approvals and permits; the likely terms of off-take agreements or metal sales contracts; potential opposition from non-governmental organizations, environmental groups or local groups in Cameroon or other countries which may delay or prevent development activities; and potential increases in construction and operating costs due to changes in the cost of fuel, power, equipment, materials and supplies. Further, the costs, timing and complexities of mine construction and development are increased by the remote location of the Cameroon Properties. Accordingly, GeoCam's activities may not result in profitable mining operations and may fail to successfully establish or maintain mining operations or profitably produce metals.

Table of Contents

The discovery and exploration of other mineral properties consistent with our present business plan will require the commitment of substantial financial resources. The amount and timing of these costs will depend on a number of factors, some of which are beyond our control.

We expect to be subject to all of the risks associated with discovering, exploring and establishing new mineral prospects and projects before we can successfully transfer interests to third parties for development. These risks will include, among others, the availability of sufficient financial resources to bring the activities to a stage that we can monetize the new project; whether appropriate regulatory approvals and rights can be timely secured; timing and costs of the prospecting and exploration activities that will be necessary; the availability and costs of skilled labor and exploration equipment; the need to obtain in a timely manner additional governmental approvals and permits; potential opposition from non-governmental organizations, environmental groups or local groups wherever our exploration activities might be undertaken which could delay or prevent planned activities; and potential increases in operating costs due to changes in the cost of fuel, power, equipment, materials and supplies. Further, the costs, timing and complexities of prospecting and exploration are increased by the remote location of some of our planned projects. Accordingly, our exploration activities and plan to transfer future exploration prospects to third parties may not result in profitable operations and we may fail to successfully implement our business plan going forward.

The actual capital costs and mine operating costs that would be incurred in connection with opening the Nkamouna Project could be significantly higher than anticipated.

The Feasibility Study completed in April 2011 estimates construction costs and related expenses, contingency reserves and financing fees at approximately \$800 million, which is significantly higher than was estimated in earlier studies. Estimated future operating expenses are also higher than estimates made in previous studies. These and similar cost and expense increases are beyond our control, and will require significantly more capital to bring the Nkamouna Project into production and could result in a decrease in the anticipated future return from operations which could adversely impact our ability to sell some or all of our interest in the Project. The actual capital costs and operating costs may be higher than we presently anticipate.

Our plan to change the focus of our business may not be successful. We may not be successful in monetizing our exploration prospects.

Our present plan is to liquidate some or all of our interest in the Nkamouna Project and to generate mineral exploration prospects suitable for transfer to others in the mineral development business. We presently hold interests in several exploratory prospects that must be advanced to a point that others would have an interest in acquiring them. We may be unable to sell our current prospects to third parties and we may be unsuccessful in generating other mineral prospects for such purposes. If we are unable to monetize prospects we would be unsuccessful in our plans for future business operations.

Market events and economic conditions may adversely affect our business and the mining industry.

International credit markets or Canadian, United States, Cameroon or global economic conditions, could, among other things, impede access to capital or increase the cost of capital, which would have an adverse effect on our ability to fund the working capital and other capital requirements of GeoCam or to sell some or all of our interest in the Nkamouna Project. Unprecedented disruptions in credit and financial markets in 2008 and 2009 had a significant material adverse impact on a number of financial institutions and limited access to capital and credit for many companies, particularly resource companies such as the Company. While these disruptions improved for a time, the global economy remains unpredictable, particularly due to the growing debt in the United States and the financial instability of certain European countries. Fluctuating prices for cobalt, nickel and manganese may have a significant

adverse impact on our success in obtaining financing for the Nkamouna Project, or the sale of some or all of our interest in the Project. It is likely to be more difficult or more expensive for GeoCam to obtain capital and financing for construction and for operations, which could result in lower valuations for our interest in the Project. Access to capital and financing may not be available on terms acceptable to the Company or at all. Nkamouna Project development modifications may be necessary or desirable to secure lending commitments which would also delay the completion of any financing. All delays in completing financing for the Project will delay mine construction, anticipated production activities and future revenue.

Inflation or deflation, changing tax laws, and fluctuating interest rates may make project development more difficult. These factors have had a significant effect on Cameroon's economy in recent years. Economic conditions may have an adverse effect on the overall performance of the Company. In addition, various economic conditions could increase the risk that financial projections for the Nkamouna Project may not be realized as expected.

The share prices of junior natural resource companies, including Geovic Mining, experienced large declines in value from 2008, stabilizing in 2010, and again declined in 2011, 2012 and 2013. Market forces are likely to make it difficult or impossible for the Company to raise equity capital except on terms which results in severe dilution to existing stockholders, or at all. Therefore, there can be no assurance that significant fluctuations in the trading price of the Company's common stock will not continue, or that such fluctuations will not materially adversely impact the Company's ability to raise equity.

Table of Contents

General economic conditions may adversely affect our growth and profitability.

A worsened slowdown in the economy and other economic conditions, including but not limited to, consumer spending, employment rates, business conditions, continued inflation, increases in fuel and energy costs, consumer debt levels, interest rates, and tax rates may adversely affect our growth and profitability. Specifically:

the global economic slowdown could impact the cost and availability of financing and our overall liquidity;

the volatility of commodity prices could impact our future revenues, profits, losses and cash flow and value of our interests in the Nkamouna Project and our other exploration prospects;

increasing energy prices, commodity and consumables prices and adverse currency exchange rates could impact production costs;

volatility of global stock markets could impact the valuation of our equity and other securities; and

increasing construction related costs could increase and adversely affect economics of the Nkamouna Project.

These factors, among others, could have a material adverse effect on our financial condition and results of operations.

GeoCam may fail to secure Nkamouna Project financing if lenders or their advisors conclude that the ore processing techniques considered in the Feasibility Study are too risky or are otherwise not feasible which could adversely affect the value of our interest in the Nkamouna Project and our ability to sell all or some of our interest in the Project .

In response to observations that raised questions about the efficacy of a few aspects of planned ore processing considered in previous feasibility studies, beginning in 2010, we modified certain of the metallurgical processes planned to be utilized and decided that GeoCam will not refine final metal products from the Nkamouna Project ore at the project site. If potential lenders or strategic investors are not ultimately assured that the modified metallurgical processes will allow the processing facilities to operate successfully as designed, Nkamouna Project debt or other financing may be delayed until further enhancement testing is performed or funding could be unavailable altogether which could adversely affect the value of our interest in the Nkamouna Project and our ability to sell all or some of our interest in the Project.

If we lose key personnel or are unable to attract and retain additional experienced personnel, we may be unable to establish and develop our business.

Our development in the future will be highly dependent on the efforts of our key management employees, namely, Michael Mason, William A. Buckovic, Gary Morris and Greg Hill, (currently Chief Executive Officer, Executive Vice President, Senior Vice President, and Chief Financial Officer, respectively), and other key employees that we or GeoCam may hire in the future. Loss of any of these executives could have a material adverse effect on our operations and future success. We do not have and currently have no plans to obtain key man insurance with respect to any of our key employees.

The other shareholders of GeoCam may fail to pay their share of future GeoCam capital.

Under the Shareholders Agreement, all GeoCam shareholders agreed to fund their proportionate share of capital and operating costs. However, it is possible that the minority shareholders will be unable or unwilling to provide their respective share of future GeoCam funding, and the business of GeoCam may be adversely affected.

Our lack of operating experience may cause difficulty in managing our business plans.

Geovic has owned a majority interest in GeoCam since its inception more than a decade ago. Geovic employees have managed the exploration of the GeoCam deposits and negotiated the terms of the required Cameroon government approvals and permits and financings we have completed. While we hold a significant interest in the Project, we will continue to provide many of such services to GeoCam. Managing GeoCam could require us to improve and expand our management and our operational and financial systems and controls. If our management is unable to manage the development of the Cameroon Properties effectively, our business and financial condition could be adversely affected.

GeoCam's dependence on many outside service providers to place the Nkamouna Project into production may delay mine opening or operation.

GeoCam's ability to place the Nkamouna Project into production will be dependent to a large part upon using the services of appropriately experienced employees, consultants and contractors and agreements with other major resource companies that can provide required expertise or equipment. Also, a significant local work force will be trained, few of whom currently have any related experience. GeoCam may not have available, or we may be unable to retain on satisfactory terms, the necessary expertise, equipment or local workers that would be needed to build the GeoCam facilities and place the Nkamouna Project into production, which could adversely affect the progress and value of the Project.

Table of Contents

Development activities in Cameroon may not be commercially successful.

We currently have no producing properties. Substantial expenditures would be required to complete and begin to operate the Nkamouna Project, to construct facilities to implement the metallurgical processes to extract metal from the mined ore and to develop the mining and processing facilities and infrastructure at each deposit site chosen for mining. Future financing that would be required to commence mining operations may not be available.

The prices of cobalt, nickel and manganese are subject to fluctuations which could adversely affect the realizable value of our assets, future results of operations and cash flow.

The principal assets are deposits of cobalt, nickel and manganese in the Nkamouna and in the other six deposits held by GeoCam. Our potential future cash flow is expected to be, in large part, derived from the outright sale or joint venture of some or all of our interest in these properties. The value of these deposits, and the value of any potential production therefrom, will vary in proportion to changes in cobalt, nickel and manganese prices. The prices of these commodities have fluctuated widely, peaked and declined significantly in 2008, partially recovered through 2010, and have generally been lower in subsequent years. These commodity prices are affected by numerous factors beyond our control, including, but not limited to, available production from other mines, worldwide economic conditions, international economic and political trends, realized or expected levels of inflation, currency exchange fluctuations, central bank activities, interest rates, global or regional consumption patterns and speculative activities. The effect of these factors on the prices of cobalt, nickel and manganese and therefore the economic viability of the Nkamouna Project, cannot be accurately predicted. Significant future decreases of the cobalt price, and to a lesser extent, nickel and manganese, would adversely affect asset values, future cash flows, revenue and profits if the Nkamouna Project is placed into production.

GeoCam may not be able to produce and sell mineral products at profitable prices. GeoCam's future operations are, therefore, more exposed to the impact of future decreases in commodity prices. Conversely, forward sales contracts would limit potential upside market swings. Such upside price swings could have a significant benefit to companies that take added market risk and sell produced mineral product on the open spot metals market. There are no central markets for the intermediate cobalt, nickel and manganese products GeoCam intends to produce and sell, and these products will likely be sold under metal sales agreements for process plant off-take with one or more companies. Prices under these agreements would be related to prevailing market prices at time of delivery. Selling intermediate products produced at mine site, while reducing process risk and required capital expense, will also likely result in lower operating profit and cash flow from the mining and processing operations. There may be reduced demand or no market for intermediate products that are expected to be produced at the Nkamouna Project site.

Mineral exploration and development are inherently hazardous and may not be insured or insurable.

Mineral exploration and development involves many risks and hazards that even a combination of experience, knowledge and careful evaluation may not be able to overcome. The business of mining is subject to certain types of risks and hazards, including reserve and resource estimates, processing risks, environmental hazards, metallurgical and process risks, industrial accidents, flooding, fire, metal theft, personal injuries, accidents, and periodic disruptions due to force majeure events and inclement weather. Workers are subject to risks associated with large mining equipment operations, slope instability, exposure to indigenous disease, steam and hazardous chemicals, as well as local social unrest. Disruption of exploration, development and production operations may occur. The hazards and risks normally incidental to exploration, development and production of minerals, may result in work stoppages, damage to property and possible environmental damage. The nature of these risks is such that liabilities might exceed any liability insurance policy limits. It is also possible that the liabilities and hazards might not be insurable, or, that we could elect not to insure Geovic Mining, GeoCam or our subsidiaries against such liabilities due to high premium

costs or other reasons, in which event, we could incur significant costs that could have a material adverse effect on our financial condition.

The mineralized material and reserve estimates for the Nkamouna Project may be inaccurate which could adversely affect the estimated value of the Project.

There is a high degree of uncertainty attributable to the calculation of mineralized material and reserves and ore grades dedicated to future production because such estimates are expressions of judgment based on knowledge, experience and industry practice, and estimates of reserves may prove to have been inaccurate. Estimates which were valid when made may change significantly when new information becomes available. Accordingly, development and mining plans may have to be altered in a way that adversely affects the Project's operation and profitability. There is a risk that full scale production activities may indicate technical and commercial shortcomings to whatever operating methodology is installed. Consequently, actual results may vary materially and adversely affect projected values given to reserves.

Until reserves are actually mined and processed, the quantity of ore and grades must be considered as an estimate only. In addition, the quantity of reserves and ore may vary depending on metal prices and significant price decreases, such as those that have occurred recently, could substantially reduce estimated reserve quantities. Any material change in the quantity of reserves, grade or overburden stripping ratio or price of cobalt, nickel and manganese may affect the economic viability of the Nkamouna Project. In addition, metal recoveries obtained in pilot-scale tests may not be duplicated during production.

Table of Contents

Conformance with GeoCam's Biodiversity Management Plan (BMP) and Equator Principles could cause Project delays, impact mineralized material and reserve estimates and adversely affect the value of the Project.

Environmental permits required to construct and operate the Nkamouna Project were received by GeoCam from the government of Cameroon in 2007 and reaffirmed in September 2010. Included in these authorizations was our commitment to a number of follow-on environmental, social, health and safety obligations, including preparation of a BMP and delineation of critical habitats, if they exist within the project area.

The Equator Principles are a credit risk management framework for determining, assessing and managing environmental and social risk in project finance transactions. International lending institutions voluntarily subscribe to the Equator Principles and commit to providing loans to projects only where the borrower can and will comply with certain social and environmental expectations. Accordingly, borrowers such as GeoCam must demonstrate that their projects can and will conform to the Equator Principles. Among those expectations is the obligation to protect biodiversity and important natural habitats.

An independent expert was engaged by GeoCam in mid-2011 as a part of GeoCam's ongoing BMP implementation to determine whether or not endangered species and/or critical habitat may be affected by the Nkamouna Project. The advisor reported that great apes and other important fauna species use the area and that certain wetlands around a portion of the Mada area of the Project may represent higher value habitat. Subsequently, a panel of qualified independent experts reviewed the advisor's work and recommended that additional studies be carried out to better enumerate animal presence and the importance of the habitat to the species before mitigation measures are applied. These additional studies could indicate that additional mitigation measures are required.

Any additional mitigation requirements could delay Project development and increase related costs. Also, areas included within the mine permit area could be withdrawn from future mine development activities as a means of offsetting adverse Project impacts. Such a decision could reduce our present reserves and mineralized material estimates and/or may result in other areas being withdrawn either within or outside of the Mining Concession. These risks also affect the value of our interest in the Project.

We face intense competition in the mining industry.

The mining industry in general and cobalt mining in particular, are intensely competitive in all phases. A significant number of new cobalt-producing projects have been announced in recent years and if placed in production, the resulting increased supplies of cobalt could adversely affect prices available for expected production at the Nkamouna Project. Competitors include large established mining companies with experience and expertise and with greater financial and technical resources, and as a result we may be unable to obtain financing, or sell mined and processed products on terms we consider acceptable. We compete with other mining companies in the recruitment and retention of qualified managerial and technical employees and in the raising of capital. If we are unable to raise sufficient capital, our exploration and development programs may be jeopardized or we may not be able to develop or operate our exploration projects. Also, the decision to produce and sell intermediate products is likely to reduce significantly the number of potential customers for the metals produced.

There presently is a lack of required infrastructure in Cameroon which could delay or prevent completion of GeoCam's mine development activities or increase its operating costs.

Completion of the development of the Nkamouna Project is subject to various infrastructure requirements, including the availability and timing of acceptable arrangements for site access, power, water, housing, transportation and other facilities at the project site. The lack of availability on acceptable terms or the delay in the availability of any one or

more of these items could prevent or delay development. There can be no assurance that construction will be commenced or completed on a timely basis, if at all, that the resulting operations will achieve the anticipated production or that the construction costs and ongoing operating costs associated with the development will not be higher than anticipated.

Challenges to our title to mineral properties in which we may have an interest could affect our exploration or development rights.

GeoCam could be deemed to be noncompliant with terms or conditions of its Cameroon mining and other permits and authorizations. There may be challenges to title to other mineral properties that we currently control or which we may acquire in the future including claims and leases in the United States, New Caledonia, Papua New Guinea and other countries. Our exploration activities in these areas may not lead to other required permits from the government. If there are title defects with respect to any of our properties, we might be required to satisfy additional government requirements, compensate other persons or perhaps reduce our interest in the affected property or lose our interest completely. Also, in any such case, the investigation and resolution of title issues would divert our management's time from ongoing exploration and development programs.

Table of Contents

Our prospecting, exploration and development operations are subject to continuously evolving environmental regulations, which could result in incurrence of additional costs and operational delays.

All phases of our operations are subject to environmental regulation. Environmental legislation is evolving in countries and local jurisdictions in a manner which will likely require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects, and a heightened degree of responsibility for companies and their officers, directors and employees. Future changes in environmental regulation, if any, could adversely affect our projects.

Acquisition of mineral rights from governmental agencies in the United States requires compliance with applicable regulations and could add costs and delays to future development.

We intend to continue to acquire properties or mineral rights in the United States. All mineral development in the United States is subject to regulation and compliance regardless of land tenure. Development projects are regulated at the state level, and in some states, also at the county level, and we must comply with the regulations relating to mining; land use; air quality; water quality, quantity and supply; and solid and hazardous wastes in the state within which the properties are located. If a state does not have an established program for regulating air, water and waste (pursuant to the federal Clean Air Act, Clean Water Act and the Resource Conservation and Recovery Act), then the U.S. Environmental Protection Agency will have direct regulatory jurisdiction. Depending on the state, there may be other applicable federal regulatory programs that also apply beyond those enacted by the state.

Mineral development (and other) actions on public lands managed by federal land management agencies such as the Bureau of Land Management (BLM) or the United States Forest Service (USFS) are obliged to file an acceptable plan of operations which is then subject to an environmental impact evaluation under the National Environmental Policy Act (NEPA). The NEPA process requires the completion of either an environmental assessment or an environmental impact statement prior to approval of the plan of operations. Whether on public or private land, mining companies must comply with all relevant federal, state and county requirements and will be required to post a bond or other surety to guarantee the cost of post-mining reclamation.

Federal, state, and local regulatory requirements including public disclosure processes and opportunities for stakeholders to appeal regulatory decisions, or changes to these requirements, could add significant additional cost and delays to any mining project we undertake in the United States. Permitting rules and/or discharge limits established at the federal, state, or local level may impose limitations on our production levels warranting additional capital expenditures in order to comply with the rules.

We may develop conflicts of interest with other natural resource companies with which one of our directors may be affiliated.

Certain of our directors are also directors and officers of other natural resource companies. Consequently, there exists the possibility for such directors to be in a position of conflict. We expect that decisions made by any of such directors relating to the Company will be made in accordance with their duties and obligations to deal fairly and in good faith with the Company and such other companies.

Many factors beyond our control could adversely affect our future profitability.

The cost, timing and complexities of mine construction and development are increased by the remote location of the Cameroon Properties and our other mineral prospects in other foreign countries. It is common in new mining operations to experience unexpected problems and delays during construction, development, mine start-up and

ramp-up to full commercial production. Also, ongoing cost and expense increases being faced throughout the mining and natural resources industries are beyond our control. Accordingly, our activities may not result in timely or profitable mining operations, and we may fail to successfully establish mining operations or profitably produce metals at any of our properties or arrange strategic partners for other exploration prospects. In addition, factors such as the progress of ongoing exploration and development, the results of consultants' analysis and recommendations, the rate at which operating losses are incurred, and the Company's acquisition of additional exploration properties will also impact the magnitude of the cost and timing of Company expenditures and our future profitability.

If GeoCam is unable to comply readily with present or future laws and regulations of the Republic of Cameroon, development activities could be delayed and the value of the Project could be adversely affected.

The planned future development of the GeoCam Properties requires permits from various Cameroon governing authorities. Future operations will be subject to a number of existing laws and regulations such as labor standards, environmental reclamation, land use and safety. GeoCam must receive a Land Lease for that portion of the mine permit area to be used for the Nkamouna Project. It must also obtain authorization to develop an on-site rock quarry if suitable aggregate is not purchased from external sources. These and other permits required to construct and operate a mining and processing facility may contain terms and conditions that are difficult or expensive to meet. Such laws and regulations may adversely affect the profitability of GeoCam's operations and the potential value of our interest in the Nkamouna Project.

Table of Contents

Political unrest or changes in Cameroon or nearby countries could interfere with GeoCam mining rights and development or financing activities.

Mine exploration, development and production activities are subject to regional, political, community and other risks of doing business, including risks inherent in contracts with government owned entities such as unilateral cancellation or renegotiation of contracts, licenses or other mining rights.

The political risk in sub-Saharan Africa is significant. GeoCam's rights to explore and develop mineral deposits in Cameroon are always subject to the continued political stability of the Republic of Cameroon and its government. In March 2008 Cameroon experienced some domestic strikes and political unrest that subsided within weeks. Also, political unrest or upheaval in adjoining countries could adversely affect our development activities with respect to the Nkamouna Project, and, if significant, would likely increase the costs of long term financing of the mining and processing activities. Further, GeoCam may not be able to finance or operate the Nkamouna Project at all if future state or regional political upheavals occur in Cameroon.

Potential violations of the Foreign Corrupt Practices Act (FCPA) by GeoCam and other foreign entities, their agents or representatives could have a material adverse impact on our financial condition and results of operations.

The FCPA prohibits payments of, promises to pay, or authorizations to pay, money, gifts or anything of value to officials of foreign governments, in order to obtain or retain business. Payments or gifts to a third party, such as an agent or sales representative, while knowing (or having reason to know) that all or part of the money or gift will be offered or given to such an official, are also prohibited. If employees violate the FCPA, the violation creates severe potential criminal and civil liability for themselves and the affiliated U.S. company. The types of conduct prohibited by the FCPA are not always clear. As a result, caution is required when doing business through foreign consultants, commercial representatives or agents, or with businesses that are owned, in whole or in part, by foreign governments or that have personal or family ties to government officials. We do not oversee the day-to-day operations of employees or representatives of GeoCam or other foreign entities. Although we emphasize compliance with the FCPA to all our employees and representatives and those of GeoCam and other foreign entities, there remains a risk of violation in Cameroon or in the other countries where we may have operations.

We may fail to maintain the adequacy of internal control over financial reporting as required by the Sarbanes-Oxley Act.

Section 404 of the Sarbanes-Oxley Act of 2002 (SOX) requires an annual report by management of the effectiveness of the Company's disclosure controls and procedures and its internal control over financial reporting. Our management evaluated our disclosure controls and procedures and our internal controls over financial reporting as of December 31, 2013 and concluded that disclosure controls and procedures were effective and that internal control over financial reporting was effective to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of our financial statements in accordance with US GAAP.

We may be unable to ensure in the future that we have effective internal controls over financial reporting or effective disclosure controls and procedures as defined by applicable rules. Because the financial statements of GeoCam are consolidated, GeoCam financial reporting is also subject to SOX. Our failure to satisfy the requirements of Section 404 of SOX on an ongoing, timely basis could result in the loss of investor confidence in the reliability of our financial reporting and disclosure, which in turn could harm our business and negatively impact the trading price of our common shares. In addition, difficulties in maintaining satisfactory controls and procedures could harm our future reported operating results or cause us to fail to meet our reporting obligations. Any future acquisitions of other businesses may provide us with challenges in implementing the required internal processes, procedures and controls in

the acquired operations. Acquired companies may not have effective disclosure control and procedures or internal control over financial reporting that are as thorough or effective as those required by securities laws currently applicable to us. No evaluation can provide complete assurance that our internal control over financial reporting will detect or uncover all failures of our personnel to disclose material information otherwise required to be reported. The effectiveness of our controls and procedures could also be limited by simple errors or faulty judgments. In addition, should we expand in the future, the challenges involved in implementing appropriate internal controls over financial reporting will increase and will require that we continue to improve our internal controls over financial reporting. Although we intend to devote substantial time and incur substantial costs, as necessary, to ensure compliance, we cannot be certain that we will be successful in complying with Section 404 of SOX on an ongoing basis.

Risks related to ownership of our stock

The market price of our common stock may be adversely affected by market volatility due in part to the current instability in the financial markets.

Our common stock price trading prices have decreased significantly since 2007. We cannot predict if or when current adverse economic conditions will be resolved or what the affect such instability may be on the price of our common stock.

Conditions beyond our control may cause wide price fluctuations in the market price of our common stock.

Table of Contents

The market price of our common stock may be subject to wide fluctuations in response to many factors, including worldwide economic conditions and commodities prices, variations in our operating results, divergence in financial results from investors' expectations, changes in performance estimates, changes in our business prospects, changes in mineral reserve or resource estimates, results of exploration, changes in results of mining operations, legislative changes, our liquidity and whether we are able to achieve financing for the Nkamouna Project and other events and factors outside our control.

Future sales of our securities in the public or private markets could adversely affect the trading price of our common stock and warrants and our ability to continue to raise funds in new stock offerings.

Future sales of substantial amounts of our securities in the public or private markets, or the perception that such sales could occur, could adversely affect prevailing trading prices of our common stock and warrants and could impair our ability to raise capital through future offerings of securities.

We do not intend to pay cash dividends in the near future.

Our Board of Directors determines whether to pay cash dividends on our issued and outstanding shares. The declaration of dividends would depend upon our future earnings, our capital requirements, our financial condition and other relevant factors. We have never paid dividends and may not pay dividends in the future.

Provisions of our Certificate of Incorporation, By-laws and Delaware law could defer a change of our management which could discourage or delay offers to acquire us.

Provisions of our Certificate of Incorporation, By-laws and Delaware law may make it more difficult for someone to acquire control of us or for our stockholders to remove existing management, and might discourage a third party from offering to acquire us, even if a change in control or in management might be beneficial to our stockholders. For example, our Certificate of Incorporation allows us to issue different series of shares of preferred stock without any vote or further action by our stockholders and our Board of Directors has the authority to fix and determine the relative rights and preferences of each series of preferred stock. As a result, our Board of Directors could authorize the issuance of a series of preferred stock with holders having the preferred right to our assets upon liquidation, preferred voting rights, preferred dividends before dividends are paid on common stock and/or redemption preferences or other preferred rights.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None

ITEM 2. PROPERTIES

Asbolane. The key mineral in the Nkamouna and Mada deposits, which hosts the cobalt, most of the manganese and a little less than half the nickel.

Breccia. A zone composed of broken fragments of minerals or rock cemented together by a fine-grained matrix.

Ferrallite. Limonitic laterite, sometimes pulverulent, mottled, with varied shades of black, yellow, brown and red. Often foliated, reflecting relict serpentinite textures. Thickness varies from a few meters to tens of meters, averaging

near 8 meters. Main ore unit, consistently mineralized with good metal grades near the top where black manganese zones occur, moderate to low cobalt grades lower in the unit.

Ferricrete breccia. Beneath the upper laterite is a nearly ubiquitous horizon of iron-rich concretions, ranging in size from one or two centimeters across, to blocks larger than a meter across. The ferricrete breccia averages 6 to 8 meters thick, and was often divided into two or three units by project geologists. A unit can contain very high cobalt grades, particularly at the base.

Gangue. The commercially worthless material that surrounds, or is closely mixed with, a wanted mineral in an ore deposit.

Hydrometallurgical process. One of several metallurgical processes that uses water and other liquids, chemicals and reagents for the leaching and recovery of soluble metals from ore.

Laterite. Soil types rich in iron and aluminum, formed in hot and wet tropical areas. They develop by intensive and long-lasting weathering of the underlying parent rock.

Leach and Recovery Circuit. That part of the mineral processing facility that accomplishes the hydrometallurgical process.

Manganese precipitate. Manganese compounds produced by precipitation from leach solutions.

Mine Permit. Republic of Cameroon Mining Permit Decree dated April 11, 2003.

Mining Convention. Mining Convention between The Republic of Cameroon and Geovic Cameroon, S.A., dated July 31, 2002.

Table of Contents

Physical upgrade (PUG) circuit. More commonly known as a wash plant, designed to use water to remove much of the gangue from the run of mine mineralized material before processing in the leach and recovery circuit.

Saprolite. A chemically weathered rock. Saprolites form in the lower zones of soil profiles and represent deep weathering of the bedrock surface.

Serpentinite. Bedrock, olive green to dark green, may be fractured and fissile, with silica-filled fractures. Uniformly low metals grades except in rare cases where garnierite-like nickeliferous silicates fill fractures.

Tailings storage facility. A containment system comprised of a compacted, earthen structure or dike and a prepared basin area that is used to contain solid tailings and water from the mineral beneficiation process.

Tailings disposal. A method for disposing of tailings, waste rejects, and water from a processing operation into the tailings facility.

Tonne. One metric tonne is 1000 kilograms, or 2,204.6 pounds.

Description of Mineral Projects

THE NKAMOUNA PROJECT

GeoCam received and published the *Nkamouna Co-Ni-Mn Project Feasibility Study* authored by Lycopodium with contributions by SRK Consulting (U.S.), Inc. (SRK), Knight Piésold and GeoCam (the Feasibility Study) in April 2011. Geovic then engaged SRK to prepare a Technical Report (the 2011 Technical Report) for the Nkamouna and Mada Deposits, the Project, to meet the requirements of Canadian National Instrument 43-101 (NI 43-101) and for the further development and advancement of the Project. The information below is summarized from the Feasibility Study and the 2011 Technical Report and is compliant with SEC Industry Guide 7. Bret Swanson, BEng Mining, MAusIMM, MMSAQP of SRK and Brett Malcolm Crossley, BAS (Chemistry), MAusIMM, of Lycopodium served as Qualified Persons for the 2011 Technical Report

Property Description and Location

The Nkamouna and Mada deposits are located in southeastern Cameroon (Figure 1.), approximately 640 road kilometers east of the port city of Douala and 400 road kilometers east of the capital of Yaoundé, in the Haut Nyong Division, East Province. The deposits are adjacent to improved roads that have been constructed to provide access.

The Nkamouna and Mada deposits are two of seven separately named laterite plateaus forming a crescent-shaped array, which extends 80 km north to south and 45 km east to west. The irregularly shaped laterite plateaus lie within the 1,645 km² boundary defined by the Mine Permit, within which GeoCam has exclusive right to mine up to 1,250 km². The plateaus are Nkamouna, Mada, Rapodjombo, North Mang, South Mang, Messea and Kondong, and all are included within the Mine Permit area (Figure 2.).

The Nkamouna Cobalt-Nickel-Manganese Project includes mining the Nkamouna and Mada deposits utilizing open-cut mining methods, physical upgrading and hydrometallurgical processing and associated Project infrastructure at the Project site. GeoCam holds the Mining Permit. Most of the Mining Permit lands are zoned mineral exclusive lands, and assign exclusive rights to the cobalt, nickel and related materials within the Mining Permit to GeoCam.

Table of Contents

Environmental and Social Initiatives

GeoCam has integrated anticipatory engineering and mitigation strategies with respect to social and environmental programs since beginning the exploration phase of the Project. Mining and production related facilities are planned to use industry proven and/or laboratory-demonstrated technologies that are considered industry best practices. Also, international requirements such as Equator Principles and International Finance Corporation (IFC) Performance Standards have guided the preparation of the Environmental and Social Assessment (ESA), and activities undertaken to preserve the health and safety of the workforce and local communities.

The following are the main potential environmental impacts of the Project:

Loss of natural flora and fauna habitats due to land clearance for mining activities and the construction of processing facilities and support infrastructure for the operations;

Alteration of land topography and form due to mining exploitation;

Increase in soil erosion due to soil grading and the construction of Project facilities;

Increase in metal and/or dissolved solid load in surface and ground water due to unexpected releases of process solutions or soil erosion;

Increase of illegal hunting activities due to population influx;

Dissemination of dust in the air due to intensive traffic of vehicles; and

Increase in job opportunities for local residents.

Geology

Southeastern Cameroon lies within a region of metamorphosed Proterozoic rocks ranging in age from 2,500 to 600 million years (My) and extending across parts of several west-central African countries. The Cameroon laterite profiles are similar to those observed elsewhere in humid tropical environments and show a strong vertical zonation, which reflects the transition from unweathered host rock at the base, to highly leached residues at the surface. The Cameroon laterites consist of two layers of iron-rich laterite separated by an iron-rich ferricrete breccia. The laterite under the breccia includes the limonitic ferralite above saprolite zones, which are more typical of humid tropical laterite profiles.

The cobalt-nickel-manganese deposits are hosted in residual laterites formed by prolonged tropical weathering of base rock serpentinites. Large areas of mineralized laterite, each several square kilometers in extent, are included on low-relief mesas or plateaus underlain by ultramafic rocks that stand above the surrounding dissected lowlands. The Nkamouna and Mada deposits are two such plateaus. Ultramafic rocks underlie all the plateaus, with some areas of

schist, phyllite, and quartzite. The surrounding lowlands are underlain by schists, phyllites, quartzites, and meta-volcanics of the Intermediate Series.

Mineralized Material

This section describes geologic modeling and estimates of mineralized material for the Nkamouna Project as described in the 2011 Technical Report.

Nkamouna/Mada Geologic Model

Total mineralized material was calculated for the Nkamouna and Mada deposits using a three-dimensional block model to estimate cobalt, nickel, and manganese grade for individual blocks with dimensions of 10 by 10-meters horizontal by 1-meter vertical. In addition, lithology codes and ore classification codes were determined for each block. Licensed geologic modeling software was used for the estimation.

Basic statistics showed that there are three cobalt grade populations, including low-grade (poorly mineralized), mid-grade (mineralized), and high-grade (strongly mineralized). Manganese was found to have grade distributions similar in shape, but higher grade than cobalt, consistent with the strong correlation between cobalt and manganese in the asbolane. Nickel appears to be more evenly distributed than cobalt and manganese and was found to have two grade zones, mid-grade (mineralized) and high-grade (strongly mineralized).

Basic statistics were run within the grade zones to confirm the grade distributions and variograms were run to confirm continuity of grades within the zones.

Table of Contents

The Nkamouna Project mineralized material is summarized in Table 1 below. These estimates of mineralized material include the results of all exploratory drilling on the Nkamouna and Mada deposits.

Table 1

Nkamouna/Mada Mineralized Material Statement

	Tonnes (kt)	Average Grade		
		Co (%)	Ni (%)	Mn (%)
Total Mineralized Material⁽¹⁾	52,467⁽²⁾	0.19	0.64	1.18

Note: Mineralized Material is not mineral reserves and does not have demonstrated economic viability.

- (1) Reflects weighted averages of estimates prepared by SRK that were included in the 2011 Technical Report and the Feasibility Study. Those estimates included, for the Nkamouna deposits: 80,723 thousand tonnes of ore (including the reserves described below), cobalt 0.23%, Nickel 0.67% and manganese 1.25%. For the Mada deposits, the estimates were: 39,876 thousand tonnes of ore (also including the reserves below), cobalt 0.23%, nickel 0.59% and manganese 1.43%. These estimates have been rounded to reflect the relative accuracy of the estimates.
- (2) Reported at cut-off grades of 0.12% and 0.23% cobalt contained in ferralite and breccia, respectively. Estimated reserves for the Nkamouna Project set forth below are exclusive of in the mineralized material set forth in the above table.

Mine Plan

The mine plan for the Nkamouna Project targets surface mining and physical upgrading at a rate of approximately 10,000 to 20,000 tons per day using small excavators and articulated dump trucks. The ore will be transported from the pit face to run-of-mine stockpiles located near the Nkamouna plant site, the southern extent of Mada and an emergency stockpile between the two. From the stockpiles, the ore will be blended to the desired feed grade and transported to a physical upgrade (PUG) plant using front-end loaders and haul trucks. Waste will be removed using bulldozers and side casting of rehandle with long boom excavators.

Reserves

The proven and probable reserves for the Nkamouna Project are summarized in Table 2.

Table 2

Nkamouna and Mada Reserves (as of December 31, 2010)⁽¹⁾

Ore Tonnes	Co Grade ⁽⁴⁾	Mn Grade ⁽⁴⁾	Ni Grade ⁽⁴⁾
(kt) ⁽¹⁾	(%)	(%)	(%)

Total Proven and Probable	68,132⁽²⁾⁽³⁾⁽⁵⁾	0.26	1.48	0.66
----------------------------------	-----------------------------------	-------------	-------------	-------------

- (1) Reflects estimates prepared by SRK and included in the 2011 Technical Reports and Feasibility Study. These estimates included, for ferralite ore: 57,097 thousand tonnes of ore, cobalt 0.23%, nickel 0.69% and manganese 1.30%; and for breccia ore: 11,035 thousand tonnes of ore, cobalt 0.42%, nickel 0.54% and manganese 2.37%.
- (2) Reserves are based on an assumed cobalt price of US\$57,761/ton (US\$26.20/lb), nickel price of US\$19,208/ton (US\$8.713/lb) and a manganese carbonate price of US\$1,360/ton (US\$0.544/lb). Cobalt and nickel prices reflect the three-year average prices for the period ending December 31, 2010, the last date used in the Feasibility Study. Manganese carbonate prices were assumed at 40% of the US\$3,000/ton price for manganese in 2010. The three year average year-end prices as of December 31, 2013 were: cobalt \$14.56/lb, nickel \$9.38/lb. Full mining recovery is assumed. Mine reserves are not diluted. These estimates have been rounded to reflect the relative accuracy of the estimates.
- (3) Cut-off grades are not representative of internal or break-even calculations but rather stockpile grade bin classification above 0.12% Co for ferralite and 0.2% Co for breccia.
- (4) In-situ grade does not reflect the average metallurgical recovery of 58.66% cobalt, 16.43% nickel and 53.06% manganese.
- (5) Reserves shown represent 100% interest of the GeoCam s Nkamouna Project. The Company holds 60.5% of GeoCam.

Ore tonnes which lie within the final pit design shape are classified as proven or probable reserves based on the geological classification for measured and indicated resources. Proven reserves are measured resources within the design pit shape and probable reserves are indicated resources within the design pit shape. Inferred material which lies within the pit design is not included in the reserve statement and is treated as waste. Ore reserves are based on the economic balance between the value per tonne of run-of-mine rock against the costs to mine and process each tonne. The value is based on estimated metal concentration, estimated metal value and process recovery. The costs include mining, processing, overhead and rehabilitation.

Table of Contents

For the Nkamouna and Mada deposits, a variable cut-off grade strategy was designed to accelerate the mining of the deposit early in the mine life but still provide adequate stockpile storage for a twenty one year process life. As such, the true definition of economic value for a block model block was not used as the differentiation of ore and waste. This is possible given the large quantum of potential resource, i.e. not reserve limited (within the mining region) and strategic planning decisions governing mine cash flow.

Metallurgy

The metallurgical evaluation centered on the selected process flow sheet and the objective was to establish the design parameters in order to engineer the selected process. This was achieved by conducting small-scale batch experiments for each of the unit processes followed by combination of the unit processes in continuous pilot scale testing campaigns.

The extensive test work provided confirmation of the selected metallurgical process flow sheet and acceptable recoveries and product qualities were achieved during the continuous pilot plant campaigns at expected reagent consumption levels.

The metallurgical evaluation provided all the required data to design the process plant and auxiliaries. The reagent consumptions for the operating cost estimates were derived from the metallurgical test work campaigns.

Process and Plant

The process plant is designed to consist of two process circuits, namely the physical upgrade (PUG) circuit, more commonly known as a wash plant, and the leach and recovery circuit.

Physical Upgrade Circuit

The objective of the planned physical upgrade (PUG) circuit is to remove most of the non-economic material, thereby significantly reducing the throughput of the leach and recovery circuit. This is generally achieved by selectively recovering the asbolane from the gangue material based on the physical characteristics of the harder, coarser and denser cobalt, nickel and manganese-bearing asbolane, compared to the finer, more friable gangue material.

Leach and Recovery Circuit

The objective of the leach and recovery circuit will be to recover cobalt and nickel as a mixed sulfide product and manganese as a manganese carbonate product from the PUG concentrate. The objective of each of the individual sub-circuits within the planned leach and recovery circuit is presented in the table below.

The steps and objectives of the Leach and Recovery Circuit

Sub Circuit	Objective
Concentrate grinding	To grind the PUG concentrate in an open circuit configuration to a very fine product size
Leach	To leach cobalt, nickel and manganese from the PUG concentrate
Primary purification	To precipitate iron and aluminum from the pregnant leach solution (PLS)

Counter current decantation (CCD)	To recover leach solution containing cobalt, nickel and manganese from barren solids
CCD tailings processing	To collect and pump tailings to CCD tailings facility
Leach and purification area scrubber	To scrub off-gasses from the leach and primary purification tanks
Secondary purification	To precipitate more iron and aluminum from the PLS stream
Sulfide precipitation	To remove precipitated Fe and Al from the PLS stream
	To precipitate cobalt and nickel from the PLS as a mixed sulfide
	To recover the precipitated sulfide from the barren stream
Tertiary purification	To filter and wash and package the mixed sulfide product to remove entrained process solution from the sulfide product
	To precipitate the remaining iron and aluminum from the PLS stream
Manganese carbonate precipitation - 1	To remove the precipitated iron and aluminum from the PLS stream
	To precipitate 95% of the leached manganese as manganese carbonate
	To remove the precipitated manganese carbonate product from the solution
Manganese carbonate precipitation - 2	To filter and wash and package the manganese carbonate product
	To precipitate the remaining 5% of the leached manganese as manganese carbonate
	To remove the precipitated manganese carbonate product from the solution
	To filter the manganese carbonate precipitate

Table of Contents**Tailings Storage Facilities**

The Tailings Storage Facilities (TSFs) are planned to provide separate storage for PUG tailings and CCD tailings. The TSFs will be built within the Napene Creek drainage basin and immediately to its north. Stored tailings will essentially fill the upper end of the Napene Creek basin. The location reduces offsite run-on to the facilities thus limiting the need to handle excess waters over the Project.

Feasibility Study

The Feasibility Study was initiated in early 2010 and completed and accepted in April 2011 for a total cost in excess of \$10.7 million paid to the report preparer, Lycopodium, and a number of other contractors and consultants associated with its completion. Among other conclusions, the Feasibility Study found that the Nkamouna Project was feasible with an estimated net present value at an 8% discount rate of approximately \$669 million (\$405 million net to Geovic's 60.5% interest) over a 23 year Project life, on total free cash flow (before debt service) of \$2.1 billion during that period. These estimates were made using three year average prices as of December 31, 2010 for cobalt and nickel and current market prices as of that date for manganese carbonate. The Feasibility Study also estimated initial capital and start-up expenditures of approximately \$617 million (including 10% contingency).

Markets and Metal Prices

Cobalt is a metal used in many diverse industrial and military applications with the leading uses in chemicals for rechargeable batteries (approximately 38 percent), and super-alloys (approximately 20 percent), principally for gas turbine engines. Cobalt is also used to make specialty magnets (5 percent); other alloys used for binding material and wear resistance (10 percent); catalysts for the petroleum and chemical industries (9 percent); drying agents for paints, varnishes, and inks and adhesives for radial tires (3 percent); porcelain enamels, ceramics, dyes and pigments (8 percent); and other uses (7 percent).

Cobalt prices are published by Metal Bulletin (www.metalbulletin.com). Commencing February 22, 2010, cobalt began trading on the London Metal Exchange (LME); however prices below are based on Metal Bulletin quotations, which reflect greater trading volume. Nickel is a principal metal also traded on the LME and has total price transparency. Prices are quoted on the LME (www.lme.com) for 99.8 percent US Spot cathode nickel and cobalt. The Nkamouna Project is planned to produce a cobalt-nickel mixed sulfide product and a magnesium carbonate product. Both products would likely be sold for the commodity content at prices slightly less than the pure metal.

The following table reflects the reported annual spot prices for high-grade cobalt and nickel as reported by Metal Bulletin for Cobalt and London Metals Exchange for nickel for each of the last five years and for cobalt in 2013, and the last reported prices for 2013.

	Year end		Average Annual Prices			
	2013	2013	2012	2011	2010	2009
Price per pound cobalt	\$ 12.67	\$ 12.39	\$ 13.83	\$ 17.47	\$ 21.32	\$ 17.88
Price per pound nickel	\$ 6.41	\$ 6.80	\$ 7.86	\$ 10.83	\$ 9.89	\$ 6.64

Other Mineral Properties

We are also engaged in the strategic acquisition, exploration and development of other mineral properties to diversify our portfolio of mineral exploration and development opportunities. The Company has discovered mineralization on

other mineral properties in the United States and on lands in several countries located in the Asia-Pacific region.

New Caledonia Properties

In 2009 we formed a subsidiary in New Caledonia, a French overseas island northeast of Australia in the South Pacific, to explore for chromite. Once prospecting licenses were issued, we applied for, and in early 2011 were awarded, 31 exploration licenses covering 100 square kilometers including the large historic resource identified by Union Oil Company (Unocal) in the mid 1980s. Figure 3 shows the location of these licensed areas, with the highlighted areas indicating our estimates of extent of ultramafic material that could be considered a source rock for the chromite.

Table of Contents

Figure 3 New Caledonia Exploration Licenses

25

Table of Contents

Environmental baseline studies were conducted within each license area. An initial program commenced in the second half of 2012 with geo-physical and auger drilling program. These activities have been ongoing over most of the 31 license areas. Since that time we have completed 554 holes on 12 of the 31 license areas, and are actively carrying out additional exploration activities on the remaining license areas.

The chromite prospects of interest to Geovic occur in unconsolidated coastal sand deposits where chromite has been separated from ultramafic host rock, and concentrated with other heavy minerals by river and wave action. This has resulted in well-sorted deposits occurring as dark bands of heavy mineral sand up to several meters thick near the mouths of large river systems and along nearby beaches and back-beach areas. Based on preliminary testing of samples collected, we believe that the chromite sands can be readily separated from the rest of the heavy mineral sand.

As of December 31, 2013 we hold exploration licenses covering 100 square kilometers.

Arizona Properties

Geovic conducted a surficial sampling survey from 2009 through 2012 within state mining leases and federal mining claims we hold in the Whetstone Mountains in southeastern Arizona. During the sampling program, Geovic discovered surface gold mineralization discontinuously along a nine-mile trend, in what appears to be a hot springs, quartz-hosted, micro-fine gold mineralization in a series of low-angle detachment faults. Such settings are often sites for hosting shallow, bulk-tonnage disseminated gold deposits.

The gold identified to date is recognized as a high level, low temperature gold-arsenic-antimony-mercury assemblage of near surface emplacement. The mineralization is closely associated with extensive silica flooding, brecciation and veining that replace host sediments, volcanics, and older basement rocks. We initiated exploration drilling, added permitting and leasing of an additional 30 square miles of land in 2012 and early 2013.

Figure 4 shows an outline of these areas.

27

Table of Contents

As of December 31, 2013 we hold the following undeveloped interest in the properties in Arizona:

Undeveloped Arizona Prospects**Whetstone Project**

	Number	Gross and Net Acres
State Mineral Exploration Permits	11	5,564

New Mexico Prospect

In late 2010 the Company discovered zirconium and other related advanced metals and rare earth elements in southeast New Mexico. Later in 2011 and early 2012 the Company carried out a limited subsurface drill program. Based on drilling results and subsequent preliminary metallurgical testing we obtained a minimal impact drilling permit for 7 new drill locations, totaling about 28 drill holes on this property.

During 2013 the Company entered into the Wind Mountain Joint Venture (WMJV) with The Joe Scott Group (JS Group) for exploring, defining, developing and marketing of mining claims the Company owns in New Mexico. The funding will be provided by the JS Group in three phases and the Company has agreed to convey and transfer all right, title and interest of 60% of the mining claims to the JS Group in such phases dependent upon continuation of the project and funding.

The property is located near the Texas New Mexico border about 90 miles northeast of El Paso, Texas close to well established infrastructure and natural gas. The advanced metal suite may include zirconium-hafnium; tantalum-tin-niobium; and rare earth elements. Detailed surface geologic mapping and sampling have confirmed the geological potential of the higher grade resource areas and limited low-impact exploratory drilling has been carried out to further assess that potential. Some of the mining claims are in an area designated by the BLM as an Area of Critical Environmental Concern. Our exploration or development of this mineralization could be restricted by these or other environmental concerns.

Figure 5. New Mexico Properties

Table of Contents

As of December 31, 2013 we hold undeveloped interests in the following mining claims in New Mexico which may be subsequently transferred to WMJV:

Undeveloped New Mexico Prospects**Cornudas Project**

	Number of Federal Claims-BLM	Gross and Net Acres
Mining Claims-Undeveloped	187	3,864

Colorado/Wyoming Properties

We hold fee mineral leases over known uranium deposits in the Denver-Cheyenne Basin of northeastern Colorado and southeastern Wyoming. These mineral leases cover acreage believed to host historical uranium deposits at depths ranging from 120 feet to 800 feet below the surface. These deposits were discovered by other energy companies in the 1970s and 1980s, including AMAX, Rocky Mountain Energy, Westinghouse, PowerCo, Resource Associates of Alaska and Unocal to name a few. Through the leases it now holds, Geovic has control over certain historically identified mineralized areas within eastern Weld County, Colorado and Goshen County, Wyoming through its wholly-owned subsidiary Geovic Energy.

As of December 31, 2013 we hold undeveloped interests in the following properties in Colorado and Wyoming:

Undeveloped Uranium Prospects**Denver-Cheyenne Basin**

	Number of Federal Claim-BLM	Number of Leases	Gross Acres	Net Acres	County
Mineral Exploration Permits and Leases (pending)	22		12,240	12,240	Weld County, CO
Mineral Fee Leases		121	57,508	16,557	Weld County, CO
Mineral Fee Leases		85	95,227	46,940	Goshen County, WY

We are holding these properties and not carrying out any exploration at this time and are awaiting improved market conditions.

Papua New Guinea

In March 2012 the Company was notified by the Mineral Resources Authority of the government of Papua New Guinea that the Company has been awarded a two-year exploration license pursuant to applications filed by the Company in 2011. Our prospecting activities in the license indicated possible deposits of advanced and specialty metals, gold, chromium and related valuable heavy minerals. As of December 31, 2013 the license area covers 277 square miles and is centered about 45 miles south of Lae PNG. Figure 6 shows an outline of these areas. During

March 2014 the Company reduced the license area to 72.5 square miles as planned and required by PNG mining statutes.

Table of Contents

Figure 6. Papua New Guinea Properties

ITEM 3. LEGAL PROCEEDINGS

In November 2009, five management level consultants or employees of GeoCam filed litigation in Cameroon, claiming approximately \$2.2 million as compensation and damages as a result of termination of their services by GeoCam in connection with a reduction in workforce in February and March 2009. In April 2010 the litigation was dismissed. In July 2010 the litigation was brought by four of the claimants before one other jurisdiction and by the fifth claimant in a separate jurisdiction. On June 3, 2011, the High Court of Abong-Mbang, the court before which four of the matters were pending entered judgments in favor of the four claimants totaling CFA 780,339,500 (approximately \$1.6 million at December 31, 2013). On November 14, 2011, the High Court of Mfoundi, Yaoundé, the court before which the fifth matter was pending entered a judgment in favor of the claimant totaling CFA 118,804,219 (approximately \$0.2 million at December 31, 2013). GeoCam appealed all five matters to the next highest appellate court in Cameroon, the Court of Appeal of the East Region at Bertoua as to the four claimants and the Court of Appeal of the Center Region at Yaoundé as to the fifth matter.

The Court of Appeal, before which the fifth matter was pending, authorized CFA 51,851,813 (approximately \$0.1 million at December 31, 2013) of GeoCam funds to be attached for the benefit of the claimant in the second quarter of 2012 and placed in a restricted account at GeoCam's bank pending resolution of the case. GeoCam has sought unsuccessfully to have this restriction lifted. The appeal of this case has not been decided by the court as of the date this report is filed.

The Court of Appeal before which the other four appeals were pending set aside the judgment of the lower court discussed above and awarded the four claimants an amount totaling CFA 125,062,887 (approximately \$0.3 million at December 31, 2013) in the fourth quarter of 2012. GeoCam has filed appeals in all four matters which stayed enforcement of the judgments pending resolution of

Table of Contents

the appeals. This Court of Appeal also authorized CFA 108,949,204 (approximately \$0.2 million at December 31, 2013) in GeoCam funds to be attached for the benefit of the claimants and placed in a restricted account at GeoCam's bank pending final resolution of the appeals. In December 2013 attached funds related to one claim in the amount of CFA 46,353,259 (approximately \$0.1 million at December 31, 2013) were released to GeoCam. In January 2014 attached funds related to two more of the remaining claims in the amount of CFA 42,380,887 (approximately \$0.09 million at December 31, 2013) were released to GeoCam. The court has thus far denied GeoCam's request to lift the restriction on the remaining one claimant of CFA 20,215,058 (approximately \$0.04 million at December 31, 2013). The appeal of this case has not been decided as of the date this report is filed.

The restricted funds related to the four claimants that remained at December 31, 2013 totaling approximately \$0.2 million are included as restricted cash on our consolidated balance sheets. The Company believes all contractual and other obligations to the five individual claimants were satisfied; however, given the judgments, we believe it could be deemed probable that the outcome would be unfavorable to GeoCam and, therefore, GeoCam accrued approximately \$0.3 million for the matters in our consolidated financial statements at the time the Court of Appeal reached its decision. It is possible that an additional amount up to approximately \$0.2 million could be awarded to the claimants in these matters.

Executive Officers

The following table sets forth certain information, as of March 20, 2014, with respect to our executive officers.

Name	Age	Position
Michael T. Mason ⁽¹⁾	69	Chairman, Chief Executive Officer of Company, Director; Chief Executive Officer of Geovic Ltd, Geovic Energy, and Geovic Mineral Sands
William A. Buckovic ⁽²⁾	64	Director, Executive Vice President of Company, Director; President of Geovic Mineral Sands and Geovic Energy; Acting General Manager of Geovic Cameroon PLC
Greg C. Hill ⁽³⁾	64	Executive Vice President, Chief Financial Officer
Gary R. Morris ⁽⁴⁾	69	Senior Vice President
Shelia I. Short ⁽⁵⁾	62	Corporate Secretary

(1) Mr. Michael Mason has been Chief Executive Officer since January 21, 2011 and Chairman of the Board of Directors since February 14, 2012. He has been Managing Partner and owner of Mineral Services, LLC, a metals marketing consulting firm, from 1996 to the present. Mr. Mason was a Director of ECU Silver Mining Inc. from April 2001 until its merger with Golden Minerals Corp. in August 2011, and has been a director of Golden Minerals Corp. since that time. Before Mr. Mason became an employee of the Company, Mineral Services was engaged as a part-time consulting firm for the Company.

(2) Mr. Buckovic is the founder and was President of Geovic Ltd. from 1994 until 2009, and presently is Executive Vice President of the Company. He became President of the Company upon completion of the RTO in December 2006, and Executive Vice President in 2009. Mr. Buckovic has been active for over 40 years in the mineral exploration and development business, including the discovery of several major mineral deposits.

- (3) Mr. Hill has been Executive Vice President and Chief Financial Officer since January 1, 2010, and was Senior Vice President and CFO for Geovic, Ltd. and the Company from October 2007 until December 2009, and he was Acting CFO of Geovic, Ltd. from August 2006 and for the Company from December 1, 2006 until October 2007. Mr. Hill has also been the President of Englewood Capital, LLC, a private consulting company since November 2001.
- (4) Mr. Morris has been Senior Vice President, Geovic Ltd. since January 2001 and Senior Vice President of the Company since December 1, 2006. Mr. Morris was Managing Director of Geovic Cameroon PLC through May, 2008 and Chairman of the Board of Geovic Cameroon PLC until February 17, 2009.
- (5) Ms. Short has been Corporate Secretary since December 1, 2006 and Executive Assistant and Secretary of Geovic, Ltd. since July 2000.

ITEM 4. MINE SAFETY DISCLOSURES

Pursuant to Section 1503(a) of the Dodd-Frank Wall Street Reform and Consumer Protection Act and Item 104 of Regulation S-K, issuers that are operators, or that have a subsidiary that is an operator, of a coal or other mine in the United States are required to disclose in their annual reports filed with the SEC information regarding specified health and safety violations, orders and citations, related assessments and legal actions, and mining-related fatalities. During the fiscal year ended December 31, 2013, our U.S. exploration properties were not subject to regulation by the Federal Mine Safety and Health Administration under the Federal Mine Safety and Health Act of 1977.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Overview

This Management's Discussion and Analysis (MD&A) is intended to provide an analysis of our capital resources and liquidity at year end 2013, and financial results for the years ended December 31, 2013 and 2012 compared to previous years. All amounts are presented in thousands of United States dollars unless indicated otherwise. Reference should also be made to the financial statements and related

Table of Contents

notes filed with this report and the Company's other disclosure materials filed from time to time on www.sec.gov and www.Sedar.com or the Company's website at www.geovic.net. As used in this report, unless the context otherwise indicates, references to we, our, ours and us refer to Geovic Mining Corp. and its subsidiaries collectively.

Business

We are engaged in the business of identifying, exploring and initially developing mineral exploration prospects. Our primary asset is a cobalt, nickel, and manganese mining project in Cameroon, Africa (the Nkamouna Project) held by GeoCam, our majority-owned (60.5%) subsidiary incorporated under the laws of the Republic of Cameroon. We also explore for exploitable deposits of other minerals. We hold the following early stage exploration prospects: exploration licenses in New Caledonia (chromite); state exploration permits in Arizona (gold); mineral leases and mining claims in Colorado and Wyoming (uranium); mining claims in New Mexico and California (rare earth and other specialty metals); and an exploration license in Papua New Guinea (advanced and specialty metals).

Our ability to continue operations in the future will be largely dependent on our ability to arrange a strategic investment in the Nkamouna Project. We expect that such an investment would involve the sale of some or all of our interest in the Project. We do not have available financial resources necessary to construct and open the Nkamouna Project. We are proactively pursuing a strategic investment which, if completed, would result in our selling some or all of our interest in the Nkamouna Project to a third party.

On July 23, 2013 we announced that we had agreed to the terms and conditions of a Definitive Agreement (DA) with JXTC of Nanchang, Jiangxi Province, China. JXTC is a state owned large-scale industrial enterprise with significant mining and industrial operations in cobalt, copper, tungsten, and other rare metals. We agreed to the terms and conditions of the DA with JXTC and SNI along with our subsidiaries Geovic Ltd. and GeoCam. GeoCam plans to develop the Nkamouna cobalt-nickel-manganese Project in Cameroon, Africa.

The transaction contemplated by the DA establishes JXTC's intent to acquire 60.5% of the existing shares of GeoCam pursuant to the execution of a share purchase agreement between JXTC and Geovic which is expected to be subject to a variety of conditions and approvals, many of which are outside our control. There is no assurance that this agreement will be finalized, or that the transaction contemplated therein will be completed. This proposed transaction would result in the complete disposition of the Company's interest in GeoCam and the Nkamouna Project. In addition to acquiring 60.5% interest in GeoCam, JXTC would also secure 100% of the mixed cobalt-nickel sulphide product to be produced by the Nkamouna Project. The share purchase agreement is not yet finalized and would require the approval of the stockholders of the Company.

If an agreement is reached, it will be subject, among other matters, to approval of our stockholders. If we are unable to complete and close an agreement to sell a significant interest in the Nkamouna project to a strategic partner in a timely manner, our plan is to place the Nkamouna Project on a care and maintenance status and significantly further reduce our level of expenditures in Cameroon. In such event, we would not have sufficient resources to maintain our interest in the Project indefinitely and we could lose our interest in the Project. In such a scenario, our cash resources would likely be insufficient to sustain our other business activities.

We are endeavoring to arrange additional financing which would allow us to continue work on our mineral projects and pay our expenses. If we are unable to arrange adequate financing, we may seek to further reduce our operations, to the extent possible, while we continue efforts to monetize our investment in GeoCam, or we may cease operations. Unless we arrange additional financing, we expect to nearly exhaust our cash during March 2014. As of December 31, 2013 the Company had entered into note purchase agreements (each a Note Purchase Agreement and collectively the Note Purchase Agreements) with a number of parties (each a Purchaser). Pursuant to the Note Purchase Agreements,

the Company agreed to issue promissory notes (each a Note and collectively the Notes) to the Purchasers in the aggregate principal amount of \$605 in consideration of the payment by each Purchaser of a purchase price equal to the principal amount of such Purchaser's respective Note. The Company issued the Notes prior to or as of December 31, 2013. Each Note matures one year following the date of issuance, at which time the outstanding principal amount of each Note and all accrued and unpaid interest thereon is due and payable by the Company. Interest accrues on the outstanding principal balance of each Note at the rate of 200% per annum. The Company may prepay each Note, in whole or in part and without penalty, at any time upon 30 calendar days' prior written notice. The Company is required to prepay each Note, in whole and without penalty, within five business days following the consummation of the acquisition of JXTC or by any other entity of the Company's 60.5% interest in GeoCam or the consummation of the acquisition of the Company by another company. The Notes contain events of default and other terms and conditions.

Subsequent to December 31, 2013 the Company entered into note purchase agreements similar to those described above with other parties in the aggregate principal amount of \$325. Each Note, issued pursuant to these note purchase agreements, matures one year following the date of issuance, at which time the outstanding principal amount of each Note and all accrued and unpaid interest thereon is due and payable by the Company. Interest accrues on the outstanding principal balance of each Note at the rate of 200% per annum, except for \$200 of Notes on which the interest accrues at 300% per annum.

Table of Contents

A feasibility study for the Nkamouna Project was completed in April 2011, which estimated approximately \$617 million of initial capital costs, including contingencies, to construct and start-up the Nkamouna Project. The GeoCam financial advisor estimated that the total of capital, financing, working capital, contingency and start-up costs would be approximately \$698 million, based on estimates included in the feasibility study. Additionally, cost overrun requirements of lenders to the Nkamouna Project were projected to be approximately \$100 million.

Since the feasibility study was completed, we have devoted most of our efforts to seeking and evaluating a means to finance the Nkamouna Project. We have considered many possible alternatives, including joint ventures or similar arrangements, which may include a sale of a significant portion or all of our interest in the Nkamouna Project to strategic investors who could assist in financing and would have an interest in purchasing the cobalt, nickel and manganese products produced from the Nkamouna Project. Beyond the Nkamouna Project financing we would also face other significant issues affecting development and operation of the Nkamouna Project. These include operating the Nkamouna Project through GeoCam as an autonomous Cameroonian entity, and GeoCam's ability to recruit, train and retain a team of qualified mining professionals and a stable local workforce to manage the development, construction and operation of the Nkamouna Project in a relatively undeveloped, remote area in Cameroon.

Since 2012 we have been seeking to 1) realize value for the Cameroonian assets and 2) shift the Company's focus to a prospect generation and strategic investment business model. Since our position in GeoCam will likely be significantly diminished or completely eliminated through strategic investment upon completion of a financing transaction, the future direction for the Company will be to identify new exploration prospects, minimally develop and prioritize existing and new prospects, and sell or joint venture further exploration and development of those prospects to others. The Company expects to take prospects to a level where they can be timely monetized through strategic investments by others who have the resources and staying ability to complete advanced exploration, permitting and development.

We are the majority shareholder of GeoCam. Under the Shareholder Agreement, GeoCam is operated as an autonomous entity and governed by a Board of Directors to which we select three of the five directors and two directors are selected by the other shareholders. A strategic investment would necessitate agreement among Geovic, SNI, and the new investors, and approval by the GeoCam Board of Directors. While we represent the majority of Directors on the GeoCam Board, we generally have not taken major strategic actions or decisions without general concurrence by the other shareholders who are collectively represented by SNI. We view a good working relationship with the other shareholders of GeoCam as important to the future success of the Nkamouna Project.

At our annual Stockholder Meeting held in late June 2013, two independent Directors did not stand for re-election. As a result only three persons were re-elected as Directors at the meeting, one of whom qualified as an independent Director. In September 2013 two new independent Directors, Ms. Teresa Dooling and Mr. Christopher A. Serin, joined the Board of Directors. Both will serve on the Audit Committee and each are qualified to serve as the Audit Committee Financial Expert as defined in accordance with Section 407 of the Sarbanes-Oxley Act of 2002 and Item 407(d)(5) of Regulation S-K adopted under the Securities Exchange Act. Ms. Dooling will serve as the Audit Committee Chairperson.

Capital Resources and Liquidity

Our ability to access additional financing and to monetize the Nkamouna Project are critical to our future financial condition. Since the completion of the feasibility study in April 2011, spending activity for the Nkamouna Project has mainly been limited to securing the Nkamouna Project site and protecting assets, continuing environmental monitoring and community development programs, and assisting potential strategic investors with their due diligence activities. Given our limited financial resources, we plan to continue this approach until we are reasonably satisfied

that an appropriate strategic transaction for the Nkamouna Project can be completed or the Project is put on care and maintenance basis.

At December 31, 2013 we had approximately \$0.2 million of unrestricted cash and cash equivalents on a consolidated basis compared to \$4.3 million at December 31, 2012 and \$0.3 million at September 30, 2013, a decrease of approximately \$4.1 million during the year, which included approximately \$0.1 million during the fourth quarter. Our cash is invested in U.S. dollar deposits and in the Cameroon branch of a large international bank.

During 2013 the Company entered into note purchase agreements (each a Note Purchase Agreement and collectively the Note Purchase Agreements) with a number of parties (each a Purchaser). Pursuant to the Note Purchase Agreements, the Company agreed to issue promissory notes (each a Note and collectively the Notes) to the Purchasers in the aggregate principal amount of \$605 (as detailed below) in consideration of the payment by each Purchaser of a purchase price equal to the principal amount of such Purchaser s respective Note. The Company issued the Notes prior to or as of December 31, 2013. Each Note matures one year from the date of issuance, at which time the outstanding principal amount of each Note and all accrued and unpaid interest thereon is due and payable by the Company. Interest accrues on the outstanding principal balance of each Note at the rate of 200% per annum. The Company may prepay each Note, in whole or in part and without penalty, at any time upon 30 calendar days prior written notice. The Company is required to prepay each Note, in whole and without penalty, within five business days following the consummation of any acquisition by JXTC or by any other entity of the Company s 60.5% interest in GeoCam or the consummation of the acquisition of the Company by another company. The Notes contain events of default and other terms and conditions.

Table of Contents

The following table summarizes the principal amounts of the Notes issued and outstanding as of December 31, 2013 and identifies the parties to which the Notes have been issued:

	Total	September 2013	October 2013	November 2013	December 2013
Richard G. Buckovic	\$ 100	\$ 50	\$ 50	\$	\$
Norman C. Rose	30	30			
M N Rose Shelter Credit Trust	40	40			
Paul D. Rose	60		60		
Dragon s Fire Investments LLC	225			125	100
Thorne Bush Investments LLC	150				
Total Short-Term Debt	\$ 605	\$ 120	\$ 110	\$ 125	\$

Subsequent to December 31, 2013 the Company entered into note purchase agreements similar to those described above with other parties in the aggregate principal amount of \$325. Each Note, issued pursuant to these note purchase agreements, matures one year following the date of issuance, at which time the outstanding principal amount of each Note and all accrued and unpaid interest thereon is due and payable by the Company. Interest accrues on the outstanding principal balance of each Note at the rate of 200% per annum, except for \$200 of Notes on which the interest accrues at 300% per annum.

Our plan for the Nkamouna Project before early 2012 had been to attempt to finance the capital costs, startup expenses and financing costs of the Project using a combination of debt secured by the project and owners' equity. In conventional project debt financing, GeoCam would be required to furnish, as equity, more than 40% of the total estimated capital and financing costs and expenses for the Nkamouna Project as a condition to securing loans for the balance of such costs and expenses. Based on the estimated capital and start-up costs of the Nkamouna Project, GeoCam's financial advisor estimated that our share of GeoCam equity to complete such debt financing for the Nkamouna Project would be approximately \$225 million, which reflects the amount of equity capital we would be required to contribute to GeoCam as a condition to conventional debt financing. We do not have sufficient capital resources available to meet that estimated equity requirement. Our ability to raise additional capital for this purpose would depend on a number of factors, which are partly or wholly outside of our control, including the state of worldwide financial, commodity and other markets, the market trading price of our common stock and demand for future access to the cobalt resources in the Nkamouna Project.

During 2012 we continued meetings with various large international businesses with respect to investment in the Nkamouna Project or the potential purchase of future off-take from the Project. The Company and the other GeoCam shareholders discussed possible strategic investment arrangements with several companies. Since the latter part of 2012 these discussions focused on JXTC. These discussions are continuing and we hope will lead to a transaction under which the strategic investor would acquire most or all of our interest in GeoCam or in the Nkamouna Project directly, and would assist GeoCam to raise the additional required funding to construct the Nkamouna Project with the investor gaining preferred access to future Nkamouna Project off-take. Any cash paid by the strategic investor for part or all of our interest could be available to satisfy our obligations under the notes and fund all or a portion of our remaining project equity requirements, if any, and for other corporate purposes. Under such an arrangement our interest in the Nkamouna Project could be eliminated. We may consider putting the Nkamouna Project on a care and maintenance status later in 2014 if we have been unable to finalize and close an acceptable strategic investment arrangement.

GeoCam's ongoing cash expenditures are presently expected to total approximately \$0.9 million for the first two quarters of 2014, for which Geovic is responsible to fund 60.5%. However, we may not be successful in completing such a sale on a timely basis, or in entering into sale or joint venture transactions involving our other exploration prospects on acceptable terms. Further, possible transactions to raise additional capital through the issuance of equity may not be available and would be dilutive to our stockholders. If we are unable to obtain additional capital, we will need to seek to further curtail our operations, to the extent possible, in order to preserve working capital, which could materially harm our business and our ability to achieve cash flow in the future, and we may need to cease operations. Unless we arrange additional financing, we expect to nearly exhaust our cash during March 2014.

As described in Part I, Item 3, Legal Proceedings, five judgments originally totaling approximately \$1.7 million against GeoCam are outstanding and are under appeal. Two separate attachments totaling \$0.3 million were allowed in two court proceedings and the funds in those amounts were restricted until resolution of the cases. In December 2013 attached funds related to one claim in the amount of approximately \$0.1 million were released to GeoCam. In January 2014 attached funds related to two more of the remaining claims in the amount of approximately \$0.09 million were released to GeoCam. The court has thus far denied GeoCam's

Table of Contents

request to lift the restriction on the two remaining claimants of approximately \$0.14 million at December 31, 2013). Should the judgments be upheld in full or in part upon exhaustion of final appeals, GeoCam would be required to satisfy the judgments. Funding the Geovic share would adversely affect our remaining capital resources.

GeoCam's operating expenses are paid through capital increases approved by the shareholders of GeoCam and funded in accordance with the respective ownership interests prior to the capital increase. We will be obligated to fund 60.5% of future GeoCam capital increases while we remain a 60.5% shareholder. GeoCam completed a capital increase in October 2012 of which our share was approximately \$0.4 million. An additional capital increase totaling approximately \$1.2 million was approved by GeoCam shareholders in January 2013, and an initial cash call totaling approximately \$0.4 million to fund an initial portion of the capital increase was completed in February, 2013. Our share of the total capital increase was approximately \$0.7 million, and our share of the initial cash call was approximately \$0.24 million. On April 17, 2013 the second cash call totaling approximately \$0.4 million, of which Geovic paid approximately \$0.24 million, was completed. On July 31, 2013 the third cash call totaling approximately \$0.4 million, of which Geovic paid approximately \$0.2 million, was completed and there are no remaining authorized calls to be made.

We expect our general and administrative expenses for the first two quarters of 2014 to total approximately \$1.8 million, including administrative expenses related to other resource entity exploration activities but not including any transaction costs related to a strategic partner transaction related to the Nkamouna Project as well as impairment, or other non-cash items, interest expense related to the short term debt balance at December 31, 2013 of \$0.6 million and that during the first two quarters of 2014 expenditures for exploration of mineral properties, or investment in other resource entities, in the United States and elsewhere will total approximately \$0.1 million. We expect that our cash balances will be nearly exhausted during March 2014. Based on our current planned 2014 expenditures we will require additional financing or completion of a strategic transaction to continue our operations. We continue to implement cash conservation measures for the Company and GeoCam. If we complete a strategic partner transaction involving the Nkamouna Project or any of our other exploration prospects, this estimate would be adjusted appropriately.

We have budgeted a lower level of general and administrative and other expenditures for 2014 to reflect our limited cash. We have implemented a number of cash conservation strategies for the Company and GeoCam that we have described in earlier reports that we have filed. These efforts were implemented to reduce financial commitments and overheads and preserve our cash.

The Company and its subsidiaries do not have any material debt or other similar obligations or commitments apart from the short-term debt under the Notes, the deferred accrued payroll and related incentives, other deferred payments and any additional amounts that may become due under pending litigation in Cameroon. We believe there is substantial doubt whether our present capital resources will be sufficient to satisfy the Company's existing capital and liquidity requirements described above, not including any equity requirements in connection with any Nkamouna Project financing by GeoCam or satisfaction of any judgments that may be upheld in final appeals of the pending litigation. We have no standby financing arrangements currently in place. If we are unable to obtain additional capital, we will need to seek to further curtail our operations, to the extent possible, in order to preserve funds, which could materially harm our business and our ability to achieve cash flow in the future, and we may need to cease operations. Unless we arrange additional financing, we expect to nearly exhaust our cash during March 2014.

Off-Balance Sheet Arrangements

We have no off balance sheet arrangements that are reasonably likely to have a current or future effect on our financial condition, revenues, results of operations, liquidity or capital expenditures.

Results of Operations

2013 compared to 2012

The Company had no revenue from operations and incurred losses from operations during 2013 and 2012, and has had no revenue from operations since inception. Until and unless we sell some or all of our interest in the Nkamouna Project, we expect to reduce our operating and other expenditures.

We had a net loss attributed to Geovic stockholders of \$7.2 million for the year ended December 31, 2013, a decrease of \$3.6 million from the net loss of \$10.8 million in 2012.

For 2013, our exploration costs decreased by \$2.4 million to \$2.4 million compared to \$4.8 million for the prior year, of which approximately \$0.9 million represents a decrease in exploration costs in Cameroon and \$1.5 million represents a decrease in exploration expense in other Company projects mainly in New Caledonia, New Mexico and Arizona. Cameroon expenses decreased approximately \$0.9 million from 2012 to 2013 primarily due to the indefinite suspension of financial advising agreements, no expenditures related to the feasibility study and technical consultants in 2013, lower labor costs and reductions due to scaling back activities. The other project expenses decreased mainly due to scaling back activities. The decreases are net of provisions for deposits of \$65 in Cameroon and \$170 in New Caledonia.

Table of Contents

General and Administrative expenses decreased by \$2.0 million to \$4.8 million compared to \$6.8 million in 2012. The decrease is largely due to a severance provision in the first quarter of 2012, lower salaries in 2013, termination of our prior executive office lease in 2012, lower legal costs and ongoing cost reductions. The decreases are offset by the salary deferral incentives of approximately \$0.5 million. The Company continues to reduce general and administrative expenses.

Interest and bank charges have increased by \$0.1 million due to interest accrued on the short term debt.

During 2013 the Company recorded approximately \$0.3 million of impairment on property, plant and equipment which is a non-cash charge that increased the loss in the year.

Loss on asset disposal decreased \$0.2 million in 2013 compared to 2012 primarily related to the write off of two vehicles by GeoCam due to their misappropriation by the former General Manager. Insurance proceeds of \$124 related to the vehicles were received in late 2013 and are recorded in other income.

Offsetting the decrease in expenditures other income decreased by \$0.6 million due to the net of lower equipment rental income in Cameroon and the insurance proceeds of \$0.1 million for vehicles misappropriated in 2012.

As an exploration stage company, we have charged our exploration and pre-construction expenses incurred for exploration projects to operations in the periods incurred and no such expenditures have been capitalized.

2012 compared to 2011

The Company had no revenue from operations and incurred losses from operations during 2012 and 2011, and has had no revenue from operations since inception. Until and unless we sell some or all of our interest in the Nkamouna Project or project financing for the Project is secured and construction commences, we expect to reduce our operating and other expenditures from those in 2012.

We had a net loss attributed to Geovic stockholders of \$10.8 million for the year ended December 31, 2012, a decrease of \$4.0 million from the net loss of \$14.8 million in 2011. The decrease in the loss in 2012 was mainly due to lower expenses for the Feasibility Study and related activities in Cameroon that were incurred in 2011 and due to an overall reduction of expenditures.

For 2012, our exploration costs decreased by \$6.1 million (56%) to \$4.8 million compared to \$10.9 million for the prior year. The decrease was mainly a result of significantly lower costs in Cameroon (\$6.0 million) which related to finalizing the feasibility study in early 2011, the indefinite suspension of financial advising agreements in early 2012 and reductions due to scaling back activities. The decrease was partially offset by an increase in exploration costs for New Caledonia and Arizona.

General and Administrative expenses decreased by \$0.4 million to \$6.8 million compared to \$7.2 million in 2011. The Company has continued to reduce general and administrative expenses. The decrease is largely due the general reductions and the indefinite suspension of corporate financial advising. However, there were increases resulting from severance paid for an executive termination, termination of an office lease and accrual for pending litigation in Cameroon.

Stock compensation expense decreased approximately \$0.6 million to \$0.1 million compared to \$0.7 million in 2011. Stock compensation expense was lower in 2012 due to no stock options or restricted shares being granted during 2012 as they had been in 2011. There was no change in fair value of warrants in 2012 compared to a gain of \$0.1 million in

2011. The fair value of the warrants became \$0 in 2011. All outstanding warrants expired in March and April 2012.

Loss on asset disposal increased \$0.2 million in 2012 compared to 2011 primarily related to the write off of two vehicles by GeoCam. The contract term of the former General Manager of GeoCam was not renewed or extended beyond its September 5, 2012 expiration date, and the two vehicles were in his possession on that date. GeoCam has had no contact with the former General Manager since that date, and the vehicles have not been recovered. GeoCam reported the vehicles as stolen to police authorities in Cameroon and filed insurance claims which were subsequently received in 2013.

Other Income was \$0.8 million in 2012 as compared to \$0.9 million in 2011. GeoCam rented idle equipment to a third party for \$0.8 million in 2012 (2011 \$0.5 million) and in 2011 we wrote-off a liability of \$0.4 million related to a repayment obligation that would have been due to the U.S. Trade and Development Agency for a 2001 grant used for an early mining feasibility study. When the 10-year measurement and reporting period under the grant expired, Geovic was relieved of its repayment obligation.

The net loss attributed to the non-controlling interest decreased by \$2.7 million to \$1.2 million compared to \$3.9 million for the prior year due to smaller loss incurred by GeoCam as a result of the decreased expenditures in Cameroon.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE.

The Company replaced Ernst & Young LLP as their independent registered public accounting firm with Haynie & Company, Certified Public Accountants as its new independent registered public accounting firm. As described below, the change in independent public accounting firms is not the result of any disagreement with Ernst & Young LLP.

On January 21, 2014, the Company dismissed its independent registered public accounting firm, Ernst & Young LLP. The Audit Committee of the Company's Board of Directors (the Audit Committee) made the decision to dismiss Ernst & Young LLP and engage Haynie & Company, Certified Public Accountants as the independent registered public accounting firm for the fiscal year ending December 31, 2013, as described below.

The reports of Ernst & Young LLP on the Company's financial statements for the past two years did not contain an adverse opinion or a disclaimer of an opinion and were not qualified or modified as to uncertainty, audit scope or accounting principles, except that the report of Ernst & Young LLP on the Company's financial statements for the fiscal year ended December 31, 2012 indicated that there was a substantial doubt about the Company's ability to continue as a going concern, noting that Company has not established an ongoing source of revenues sufficient to cover the Company's operating costs, and that the financial statements did not include any adjustments that might result from the outcome of this uncertainty.

During the Company's two most recent fiscal years and any subsequent interim period preceding Ernst & Young LLP's dismissal, there were no disagreements with Ernst & Young LLP on any matter of accounting principles or practices, financial statement disclosure, or auditing scope or procedure, which, if not resolved to the satisfaction of Ernst & Young LLP would have caused it to make reference to the subject matter of the disagreements in connection with its report. During the Company's two most recent fiscal years and any subsequent interim period preceding Ernst & Young LLP's dismissal, there were no reportable events as defined in Item 304 (a)(1)(v) of Regulation S-K.

On January 21, 2014 the Audit Committee engaged Haynie & Company as the Company's independent registered public accounting firm for the fiscal year ending December 31, 2013. The Company has not consulted with Haynie & Company during its two most recent fiscal years or during any subsequent interim period prior to its appointment as the Company's auditor with respect to the application of accounting principles to a specified transaction, either completed or proposed, or the type of audit opinion that might be rendered on Company's consolidated financial statements, or any other matters or reportable events as defined in Items 304(a)(2)(i) and (ii) of Regulation S-K

The Company provided Ernst & Young LLP a copy of foregoing disclosure. Ernst & Young LLP furnished a letter addressed to the Securities and Exchange Commission stating that Ernst & Young LLP agreed with such statements except that the change was approved by our Audit Committee, that we engaged Haynie & Company or that we had not consulted with Haynie & Company during the two most recent fiscal years or during any subsequent interim period prior to its appointment as the Company's auditor with respect to the application of accounting principles to a specified transaction, either completed or proposed, or the type of audit opinion that might be rendered on the Company's consolidated financial statements, or any other matters or reportable events as defined in Items 304(a)(2)(i) and (ii) of Regulation S-K. A copy of the letter of Ernst & Young LLP is included as Exhibit 16.1 to this report.

ITEM 9A. CONTROLS AND PROCEDURES
Evaluation of Disclosure Controls and Procedures

The Company maintains disclosure controls and procedures (as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934, as amended (the Exchange Act)), that are designed to ensure that information required to be disclosed in the reports that we file or submit under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in Securities and Exchange Commission rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

Our management is responsible for establishing and maintaining our disclosure controls and procedures. Our Chief Executive Officer and Chief Financial Officer participated with our management in evaluating the effectiveness of our disclosure controls and procedures as of December 31, 2013.

Based on our management's evaluation (with the participation of our Chief Executive Officer and Chief Financial Officer), our Chief Executive Officer and Chief Financial Officer have concluded that, as of December 31, 2013 our disclosure controls and procedures were effective to provide reasonable assurance that the information required to be disclosed by us in the reports we file or submit under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in the SEC's rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

Table of Contents

Management's Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f) and 15d-15(f), to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of financial statements for external purposes in accordance with US GAAP. Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the design and operational effectiveness of our internal control over financial reporting as of December 31, 2013 based on the framework in Internal Control Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

Our management, including our Chief Executive Officer and Chief Financial Officer, does not expect that our disclosure controls or our internal control over financial reporting will prevent or detect all errors or all fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Further, because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that misstatements due to error or fraud will not occur or that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Projections of any evaluation of controls effectiveness to future periods are subject to risks. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures.

A material weakness is a control deficiency, or combination of control deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of the annual or interim financial statements will not be prevented or detected on a timely basis. Management's assessment identified no material weaknesses in our internal control over financial reporting as of December 31, 2013.

Therefore, our management concluded that, as of December 31, 2013, our internal control over financial reporting was effective.

Table of Contents

Changes in Internal Control over Financial Reporting

Management has evaluated, with the participation of the Chief Executive Officer and Chief Financial Officer, whether any changes in our internal control over financial reporting that occurred during our last fiscal quarter have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting. Based on the evaluation, management has concluded that no changes in our internal control over financial reporting have materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

ITEM 9B. OTHER INFORMATION

We have no information to report pursuant to Item 9B.

Table of Contents**PART III****ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE****Directors**

The following table contains the name, age (as of March 26, 2014), position(s) at the Company, municipality of residence, present principal occupation, principal occupations and directorships for at least the last five years and period of service as a director of the Company for each member of the Board of Directors of the Company (the Board of Directors or the Board):

Name,	Principal Occupations	
Age and Position	During the Past Five Years	Director Since
William A. Buckovic Age: 64 Executive Vice President, Director Grand Junction, Colorado	Mr. Buckovic is the Founder of Geovic, Ltd., the Company's principal operating subsidiary, and was President of Geovic, Ltd. from 1994 through March 2009. He became President and a director of the Company upon completion of the reverse take-over transaction (the RTO) completed in December 2006, and Executive Vice President of the Company and Geovic Ltd. in 2009. Mr. Buckovic has been active for over 40 years in the mineral exploration and development business, and has been involved in the discovery of several major mineral deposits. Mr. Buckovic's wide ranging experience in the energy minerals, precious metals, advanced metals and ferro-alloy metals businesses and his work on projects in North America, Africa, South America, Australia, Europe and Asia, has provided him with a wealth of mineral exploration and development knowledge. In addition, Mr. Buckovic's long tenure with the Company has provided him with knowledge of all aspects of the Company's business and its history, which uniquely positions him to be a valued member of the Board of Directors.	December 1, 2006

<p>Teresa A. Dooling ⁽¹⁾ Age: 57 Director Portland, Oregon</p>	<p>Ms. Dooling has been Compliance Officer for Billing, Benefits and HIPPA since 1998 and from 1993 to 1997 was Chief Financial Officer and Controller for the Oregon Anesthesiology Group, P.C., one of the largest single specialty physician practices in the U.S. providing anesthesia and pain management services in 16 hospitals and many ambulatory surgery centers throughout Oregon. She is a Certified Public Accountant, and received an M.B.A. from the University of Alaska, Anchorage, and a Bachelor of Arts from Creighton University. Ms. Dooling s 21 years of experience working in the finance, accounting and corporate governance areas qualifies her as a valued member of the Board of Directors.</p>	<p>September 17, 2013</p>
<p>Michael T. Mason Age: 69 Chairman of the Board, Chief Executive Officer, Garden City, New York</p>	<p>Mr. Mason assumed the role of Chief Executive Officer of the Company in January 2011 and Chairman of the Board in February 2012. Mr. Mason has been Managing Partner of Mineral Services, LLC (MSL), a consulting firm, from 1996 to present. He was President and Director of MBMI Resources from 2002 to July 2011 but remains a shareholder. He has more than 35 years of experience in the marketing of precious and base metals and other commodities and is a specialist in risk management, off-take agreements and international trading, providing unique experience to the Board of Directors on significant aspects of the mining industry. Mr. Mason was Director for Euromax Ltd. from May 2003 to September 2010. He served as Director of ECU Silver Mining Inc. from April 2001 until its merger with Golden Minerals, Inc. in September 2011, and has been a Director of Golden Minerals since the merger.</p>	<p>December 1, 2006</p>

Table of Contents

Name,	Principal Occupations	
Age and Position	During the Past Five Years	Director Since
Paul D. Rose ⁽¹⁾ Age: 55 Director Beaverton, Oregon	Mr. Rose has been an Anesthesia Staff Physician with Legacy Emanuel Hospital in Portland, Oregon since 1990. He is a founding member and a former director of Oregon Anesthesiology Group (OAG) and serves as Chairman of OAG 's Pension Committee. Mr. Rose, an early investor in Geovic, Ltd., the Company 's predecessor prior to the RTO and has a strong understanding of the Company and its history and brings a valuable and diverse set of skills to the Board of Directors.	June 11, 2010
Christopher A. Serin ⁽¹⁾ Age: 63 Director North Vancouver, British Columbia	Mr. Serin has more than 35 years international financial and corporate management experience mainly in natural resource projects around the world. He has been the President and major shareholder of Macspence Enterprises (1994) Inc., a private management and financial consulting firm, since 1994. From December 2010 to February 2014, he was the Chief Financial Officer of Oil Optimization Inc. an oil exploration company focused on Thailand. From 2002 to 2010 he was a director of EurOmax Resources Ltd., a mineral exploration company focused in southeastern Europe, and during this period held a number of executive positions with the company. Previously he was Chief Financial Officer of Royal Oak Mines Ltd. During his career Mr. Serin has been a director of a number of junior mining exploration companies. He is a Professional Engineer. He was awarded an M.B.A. and Bachelor of Science in Mining Engineering by Queen 's University in Kingston. Mr. Serin 's demonstrated management expertise at senior levels and his service on numerous boards of directors in the mining industry position	September 22, 2013

him well to provide the Board of Directors with extensive insight on the roles of management and directors.

- (1) Each of Messrs. Rose and Serin and Ms. Dooling are current members of the Audit Committee, the Human Resources and Compensation Committee and the Nominating and Corporate Governance Committee.

Executive Officers

For information with respect to the executive officers of the Company, see the item captioned "Executive Officers" in Part I.

Family Relationships

There is no family relationship among any directors or executive officers of the Company.

Section 16(a) Beneficial Ownership Reporting Compliance

To the knowledge of the Company's directors and executive officers, no person who was at any time during the last fiscal year an officer, director or holder of more than ten percent of the Company's common stock failed to file on a timely basis, reports required by Section 16(a) of the Exchange Act to be filed during the most recent fiscal year or prior fiscal years.

Corporate Governance Guidelines and Business Ethics Code

The Board is committed to maintaining high standards of corporate governance and accordingly reviews its corporate governance practices from time to time to assess the effectiveness and appropriateness of such practices. The Board has adopted a Statement on Corporate Governance setting forth guidelines and standards with respect to the role and composition of the Board, the functioning of the Board and its committees, succession planning and management development, the Board's and its committees' access to independent advisers and other matters.

The Board encourages and provides a culture of ethical business conduct within the Company and has adopted a Code of Business Conduct and Ethics (the "Ethics Code"), which applies to all directors, officers, employees and agents of the Company and its wholly-owned subsidiaries. Compliance with the Ethics Code is based on the cooperation and vigilance of all persons subject to the Ethics Code. Each employee is provided with a copy of the Ethics Code and is required to certify in writing that they have read, understood and agree to comply with the Ethics Code. Primary responsibility for monitoring compliance with the Ethics Code rests with the Audit Committee, the Chief Financial Officer and the General Counsel.

Directors who (i) are parties to, (ii) are directors or officers of a party to or (iii) have a material interest in any person who is a party to a material contract or proposed material contract with the Company must disclose the conflict in writing to the Company or request to have the nature and extent of such interest entered into the minutes of the meeting. The director shall, if requested by any other director, not be present at a meeting of the Board while the Board is considering any such material contract and shall not vote on such material contract, unless permitted by law.

Table of Contents

Stockholders and other interested persons may obtain a written copy of the Statement on Corporate Governance and the Ethics Code by contacting the Company, from the Company's website www.geovic.net and on SEDAR at www.sedar.com.

Audit Committee

The Company has a separately-designated standing audit committee established in accordance with section 3(a)(58)(A) of the Exchange Act (the Audit Committee), comprised of Ms. Teresa Dooling as Chair and Messrs. Paul Rose and Christopher Serin. Each of the three Directors serving on the Audit Committee qualify as independent under rules promulgated by the SEC, NASDAQ listing standards and the applicable rules of the TSX. Additionally, the Board has determined that both Ms. Dooling and Mr. Serin qualify as an Audit Committee Financial Expert as defined in accordance with Section 407 of the Sarbanes-Oxley Act of 2002 and Item 407(d)(5) of Regulation S-K.

Table of Contents**ITEM 11. EXECUTIVE COMPENSATION****Summary Compensation Table**

The following table sets forth the compensation paid during the fiscal years indicated to the individuals who served as Chief Executive Officer and Chief Financial Officer of the Company during the last completed fiscal year; each of the Company's two most highly compensated executive officers, other than the Chief Executive Officer and Chief Financial Officer, who were serving as executive officers at the end of the most recently completed fiscal year and whose salary and bonus exceeded \$100,000; and up to two individuals who would have satisfied this criteria but for the fact that individual was not serving as an executive officer at December 31, 2013 (collectively, the "Named Executive Officers"):

Name and Principal Position	Year	Salary (\$)	Bonus (\$)	Options awards (\$) (non-cash)⁽¹⁾	All other compensation (\$)	Total (\$)
Michael T. Mason Chairman of the Board and Chief Executive Officer	2013	194,792 ⁽²⁾				194,792
	2012	275,000				275,000
	2011	260,215		204,382 ⁽³⁾	69,132	533,729
Greg C. Hill Chief Financial Officer	2013	144,375 ⁽⁴⁾				144,375 ⁽⁴⁾
	2012	210,000				210,000
	2011	210,000		51,020	36,790	297,810
William A. Buckovic Executive Vice President and Director	2013	134,266 ⁽⁵⁾				134,266 ⁽⁵⁾
	2012	207,360 ⁽⁶⁾				207,360 ⁽⁶⁾
	2011	207,360 ⁽⁷⁾		40,816	12,493	260,669 ⁽⁷⁾
Timothy D. Arnold ⁽⁸⁾ Chief Operating Officer	2013	187,339	16,304			203,643
	2012	230,000				230,000
	2011	217,365				217,365
Gary R. Morris Senior Vice President	2013	179,579				179,579
	2012	186,000				186,000
	2011	186,000 ⁽⁹⁾				186,000 ⁽⁹⁾
Alan W. Peryam ⁽¹⁰⁾ Senior Vice President and General Counsel	2013	180,000				180,000
	2012	180,000				180,000
	2011	180,000				180,000

(1) The grant date fair value of such options, restricted stock units and restricted stock awards was computed in accordance with the authoritative guidance for accounting for stock compensation. See Note 6 to the Consolidated Financial Statements for the fiscal year ended December 31, 2012 included in the Original Filing for assumptions made in reaching these valuations.

(2) This amount does not include \$80,208 voluntary salary deferral under the terms of the voluntary deferral.

(3) These are performance-based stock options that expired January 20, 2012 without vesting.

(4) This amount does not include \$65,625 voluntary salary deferral under the terms of the voluntary deferral.

(5) This amount does not include \$73,094 voluntary salary deferral under the terms of the voluntary deferral.

(6)

This amount does not include fair market value of restricted stock awarded in January 2011 (39,000 shares), determined in accordance with FASB ASC Topic 718.

- (7) This amount does not include (i) \$180,000 in proceeds from the exercise of stock options, or (ii) \$89,888 in aggregate grant date fair market value of restricted stock awarded in January 2011 (78,000 shares), determined in accordance with FASB ASC Topic 718.
- (8) Mr. Arnold's employment with the Company terminated effective October 24, 2013.
- (9) This amount does not include \$33,000 in proceeds from the exercise of stock options.
- (10) Mr. Peryam resigned from his employment with the Company effective February 20, 2014.

The Company has entered into agreements with certain employees to defer a portion of their salaries pending the closing of a strategic partner transaction or other events described below. The total deferred salaries and related employee benefits were equal to \$263,282 as at December 31, 2013. The agreements further provide for an additional incentive of 100% - 200% of the deferral and related employee benefits, and as at December 31, 2013 the total deferral incentives and related employee benefits were \$480,939. The total of deferred salaries and deferral incentives and related employee benefits of \$744,221 is included in Accrued payroll and related on the Company's consolidated balance sheets, however such amounts will not be paid or impact the cash position until the earlier of: a) receipt of proceeds from JXTC or from any other entity from the sale of our interest

Table of Contents

in the Cameroon project, b) consummation of the acquisition of the Company by another company, c) receipt of proceeds from a significant financing in an amount expected to be sufficient to cover the Company's cash requirement for at least six months, or d) March 14, 2014.

As of March 14, 2014 none of the foregoing events had occurred and the Company was not in a financial position to pay the salary deferrals and incentives. Accordingly in March 2014 the Company sought forbearance agreements, which would extend the March 14, 2014 deadline to a future date, from the employees who had deferred a portion of their salaries and the employees agreed to consider entering into such agreements. These agreements have not yet been finalized.

The deferred salaries and incentive amounts, not including related employee benefits, for the Named Executive Officers presently employed by the Company are, Michael T. Mason (\$224,583), Greg C. Hill (\$183,750) and William A. Buckovic (\$204,768). Such amounts are not included in the Summary Compensation Table.

Outstanding Equity Awards at Fiscal Year-End

The following table sets forth the number of unexercised options held by each Named Executive Officer as at December 31, 2013.

Name	Number of Securities Underlying Vested Options (#)	Number of Securities Underlying Non-vested Options (#)	Option Exercise Price	Option Expiration Date
Michael T. Mason	20,000		\$ 0.56	12/31/2014
	50,000		Cdn\$ 2.36	10/26/2017
	100,000		Cdn\$ 1.68	01/02/2018
	100,000		Cdn\$ 0.65	02/02/2019
	100,000		Cdn\$ 0.90	01/10/2020
Greg C. Hill	400,000		Cdn\$ 2.36	10/26/2017
	200,000		Cdn\$ 1.68	01/03/2018
	60,000		Cdn\$ 0.65	02/03/2019
	100,000		Cdn\$ 0.90	01/10/2020
	125,000		Cdn\$ 0.70	01/21/2021
William A. Buckovic	429,200		\$ 0.05	11/23/2016
	376,000		\$ 0.15	12/31/2014
	100,000		\$ 0.38	12/31/2014
	62,000		\$ 1.08	08/15/2016

- (1) Mr. Arnold's employment with the Company terminated effective October 24, 2013. All options for Mr. Arnold were cancelled on January 24, 2014 since he did not exercise those options within the 90 day period following his effective termination date.
- (2) Mr. Peryam resigned from his employment with the Company effective February 20, 2014. All options for Mr. Peryam will expire within the 90 day period following his resignation date if not exercised.

Employment Agreements

The Company has a written employment agreement with Michael T. Mason, the Company's Chief Executive Officer. The initial term of Mr. Mason's agreement is for one year beginning April 23, 2012. The term renews annually on April 23 of each year subject to 60 days written notice of termination by either party. Under the terms of his employment agreement, Mr. Mason is entitled to (i) an annual salary at the rate of \$275,000 per year; (ii) an award of options to purchase up to 500,000 shares of the Company's common stock under the Company's Second Amended and Restated Stock Option Plan, exercisable within ten years of the grant of the options; (iii) a one-time cash incentive bonus equal to 150% of his base salary, payable if during the term of the agreement, including any extension thereof approved by the Board of Directors, any one of a number of extraordinary corporate transactions are approved by the Board of Directors, including a merger of the Company, a transaction or a series of transactions in which a controlling interest in the company's 60.5% subsidiary Geovic Cameroon, PLC is transferred by its shareholders to a third party, the Company transfers more than 50% ownership of its subsidiary Geovic Ltd. to a third party, or an agreement is reached to complete final financing arrangements including acceptable project debt financing for the Nkamouna Project in Cameroon; and (iv) a cash incentive bonus equal to 0.5% of transaction value for each of the following (A) the closing value received by the Company for any transaction for which the one-time cash incentive bonus described above would become payable and (B) the closing value received by the Company or any of its wholly owned subsidiaries related to the sale to a third party of equity (either new or existing shares) related to one or more of the Company's exploration projects (not including Cameroon).

Upon termination of Mr. Mason's employment agreement and his employment by the Company, the Company is required to pay to Mr. Mason certain compensation if such termination is (i) by the Company without cause or due to Mr. Mason's disability or (ii) by Mr. Mason due to the Company's breach of any material obligation owed to Mr. Mason under his employment agreement, due to the Company requiring Mr. Mason to perform illegal activities or due to the inability of Mr. Mason to substantially perform his essential duties under his employment agreement because of a disability. The compensation payable to Mr. Mason in a termination event described above would be a lump sum amount, due within 74 days of termination, equal to one year of Mr. Mason's minimum base salary plus any earned bonus approved by the Board of Directors accrued to the time of termination. In the event of termination by the Company due to a Mr. Mason's death, (A) Mr. Mason would become 100 percent vested with respect to any options to purchase the Company's capital stock then held by Mr. Mason and any restrictions with respect to restricted shares of the Company's capital stock then held by Mr. Mason would immediately lapse, subject to any applicable rules or restrictions imposed by any stock exchange or securities regulatory authority, and (B) Mr. Mason's estate would receive an amount equal to the amount received by the Company under the life insurance held by the Company on Mr. Mason's life.

The Company also has written employment agreements with each of its other Named Executive Officers presently employed by the Company. Each employment agreement provides for continued employment with rolling two year

expiration terms. Each employment agreement also provides for payment of certain compensation following termination of the Named Executive Officer's employment, if such termination is (i) by the Company without cause or due to the Named Executive Officer's death or disability or (ii) by the Named Executive Officer due to the Company's breach of any material obligation owed to the Named Executive Officer under his or her employment agreement, due to the Company requiring the Named Executive Officer to perform illegal activities, due to the inability of the Named Executive Officer to substantially perform his or her essential duties under his or her employment agreement because of a disability, or in the event of a change in control or any similar business circumstance with the Company or its subsidiaries which results within twelve months of such change in control in either (A) a termination or threatened termination of the Named Executive Officer's employment or a reduction in compensation to be paid to the Named Executive Officer or (B) a significant change in the duties of the Named Executive Officer reasonably deemed unacceptable by the Named Executive Officer. The term "change in control" as used in the employment agreements means (1) any one person (or group of affiliated persons) holds a sufficient number of voting shares of the Company (or a resulting issuer) to affect materially the control of the Company or (2) any combination of persons acting in concert hold in total a sufficient number of voting shares of the Company to affect materially the control of the Company, in each case where such person or combination of persons did not previously hold a sufficient number of voting shares of the Company to affect materially the control of the Company (with the holding of more than 20 percent of the voting shares of the Company being deemed to materially affect the control of the Company in the absence of evidence to the contrary).

Table of Contents

The compensation payable to a Named Executive Officer in a termination event described above (other than termination by the Company due to a Named Executive Officer's death or disability) would be a lump sum amount, due within 90 days of termination, equal to two years of the minimum base salary of the Named Executive Officer, commencing on the effective date of the termination, plus any annual bonus to which the Named Executive Officer would have been entitled had the employment agreement not been terminated. In the event of termination by the Company due to a Named Executive Officer's death, the Named Executive Officer's estate would receive an amount equal to the amount received by the Company under the life insurance held by the Company on such Named Executive Officer's life. In the event of termination by the Company due to a Named Executive Officer's disability, the Named Executive Officer would receive an amount equal to the amount received by the Company under the disability insurance held by the Company on such Named Executive Officer.

In addition, in connection with each of the termination events described above, the Named Executive Officer would become 100 percent vested with respect to any options to purchase the Company's capital stock then held by the Named Executive Officer and any restrictions with respect to restricted shares of the Company's capital stock then held by the Named Executive Officer would immediately lapse, subject to any applicable rules or restrictions imposed by any stock exchange or securities regulatory authority. The Company does not have any obligation under the employment agreements to pay or reimburse the Named Executive Officer for any income or other taxes imposed as result of the foregoing benefits.

Our Board believes that having these employment agreements in place is an important retention incentive for our Named Executive Officers.

On October 22, 2013, the Company entered into a severance and release agreement (the "Severance Agreement") with Timothy D. Arnold, the Company's former Chief Operating Officer whose employment with the Company terminated effective October 24, 2013 (the "Separation Date").

Under the Severance Agreement the Company is obligated to pay Mr. Arnold a lump sum severance payment equal to \$0.5 million, less applicable deductions and withholdings (the "Severance Amount"). The Company must pay the Severance Amount to Mr. Arnold on the first business day following six months after the Separation Date (the "Payment Date"), unless payment on that date would jeopardize the ability of the Company to continue as a going concern, in which case the Severance Amount is payable on the first date after the Payment Date where making such payment would not jeopardize the ability of the Company to continue as a going concern. Effective upon the actual payment of the Severance Amount, Mr. Arnold has agreed to release, subject to limited exceptions, the Company and its affiliates from any and all claims Mr. Arnold may have through the effective date of the Severance Agreement. The Severance Agreement replaces and supersedes the Executive Employment Agreement between the Company and Mr. Arnold, dated as of February 1, 2011.

Directors and Officer Liability Insurance

The Company has purchased and maintains insurance for the benefit of the directors and officers of the Company and its subsidiaries against liabilities incurred by such persons as directors and officers of the Company and its subsidiaries, except where the liability relates to such person's failure to act honestly and in good faith with a view to the best interests of the Company and its subsidiaries. The annual premium for the policy year ending November 30, 2014 for the Company and its subsidiaries for this insurance in respect of the directors and officers as a group is \$127,612. No premium for this insurance is paid by the individual directors and officers.

Compensation of Directors

The Company provides cash compensation to the non-employee directors for their services as directors and as members of committees of the Board. The Company has reimbursed and will continue to reimburse its non-employee directors for their travel, lodging and other reasonable expenses incurred in attending Board and committee meetings, and for other Company business meetings.

The Board has adopted a compensation program for the non-employee directors of the Company. Under that arrangement, all non-employee directors are paid an annual retainer of \$25,000; the Board Chair, if independent, receives an additional \$25,000; the Chair of the Audit Committee \$15,000; and the Chair of each other Committee \$5,000, all paid quarterly in advance. In addition, each director receives \$1,500 for each Board or committee meeting attended in person (and receives an additional \$1,500 if required to travel to a Board meeting on one or more days other than the meeting date) or any other meeting lasting longer than two hours, \$500 for telephone meetings lasting two hours or less, and the Board Chair, if independent, also receives \$1,000 per day for other business undertaken on behalf of the Company. Since mid 2013 the payment of director fees has been deferred pending the closing of a strategic transaction.

Table of Contents

In addition, prior to September 2013 non-employee directors received initial non-discretionary grants of non-qualified stock options under the Company's Second Amended and Restated Stock Option Plan (Plan). Upon appointment or election, a new director may be granted 200,000 options upon taking office, or as soon thereafter as the grant may be completed. In all years through 2010, annual grants of 100,000 options were made to directors before January 10 each year, or as soon thereafter as permitted under the Plan, vesting 40 percent upon the date of grant, 30 percent after one year and 30 percent after two years, dependent upon continued service as a director of the Company, with option terms of ten years from the date of grant. In 2011 awards of 40,000 restricted shares of the Company's common stock (Restricted Stock Awards) or awards of 40,000 Restricted Stock Units (RSUs) were made to each independent director (60,000 RSUs for the Chairman). The Restricted Stock Awards vest 40% upon date of grant and 30% annually for the next two years, while the RSUs entitle the holder to receive the underlying shares of the Company's common stock at the later of a termination of services at least one year after the date of the award or three years after the award. No stock awards were made during 2013 and 2012.

Director Compensation Table

The following table shows compensation paid or payable to the non-employee directors of the Company during the fiscal year ended December 31, 2013.

Name	Fees earned or paid in cash	Option awards (non-cash)⁽¹⁾	All other compensation	Total
Teresa A. Dooling	\$ 12,522			\$ 12,522
Robert J. MacDonald	\$ 23,000			\$ 23,000
Paul D. Rose	\$ 42,929			\$ 42,929
Gregg J. Sedun	\$ 14,000			\$ 14,000
Christopher A. Serin	\$ 7,361			\$ 7,361

⁽¹⁾ As of the end of the fiscal year ended December 31, 2013, the aggregate number of options outstanding for each non-employee director was as follows:

Name	Options
Teresa A. Dooling	
Robert J. MacDonald (former)	500,000
Paul Rose	200,000
Gregg J. Sedun (former)	350,000
Christopher A. Serin	

Table of Contents**ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS****Security Ownership of Certain Beneficial Owners and Management**

The following table sets forth certain information regarding beneficial ownership of the Company's shares of common stock, par value \$0.0001 per share (the Shares), as of March 20, 2014 (the Reference Date), by (i) each of our directors and executive officers, (ii) each person who holds, of record, more than 5% of our Shares with such person's address, and (iii) our executive officers and directors, as a group. Beneficial ownership is based on the number of Shares and percentage of issued Shares beneficially owned, directly or indirectly, or that are subject to control or direction by that person. For purposes of the table, and in accordance with Rule 13d-3(d)(1) under the Exchange Act, the applicable percentage of ownership for each listed person is based on 106,719,602 outstanding Shares as at the Reference Date, plus any securities held by such person exercisable for, or convertible into, the Company's common stock within 60 days of the Reference Date.

Name and Address of Beneficial Owner⁽¹⁾	Amount and Nature of Beneficial Ownership	Percentage of Outstanding Common Stock
Paul D. Rose 14465 NW Belle Place Beaverton, OR 97006	9,609,403 ⁽²⁾	8.99%
William A. Buckovic 743 Horizon Ct. 300A Grand Junction, CO 81506	11,246,982 ⁽³⁾	10.37%
Michael T. Mason	570,000 ⁽⁴⁾	0.53%
Greg C. Hill	885,000 ⁽⁵⁾	0.82%
Gary R. Morris	1,079,232 ⁽⁶⁾	1.00%
Alan W. Peryam	290,000 ⁽⁷⁾	0.27%
Shelia I. Short	415,536 ⁽⁸⁾	0.39%
Teresa A. Dooling	9,562 ⁽⁹⁾	0.01%
Christopher A. Serin	50,000 ⁽¹⁰⁾	0.05%
All Executive Officers and Directors as a Group (9 Persons)	24,155,715	22.43%

(1) Unless otherwise indicated, the address of each such person is c/o Geovic Mining Corp., 5500 E. Yale Avenue, Suite 980, Denver, Colorado 80222.

(2) Includes 8,415,411 Shares held by Paul D. Rose over which Mr. Rose has sole dispositive and voting options exercisable within 60 days of the Reference Date to purchase up to 200,000 Shares, 654,072 Shares held by Mr. Rose's wife, Jean L. Rose, over which Ms. Rose has sole dispositive and voting power and 339,920 Shares over which Mr. and Ms. Rose share dispositive and voting power.

(3) Includes 9,004,540 Shares held by William A. Buckovic, jointly with his wife, 39,000 Shares held individually, options exercisable within 60 days of the Reference Date to purchase up to 1,726,360 Shares, which includes 63,160 options held by his wife, and 477,082 Shares held by his wife as trustee for the

- benefit of minor children, of which he disclaims beneficial ownership.
- (4) Includes 200,000 Shares held by Michael T. Mason and options exercisable within 60 days of the Reference Date to purchase up to 370,000 Shares.
 - (5) Includes options exercisable within 60 days of the Reference Date, held by Greg C. Hill, to purchase up to 885,000 Shares.
 - (6) Includes 308,832 Shares held by Gary R. Morris and options exercisable within 60 days of the Reference Date to purchase up to 770,400 Shares.
 - (7) Includes options exercisable within 60 days of the Reference Date, held by Alan W. Peryam to purchase up to 290,000 Shares. Mr. Peryam resigned from his employment with the Company effective February 20, 2014. Unless the options are exercised they expire 90 days from his registration.
 - (8) Includes 153,536 Shares held by Shelia I. Short and options exercisable within 60 days of the Reference Date to purchase up to 262,000 Shares.
 - (9) Includes 9,562 Shares held by Teresa A. Dooling.
 - (10) Includes 50,000 Shares held by Christopher A. Serin.

Table of Contents

We are not aware of any arrangements that may result in a change in control as that term is defined by the Item 403 of Regulation S-K.

Securities Reserved for Issuance under Equity Compensation Plans

The following table sets forth information as at December 31, 2013 relating to the Company's Second Amended and Restated Stock Option Plan and 2010 Stock Award Plan, our only equity compensation plans under which our securities are authorized for issuance at December 31, 2013:

Plan Category	Number of securities to be issued upon exercise/conversion of outstanding options, warrants and rights	Weighted-average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected herein)
Equity compensation plans approved by security holders	10,081,199	\$ 0.91 per Share	8,618,801
Equity compensation plans not approved by security holders			
Total	10,081,199	\$ 0.91 per Share	8,618,801

The Company has never repriced any stock options previously granted.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS AND DIRECTOR INDEPENDENCE**Transactions with Related Persons**

During 2013 the Company entered into note purchase agreements (each a Note Purchase Agreement and collectively the Note Purchase Agreements) with a number of related persons (each a Purchaser). Pursuant to the Note Purchase Agreements, the Company agreed to issue promissory notes (each a Note and collectively the Notes) to the Purchasers in the aggregate principal amount of \$605,000 (as detailed below) in consideration of the payment by each Purchaser of a purchase price equal to the principal amount of such Purchaser's respective Note. The Company issued the Notes prior to or as of December 31, 2013. Each Note matures one year from the date of issuance, at which time the outstanding principal amount of each Note and all accrued and unpaid interest thereon is due and payable by the Company. Interest accrues on the outstanding principal balance of each Note at the rate of 200% per annum. The Company may prepay each Note, in whole or in part and without penalty, at any time upon 30 calendar days' prior written notice. The Company is required to prepay each Note, in whole and without penalty, within five business days following the consummation of any acquisition by JXTC or by any other entity of the Company's 60.5% interest in GeoCam or the consummation of the acquisition of the Company by another company. The Notes contain events of default and other terms and conditions.

The following table summarizes the principal amounts of all Notes issued and outstanding as of December 31, 2013 and identifies the parties to which the Notes have been issued:

(In Thousands)	Total	September 2013	October 2013	November 2013	December 2013
Richard G. Buckovic	\$ 100	\$ 50	\$ 50	\$	\$
Norman C. Rose	30	30			
M N Rose Shelter Credit Trust	40	40			
Paul D. Rose	60		60		
Dragon s Fire Investments LLC	225			125	100
Thorne Bush Investments LLC	150				150
Total Short-Term Debt	\$ 605	\$ 120	\$ 110	\$ 125	\$ 250

The following purchases are considered related persons required to be disclosed, namely Paul D. Rose, a Director of the Company (\$60,000), Dragon s Fire Investments LLC, an entity owned by Paul D. Rose (\$225,000), Norman C. Rose, the father of Paul D. Rose (\$30,000) and Thorne Bush Investments LLC, owned by Norman C. Rose (\$150,000). Further, Richard G. Buckovic (\$100,000) is the uncle of William A. Buckovic, Executive Vice President and Director and the M.N. Rose Shelter Credit Trust (\$40,000) is a trust organized by Norman C. Rose, the father of Paul D. Rose. As of March 20, 2014 the aggregate principal amount outstanding under the Notes was \$930,000 (including 2014 amounts) and no principal or interest has been paid under any Note.

The Company has entered into agreements with certain employees to defer a portion of their salaries pending the closing of a strategic partner transaction or other events described below. The total deferred salaries and related employee benefits were equal to \$263,282 as at December 31, 2013. The agreements further provide for an additional incentive of 100%-200% of the deferral and related employee benefits, and as at December 31, 2013 the total deferral

Table of Contents

incentives and related employee benefits were \$480,939. The total of deferred salaries and deferral incentives and related employee benefits of \$744,221 is included in Accrued payroll and related on the Company's consolidated balance sheets, however such amounts will not be paid or impact the cash position until the earlier of: a) receipt of proceeds from JXTC or from any other entity from the sale of our interest in the Cameroon project, b) consummation of the acquisition of the Company by another company, c) receipt of proceeds from a significant financing in an amount expected to be sufficient to cover the Company's cash requirement for at least six months, or d) March 14, 2014.

As of March 14, 2014 none of the foregoing events had occurred and the Company was not in a financial position to pay the salary deferrals and incentives. Accordingly in March 2014 the Company sought forbearance agreements, which would extend the March 14, 2014 deadline to a future date, from the employees who had deferred a portion of their salaries and the employees agreed to consider entering into such agreements. These agreements have not yet been finalized.

The deferred salaries and incentive amounts, not including related employee benefits, for the Named Executive Officers presently employed are, Michael T. Mason (\$224,583), Greg C. Hill (\$183,750) and William A. Buckovic (\$204,768). Such amounts are not included in the Summary Compensation Table.

During 2013 the Company also deferred Director fees pending the closing of a strategic partner transaction and/or a significant financing. As at December 31, 2013 the deferred fees were \$72,062. The deferred Directors fees are Teresa A. Dooling (\$12,522), Robert J. MacDonald (\$11,500), Paul D. Rose (\$33,429), Gregg J. Sedun (\$7,250) and Christopher A. Serin (\$7,361). The deferred fees are included in Accrued liabilities and other payables on the consolidated balance sheets, however such amounts will not be paid or impact the cash position until the earlier of: a) receipt of proceeds from JXTC from the sale of our interest in the Cameroon project or, b) receipt of proceeds from a significant financing in an amount expected to be sufficient to cover the Company's cash requirement for at least six months.

On October 22, 2013, the Company entered into a severance and release agreement (the "Severance Agreement") with Timothy D. Arnold, the Company's former Chief Operating Officer whose employment with the Company terminated effective October 24, 2013 (the "Separation Date").

Under the Severance Agreement the Company is obligated to pay Mr. Arnold a lump sum severance payment equal to \$0.5 million, less applicable deductions and withholdings (the "Severance Amount"). The Company must pay the Severance Amount to Mr. Arnold on the first business day following six months after the Separation Date (the "Payment Date"), unless payment on that date would jeopardize the ability of the Company to continue as a going concern, in which case the Severance Amount is payable on the first date after the Payment Date where making such payment would not jeopardize the ability of the Company to continue as a going concern. Effective upon the actual payment of the Severance Amount, Mr. Arnold has agreed to release, subject to limited exceptions, the Company and its affiliates from any and all claims Mr. Arnold may have through the effective date of the Severance Agreement. The Severance Agreement replaces and supersedes the Executive Employment Agreement between the Company and Mr. Arnold, dated as of February 1, 2011.

In addition, on October 22, 2013, the Company entered into a services agreement (the "Services Agreement") with Arnold Consulting, LLC ("Arnold Consulting"), of which Mr. Arnold is the principal. Pursuant to the Services Agreement, Arnold Consulting will provide services in connection with transition matters relating to matters for which Mr. Arnold was previously responsible as an employee of the Company, and Mr. Arnold will continue to serve as a Director and the Acting General Manager of the Company's 60.5% owned subsidiary, Geovic Cameroon PLC until March 31, 2014 unless he is earlier replaced in that position by the Company (collectively, the "Services").

Director Independence

The Board has determined that three of its five members, namely Messrs. Rose and Serin and Ms. Dooling, are independent under rules promulgated by the SEC, NASDAQ listing standards and the applicable rules of the TSX. A majority of the current directors are therefore independent as determined under applicable rules. The Board has concluded that two directors, Messrs. Buckovic and Mason are not independent under applicable rules, as they are officers of the Company or its subsidiaries. Mr. Mason was also a paid consultant to the Company from 2003 until early 2011. The independent directors are the sole members of the Audit Committee, the Human Resources and Compensation Committee and the Nominating and Corporate Governance Committee of the Company.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

Fees Paid to the Independent Registered Public Accounting Firm

The fees billed or billable to the Company for 2013 for audit services by Haynie & Company and for 2013 and 2012 by Ernst & Young LLP the Company's independent registered public accounting firms for those years were:

	2013	2012
Audit Fees ⁽¹⁾	\$ 122,000	\$ 240,000
Audit-Related Fees ⁽²⁾		
Tax Fees ⁽³⁾		
All Other Fees		
Total	\$ 122,000	\$ 240,000

- (1) Audit fees consist of our annual audit costs, fees for review of registration statements we file with the SEC and review of financial statements included in our Form 10-Q quarterly reports.
- (2) Audit-related fees are fees billed by the independent accountants for assurance and related services that are reasonably related to the performance of the audit or review of the Company's financial statements and other reports and quarterly meetings with our Audit Committee, and include other consultations concerning financial accounting and reporting standards.
- (3) Tax fees consist of fees billed for professional services rendered for tax compliance, tax advice, and tax planning.

Pre-Approval Policy Regarding Independent Registered Public Accounting Firm Services

The Audit Committee of the Board of Directors pre-approves all audit, non-audit and internal control-related services provided by the independent registered public accounting firm prior to the engagement of the independent registered public accounting firm with respect to such services. The audit and other services provided by our independent accountants are supervised by the Audit Committee. No services were performed in 2013 or 2012 by our independent registered public accountants that had not been pre-approved by our Audit Committee.
