Forward-looking statements

This quarterly report contains forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 with respect to Harmony's nancial condition, results of operations, business strategies, operating ef ciencies, competitive positions, growth opportunities for existing services, plans and objectives of management, markets for stock and other matters. Statements in this quarter that are not historical facts are "forward-looking statements" for the purpose of the safe harbour provided by Section 21E of the U.S. Securities Exchange Act of 1934, as amended, and Section 27A of the U.S. Securities Act of 1933, as amended. Forward-looking statements are statements that are not historical facts.

These statements include nancial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future operations, products and services, and statements regarding future performance. Forward-looking statements are generally identi ed by the words "expect", "anticipates", "believes", "intends", "estimates" and similar expressions. These statements are only predictions. All forward-looking statements involve a number of risks, uncertainties and other factors and we cannot assure you that such statements will prove to be correct. Risks, uncertainties and other factors could cause actual events or results to differ from those expressed or implied by the forward-looking statements.

These forward-looking statements, including, among others, those relating to the future business prospects, revenues and income of Harmony, wherever they may occur in this quarterly report and the exhibits to this quarterly report, are necessarily estimates re ecting the best judgment of the senior management of Harmony and involve a number of risks and uncertainties that could cause actual results to differ materially from those suggested by the forward-looking statements.

As a consequence, these forward-looking statements should be considered in light of various important factors, including those set forth in this quarterly report.

Important factors that could cause actual results to differ materially from estimates or projections contained in the forward-looking statements include, without limitation: overall economic and business conditions in the countries in which we operate; the ability to achieve anticipated ef ciencies and other cost savings in connection with past and future acquisitions; increases or decreases in the market price of gold; the occurrence of hazards associated with underground and surface gold mining; the occurrence of labour disruptions; availability, terms and deployment of capital; changes in government regulations, particularly mining rights and environmental regulations; uctuations in exchange rates; currency devaluations and other macro-economic monetary policies; and socio-economic instability in the countries in which we operate.

Competent person's declaration

Harmony reports in terms of the South African Code for the Reporting of Exploration results, Mineral Resources and Ore Reserves (SAMREC). Harmony employs an ore reserve manager at each of its operations who takes responsibility for reporting mineral resources and mineral reserves at his operation.

The mineral resources and mineral reserves in this report are based on information compiled by the following competent persons:

Reserves and resources South Africa:

Jaco Boshoff, Pri Sci Nat, who has 16 years' relevant experience and is registered with the South African Council for Natural Scienti c Professions (SACNASP).

Reserves and resources PNG:

Stuart Hayward for the Wa -Golpu mineral resources, Gregory Job for the Golpu mineral reserve, James Francis for the Hidden Valley mineral resources and Anton Kruger for the Hidden Valley mineral reserve. Messers Job, Francis and Kruger are corporate members of the Australian Institute of Mining and Metallurgy and Mr Hayward is a member of the Australian Institute of Geoscientists. All have relevant experience in the type and style of mineralisation for which they are reporting, and are competent persons as de ned by the code.

These competent persons consent to the inclusion in the report of the matters based on the information in the form and context in which it appears. Mr Boshoff and Mr Job are full-time employees of Harmony Gold Mining Company Limited and Mr Hayward is a full-time employee of Wa -Golpu Services Limited. Mr Francis and Mr Kruger are full-time employees of Newcrest Mining Limited (Newcrest). Newcrest is Harmony's joint venture partner in the Morobe Mining Joint Venture on the Hidden Valley mine and Wa -Golpu project.

3

Chief executive officer's review

We have made excellent strides in the last couple of years in achieving our stated strategy of creating a sustainable company that generates free cash flow that funds dividends and growth. The March 2012 quarter has been a difficult quarter and we have to ensure we continue to improve on all fronts – safety, production and returns.

Gold production in the March 2012 quarter was negatively impacted by a number of factors, some unexpected. This resulted in a reduction of gold production, the details of which are explained below in the commentary on operational results (pages 6 to 9).

It was with great excitement that we announced the launch of Harmony's employee share trust in March 2012, a venture that recognises the importance of the employees who sustain our business. Our employees are our 'human gold'. A core focus for Harmony therefore continues to be the improvement in safety and health of our employees and some good initiatives were undertaken that will improve this substantially going forward.

Safety

Given the high-risk nature of many of our underground operations, the safety, health and well-being of our people is our foremost priority. As part of our efforts to continually improve our safety, a number of audits were conducted by an external party during the quarter to identify potential areas of improvement in our safety strategy. Following the review, an improved safety framework for Harmony is being developed and we expect this to be rolled out during the next 12 months.

In the short term, a high level internal safety audit team, consisting of mining and safety experts, has been established. The main objective of this team is to verify conditions in the risk areas at Harmony's operations and establish the effectiveness of the management systems that are in place to ensure the safety of employees. The team will also review the level of implementation of strategic health and safety programmes and standards at all operations.

Despite our best efforts to curb fatalities, it is with deep regret that I report that five of our colleagues died in work-related incidents during the quarter. Those who died were: Zanekhaya Meteawdaba (belt attendant, Doornkop), Lefy David Ntsihlele (engineering assistant, Doornkop), Johannes Leepile and Zukisa Mentile (both winch operators at Kusasalethu) and Lisene Phidalis Rankopane (boilermaker aide at Bambanani West). I would like to extend my deepest condolences to their families, friends and colleagues.

Operations that showed significant improvements in safety trends during the quarter were Tshepong, Bambanani and Evander. In addition, Target 1, Target 3, Kalgold, Joel, Phakisa and Masimong are fatality-free for the year to date.

Other significant safety achievements during the quarter were the following:

- Kalgold operations
  2 500 000 fatality-free shifts
-

Harmony One Plant
1 250 000 fatality-free shifts
•
Target 1 shaft
1 000 000 fatality-free shifts
•
Masimong
2 237 688 fall of ground
fatality-free shifts
•
Doornkop
4 897 318 fall of ground
fatality-free shifts.

Health

Our pro-active approach to the health and wellness of our employees continue and we are continually investing in healthcare through policies, procedures and training, to achieve the optimal consolidated health and business solution for employees' wellness and productivity improvement.

See our 2011 Sustainable Development Report for more details on our website www.harmony.co.za.

Gold market

Although the gold price received decreased from R438 183/kg in the December 2011 quarter to R419 649/kg in the March 2012 quarter, a 4% variance, the R/kg gold price still provides us with a strong margin. The US dollar gold price remained fairly constant at US$1 688/oz, marginally up from the US$1 683/oz recorded in the December 2011 quarter. We believe that the gold price will strengthen in the long term as the same fundamentals are still in place and the uncertainty in the world-wide markets continues to support a higher gold price.

As we have no control over the gold price or the strength of the rand we have to continue to focus on factors within our control, such as safety, productivity, production and cost control.

Operational results

Gold production decreased by 18% (1 965kg) in the March 2012 quarter to 8 753kg from 10 718kg in the December 2011 quarter. The rand per kilogram unit cost for the March 2012 quarter increased by 18% from R249 356/kg in the December 2011 quarter to R293 842/kg in the quarter under review. This was due to an 18% decrease in the gold produced.

A number of factors contributed to a weaker than expected performance during the quarter:

• The festive season and public holiday disruptions associated with the March 2012 quarter;
• Safety stoppages;
• Shifts lost due to the one day protected strike of the Congress of South African Trade Unions (COSATU);
• High rainfall in Papua New Guinea impacted gold production at Hidden Valley negatively;
• The upgrade of the infrastructure at Doornkop resulted in gold

production at this shaft being 44% lower quarter on quarter (as guided in February 2012);

• Lower than expected recovered grades at most of our shafts contributed to a 13% decline in underground grade. Face grades are in line with geo-statistical models and, apart from Bambanani and Target 3, the face grades and shaft call factors at all the shafts improved. Belt grades, across almost all operations, were not in line with our plans – mainly as a result of the square metres not being blasted due to safety stoppages and high grade panels underperforming.

Disposal of interest in Rand Uranium and Evander

Investment in Rand Uranium (Pty) Limited

The sale transaction with Gold One International Limited (Gold One) was concluded on 6 January 2012, with the first payment of US$24 million (R193 million) being received on that day. The outstanding amount as at 31 March 2012 was R108 million. Subsequent to the March 2012 quarter-end, additional payments were received from Gold One in respect of the sale.

Evander Gold Mines Limited

A sale of share and claims agreement was signed on 30 January 2012 with Pan African Resources plc and Witwatersrand Consolidated Gold Resources Limited (the Consortium). The disposal will be for an aggregate purchase consideration of R1.7 billion, less certain distributions made by Evander to Harmony between 1 April 2012 and the close of the transaction.

The transaction is subject to, among others, the following conditions precedent:

- the Consortium raising the required funding comprising of debt and/or equity;
- each of the Consortium members obtaining the requisite shareholder approval for the acquisition; and
- obtaining all relevant regulatory approvals.

Wafi-Golpu

Eight drilling rigs were operating by the end of the quarter. Two of which were engaged on geotechnical assessment for the proposed decline and mine infrastructure locations and six were engaged on further definition of the Golpu orebody. The initial Golpu pre-feasibility report will be subject to various internal discussions and review between Harmony and its joint venture partner, Newcrest Mining Limited.

The study gating process with technical experts from both companies as well as external independent reviewers for each key discipline commenced in April 2012. The outcomes of the pre-feasibility study will be shared with investors during the September 2012 quarter.

Environmental management

Renewable energy initiatives and carbon trading

Harmony has initiated a number of energy efficiency projects which have resulted in emission reductions for the group. In FY11, Harmony reduced its electricity consumption by 48.5GWh, decreasing emissions by 48 500t CO_2e (CO_2e= carbon dioxide equivalents). The Company has identified many other projects to implement. To this end, Harmony and Nedbank are in the process of registering three projects under the clean development mechanism for carbon trading.

The Free State rehabilitation programme

The Free State rehabilitation programme has been geared towards reducing environmental liability, eliminating potential safety and health exposures to both our people and society in general, as well as assisting the Free State Province in meeting some of its socio-economic imperatives especially job creation.

The Free State rehabilitation programme is progressing very well.
In the year to date, rehabilitation work has been performed at the following sites:

- Virginia 2 Shaft, its plant and hostel;
- Brand 1, 2 and 3 shafts;
- Saaiplaas plant;
- Saint Helena 2 shaft and hostel;
- Saint Helena 4 shaft;
- Saint Helena plant;
- Steyn 1 shaft; and
- Freddies 7 shaft.

These initiatives coupled with the Masimong hostel conversion project resulted in a total reduction in our rehabilitation liabilities of R60 million. This represents a 3% reduction of Harmony's overall rehabilitation liability.

Other initiatives underway that will further contribute to the reduction of the rehabilitation liability include:

- Reclaiming of waste rock dumps;
- Slimes retreatment through Saaiplaas plant which liberates a surface footprint and results in an improved footprint on the placement dam.

Launch of Harmony's employees share trust:

The employee share trust was successfully launched on 15 March 2012 with a lot of excitement from organised labour representatives and employees in general. The trust will be known as the Tlhakanelo Employee Share Trust.

Conclusion

During the next quarter we will continue to improve our safety performances across the company to reduce stoppages. To ensure an immediate uplift in grade, the top 10 higher grade panels at each operation will be focused on. A standardised short interval control monitoring initiative has also been rolled out to all the Harmony operations at the beginning of April 2012. As a result, production performances will be monitored on a daily basis, assisting us in identifying potential production challenges and addressing these immediately. In addition, we will increase the discipline on clean mining.

Graham Briggs
Chief executive officer

5

Financial overview

Net profit

The net profit for the March 2012 quarter was R1 014 million, 3% lower than the previous quarter. This was due to the gross profit being 62% lower at R501 million offset by a deferred tax credit of R652 million.

The net profit for the nine months ended 31 March 2012 was R2 538 million compared to R659 million for the corresponding nine months of the previous year. This was as a result of the significant higher gold price received for the period of R418 749/kg versus R300 386/kg the previous year.

Taxation

Included in the large deferred taxation credit is an amount of R605 million related to the change in the mining tax rate formula. Prior to the change, some of our subsidiaries were exempt from paying Secondary Tax on Companies (STC) when declaring a dividend, but had to pay a higher mining tax rate.

With the repeal of STC and the introduction of the Dividend Tax, the higher gold mining tax rate formula was removed. The change in the mining tax rate affected the calculation of deferred tax, resulting in lower deferred tax balances.

The lower statutory tax rate would result in a lower tax liability over the life of mine and therefore a lower average deferred tax rate. Applying these lower rates to the temporary differences balances at the beginning of the year will result in a change in estimate of R605 million which has been credited to the taxation line in the income statement in the quarter ended 31 March 2012.

Discontinued operations and assets and liabilities of disposal group classified as held for sale

Evander Gold Mines Limited has been classified as a disposal group held for sale following the signing of a sales agreement on 30 January 2012. It has also been classified as a discontinued operation. The comparative information in the income statement for all periods shown has been re-presented accordingly.

Earnings per share

Total basic earnings per share for the March 2012 quarter decreased from 243 SA cents to 235 SA cents per share. Total headline earnings per share decreased from earnings of 242 SA cents per share to 234 SA cents per share.

For the nine month period to March 2012, total headline earnings per share amounts to 571 SA cents per share compared to 192 SA cents per share for the corresponding period in the previous year.

Capital

Total capital expenditure for the March 2012 quarter was R767 million, a R15 million decrease in comparison to the December 2011 quarter (R782 million). Capital expenditure at most SA operations decreased with Bambanani and Phakisa being the exceptions. Capital at Bambanani increased by R11 million for the backfill plant. Total capital spent at Hidden Valley increased by R29 million and Wafi-Golpu increased by R34 million.

Deferred tax liabilities

The change in the deferred tax rates (discussed above under Taxation) resulted in the reduction of the deferred tax liabilities.

Cash flow

The strong cash generated by operating activities for the nine months ended March 2012 of R3.2 billion paid for capital expenditure of R2.2 billion and reduced the net debt significantly.

Dividend Tax (DT)

The Minister of Finance announced in his budget speech in February 2012 that DT will be implemented effective 1 April 2012, at a rate of 15%. The dividend tax replaces the current Secondary Tax on Companies (STC). While STC was payable by the Company, the DT is normally levied on the shareholder, or the person entitled to the benefit of the dividend.

According to the new legislation, regulated intermediaries (e.g. share registrars and stockbrokers) will withhold the DT amount before the dividend is paid out. All South African companies and several other bodies are exempt from DT, while South African natural person shareholders will be liable for DT at 15%.

Foreign investors may be eligible for a reduced rate or be able to claim credit from taxes withheld depending on the relevant double tax treaty between South Africa and the relevant country.

The legislation allows for credits accumulated under STC to be carried forward and may be utilised within three years of the introduction of DT. Harmony had STC credits amounting to R151 million at 31 March 2012 which will be available for offset against future dividends. This means that no DT needs to be withheld on the next R151 million of dividend paid out by the Company, irrespective of the category of shareholder. If such a shareholder is a resident company these credits can be passed on to their beneficial shareholders.

Gold production was 18% lower than the previous quarter at 8 753kg. An estimated 600 kilograms were lost due to safety stoppages alone. In addition, the operations' grade performance was poor, with overall recovered grade being 20% lower than the December 2011 quarter at 1.90g/t and underground grade being 13% lower at 4.24g/t. The reasons for the underperformance in grade are the following:

- belt grades, across almost all operations, were not in line with our plans – mainly as a result of the square metres not being blasted due to safety stoppages and high grade panels underperforming;
- more development waste was hoisted with ore at Kusasalethu and Masimong (the mixing of waste with ore is being addressed at both operations);
- One Plant – which processes the ore from Tshepong, Phakisa, Masimong, Bambanani, Steyn 2 and Unisel – had an exceptional plant call factor of 115% in December 2011. The March 2012 quarter is therefore much lower and more normalised at 104%;
- in the Free State, where one fatality occurred, we had a total of eight Section 54* safety-related stoppages, resulting in the loss of 368 kilograms. On average, following a Section 54* stoppage, it takes up to three days to safely restart operations. After one reportable accident at Unisel, Bambanani, Steyn 2, West Shaft and Unisel were all stopped as they are all the responsibility of one general manager. This resulted in a production loss of 21 days (cumulative);
- at Doornkop, 17 production days on South Reef (high grade) were lost due to the infrastructure upgrade announced in February 2012,

while the lower grade Kimberley Reef continued to be mined, resulting in a drop in face grade; and at Joel, 14 production days were lost due to a guide rope repair in North Shaft, resulting in ore tonnage being locked up underground; and

- at Hidden Valley production was adversely impacted by high rainfall during the quarter, impeding access to high grade ore.

** In terms of the Mine Health and Safety Act 29 of 1996.*

The increase in tonnes milled was insufficient to offset the decrease in recovered grade and consequently, gold production was 18% lower quarter on quarter at 8 753kg. Cash operating costs increased to R293 842/kg, a consequence of lower gold production.

Operating profit was lower at R1.1 billion due both to the decline in gold production and a 4% decrease in the average gold price received to R419 649/kg.

An improved safety performance, increased focus on the mining of the top 10 higher grade panels at each operation, daily monitoring of production performances and an increased focus on clean mining will result in improved production results in the June 2012 quarter.

Cash operating costs	R/kg	401 952	237 007	(70)
Operating profit	R'000	15 663	179 225	(91)

During the past quarter, gold production at Doornkop was affected by safety stoppages relating to two fatalities and the upgrade of the South Reef's infrastructure. The temporary production interruption due to the upgrade is typical of a newly built operation. In a new mine, as production builds up, commissioning challenges are experienced. We have a lot of confidence in the geology and grade of South Reef and the upgrade allows us to exploit more of the developed South Reef reserves at an improved rate in future.

Tonnes decreased by 32% to 158 000t, while the recovery grade declined to 3.16g/t, as less of the higher grade South Reef was mined.

Due mainly to lower gold production, cash operating costs increased to R401 952/kg from R237 007/kg in the previous quarter.

Lower production, higher costs and a lower average Rand gold price received resulted in lower operating profit of R16 million.

Kusasalethu

Indicator	Units	March 2012	December 2011	% variance
Tonnes	000	273	256	7
Grade	g/t	4.47	4.95	(10)
Gold produced	Kg	1 221	1 268	(4)
Cash operating costs	R/kg	289 818	283 053	(2)
Operating profit	R'000	167 968	198 948	(16)

At Kusasalethu tonnes milled increased by 7% to 273 000t due to more development waste, which was hoisted in the previous quarter, being processed in the current quarter. This resulted in a 10% decrease in the recovered grade to 4.47g/t.

A safety stoppage in March 2012 resulted in further production losses.

Cash operating cost increased slightly to R289 818/kg. An operating profit of R168 million was recorded, 16% lower than the previous quarter.

7

Phakisa

Indicator	Units	March 2012	December 2011	% variance
Tonnes	000	129	126	2
Grade	g/t	4.78	5.22	(8)
Gold produced	Kg	616	658	(6)
Cash operating costs	R/kg	328 601	299 804	(10)
Operating profit	R’000	55 374	93 819	(41)

Phakisa increased tonnes milled from 126 000t to 129 000t quarter on quarter. Recovered grade decreased by 8% to 4.78g/t. During the March 2012 quarter 616kg of gold was produced, a decrease of 6% quarter on quarter due to the decline in the grade.

Cash operating costs increased by 10% to R328 601/kg, due to lower gold production and additional labour costs (crews from Bambanani, post its restructuring, were transferred to Phakisa). An operating profit of R55 million was generated during the quarter.

Hidden Valley (held in Morobe Mining Joint Venture – 50% of attributable production reflected)

Indicator	Units	March 2012	December 2011	% variance

188 062
(90)
Hidden Valley produced 490kg of gold and 5 319kg of silver at a cash cost of R427 753/kg. This compares with 816kg of gold and 8 564kg of silver produced in the December 2011 quarter at a cash cost of R268 500/kg.
Gold production was adversely affected by high rainfall during the months of January and February 2012, which impeded access to high-grade ore.
Increased reliance on low-grade oxide stockpiles during the period resulted in both lower mill throughput and lower recoveries, also contributing to lower overall gold and silver production.
Lower gold production was the main contributor to the increase in cash costs per ounce. Trucking of ore to the mill continues to supplement the use of the overland conveyor system and adds to the high-cost profile.

(33)
Masimong increased tonnes milled by 3% during the current quarter to 238 000t, at a lower recovered grade of 3.26g/t, which resulted in a 13% decrease in gold production to 776kg. During the previous quarter it was identified that the reef ore pass system is beyond rehabilitation and a new ore pass will be developed. Until such time as the new ore pass is completed, reef and waste will be mixed and will affect the grade in the short term. This development has started and will be completed during the September 2012 quarter.
Cash operating costs were 10% higher at R264 233/kg due to lower gold production. Operating profit declined to R120 million due to lower gold production and a lower gold price received.

Target 1

Indicator	Units	March 2012	December 2011	% variance
Tonnes	000	190	208	(9)
Grade	g/t	4.54	4.91	(8)
Gold produced	Kg	862	1 021	(16)
Cash operating costs	R/kg	240 175	202 816	

(18)
Operating profit
R’000
148 186
240 255
(38)
Tonnage was down 9% at 190 000t, due to load-haul-dump trucks undergoing scheduled maintenance, which reduced loading from the massive stopes.
Recovered grade decreased to 4.54g/t. Due to lower tonnage and grade, the gold production declined by 16% to 862kg. Cash operating costs were R240 175kg, 18% higher than in the December 2011 quarter, mainly as a result of lower gold production. An operating profit of R148 million was recorded, a 38% decrease on the previous quarter, resulting both from lower gold production and a lower gold price received.

Target 3

Indicator	Units	March 2012	December 2011	% variance
Tonnes	000	82	76	8
Grade	g/t	3.61	3.89	(7)
Gold produced	Kg	296	296	–
Cash operating costs	R/kg	354 581	350 851	(1)
Operating profit	R’000	20 423	24 174	(16)

Gold production from Target 3 remained flat at 296kg, with an increase of 8% in tonnage to 82 000t offsetting the effect of a decline in the recovered grade to 3.61g/t.

Operating profit of R20 million was recorded compared to R24 million during the previous quarter, the decline due to the lower gold price received during the quarter. Cash operating costs were stable at R354 581/kg.

Tshepong

Indicator	Units	March 2012	December 2011	% variance
Tonnes	000	323	306	6
Grade	g/t	4.02	5.08	(21)
Gold produced	Kg	1 297	1 555	(17)
Cash operating costs	R/kg	244 231	203 708	(20)
Operating profit	R'000	225 386	371 743	(39)

Tshepong increased tonnes milled by 6% to 323 000t.

Recovered grade was lower at 4.02g/t compared to the exceptional 5.08g/t in the previous quarter. Management is investigating ways to improve the waste/reef split from the decline, which currently negatively impacts on the recovered grade.

Tshepong produced 1 297kg for the quarter, a 17% reduction quarter on quarter.

Cash operating costs increased by 20% to R244 231/kg, a function of lower gold production. Operating profit was R225 million.

OTHER OPERATIONS

Bambanani

Indicator	Units	March 2012	December 2011	% variance
Tonnes	000	20	25	(20)
Grade	g/t	8.35	8.56	(3)
Gold produced	Kg	167	214	(22)
Cash operating costs	R/kg	494 916	564 808	12
Operating loss	R’000	(12 782)	(30 458)	58

Bambanani had a challenging quarter. In terms of a Section 54* stoppage imposed by the Department of Mineral Resources (DMR) following a fatality at West shaft, Bambanani, as well as Steyn 2, West Shaft and Unisel were stopped for 21 days as one general manager is responsible for all of these shafts. To safely resume operations after a stoppage can take up to three days.

Recovered grade was 8.35g/t, a decrease of 3% due to the decrease in face grade values. As a result of lower volumes and a decline in grade,

only 167kg of gold was produced for the quarter.
Cash operating costs decreased to R494 916/kg as the restructuring process of only mining the shaft pillar in future is being finalised, but remained very high due to the low gold production. An operating loss of R13 million was recorded compared to a loss of R30 million in the December 2011 quarter.

Steyn 2

Indicator	Units	March 2012	December 2011	% variance
Tonnes	000	11	15	(27)
Grade	g/t	6.91	7.53	(8)
Gold produced	Kg	76	113	(33)
Cash operating costs	R/kg	447 842	337 593	(33)
Operating (loss)/profit	R'000	(2 379)	13 010	>(100)

Steyn 2 was also adversely affected by the 21-day stoppage (refer to the Bambanani commentary above) and a subsequent three-day safe start-up. Only 11 000t were milled in the March 2012 quarter. The transport of the ore is a constraint at Steyn 2 until West Shaft's infrastructure upgrade to facilitate more hosting capacity has been completed. This is expected to be completed by the end of June 2012.

** In terms of the Mine Health and Safety Act 29 of 1996.*

Unplanned rope guide repairs in North Shaft caused a 14-day stoppage at Joel, resulting in ore tonnage being locked up underground. Some 113 000t of ore were milled, 25% less than in the previous quarter, while recovered grade was 17% lower at 4.03g/t.

Due to lower volume and grade, gold production declined to 455kg from the previous quarter’s 727kg. Cash operating costs increased to R281 404/kg due to lower gold production. Operating profit of R54 million was generated during the quarter.

Unisel

Indicator	Units	March 2012	December 2011	% variance
Tonnes milled	000	90	100	(10)
Grade	g/t	3.69	4.62	(20)

Cash operating costs	R/kg	356 738	276 102	(29)
Operating profit	R’000	19 679	77 308	

(75)

Unisel's tonnage decreased by 10% to 90 000t. Unisel was also subject to a safety stoppage due to a fatality that occurred at Bambanani West. Unisel's grade normalised to 3.69g/t in the quarter under review from an abnormally higher grade of 4.62g/t achieved in the December 2011 quarter. Gold production was 28% lower than the previous quarter due to lower volume and grade.

Cash operating costs increased to R356 738/kg as a result of lower gold production. Operating profit of R20 million was recorded for the quarter.

9

TOTAL SOUTH AFRICAN SURFACE OPERATIONS

Indicator	Units	March 2012	December 2011	% variance
Tonnes	**000**	2 427	2 225	9

Cash operating costs	**R/kg**	275 214	240 183	(15)
Operating profit	**R'000**	123 113	180 079	(32)

Surface sources increased tonnage by 9% to 2 427 000t, the main contribution coming from the Phoenix tailings. Gold production, however, was lower at 835kg due to a 21% decline in the recovered grade to 0.34g/t.

Cash operating costs increased to R275 214/kg due to the lower gold output. The South African surface sources generated an operating profit of R123 million, collectively, 32% lower than the December 2011 quarter as a result of lower gold output and a lower gold price received.

Kalgold milled 310 000t during the quarter at a recovered grade of 0.73g/t. This represented decreases of 6% and 11%, respectively, when compared to the December 2011 quarter. Gold production declined to 225kg from the 273kg produced in the previous quarter.
Kalgold plant is replacing and repairing the carbon in leach (CIL) tanks, carbon regeneration circuit and the elution circuit. Satisfactory progress has been made on the CIL project during the quarter.
Cash operating costs increased by 20% to R323 222/kg due to lower gold production, additional repair work during the quarter and the rental costs of mobile crushers. As a result, the operating profit decreased to R26 million for the quarter.

Phoenix tailings increased tonnage by 16% to 1 256 000t. However, the recovered grade decreased to more normal 0.16g/t.

Surface dumps (includes Evander surface sources)

Indicator	Units	March 2012	December 2011	% variance
Tonnes	000	861	809	6
Grade	g/t	0.48	0.59	(19)
Gold produced	Kg	410	476	(14)
Cash operating costs	R/kg	265 324	225 544	(18)
Operating profit	R’000	58 347	99 127	(41)

Tonnage from the surface dumps increased by 6% during the March 2012 quarter to 861 000t. Recovered grade was 0.48g/t compared with the previous quarter’s 0.59g/t, a consequence of most sources delivering lower grade material.

The lower recovered grade resulted in a reduction in gold production to 410kg.

Cash operating costs increased by 18% quarter on quarter to R265 324/kg. Operating profit of R58 million was generated, 41% lower than the December 2011 quarter due to the lower output and a decrease in the gold price.

10

Results for the third quarter FY12
ended 31 March 2012

Development

The main purpose of development is to explore the possibilities of future mining operations. A development programme is vital in the life of a mine. The on reef development grade on a shaft is an indication of the grades that will be mined in future. Important information is derived, such as expected geological structures, dip of the ore body and the channel width.

Depending on the shaft layout – such as raise line length and spacing – ledging and stoping will take place in approximately 18 to 36 months after on reef development.

Therefore the target areas for development are extremely important to prove the existence of ore of sufficient mineral content to mine profitably and to continuously upgrade the resources to reserves.

Mineral reserves block grades vs development grades

Note: The ore reserve block grades reflect the grades of the blocks in the life-of-mine plans for the various operations. These blocks are to a large degree the blocks above a certain cut-off grade that has been targeted for mining. The development grades are those as sampled in the ongoing on-reef development at the operations and no selectivity has been applied from a grade point of view.

Doornkop

There was a decrease in the development grade during the current quarter which is in line with expectations of the areas being developed on 202 level. On reef development was also stopped for the period in which the shaft infrastructure was being upgraded and this resulted in limited new information becoming available during the quarter. All on reef development has been re-started on the South Reef and better results are expected in the next quarter.

Kusasalethu

The quarter on quarter development grade has improved and the grades intersected continue to support the ore reserve estimates.

Phakisa

There was further progress with the development towards the north and these areas continue to return good grades, as expected. This resulted in an improved development grade for this quarter compared to the previous quarter.

Masimong

Basal Reef and B Reef development grades remained below expectation for the quarter and the areas being developed are receiving increased focus from the geologists in order to firm up on the geological models and provide improved guidance with respect to development target areas.

Target (narrow reef mining)

Quarter on quarter there was an increase in development grades of the narrow reef mining section at Target 1 shaft due to well-developed Dreyerskuil Reef that was intersected. At Target 3 there is still an encouraging improvement in both the metres developed and the development grade quarter on quarter.

Tshepong

The Basal Reef development grades were in line with expectations and returned good results especially from the areas to the west of the shaft and the decline area. The B Reef grade was lower quarter on quarter due to poorly developed reef that was intersected in some of the on reef development.

Bambanani

All of the development is taking place in the shaft pillar. There was a quarter on quarter drop in the wide raise development grade due to the intersection of an expected localised lower grade area.

Evander

Grade of the reef development, as expected, is down quarter on quarter due to developing only one winze in the high grade area down to 25 level. All the other development is at the lower grade edge of the bigger payshoot. In the next few months more winzes will start up within the high grade area of the main pay shoot and this will improve the overall development grade.

Joel

The development grades at Joel remained above the reserve grade and are in line with our expectations.

Unisel

At Unisel, the development grade of the Basal Reef improved due to higher grade pillars that are being developed. The Leader Reef grade was better than expected and returned encouraging results. No Middle Reef was developed during the quarter.

11

Exploration highlights

International (Papua New Guinea)

Morobe Mining Joint Venture (50% Harmony)

Wafi-Golpu

During the March 2012 quarter, the independent review of the pre-feasibility study began, with the final report expected to be released to the
Joint Venture partners (Harmony and Newcrest Mining Limited) during the September 2012 quarter. The upgrade of the existing Wafi camp
continued during the March 2012 quarter, supporting the extensive drilling activity being undertaken. Construction and upgrade of the road to
site progressed during the quarter. Stakeholder engagement with the community, landowners and various government agencies also continued
during the period.

The pre-feasibility study remains on schedule, for completion in the first half of calendar 2012, with consideration by the Joint Venture partners to
occur thereafter. The infill drilling programme continued to encounter challenging down-hole conditions associated with the deep targets at Golpu,
with only two holes completed in the quarter under review.

Infill resource drill hole WR418 intersected a significant zone of high grade mineralisation which returned 604m @ 2.01% Cu and 1.92g/t Au from 922m, including 436m @ 2.56% Cu and 2.51g/t Au. This intercept confirms the continuity of the high grade mineralisation within the central portion of the resource. Drilling in the upper levels of the system also intersected well-developed mineralisation.

Drill hole WR421 intersected 150 metres of highly mineralised porphyry, highlighting the potential for defining additional higher grade mineralisation within the upper levels. Assay results are pending.

Drilling in the north has expanded the 0.1% Cu shell, with WR408 intersecting 450m @ 0.18% Cu and 0.11g/t Au from 1 592m.

WR415W-2 drilled the southern-most part of the deposit and intersected a large zone of low grade gold-copper mineralisation associated with multiple porphyritic intrusions, returning 806m @ 0.30%Cu and 0.25g/t Au from 1 237m.

Results from the drilling are in line with the existing resource model. Six drill holes are currently in progress, seeking to extend the resource base along the eastern margins of the system and within the upper levels.

Drill testing of the highly prospective Wafi Transfer Zone began during the quarter, and is presently testing the Kesiago and Zimake prospects.

At the Kesiago prospect, previous shallow drilling returned 389m @

Figure 1. Golpu:

(1)
Refer www.harmony.co.za for Statement of Mineral Resources and Ore Reserves at 30 June 2011. Resource figures quoted on 100% basis.

Note: Cu = copper; Au = gold.

12
Results for the third quarter FY12
ended 31 March 2012

0.24g/t Au and confirmed the presence of porphyry-related mineralisation. Drilling is targeting higher-grade mineralisation below this zone.

The second rig is testing the Zimake prospect, where surface sampling has confirmed the presence of outcropping gold and copper mineralisation
co-incident with an extensive surface gold-copper geochemical anomaly and large geophysical feature.

Figure 2: Wafi- transfer zone – porphyry corridor

(1)
Refer to www.harmony.co.za for Statement of Mineral Resources and Ore Reserves as at 30 June 2011. Resource figures quoted on 100% basis.

Note: Cu = copper; Au = gold.

Figure 3: Plan view of Wafi-transfer zone

(1)
Refer to www.harmony.co.za for Statement of Mineral
Resources and Ore Reserves as at 30 June 2011.
Resource figures quoted on 100% basis.

13

Hidden Valley district exploration

Drilling at Hidden Valley confirmed the continuity and extent of the higher grade mineralisation within the current resource of the Hidden Valley and Kaveroi lodes, with the following significant results drilled this quarter:

- HVDD124
81m @ 1.6g/t Au from 214m
- HVDD126
35.3m @ 9.6g/t Au from 336.7m including 12m @ 23g/t Au from 345m
- HVDD131
13m @ 2.6g/t Au from 188m and 36m @ 2.4g/t Au from 256m
- HVDD130
10.4m @ 13g/t Au from 326.6m including 4m @ 31g/t Au from 333m

Results of the infill drill-hole HVDD126, designed to test for continuity of the high grade zone upon which the Kaveroi underground concept is based, have confirmed the geometry of this high grade domain.

Regionally, drill testing of the Heyu Prospect, located four kilometres northwest of the Hidden Valley mine, continued. Drilling has been successful, with the intersection of gold mineralisation. Significant results include:

- HEYDH001
9m @ 1.4g/t Au from 287m and 8m @ 0.53g/t Au from 592.5m

Drilling will continue to test the remainder of the prospective geochemical targets to help define the extent of the mineralisation.

PNG exploration (Harmony 100%)

Tenement processing at the Mineral Resource Authority progressed significantly. Six tenement renewals and five new tenement applications were approved during the quarter. This includes EL1786, a new tenement application at Lake Kopiago where a major porphyry Cu-Au target has been developed.

Mt Hagen project (EL1611 and EL1596)

Exploration work at Mt Hagen focused on the Kurunga Intrusive Complex (KIC) with the aim of completing first pass exploration over the target by December 2012.

Drilling during the quarter was undertaken at Penamb and Bakil prospects for a total of 2 304m. Reconnaissance Exploration activities comprised ridge and spur soil sampling and mapping, and stream sediment sampling at the Ganz, and Penamb east prospects (355 samples).

Initial gold results from Penamb East are highly encouraging.

Bakil prospect (EL1611)

Assays for BKDD002, and BKD003 were received during the quarter, but returned no significant results. No further work is planned at this stage.

Penamb prospect (EL1596)

Drilling during the quarter at Penamb prospect comprised three holes/1 674m (PND003-PND005). Results received include:

- PNDD003
225m @ 0.1% Cu, 87ppm Mo from 456m
- PNDD004*
79m @ 0.1% Cu, 54ppm Mo from 60m
(*results incomplete)

Results for PNDD005 are pending. Previous results reported for the prospect include:

- PNDD001
285m @ 0.1% Cu, 83 Mo from 63m
- PNDD002
144m @ 0.1% Cu, 27ppm Mo from 32m
190m @ 0.1% Cu, 47ppm Mo from 193m

Drilling to date has outlined a 400m x 300m zone of 0.1% Cu mineralisation. Chalcopyrite occurs as vein stockworks and is finely disseminated. Alteration generally comprises weak to moderate biotite +/– actinolite forming selvages along vein margins. At this stage the system remains open but logging has yet to establish vectors to a high-grade mineralised core.

Figure 4: PNDD003; 749m. Fine chalcopyrite vein stockwork and disseminations, with biotite alteration forming vein selvages. The sample is characteristic of outer potassic alteration off the margin of a big porphyry Cu-Au-Mo system.

Penamb East prospect (EL1611)

Ridge and spur soil sampling at the Penamb East prospect has outlined a +0.1 g/t Au soil anomaly over 1km long and up to 400m wide, with individual assays ranging up to 0.3 g/t Au.

Follow-up creek mapping and rock chip sampling has established a northeast trend to the mineralisation with several veined and mineralised outcrops identified. Sixteen of the 43 rock chips collected returned gold grades greater than 0.1ppm. A large number of these samples were collected from outcropping veins consisting of quartz, white clay, pyrite and base metal sulphides, notably galena. The samples are anomalous in As, Sb and Ag levels, confirming an epithermal nature to the vein system.

Southern Highlands project (EL1786)

EL1786 was granted during the quarter. The tenement encompasses a bull's-eye magnetic target with associated Au-Cu skarn mineralisation, and is considered highly prospective for an Ok Tedi-style copper gold system. Work during the quarter included camp set-up and community awareness ahead of an airborne magnetic survey starting late in April.

South Africa

Masimong exploration

Masimong 5 shaft has a vast area, greater than that which has been mined at Masimong to date, of unknown potential to the east of a North-South striking 270m up-throw-fault running to the east of the shaft. The B Reef channels are expected to continue into this ground but have not been explored.

The aim of this surface drilling is therefore to locate these channels, with a view to developing into them. Diamond drilling of the first two holes (ED7 and 8) has commenced. A total of 2 358m have been drilled and the depth of the two holes is now 1 403.69m (ED8) and 1 535.3m (ED7) below surface. Both holes are very close to the estimated position of the B Reef.

* Operating profit/(loss) is comparable to the term production profit/(loss) in the segment report in the financial statements and not to the operating profit line
item in the income statement.

Results for the third quarter FY12
and nine months ended 31 March 2012

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
for the period ended 31 March 2012 (Rand)

1. Accounting policies

Basis of accounting

The condensed consolidated financial statements for the nine months ended 31 March 2012 have been prepared in accordance with IAS 34, Interim Financial Reporting, JSE Listings Requirements and in the manner required by the Companies Act of South Africa. They should be read in conjunction with the annual financial statements for the year ended 30 June 2011, which have been prepared in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board (IFRS). The accounting policies are consistent with those described in the annual financial statements, except for the adoption of applicable revised and/or new standards issued by the International Accounting Standards Board.

2.

1
The comparative figures are re-presented due to Evander being reclassified as a discontinued operation. See note 3 in this regard.

2
The credit in the current quarter relates to a change in estimate on areas where rehabilitation work has been performed.

3
The amounts for the 2012 financial year relates to restructuring at the Bambanani shaft.

3.
Disposal groups classified as held for sale and discontinued operations

Investment in Rand Uranium

The investment in Rand Uranium (Proprietary) Limited (Rand Uranium) was classified as held for sale in the March 2011 quarter following a decision to sell it. The transaction with Gold One International Limited (Gold One) was concluded on 6 January 2012, with the first payment of US$24 million (R193 million) being received on that day. The outstanding amount as at 31 March 2012 was R108 million. Subsequent to the March 2012 quarter-end, additional payments were received from Gold One for the sale. For further information refer to note 8.

Evander Gold Mines Limited

The assets and liabilities related to Evander Gold Mines Limited (Evander), a wholly-owned subsidiary of Harmony Gold Mining Company Limited (Harmony), have been classified as held for sale following signing of the sale of share and claims agreement on 30 January 2012 with Pan African Resources plc and Witwatersrand Consolidated Gold Resources Limited (the Consortium). The disposal will be for an aggregate purchase consideration of R1.7 billion, excluding the proceeds of the Taung Gold Limited transaction and less certain distributions made by Evander to Harmony between 1 April 2012 and the close of the transaction.

The transaction is subject to, among others, the following conditions precedent:

- the Consortium raising the required funding comprising of debt and/or equity;
- each of the Consortium members obtaining the requisite shareholder approval for the acquisition; and
- obtaining all relevant regulatory approvals.

The operation also meets the requirements to be classified as a discontinued operation. The comparative figures in the income statement have been re-presented as a result.

4. Deferred taxation

The deferred tax for the March 2012 quarter includes a tax credit of R605 million, relating to a change in the gold mining tax rate formula in South Africa. Previously some of our subsidiaries were exempt from paying Secondary Tax on Companies when declaring a dividend, but had to pay a higher mining tax rate. With the introduction of Dividend Tax, the higher gold mining tax rate formula was repealed resulting in lower income tax and deferred tax rates. The affected subsidiaries are Randfontein, Freegold, Evander and Kalgold.

6. Borrowings

The Nedbank revolving credit facility was repaid in full during the December 2011 quarter. The full R850 million facility is available until December 2013. The balance on Nedbank term facilities at the end of March 2012 quarter is R915 million.

In addition to the US$50 million drawn during the September 2011 quarter, a further US$40 million of the US$300 million syndicated revolving credit facility was drawn during the March 2012 quarter, with US$210 million still available. The facility is repayable by August 2015 and attracts interest at LIBOR plus 260 basis points, which is payable quarterly.

7. Commitments and contingencies

Figures in million	At 31 March 2012 (Unaudited)	At 31 December 2011	At 30 June 2011 (Audited)	At 31 March 2011 (Unaudited)
Capital expenditure commitments:				
Contracts for capital expenditure	391	291	194	191
Authorised by the directors but not contracted for	3 032	3 373	1 504	2 175
	3 423	**3 664**	**1 698**	**2 366**

This expenditure will be financed from existing resources and, where appropriate, borrowings.

Contingent liability

For a detailed disclosure on contingent liabilities refer to Harmony's annual report for the financial year ended 30 June 2011, available on the group's website (www.harmony.co.za). There were no significant changes in contingencies since 30 June 2011, except as discussed below.

Harmony reached a mutually acceptable settlement with the plaintiff class and this settlement was found to be fair and reasonable and was approved by the United States District Court in November 2011. A single class member has filed an appeal of the District Court's order approving the settlement. That appeal is currently pending in the United States Court of Appeals for the Second Circuit. The

settlement amount has been
paid into escrow by the company's insurers and will be distributed to the plaintiffs once the appeal has been finalised.

8. Subsequent events

During April 2012, an amount of R86 million was received from Gold One relating to the sale of shares in Rand Uranium. An additional R25 million is being held in an escrow account for a period of 12 months.

9. Segment report

The segment report follows on the page 23.

10. Reconciliation of segment information to consolidated income statements

	Nine months ended	
	31 March	31 March[1]
	2012	2011
Figures in million	(Unaudited)	(Unaudited)
The "Reconciliation of segment information to consolidated income statement" line item in the segment report is broken down in the following elements, to give a better understanding of the differences between the income statement and segment report:		
Reconciliation of production profit to gross profit		
Total segment revenue	12 341	9 023
Total segment production costs	(7 834)	(6 649)
Production profit per segment report	4 507	2 374
Discontinued operations	(543)	(75)
Production profit from continuing operations	3 964	2 299
Cost of sales items, other than production costs and royalty expense	(1 540)	(1 329)
Gross profit as per income statements *	**2 424**	**970**

1 The comparative figures are re-presented due to Evander being reclassified as a discontinued operation. See note 3 in this regard.

* The reconciliation was done up to the first recognisable line item on the income statement. The reconciliation will follow the income statement after that.

[1] The comparative figures are re-presented due to Evander being reclassified as a discontinued operation.

The currency conversion average rates for the quarter ended: March 2012: US$1 = R7.73 (December 2011: US$1 = R8.10, March 2011: US$1 = 6.99).

Nine months ended: March 2012: US$1 = R7.65 (March 2011: US$1 = R 7.06).

The income statement for the year ended 30 June 2011 has been extracted from the 2011 Annual Report, but is re-presented due to Evander being reclassified as a discontinued operation.

Note on convenience translation

Except where specific statements have been extracted from the 2011 Annual Report, the requirements of IAS 21, The Effects of the Changes in Foreign Exchange Rates, have not necessarily been applied in the translation of the US Dollar financial statements presented on pages 26 to 30.
