**Item 8.01 Other Events.**

On March 21, 2014, Patterson-UTI Energy, Inc. (the "Company") announced that its pressure pumping operations in the Appalachian region have been negatively impacted by unusually severe weather during the first quarter. The Company now expects pressure pumping revenues of approximately \$240 million for the first quarter, with a margin percentage of approximately 17%. The margin percentage is lower than projected as a result of having crews and equipment on location that were unable to provide revenue generating services during the unusually severe weather. While on location, the Company continued to incur labor, demurrage and other costs, including fuel costs to run equipment in order to protect it in these extraordinary weather conditions.

The severe weather has not significantly impacted the Company's other operations, and demand remains strong for both pressure pumping and drilling services even in the areas impacted by weather.

Margin is defined as revenues less direct operating costs and excludes depreciation, amortization and impairment and selling, general and administrative expenses. Margin percentage is defined as margin divided by revenues.

**Item 9.01 Financial Statements and Exhibits.**
