

Spirit Airlines, Inc.
Form 10-K
February 13, 2017

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
For the fiscal year ended December 31, 2016

or

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____
Commission File No. 001-35186
Spirit Airlines, Inc.

(Exact name of registrant as specified in its charter)

Delaware 38-1747023
(State or other jurisdiction of (I.R.S. Employer
incorporation or organization) Identification No.)

2800 Executive Way Miramar, Florida 33025
(Address of principal executive offices) (Zip Code)

(954) 447-7920
(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
Voting Common Stock, \$0.0001 par value Non-Voting Common Stock, \$0.0001 par value	NASDAQ Global Select Market None

Securities registered pursuant to Section 12(g) of the Act:
None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Edgar Filing: Spirit Airlines, Inc. - Form 10-K

Indicate by checkmark whether the registrant has submitted electronically and posted on its corporate Website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Edgar Filing: Spirit Airlines, Inc. - Form 10-K

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the common stock held by non-affiliates of the registrant was approximately \$3.3 billion computed by reference to the last sale price of the common stock on the NASDAQ Global Select Market on June 30, 2016, the last trading day of the registrant's most recently completed second fiscal quarter. Shares held by each executive officer, director and by certain persons that own 10 percent or more of the outstanding Common Stock have been excluded in that such persons may be deemed to be affiliates. This determination of affiliate status is not necessarily a conclusive determination for other purposes.

The number of shares of each registrant's classes of common stock outstanding as of the close of business on February 6, 2017:

Class	Number of Shares
Common Stock, \$0.0001 par value per share	69,336,418

Documents Incorporated by Reference

Portions of the registrant's Proxy Statement for the registrant's 2017 Annual Meeting of Stockholders are incorporated by reference into Part III of this Form 10-K to the extent stated herein. The Proxy Statement will be filed within 120 days of the registrant's fiscal year ended December 31, 2016.

PART I

ITEM 1. BUSINESS

Overview

Spirit Airlines is an ultra low-cost, low-fare airline that offers affordable travel to price-conscious customers. Our all-Airbus Fit Fleet™, the youngest fleet of any major U.S. airline, currently operates more than 420 daily flights to 59 destinations in the United States, Caribbean and Latin America. Our stock trades on the NASDAQ Global Select Stock Market under the symbol "SAVE."

Our ultra low-cost carrier, or ULCC, business model allows us to compete principally by offering customers our Bare Fares™, which are unbundled base fares that remove components traditionally included in the price of an airline ticket. We then give customers Frill Control™, which provides customers the freedom to save by paying only for the options they choose such as bags, advance seat assignments and refreshments. We record revenue related to these options in our financial statements as non-ticket revenue.

Our History and Corporate Information

We were founded in 1964 as Clippert Trucking Company, a Michigan corporation. We began air charter operations in 1990 and renamed ourselves Spirit Airlines, Inc. in 1992. In 1994, we reincorporated in Delaware, and in 1999 we relocated our headquarters to Miramar, Florida.

Our mailing address and executive offices are located at 2800 Executive Way, Miramar, Florida 33025, and our telephone number at that address is (954) 447-7920. We are subject to the information and periodic reporting requirements of the Securities Exchange Act of 1934, or Exchange Act, and, in accordance therewith, file periodic reports, proxy statements and other information with the Securities and Exchange Commission or SEC. Such periodic reports, proxy statements and other information are available for inspection and copying at the SEC's Public Reference Room at 100 F Street, NE., Washington, DC 20549 or may be obtained by calling the SEC at 1-800-SEC-0330. In addition, the SEC maintains a website at <http://www.sec.gov> that contains reports, proxy statements and other information regarding issuers that file electronically with the SEC. We also post on the Investor Relations page of our website, www.spirit.com, a link to our filings with the SEC, our Corporate Governance Guidelines and Code of Business Conduct and Ethics, which applies to all directors and all our employees, and the charters of our Audit, Compensation, Finance, Safety, Security and Operations and Nominating and Corporate Governance committees. Our filings with the SEC are posted as soon as reasonably practical after they are filed electronically with the SEC. Please note that information contained on our website is not incorporated by reference in, or considered to be a part of, this report. You can also obtain copies of these documents free of charge by writing to us at: Corporate Secretary, Spirit Airlines, Inc., 2800 Executive Way, Miramar, Florida 33025.

Our Business Model

Our ULCC business model provides customers low, unbundled base fares with a range of optional services, allowing customers the freedom to choose only the options they value. The success of our model is driven by our low cost structure, which permits us to offer low base fares while maintaining high profit margins.

We are focused on price-sensitive travelers who pay for their own travel, and our business model is designed to deliver what we believe our customers want: low fares. We aggressively use low fares to address an underserved market, which helps us to increase passenger volume, load factors and non-ticket revenue on the flights we operate. We also have high-density seating configurations on our aircraft and a simplified onboard product designed to lower costs, which is part of our Plane Simple™ strategy. High passenger volumes and load factors help us sell more ancillary products and services, which in turn allows us to reduce the base fare we offer even further. We strive to be recognized by our customers and potential customers as the low-fare leader in the markets we serve.

We compete based on total price. We believe other airlines have used an all-inclusive price concept to effectively maintain higher total prices to consumers, rather than lowering fares by unbundling each product or service. For example, carriers that tout "free bags" have included the cost of checking bags in the total ticket price, which does not allow passengers to see how much they would save if they did not check luggage. We believe that we and our customers benefit when we allow our customers to know the total price of their travel by breaking out the cost of

optional products or services.

We allow our customers to see all available options and their respective prices prior to purchasing a ticket, and this full transparency illustrates that our total price, including options selected, is lower than other airlines on average.

Through branded

4

campaigns, we educate the public on how our unbundled pricing model works and show them how it gives them a choice on how they spend their money and saves them money compared to other airlines.

Our Strengths

We believe we compete successfully in the airline industry by leveraging the following demonstrated business strengths:

Ultra-Low Cost Structure. Our unit operating costs are among the lowest of all airlines operating in the United States. We believe this unit cost advantage helps protect our market position and enables us to offer some of the lowest base fares in our markets, sustain among the highest operating margins in our industry and support continued growth. Our operating costs per available seat mile (CASM) of 7.37 cents in 2016 were significantly lower than those of the major domestic network carriers and among the lowest of the domestic low-cost carriers. We achieve these low unit operating costs in large part due to:

- high aircraft utilization;

- high-density seating configurations on our aircraft, which is part of our Plane Simple™ strategy along with simplified onboard product designed to lower costs;

- minimal hub-and-spoke network inefficiencies;

- highly productive workforce;

- opportunistic outsourcing of operating functions;

- operating our Fit Fleet™, a single-fleet type of Airbus A320-family aircraft that is the youngest fleet of any major U.S. airline and operated by common flight crews;

- reduced sales, marketing and distribution costs through direct-to-consumer marketing;

- efficient flight scheduling, including minimal ground times between flights; and

- a company-wide business culture that is keenly focused on driving costs lower.

Innovative Revenue Generation. We execute our innovative, unbundled pricing strategy to generate significant non-ticket revenue, which allows us to lower base fares and enables our passengers to identify, select and pay for only the products and services they want to use. In implementing our unbundled strategy, we have grown average non-ticket revenue per passenger flight segment from approximately \$5 in 2006 to \$52 in 2016 by:

- charging for checked and carry-on baggage;

- passing through all distribution-related expenses;

- charging for premium seats and advance seat selection;

- maintaining consistent ticketing policies, including service charges for changes and cancellations;

- generating subscription revenue from our \$9 Fare Club low-fare subscription service;

- deriving brand-based revenues from proprietary services, such as our FREE SPIRIT affinity credit card program;

- offering third-party travel products (travel packages), such as hotel rooms, ground transportation (rental and hotel shuttle products) and attractions (show or theme park tickets) packaged with air travel on our website;

- selling third-party travel insurance through our website; and

- selling onboard advertising.

Resilient Business Model and Customer Base. By focusing on price-sensitive travelers, we have maintained profitability during volatile economic periods because we are not highly dependent on premium-fare business traffic. We believe our growing customer base is more resilient than the customer bases of most other airlines because our low fares and unbundled service offering appeal to price-sensitive travelers. In 2015 and 2016, low oil prices coupled with increased competition in the U.S. drove lower unit revenues, but lower costs produced margins that remain higher than most of our domestic network peers.

Well Positioned for Growth. We have developed a substantial network of destinations in profitable U.S. domestic niche markets, targeted growth markets in the Caribbean and Latin America and high-volume routes flown by price-sensitive travelers. In the United States, we also have grown into large markets that, due to higher fares, have priced out those more price-sensitive travelers. We seek to balance growth between large domestic markets, niche markets and opportunities in the Caribbean and Latin America according to current economic and industry conditions.

Experienced International Operator. We believe we have substantial experience in foreign local aviation, security and customs regulations, local ground operations and flight crew training required for successful international and overwater flight operations. All of our aircraft are certified for overwater operations. We believe we compete favorably against other low-cost carriers because we have been conducting international flight operations since 2003 and have developed substantial experience in complying with the various regulations and business practices in the international markets we serve. During 2016, 2015 and 2014, no revenue from any one foreign country represented greater than 4% of our total passenger revenue. We attribute operating revenues by geographic region based upon the origin and destination of each passenger flight segment.

Financial Strength Achieved with Focus on Cost Discipline. We believe our ULCC business model has delivered strong financial results in both favorable and more difficult economic times. We have generated these results by:

- keeping a consistent focus on maintaining low unit operating costs;

- ensuring our sourcing arrangements with key third parties are regularly benchmarked against the best industry standards;

- generating and maintaining an adequate level of liquidity to insulate against volatility in key cost inputs, such as fuel, and in passenger demand that may occur as a result of changing general economic conditions.

Route Network

As of December 31, 2016, our route network included 200 markets served by 59 airports throughout North America, Central America, South America and the Caribbean.

Below is a route map of our current network, which includes seasonal routes and routes announced as of February 3, 2017 for which service has not yet started:

Our network expansion targets underserved and/or overpriced markets. We employ a rigorous process to identify opportunities to deploy new aircraft where we believe they will be most profitable. To monitor the profitability of each route, we analyze weekly and monthly profitability reports as well as near term forecasting.

Competition

The airline industry is highly competitive. The principal competitive factors in the airline industry are fare pricing, total price, flight schedules, aircraft type, passenger amenities, number of routes served from a city, customer service, safety record and reputation, code-sharing relationships and frequent flier programs and redemption opportunities. Our competitors and potential competitors include traditional network airlines, other low-cost carriers and ULCCs, and regional airlines. We typically compete in markets served by traditional network airlines, and other low-cost carriers and ULCCs, and, to a lesser extent, regional airlines.

As of December 31, 2016, our top two largest network overlaps are with Southwest Airlines and American Airlines at approximately 58% and 54% of our markets, respectively. Our principal competitors on domestic routes are Southwest Airlines, American Airlines, Delta Air Lines and United Airlines. Our principal competitors to our markets in the Caribbean and Latin America are American Airlines, JetBlue Airways, Southwest Airlines and United Airlines. Our principal competitive advantage is our low base fares. We are able to offer low fares profitably, due to our low unit operating costs, which in 2016 were among the lowest in the U.S. airline industry. In difficult economic or competitive environments, we believe our low unit costs coupled with our relatively stable non-ticket revenues allow us to price our fares at levels where we can be profitable while our primary competitors cannot.

The airline industry is particularly susceptible to price discounting because, once a flight is scheduled, airlines incur only nominal incremental costs to provide service to passengers occupying otherwise unsold seats. The expenses of a scheduled aircraft flight do not vary significantly with the number of passengers carried and, as a result, a relatively small change in the number of passengers or in pricing could have a disproportionate effect on an airline's operating and financial results. Price competition occurs on a market-by-market basis through price discounts, changes in pricing structures, fare matching, target promotions and frequent flier initiatives. Airlines typically use discount fares and other promotions to stimulate traffic during normally slower travel periods to generate cash flow and to maximize TRASM. The prevalence of discount fares can be particularly acute when a competitor has excess capacity that it is unable to fill at higher rates. A key element to our competitive strategy is to maintain very low unit costs in order to permit us to compete successfully in price-sensitive markets.

Seasonality

Our business is subject to significant seasonal fluctuations. We generally expect demand to be greater in the second and third quarters each year due to more vacation travel during these periods, as compared to the rest of the year. The air transportation business is also volatile and highly affected by economic cycles and trends.

Distribution

The majority of our tickets are sold through direct channels, including online via www.spirit.com, our call center and our airport ticket counters, with spirit.com being the primary channel. We also partner with a number of third parties to distribute our tickets, including online and traditional travel agents and electronic global distribution systems.

Customers

We believe our customers are primarily leisure travelers who are paying for their own ticket and who make their purchase decision based largely on price. By maintaining a low cost structure, we can successfully sell tickets at low fares while maintaining a strong profit margin.

Customer Service

We are committed to taking care of our customers. We believe focusing on customer service in every aspect of our operations, including personnel, flight equipment, in-flight and ancillary amenities, on-time performance, flight completion ratios, and baggage handling, will strengthen customer loyalty and attract new customers. We proactively aim to improve our operations to ensure further improvement in customer service.

In response to customer and other demands, we modified our online booking process to allow our customers to see all available options and their prices prior to purchasing a ticket, and maintain a campaign that illustrates our total prices are lower, on average, than those of our competitors, even when options are included.

7

Fleet

We fly only Airbus A320 family aircraft, which provides us significant operational and cost advantages compared to airlines that operate multiple aircraft types. By operating a single aircraft type, we avoid the incremental costs of training crews across multiple types. Flight crews are entirely interchangeable across all of our aircraft, and maintenance, spare parts inventories and other operational support remains highly simplified compared to those airlines with more complex fleets. Due to this commonality among Airbus single-aisle aircraft, we can retain the benefits of a fleet comprised of a single type of aircraft while still having the flexibility to match the capacity and range of the aircraft to the demands of each route.

As of December 31, 2016, we had a fleet of 95 Airbus single-aisle aircraft, which are commonly referred to as “A320 family” aircraft. A320 family aircraft include the A319, A320 and A321 models, which have broadly common design and equipment but differ most notably in fuselage length, service range and seat capacity. Within the A320 family of aircraft, models using existing engine technology may carry the suffix “ceo,” denoting the “current engine option,” while models equipped with new-generation engines may carry the suffix “neo,” denoting the “new engine option.” As of December 31, 2016, our fleet consisted of 29 A319s, 45 A320ceos, 5 A320neos and 16 A321ceos, and the average age of the fleet was 5.2 years. As of December 31, 2016, we owned 36 of our aircraft, of which 15 aircraft are financed through senior and junior long-term debt with terms of 12 and 7 years, respectively, 14 aircraft are financed through enhanced equipment trust certificates (EETCs), and 7 aircraft were purchased off lease and currently unencumbered. Refer to “Notes to the Financial Statements—11. Debt and Other Obligations” for information regarding our debt financing and “Notes to the Financial Statements—3. Special Charges” for information regarding our aircraft purchased off lease. The remaining 59 of our aircraft are financed under operating leases with expirations between 2017 and 2029. In addition, as of December 31, 2016, we had 11 spare engines financed under operating leases and owned 1 spare engine.

As of December 31, 2016, firm aircraft orders consisted of 76 A320 family aircraft (10 A320ceos, 50 A320neos and 16 A321ceos) with Airbus. As of December 31, 2016, spare engine orders consisted of three V2500 SelectOne engines with IAE and nine PurePower PW 1100G-JM engines with Pratt & Whitney. Aircraft are scheduled for delivery from 2017 through 2021 and spare engines are scheduled for delivery from 2017 through 2023. The firm aircraft orders provide for capacity growth as well as the flexibility to add to, or replace, the aircraft in our present fleet. We may elect to supplement these deliveries by additional acquisitions from the manufacturer or in the open market if demand conditions merit. We also may adjust or defer deliveries, or change models of aircraft in our delivery stream, from time to time, as a means to match our future capacity with anticipated demand and growth trends.

Consistent with our ULCC business model, each of our aircraft is configured with a high density seating configuration, which helps us maintain a lower unit cost and pass savings to our customers. Our high density seating configuration accommodates more passengers than those of our competitors when comparing the same type of aircraft.

Maintenance and Repairs

We have a Federal Aviation Administration (FAA) mandated and approved maintenance program, which is administered by our technical services department. Our maintenance technicians undergo extensive initial and ongoing training to ensure the safety of our aircraft.

Aircraft maintenance and repair consists of routine and non-routine maintenance, and work performed is divided into three general categories: line maintenance, heavy maintenance and component service. Line maintenance consists of routine daily and weekly scheduled maintenance checks on our aircraft, including pre-flight, daily, weekly and overnight checks, and any diagnostics and routine repairs and any unscheduled items on an as needed basis. Line maintenance events are currently serviced by in-house mechanics supplemented by contract labor and are primarily completed at airports we currently serve. Heavy airframe maintenance checks consist of a series of more complex tasks that can take from one to four weeks to accomplish and typically are required approximately every 24 months. Heavy engine maintenance is performed approximately every four to six years and includes a more complex scope of work. Due to our relatively small fleet size and projected fleet growth, we believe outsourcing all of our heavy maintenance activity, such as engine servicing, major part repair and component service repairs is more economical.

Outsourcing eliminates the substantial initial capital requirements inherent in heavy aircraft maintenance. We have entered into a long-term flight hour agreement for our current fleet and future deliveries with IAE and Pratt & Whitney for our engine overhaul services and with Lufthansa Technik on an hour-by-hour basis for component services. We outsource our heavy airframe maintenance to FAA-qualified maintenance providers.

Our recent maintenance expenses have been lower than what we expect to incur in the future because of the relatively young age of our aircraft fleet. Our maintenance costs are expected to increase as the scope of repairs increases with the increasing age of our fleet. As our aircraft age, scheduled scope of work and frequency of unscheduled maintenance events is likely to increase like any maturing fleet. Our aircraft utilization rate could decrease with the increase in aircraft maintenance.

Employees

Our business is labor intensive, with labor costs representing approximately 25.2%, 23.1% and 19.9% of our total operating costs for 2016, 2015 and 2014, respectively. As of December 31, 2016, we had 1,465 pilots, 2,437 flight attendants, 42 flight dispatchers, 215 ramp service agents, 678 mechanics, 371 airport agents/other and 534 employees in administrative roles for a total of 5,742 employees. As of December 31, 2016, approximately 73% of our employees were represented by four labor unions. On an average full-time equivalent basis, for the full year 2016, we had 5,159 employees, compared to 4,326 in 2015.

FAA regulations require pilots to have commercial licenses with specific ratings for the aircraft to be flown and be medically certified as physically fit to fly. FAA and medical certifications are subject to periodic renewal requirements, including recurrent training and recent flying experience. Mechanics, quality-control inspectors and flight dispatchers must be certificated and qualified for specific aircraft. Flight attendants must have initial and periodic competency training and qualification. Training programs are subject to approval and monitoring by the FAA. Management personnel directly involved in the supervision of flight operations, training, maintenance and aircraft inspection must also meet experience standards prescribed by FAA regulations. All safety-sensitive employees are subject to pre-employment, random and post-accident drug testing.

The Railway Labor Act, or RLA, governs our relations with labor organizations. Under the RLA, our collective bargaining agreements generally do not expire, but instead become amendable as of a stated date. If either party wishes to modify the terms of any such agreement, they must notify the other party in the manner agreed to by the parties. Under the RLA, after receipt of such notice, the parties must meet for direct negotiations. If no agreement is reached, either party may request the National Mediation Board, or NMB, to appoint a federal mediator. The RLA prescribes no set timetable for the direct negotiation and mediation process. It is not unusual for those processes to last for many months, and even several years. If no agreement is reached in mediation, the NMB in its discretion may declare at some time that an impasse exists. If an impasse is declared, the NMB proffers binding arbitration to the parties. Either party may decline to submit to arbitration. If arbitration is rejected by either party, a 30-day “cooling off” period commences. During that period (or after), a Presidential Emergency Board, or PEB, may be established, which examines the parties’ positions and recommends a solution. The PEB process lasts for 30 days and is followed by another “cooling off” period of 30 days. At the end of a “cooling off” period, unless an agreement is reached or action is taken by Congress, the labor organization and the airline each may resort to “self-help,” including, for the labor organization, a strike or other labor action, and for the airline, the imposition of any or all of its proposed amendments and the hiring of new employees to replace any striking workers. Congress and the President have the authority to prevent “self-help” by enacting legislation that, among other things, imposes a settlement on the parties. The table below sets forth our employee groups and status of the collective bargaining agreements.

Employee Groups	Representative	Amendable Date
Pilots	Air Line Pilots Association, International (ALPA)	August 2015
Flight Attendants	Association of Flight Attendants (AFA-CWA)	May 2021
Dispatchers	Transport Workers Union (TWU)	August 2018
Ramp Service Agents	International Association of Machinists and Aerospace Workers (IAMAW)	June 2020

In August 2015, the Company's collective bargaining agreement with its pilots, represented by ALPA, became amendable. In June 2016, ALPA requested the services of the National Mediation Board (NMB) to facilitate negotiations for an amended agreement and the Company joined ALPA in the request. The NMB has assigned a mediator and the parties continue to meet and work toward an amended agreement with the guidance of the mediator. Under the RLA, the parties' current agreement remains in effect until an amended agreement is reached.

In March 2016, under the supervision of the NMB, the Company and AFA-CWA reached a tentative agreement for a five-year contract with the Company's flight attendants. In May 2016, the flight attendants voted to approve the new five-year contract with the Company. In connection with this agreement, the Company paid a \$9.6 million ratification incentive payment to the flight attendants recorded within salaries, wages and benefits in the statement of operations.

In July 2014, certain ramp service agents directly employed by the Company voted to be represented by the IAMAW. In May 2015, the Company entered into a five-year interim collective bargaining agreement with the IAMAW,

covering material economic terms. In June 2016, the Company and the IAMAW reached an agreement on the remaining terms of the collective bargaining agreement, which is amendable in June 2020. As of December 31, 2016, these ramp service agents served 1 of the 59 airports where the Company operates.

We focus on hiring highly productive employees and, where feasible, designing systems and processes around automation and outsourcing in order to maintain our low cost base.

Safety and Security

We are committed to the safety and security of our passengers and employees. We strive to comply with or exceed health and safety regulation standards. In pursuing these goals, we maintain an active aviation safety program. All of our personnel are expected to participate in the program and take an active role in the identification, reduction and elimination of hazards.

Our ongoing focus on safety relies on training our employees to proper standards and providing them with the tools and equipment they require so they can perform their job functions in a safe and efficient manner. Safety in the workplace targets several areas of our business, including: flight operations, maintenance, in-flight, dispatch and station operations. The Transportation Security Administration, or TSA, is charged with aviation security for both airlines and airports. We maintain active, open lines of communication with the TSA at all of our locations to ensure proper standards for security of our personnel, customers, equipment and facilities are exercised throughout our business.

Insurance

We maintain insurance policies we believe are customary in the airline industry and as required by the Department of Transportation (DOT). The policies principally provide liability coverage for public and passenger injury; damage to property; loss of or damage to flight equipment; fire and extended coverage; directors' and officers' liability; advertiser and media liability; cyber risk liability; fiduciary; and workers' compensation and employer's liability. Beginning in July 2014, we obtained third-party war risk (terrorism) insurance from the commercial market. Prior to July 2014, we obtained this insurance through a special program administered by the FAA, which was discontinued in late 2014. Renewing coverage from commercial underwriters could result in a change in premium and more restrictive terms. Although we currently believe our insurance coverage is adequate, there can be no assurance that the amount of such coverage will not be changed or that we will not be forced to bear substantial losses from accidents. Our current war risk (terrorism) insurance policy expires in July 2017.

Management Information Systems

We have continued our commitment to technology improvements to support our ongoing operations and initiatives. During 2015, we completed the integration of TRAX, a new scalable maintenance, repair, operations (MRO) system to improve the tracking of all maintenance related financial transactions and in 2016, we upgraded the Sabre Flight Operating Suite to Flight Plan Manager. We intend to continue to invest time and resources in upgrading and improving our information systems and the security of our data.

Foreign Ownership

Under DOT regulations and federal law, we must be controlled by U.S. citizens. In order to qualify, at least 75% of our stock must be voted by U.S. citizens, and our president and at least two-thirds of our board of directors and senior management must be U.S. citizens.

We believe we are currently in compliance with such foreign ownership rules.

Government Regulation

Operational Regulation

The airline industry is heavily regulated, especially by the federal government. Two of the primary regulatory authorities overseeing air transportation in the United States are the Department of Transportation (DOT) and the Federal Aviation Administration (FAA). The DOT has jurisdiction over economic and consumer issues affecting air transportation, such as competition, route authorizations, advertising and sales practices, baggage liability and disabled passenger transportation, tarmac delays and responding to customer complaints among other areas. In January 2017, DOT issued a Supplemental Notice of Proposed Rulemaking of rules proposed in 2014 that would require airlines to disclose through all points of sale the fees for first and second checked bags and a carry-on bag associated with the air transportation consumers are buying or considering buying which may be implemented in 2017. In 2016, Congress passed a law requiring airlines to refund checked bag fees for delayed bags if they are not delivered to the passenger within a specified number of hours. DOT is collecting information from which to develop a rule which Congress required to be issued by July 15, 2017. Additional disabled passenger rules may be issued in

2017. See “Risk Factors—Restrictions on or increased taxes applicable to charges for ancillary products and services paid by airline passengers and burdensome consumer protection regulations or laws which could harm our business, results of operations and financial condition.”

10

The DOT has authority to issue certificates of public convenience and necessity required for airlines to provide air transportation. We hold a DOT certificate of public convenience and necessity authorizing us to engage in scheduled air transportation of passengers, property and mail within the United States, its territories and possessions and between the United States and all countries that maintain a liberal aviation trade relationship with the United States (known as “open skies” countries). We also hold DOT certificates to engage in air transportation to certain other countries with more restrictive aviation policies.

The FAA is responsible for regulating and overseeing matters relating to air carrier flight operations, including airline operating certificates, aircraft certification and maintenance and other matters affecting air safety. The FAA requires each commercial airline to obtain and hold an FAA air carrier certificate. This certificate, in combination with operations specifications issued to the airline by the FAA, authorizes the airline to operate at specific airports using aircraft approved by the FAA. As of December 31, 2016, we had FAA airworthiness certificates for all of our aircraft, we had obtained the necessary FAA authority to fly to all of the cities we currently serve, and all of our aircraft had been certified for overwater operations. In 2014, the FAA issued its final regulations governing pilot rest periods and work hours for all airlines certificated under Part 121 of the Federal Aviation Regulations. The rule, known as FAR 117 which became effective on January 4, 2014, impacts the required amount and timing of rest periods for pilots between work assignments, and modifies duty and rest requirements based on the time of day, number of scheduled segments, flight types, time zones and other factors. FAR 117 has resulted in increased pilot costs as we were required to hire more pilots in order to comply with the regulations. We believe we hold all necessary operating and airworthiness authorizations, certificates and licenses and are operating in compliance with applicable DOT and FAA regulations, interpretations and policies.

International Regulation

All international service is subject to the regulatory requirements of the foreign government involved. We currently operate international service to Aruba, Colombia, Costa Rica, Cuba, Dominican Republic, El Salvador, Guatemala, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Panama, Peru and St. Maarten, as well as Puerto Rico and the U.S. Virgin Islands. If we decide to increase our routes to additional international destinations, we will be required to obtain necessary authority from the DOT and the applicable foreign government. We are also required to comply with overfly regulations in countries that lay along our routes but which we do not serve.

International service is also subject to Customs and Border Protection, or CBP, immigration and agriculture requirements and the requirements of equivalent foreign governmental agencies. Like other airlines flying international routes, from time to time we may be subject to civil fines and penalties imposed by CBP if unmanifested or illegal cargo, such as illegal narcotics, is found on our aircraft. These fines and penalties, which in the case of narcotics are based upon the retail value of the seizure, may be substantial. We have implemented a comprehensive security program at our airports to reduce the risk of illegal cargo being placed on our aircraft, and we seek to cooperate actively with CBP and other U.S. and foreign law enforcement agencies in investigating incidents or attempts to introduce illegal cargo.

Security Regulation

The TSA was created in 2001 with the responsibility and authority to oversee the implementation, and ensure the adequacy of security measures at airports and other transportation facilities. Funding for passenger security is provided in part by a per enplanement ticket tax (passenger security fee). Prior to and for the first half of 2014, this fee was \$2.50 per passenger flight segment, subject to a maximum of \$5 per one-way trip. Effective July 1, 2014, the security fee was set at a flat rate of \$5.60 each way. On December 19, 2014, the law was amended to limit a round-trip fee to \$11.20. We cannot forecast what additional security and safety requirements may be imposed in the future or the costs or revenue impact that would be associated with complying with such requirements. In addition, in the past, the TSA has assessed an Aviation Security Infrastructure Fee, or ASIF, on each airline. This fee was eliminated by the TSA effective October 1, 2014.

Environmental Regulation

We are subject to various federal, state and local laws and regulations relating to the protection of the environment and affecting matters such as aircraft engine emissions, aircraft noise emissions and the discharge or disposal of materials and chemicals, which laws and regulations are administered by numerous state and federal agencies. The

Environmental Protection Agency, or EPA, regulates operations, including air carrier operations, which affect the quality of air in the United States. We believe the aircraft in our fleet meet all emission standards issued by the EPA. Concern about climate change and greenhouse gases may result in additional regulation or taxation of aircraft emissions in the United States and abroad.

Federal law recognizes the right of airport operators with special noise problems to implement local noise abatement procedures so long as those procedures do not interfere unreasonably with interstate and foreign commerce and the national air

transportation system. These restrictions can include limiting nighttime operations, directing specific aircraft operational procedures during takeoff and initial climb, and limiting the overall number of flights at an airport.

Other Regulations

We are subject to certain provisions of the Communications Act of 1934, as amended, and are required to obtain an aeronautical radio license from the Federal Communications Commission, or FCC. To the extent we are subject to FCC requirements, we will take all necessary steps to comply with those requirements. We are also subject to state and local laws and regulations at locations where we operate and the regulations of various local authorities that operate the airports we serve.

Future Regulations

The U.S. and foreign governments may consider and adopt new laws, regulations, interpretations and policies regarding a wide variety of matters that could directly or indirectly affect our results of operations. We cannot predict what laws, regulations, interpretations and policies might be considered in the future, nor can we judge what impact, if any, the implementation of any of these proposals or changes might have on our business.

ITEM 1A. RISK FACTORS

Cautionary Statement Regarding Forward-Looking Statements

This Annual Report on Form 10-K contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended (the Securities Act), and Section 21E of the Securities Exchange Act of 1934, as amended (the Exchange Act) which are subject to the “safe harbor” created by those sections. Forward-looking statements are based on our management’s beliefs and assumptions and on information currently available to our management. All statements other than statements of historical facts are “forward-looking statements” for purposes of these provisions. In some cases, you can identify forward-looking statements by terms such as “may,” “will,” “should,” “could,” “would,” “expect,” “plan,” “anticipate,” “believe,” “estimate,” “project,” “predict,” “potential,” and similar expressions to identify forward-looking statements. Such forward-looking statements are subject to risks, uncertainties and other important factors that could cause actual results and the timing of certain events to differ materially from future results expressed or implied by such forward-looking statements. Factors that could cause or contribute to such differences include, but are not limited to, those identified below. Furthermore, such forward-looking statements speak only as of the date of this report. Except as required by law, we undertake no obligation to update any forward-looking statements to reflect events or circumstances after the date of such statements. Additional risks or uncertainties (i) that are not currently known to us, (ii) that we currently deem to be immaterial, or (iii) that could apply to any company, could also materially adversely affect our business, financial condition, or future results. You should carefully consider the risks described below and the other information in this report. If any of the following risks materialize, our business could be materially harmed, and our financial condition and results of operations could be materially and adversely affected. References in this report to “Spirit,” “we,” “us,” “our,” or the “Company” shall mean Spirit Airlines, Inc., unless the context indicates otherwise.

Risks Related to Our Industry

We operate in an extremely competitive industry.

We face significant competition with respect to routes, fares and services. Within the airline industry, we compete with traditional network airlines, other low-cost airlines and regional airlines on many of our routes. Competition in most of the destinations we presently serve is intense, due to the large number of carriers in those markets.

Furthermore, other airlines may begin service or increase existing service on routes where we currently face little competition. Most of our competitors are larger than us and have significantly greater financial and other resources than we do.

The airline industry is particularly susceptible to price discounting because once a flight is scheduled, airlines incur only nominal additional costs to provide service to passengers occupying otherwise unsold seats. Increased fare or other price competition has, and may continue to, adversely affect our operations. Moreover, many other airlines have begun to unbundle services by charging separately for services such as baggage and advance seat selection. This unbundling and other cost reducing measures could enable competitor airlines to reduce fares on routes that we serve. Beginning in 2015, and continuing through 2016, the availability of low priced fares coupled with an increase in domestic capacity led to dramatic changes in pricing behavior in many U.S. markets. Many domestic carriers began matching lower cost airline pricing, either with limited or unlimited inventory.

Airlines increase or decrease capacity in markets based on perceived profitability, market share objectives, competitive considerations and other reasons. Decisions by our competitors that increase overall industry capacity, or capacity dedicated to a particular domestic or foreign region, market or route, could have a material adverse impact on our business. If a traditional network airline were to successfully develop a low-cost structure, compete with us on price or if we were to experience increased competition from other low-cost carriers, our business could be materially adversely affected.

Many of the traditional network airlines in the United States have on one or more occasions initiated bankruptcy proceedings in attempts to restructure their debt and other obligations and reduce their operating costs. They also have completed large mergers that have increased their scale and share of the travel market. On November 29, 2011, AMR Corporation and substantially all of its subsidiaries, including American Airlines, Inc., filed a petition for relief under

Chapter 11 of the U.S. Bankruptcy Code. In December 2013, AMR Corporation and US Airways Group, Inc. completed a merger and formally became American Airlines Group Inc. We presently compete with American Airlines in a majority of our markets. This merger along with earlier mergers between Delta Airlines and Northwest Airlines, between United Airlines and Continental Airlines, Southwest Airlines and AirTran Airways, and Alaska Airlines and Virgin America, have created five very large and powerful network airlines, which creates a challenging pricing environment for smaller airlines like us.

Our growth and the success of our ULCC business model could stimulate competition in our markets through our competitors' development of their own ULCC strategies, new pricing policies designed to compete with ULCCs or new market entrants. Any such competitor may have greater financial resources and access to less expensive sources of capital than we do, which could enable them to operate their business with a lower cost structure, or enable them to operate with lower-marginal revenues without substantial adverse effects, than we can. If these competitors adopt and successfully execute a ULCC business model, we could be materially adversely affected. In 2015, Delta Airlines began to market and sell a "Basic Economy" fare which was designed in part to provide its customers with a low base fare similar to Spirit. Most recently, United Airlines and American Airlines announced their "Basic Economy" fare. Other major carriers have announced plans to market similar discounted fare classes.

There has been significant consolidation within the airline industry including, for example, the combinations of American Airlines and US Airways, Delta Air Lines and Northwest Airlines, United Airlines and Continental Airlines, Southwest Airlines and AirTran Airways, and Alaska Airlines and Virgin America. In the future, there may be additional consolidation in our industry. Any business combination could significantly alter industry conditions and competition within the airline industry, which could have an adverse effect on our business.

The extremely competitive nature of the airline industry could prevent us from attaining the level of passenger traffic or maintaining the level of fares or revenues related to ancillary services required to sustain profitable operations in new and existing markets and could impede our growth strategy, which could harm our operating results. Due to our relatively small size, we are susceptible to a fare war or other competitive activities in one or more of the markets we serve, which could have a material adverse effect on our business, results of operations and financial condition.

Our low cost structure is one of our primary competitive advantages, and many factors could affect our ability to control our costs.

Our low cost structure is one of our primary competitive advantages. However, we have limited control over many of our costs. For example, we have limited control over the price and availability of aircraft fuel, aviation insurance, airport costs and related infrastructure taxes, the cost of meeting changing regulatory requirements and our cost to access capital or financing. In addition, the compensation and benefit costs applicable to a significant portion of our employees are established by the terms of our collective bargaining agreements. We cannot guarantee we will be able to maintain a cost advantage over our competitors. If our cost structure increases and we are no longer able to maintain a sufficient cost advantage over our competitors, it could have a material adverse effect on our business, results of operations and financial condition.

The airline industry is heavily influenced by the price and availability of aircraft fuel. Continued volatility in fuel costs or significant disruptions in the supply of fuel, including hurricanes and other events affecting the Gulf Coast in particular, could materially adversely affect our business, results of operations and financial condition.

Aircraft fuel costs represented 23.8%, 28.3% and 38.9% of our total operating expenses for 2016, 2015 and 2014, respectively. As such, our operating results are significantly affected by changes in the availability and the cost of aircraft fuel, especially aircraft fuel refined in the U.S. Gulf Coast region, on which we are highly dependent. Both the cost and the availability of aircraft fuel are subject to many meteorological, economic and political factors and events occurring throughout the world, which we can neither control nor accurately predict. For example, a major hurricane making landfall along the Gulf Coast could cause disruption to oil production, refinery operations and pipeline capacity in that region, possibly resulting in significant increases in the price of aircraft fuel and diminished availability of aircraft fuel supply. Any disruption to oil production, refinery operations, or pipeline capacity in the Gulf Coast region could have a disproportionate impact on our operating results compared to other airlines that have more diversified fuel sources. Fuel prices also may be affected by geopolitical and macroeconomic conditions and events that are outside of our control, including volatility in the relative strength of the U.S. dollar, the currency in which oil is denominated. Instability within major oil producing regions, such as the Middle East, changes in demand from major petroleum users such as China, and secular increases in competing energy sources are examples of these trends.

Aircraft fuel prices have been subject to high volatility, fluctuating substantially over the past several years. For example, our fuel prices spiked at a high of \$3.32 per gallon, in the second quarter of 2012, and have recently fallen as low as \$1.22 per gallon in the first quarter of 2016. We can not predict the future availability, price volatility or cost of

aircraft fuel. Due to the large proportion of aircraft fuel costs in our total operating cost base, even a relatively small increase or decrease in the price of aircraft fuel can have a significant negative impact on our operating costs or revenues and on our business, results of operations and financial condition.

Our fuel derivative activity, if any, may not reduce our fuel costs.

From time to time, we may enter into fuel derivative contracts in order to mitigate the risk to our business from future volatility in fuel prices. Our derivatives may generally consist of United States Gulf Coast jet fuel swaps (jet fuel swaps) and United States Gulf Coast jet fuel options (jet fuel options). Both jet fuel swaps and jet fuel options can be used at times to protect the refining risk between the price of crude oil and the price of refined jet fuel, and to manage the risk of increasing fuel prices. As of December 31, 2016, we had no outstanding jet fuel derivatives. There can be no assurance that we will be able to enter into fuel derivative contracts in the future if we are required or choose to do so. Our liquidity and general level of capital resources impacts our ability to hedge our fuel requirements. Even if we are able to hedge portions of our future fuel requirements, we cannot guarantee that our derivative contracts will provide sufficient protection against increased fuel costs or that our counterparties will be able to perform under our derivative contracts, such as in the case of a counterparty's insolvency. Furthermore, our ability to react to the cost of fuel, absent hedging, is limited because we set the price of tickets in advance of incurring fuel costs. Our ability to pass on any significant increases in aircraft fuel costs through fare increases could also be limited. In the event of a reduction in fuel prices compared to our hedged position, if any, our hedged positions could counteract the cost benefit of lower fuel prices and may require us to post cash margin collateral. Please see "Management's Discussion and Analysis of Financial Condition and Results of Operations—Trends and Uncertainties Affecting Our Business—Aircraft Fuel."

Restrictions on or increased taxes applicable to charges for ancillary products and services paid by airline passengers and burdensome consumer protection regulations or laws could harm our business, results of operations and financial condition.

During 2016, 2015 and 2014, we generated non-ticket revenues of \$1,121.3 million, \$972.1 million and \$786.6 million, respectively. Our non-ticket revenues are generated from charges for, among other things, baggage, bookings through certain of our distribution channels, advance seat selection, itinerary changes and loyalty programs. The DOT has rules governing many facets of the airline-consumer relationship, including, for instance, price advertising, tarmac delays, bumping of passengers from flights, ticket refunds and the carriage of disabled passengers. If we are not able to remain in compliance with these rules, the DOT may subject us to fines or other enforcement action, including requirements to modify our passenger reservations system, which could have a material adverse effect on our business. The U.S. Congress and Federal administrative agencies have investigated the increasingly common airline industry practice of unbundling the pricing of certain products and services. If new taxes are imposed on non-ticket revenues, or if other laws or regulations are adopted that make unbundling of airline products and services impermissible, or more cumbersome or expensive, our business, results of operations and financial condition could be harmed. Congressional and other government scrutiny may also change industry practice or public willingness to pay for ancillary services. See also "—We are subject to extensive regulation by the Federal Aviation Administration, the Department of Transportation and other U.S. and foreign governmental agencies, compliance with which could cause us to incur increased costs and adversely affect our business and financial results."

The airline industry is particularly sensitive to changes in economic conditions. Adverse economic conditions would negatively impact our business, results of operations and financial condition.

Our business and the airline industry in general are affected by many changing economic conditions beyond our control, including, among others:

- changes and volatility in general economic conditions, including the severity and duration of any downturn in the U.S. or global economy and financial markets;
- changes in consumer preferences, perceptions, spending patterns or demographic trends, including any increased preference for higher-fare carriers offering higher amenity levels, and reduced preferences for low-fare carriers offering more basic transportation, during better economic times;
- higher levels of unemployment and varying levels of disposable or discretionary income;
- depressed housing and stock market prices; and
- lower levels of actual or perceived consumer confidence.

These factors can adversely affect, and from time to time have adversely affected, our results of operations, our ability to obtain financing on acceptable terms and our liquidity. Unfavorable general economic conditions, such as higher

unemployment rates, a constrained credit market, housing-related pressures and increased focus on reducing business operating costs can reduce spending for price-sensitive leisure and business travel. For many travelers, in particular the price-sensitive travelers we serve, air transportation is a discretionary purchase that they may reduce or eliminate from their spending in

15

difficult economic times. The overall decrease in demand for air transportation in the United States in 2008 and 2009 resulting from record high fuel prices and the economic recession required us to take significant steps to reduce our capacity, which reduced our revenues. Unfavorable economic conditions could also affect our ability to raise prices to counteract increased fuel, labor or other costs, resulting in a material adverse effect on our business, results of operations and financial condition.

The airline industry faces ongoing security concerns and related cost burdens, furthered by threatened or actual terrorist attacks or other hostilities that could significantly harm our industry and our business.

The terrorist attacks of September 11, 2001 and their aftermath negatively affected the airline industry. The primary effects experienced by the airline industry included:

- substantial loss of revenue and flight disruption costs caused by the grounding of all commercial air traffic in or headed to the United States by the FAA for three days after the terrorist attacks;

- increased security and insurance costs;

- increased concerns about future terrorist attacks;

- airport shutdowns and flight cancellations and delays due to security breaches and perceived safety threats; and
- significantly reduced passenger traffic and yields due to the subsequent dramatic drop in demand for air travel.

Since September 11, 2001, the Department of Homeland Security and the TSA have implemented numerous security measures that restrict airline operations and increase costs, and are likely to implement additional measures in the future. For example, following the widely publicized attempt of an alleged terrorist to detonate plastic explosives hidden underneath his clothes on a Northwest Airlines flight on Christmas Day in 2009, passengers became subject to enhanced random screening, which included pat-downs, explosive detection testing and body scans. Enhanced passenger screening, increased regulation governing carry-on baggage and other similar restrictions on passenger travel may further increase passenger inconvenience and reduce the demand for air travel. In addition, increased or enhanced security measures have tended to result in higher governmental fees imposed on airlines, resulting in higher operating costs for airlines, which we may not be able to pass on to consumers in the form of higher prices. Any future terrorist attacks or attempted attacks, even if not made directly on the airline industry, or the fear of such attacks or other hostilities (including elevated national threat warnings or selective cancellation or redirection of flights due to terror threats) would likely have a material adverse effect on our business, results of operations and financial condition and on the airline industry in general.

Airlines are often affected by factors beyond their control, including: air traffic congestion at airports; air traffic control inefficiencies; adverse weather conditions, such as hurricanes or blizzards; increased security measures; new travel related taxes or the outbreak of disease, any of which could harm our business, operating results and financial condition.

Like other airlines, our business is affected by factors beyond our control, including air traffic congestion at airports, air traffic control inefficiencies, adverse weather conditions, increased security measures, new travel related taxes, the outbreak of disease, new regulations or policies from the incoming presidential administration and new Congress. Factors that cause flight delays frustrate passengers and increase costs, which in turn could adversely affect profitability. The federal government singularly controls all U.S. airspace, and airlines are completely dependent on the FAA to operate that airspace in a safe, efficient and affordable manner. The air traffic control system, which is operated by the FAA, faces challenges in managing the growing demand for U.S. air travel. U.S. and foreign air-traffic controllers often rely on outdated technologies that routinely overwhelm the system and compel airlines to fly inefficient, indirect routes resulting in delays. Adverse weather conditions and natural disasters, such as hurricanes affecting southern Florida and the Caribbean (such as Hurricane Matthew in October 2016) as well as other areas of the eastern United States (such as Hurricane Sandy in October 2012), winter snowstorms or the January 2010 earthquakes in Port-au-Prince, Haiti, can cause flight cancellations or significant delays. For example, during 2015, we experienced consecutive storm systems in Dallas, Chicago, New York and Detroit followed by Tropical Storm Bill that sat over Houston before moving north to Dallas. The timing and location of these storm systems produced a domino effect on our operations resulting in over 500 flight cancellations and numerous flight delays, which resulted in an adverse effect on our results of operations. Cancellations or delays due to adverse weather conditions or natural disasters, air traffic control problems or inefficiencies, breaches in security or other factors may affect us to a greater

degree than other, larger airlines that may be able to recover more quickly from these events, and therefore could harm our business, results of operations and financial condition to a greater degree than other air carriers. Because of our high utilization, point-to-point network, operational disruptions can have a disproportionate impact on our ability to recover. In addition, many airlines reaccommodate their disrupted passengers on other airlines at prearranged rates under flight interruption manifest agreements. We have been unsuccessful in procuring any of these agreements with our peers, which makes our recovery from disruption more challenging

than for larger airlines that have these agreements in place. Similarly, outbreaks of pandemic or contagious diseases, such as ebola, measles, avian flu, severe acute respiratory syndrome (SARS), H1N1 (swine) flu and Zika virus, could result in significant decreases in passenger traffic and the imposition of government restrictions in service and could have a material adverse impact on the airline industry. Increased travel taxes, such as those provided in the Travel Promotion Act, enacted March 10, 2010, which charges visitors from certain countries a \$10 fee every two years to travel into the United States to subsidize certain travel promotion efforts, could also result in decreases in passenger traffic. Any general reduction in airline passenger traffic could have a material adverse effect on our business, results of operations and financial condition.

Restrictions on or litigation regarding third-party membership discount programs could harm our business, operating results and financial condition.

We generate a relatively small but growing portion of our revenue from commissions, revenue share and other fees paid to us by third-party merchants for customer click-throughs, distribution of third-party promotional materials and referrals arising from products and services of the third-party merchants that we offer to our customers on our website. Some of these third-party referral-based offers are for memberships in discount programs or similar promotions made to customers who have purchased products from us, and for which we receive a payment from the third-party merchants for every customer that accepts the promotion. Certain of these third-party membership discount programs have been the subject of consumer complaints, litigation and regulatory actions alleging that the enrollment and billing practices involved in the programs violate various consumer protection laws or are otherwise deceptive. Any private or governmental claim or action that may be brought against us in the future relating to these third-party membership programs could result in our being obligated to pay damages or incurring legal fees in defending claims. These damages and fees could be disproportionate to the revenues we generate through these relationships. In addition, customer dissatisfaction or a significant reduction in or termination of the third-party membership discount offers on our website as a result of these claims could have a negative impact on our brand, and have a material adverse effect on our business, results of operations and financial condition.

We face competition from air travel substitutes.

In addition to airline competition from traditional network airlines, other low-cost airlines and regional airlines, we also face competition from air travel substitutes. On our domestic routes, we face competition from some other transportation alternatives, such as bus, train or automobile. In addition, technology advancements may limit the demand for air travel. For example, video conferencing and other methods of electronic communication may reduce the need for in-person communication and add a new dimension of competition to the industry as travelers seek lower-cost substitutes for air travel. If we are unable to adjust rapidly in the event the basis of competition in our markets changes, it could have a material adverse effect on our business, results of operations and financial condition.

Risks Related to Our Business

Increased labor costs, union disputes, employee strikes and other labor-related disruption may adversely affect our business, results of operations and financial conditions.

Our business is labor intensive, with labor costs representing approximately 25.2%, 23.1% and 19.9% of our total operating costs for 2016, 2015 and 2014, respectively. As of December 31, 2016, approximately 73% of our workforce was represented by labor unions. We cannot assure you that our labor costs going forward will remain competitive because in the future our labor agreements may be amended or become amendable and new agreements could have terms with higher labor costs; one or more of our competitors may significantly reduce their labor costs, thereby reducing or eliminating our comparative advantages as to one or more of such competitors; or our labor costs may increase in connection with our growth. We may also become subject to additional collective bargaining agreements in the future as non-unionized workers may unionize.

Relations between air carriers and labor unions in the United States are governed by the Railway Labor Act, or the RLA. Under the RLA, collective bargaining agreements generally contain “amendable dates” rather than expiration dates, and the RLA requires that a carrier maintain the existing terms and conditions of employment following the amendable date through a multi-stage and usually lengthy series of bargaining processes overseen by the NMB. This process continues until either the parties have reached agreement on a new collective bargaining agreement, or the parties have been released to “self-help” by the NMB. In most circumstances, the RLA prohibits strikes; however, after

release by the NMB, carriers and unions are free to engage in self-help measures such as lockouts and strikes. Our flight operations were shut down due to a strike by our pilots beginning on June 12, 2010 and lasting until we and the union representing our pilots reached a tentative agreement for a new contract. Under a Return to Work Agreement, we began to resume flights on June 17, 2010 and resumed our full flight schedule on June 18, 2010. On August 1, 2010, we and the

pilots' union executed a five-year collective bargaining agreement. This shutdown had a material adverse effect on our results of operations for 2010.

In March 2016, under the supervision of the NMB, we reached a tentative agreement for a five-year contract with our flight attendants. In May 2016, we entered into a five-year agreement with our flight attendants, which becomes amendable May 2021.

In August 2015, the collective bargaining agreement with our pilots, represented by ALPA, became amendable. In June 2016, ALPA requested the services of the NMB to facilitate negotiations for an amended agreement and we joined ALPA in the request. The NMB has assigned a mediator and the parties continue to meet and work toward an amended agreement with the guidance of the mediator. Under the RLA, the parties' current agreement remains in effect until an amended agreement is reached. If the NMB releases the parties to "self-help" in the absence of a new agreement, our pilots may go on strike, which would shut down our flight operations and have a material adverse effect on our business and results of operations.

In August 2013, we entered into a five-year agreement with our flight dispatchers, which becomes amendable August 2018.

In July 2014, certain ramp service agents directly employed by us voted to be represented by the International Association of Machinists and Aerospace Workers (IAMAW). In May 2015, we entered into a five-year interim collective bargaining agreement with the IAMAW, including material economic terms. In June 2016, we reached an agreement on the remaining terms of the collective bargaining agreement with the IAMAW, which is amendable in June 2020. As of December 31, 2016, these ramp service agents served 1 of the 59 airports where we operate.

The Patient Protection and Affordable Care Act was enacted in 2010. Under the new presidential administration, this law may be repealed in its entirety or certain aspects may be changed or replaced. If the law is repealed or modified or if new legislation is passed, such action could significantly increase cost of the healthcare benefits provided to our U.S. employees. In addition, the failure to comply materially with such existing and new laws, rules and regulations could adversely affect our business, results of operations and financial conditions.

We have a significant amount of aircraft-related fixed obligations that could impair our liquidity and thereby harm our business, results of operations and financial condition.

The airline business is capital intensive and, as a result, many airline companies are highly leveraged. As of December 31, 2016, our 95 aircraft fleet consisted of 59 aircraft financed under operating leases, 29 aircraft financed under debt arrangements, and 7 aircraft purchased off lease and currently unencumbered. In 2016 and 2015, we paid the lessors rent of \$213.9 million and \$217.0 million, respectively, and paid maintenance deposits of \$45.9 million and \$32.1 million, respectively. As of December 31, 2016, we had future aircraft and spare engine operating lease obligations of approximately \$1.5 billion. In 2016 and 2015, we made scheduled principal payments of \$64.4 million and \$25.4 million on our outstanding debt obligations, respectively. As of December 31, 2016, we had future principal debt obligations of \$1,012.4 million, of which \$88.9 million is due in 2017. In addition, we have significant obligations for aircraft and spare engines that we have ordered from Airbus, International Aero Engines AG, or IAE, and Pratt and Whitney for delivery over the next several years. Our ability to pay the fixed costs associated with our contractual obligations will depend on our operating performance, cash flow and our ability to secure adequate financing, which will in turn depend on, among other things, the success of our current business strategy, fuel price volatility, weakening or improvement in the U.S. economy, as well as general economic and political conditions and other factors that are beyond our control. The amount of our aircraft related fixed obligations and related need to obtain financing could have a material adverse effect on our business, results of operations and financial condition and could:

require a substantial portion of cash flow from operations for operating lease and maintenance deposit payments, thereby reducing the availability of our cash flow to fund working capital, capital expenditures and other general corporate purposes;

• limit our ability to make required pre-delivery deposit payments, or PDPs, including those payable to our aircraft and engine manufacturers for our aircraft and spare engines on order;

• limit our ability to obtain additional financing to support our expansion plans and for working capital and other purposes on acceptable terms or at all;

make it more difficult for us to pay our other obligations as they become due during adverse general economic and market industry conditions because any related decrease in revenues could cause us to not have sufficient cash flows from operations to make our scheduled payments;

18

reduce our flexibility in planning for, or reacting to, changes in our business and the airline industry and, consequently, place us at a competitive disadvantage to our competitors with fewer fixed payment obligations; and cause us to lose access to one or more aircraft and forfeit our rent deposits if we are unable to make our required aircraft lease rental and debt payments and our lessors or lenders exercise their remedies under the lease and debt agreements, including cross default provisions in certain of our leases and mortgages.

A failure to pay our operating lease, debt and other fixed cost obligations or a breach of our contractual obligations could result in a variety of adverse consequences, including the exercise of remedies by our creditors and lessors. In such a situation, it is unlikely that we would be able to cure our breach, fulfill our obligations, make required lease or debt payments or otherwise cover our fixed costs, which would have a material adverse effect on our business, results of operations and financial condition.

We are highly dependent upon our cash balances and operating cash flows.

As of December 31, 2016, we had access to lines of credit from our physical fuel delivery and derivative counterparties and our purchase credit card issuer aggregating \$70.1 million. In addition, we had a \$25.2 million unsecured standby letter of credit facility. These credit facilities are not adequate to finance our operations, and we will continue to be dependent on our operating cash flows and cash balances to fund our operations and to make scheduled payments on our aircraft related fixed obligations. In addition, our credit card processors are entitled to withhold receipts from customer purchases from us, under certain circumstances. Although our credit card processors currently do not have a right to hold back credit card receipts to cover repayment to customers, if we fail to maintain certain liquidity and other financial covenants, their rights to holdback would be reinstated, which would result in a reduction of unrestricted cash that could be material. In addition, we are required by some of our aircraft lessors to fund reserves in cash in advance for scheduled maintenance, and a portion of our cash is therefore unavailable until after we have completed the scheduled maintenance in accordance with the terms of the operating leases. Based on the age of our fleet and our growth strategy, these maintenance deposits will increase over the next few years before we receive any significant reimbursement for completed maintenance. If we fail to generate sufficient funds from operations to meet our operating cash requirements or do not obtain a line of credit, other borrowing facility or equity financing, we could default on our operating lease and fixed obligations. Our inability to meet our obligations as they become due would have a material adverse effect on our business, results of operations and financial condition.

A deterioration in worldwide economic conditions may adversely affect our business, operating results, financial condition, liquidity and ability to obtain financing or access capital markets.

The general worldwide economy has in the past experienced downturns due to the effects of the European debt crisis, unfavorable U.S. economic conditions and slowing growth in certain Asian economies, including general credit market crises, collateral effects on the finance and banking industries, energy price volatility, concerns about inflation, slower economic activity, decreased consumer confidence, reduced corporate profits and capital spending, adverse business conditions, geopolitical conflict and liquidity concerns. The airline industry is particularly sensitive to changes in economic conditions, which affect customer travel patterns and related revenues. A weak economy could reduce our bookings, and a reduction in discretionary spending could also decrease amounts our customers are willing to pay. Unfavorable economic conditions can also impact the ability of airlines to raise fares to help offset increased fuel, labor and other costs. We cannot accurately predict the effect or duration of any economic slowdown or the timing or strength of a subsequent economic recovery.

In addition, we have significant obligations for aircraft and spare engines that we have ordered from Airbus, IAE and Pratt and Whitney over the next several years, and we will need to finance these purchases. We may not have sufficient liquidity or creditworthiness to fund the purchase of aircraft and engines, including payment of PDPs, or for other working capital. Factors that affect our ability to raise financing or access the capital markets include market conditions in the airline industry, economic conditions, the perceived residual value of aircraft and related assets, the level and volatility of our earnings, our relative competitive position in the markets in which we operate, our ability to retain key personnel, our operating cash flows and legal and regulatory developments. Regardless of our creditworthiness, at times the market for aircraft purchase or lease financing has been very constrained due to such factors as the general state of the capital markets and the financial position of the major providers of commercial aircraft financing.

Our liquidity and general level of capital resources impact our ability to hedge our fuel requirements. From time to time, we may enter into fuel derivative contracts in order to mitigate the risk to our business from future volatility in fuel prices, refining risk between the price of crude oil and the price of refined jet fuel, and to manage the risk of increasing fuel prices. As of December 31, 2016, we had no outstanding jet fuel derivatives. There can be no assurance that we will be able to enter into fuel derivative contracts in the future if we are required or choose to do so. In the past, we have not had and in the future we may not have sufficient creditworthiness or liquidity to post the collateral necessary to hedge our fuel

requirements. Even if we are able to hedge portions of our future fuel requirements, we cannot guarantee that our derivative contracts will provide any particular level of protection against increased fuel costs or that our counterparties will be able to perform under our derivative contracts, such as in the case of a counterparty's insolvency. In a falling fuel environment, we may be required to make cash payments to our counterparties which may impair our liquidity position and increase our costs. Furthermore, our ability to react to the cost of fuel, absent hedging, is limited, because we set the price of tickets in advance of knowing our fuel costs at the time the tickets are flown. Our ability to pass on any significant increases in aircraft fuel costs through fare increases could also be limited. We rely on maintaining a high daily aircraft utilization rate to implement our low cost structure, which makes us especially vulnerable to flight delays or cancellations or aircraft unavailability.

We maintain a high daily aircraft utilization rate. Our average daily aircraft utilization was 12.4 hours for 2016, and 12.7 hours for 2015 and 2014. Aircraft utilization is the average amount of time per day that our aircraft spend carrying passengers. Our revenue per aircraft can be increased by high daily aircraft utilization, which is achieved in part by reducing turnaround times at airports so we can fly more hours on average in a day. Aircraft utilization is reduced by delays and cancellations from various factors, many of which are beyond our control, including air traffic congestion at airports or other air traffic control problems, adverse weather conditions, increased security measures or breaches in security, international or domestic conflicts, terrorist activity, or other changes in business conditions. A significant portion of our operations are concentrated in markets such as South Florida, the Caribbean, Latin America and the Northeast and northern Midwest regions of the United States, which are particularly vulnerable to weather, airport traffic constraints and other delays. In addition, pulling aircraft out of service for unscheduled and scheduled maintenance, the occurrence of which will increase as our fleet ages, may materially reduce our average fleet utilization and require that we seek short-term substitute capacity at increased costs. Due to the relatively small size of our fleet and high daily aircraft utilization rate, the unavailability of one or more aircraft and resulting reduced capacity could have a material adverse effect on our business, results of operations and financial condition.

Our maintenance costs will increase as our fleet ages, and we will periodically incur substantial maintenance costs due to the maintenance schedules of our aircraft fleet.

As of December 31, 2016, the average age of our aircraft was approximately 5.2 years. Our relatively new aircraft require less maintenance now than they will in the future. Our fleet will require more maintenance as it ages and our maintenance and repair expenses for each of our aircraft will be incurred at approximately the same intervals. For our leased aircraft, we expect that the final heavy maintenance events will be amortized over the remaining lease term rather than until the next estimated heavy maintenance event, because we account for heavy maintenance under the deferral method. This will result in significantly higher depreciation and amortization expense related to heavy maintenance in the last few years of the leases as compared to the costs in earlier periods. Moreover, because our current fleet was acquired over a relatively short period, significant maintenance that is scheduled on each of these planes is occurring at roughly the same time, meaning we will incur our most expensive scheduled maintenance obligations, known as heavy maintenance, across our present fleet around the same time. These more significant maintenance activities result in out-of-service periods during which our aircraft are dedicated to maintenance activities and unavailable to fly revenue service. In addition, the terms of some of our lease agreements require us to pay maintenance reserves to the lessor in advance of the performance of major maintenance, resulting in our recording significant prepaid deposits on our balance sheet. Depending on their recoverability, these maintenance reserves may be classified as supplemental rent. We expect scheduled and unscheduled aircraft maintenance expenses to increase over the next several years. Any significant increase in maintenance and repair expenses would have a material adverse effect on our business, results of operations and financial condition. Please see "Management's Discussion and Analysis of Financial Condition and Results of Operations—Critical Accounting Policies and Estimates—Aircraft Maintenance, Materials and Repair Costs and Heavy Maintenance Amortization" and "—Maintenance Reserves." Our lack of marketing alliances could harm our business.

Many airlines, including the domestic traditional network airlines (American, Delta and United) have marketing alliances with other airlines, under which they market and advertise their status as marketing alliance partners. These alliances, such as OneWorld, SkyTeam and Star Alliance, generally provide for code-sharing, frequent flier program reciprocity, coordinated scheduling of flights to permit convenient connections and other joint marketing activities.

Such arrangements permit an airline to market flights operated by other alliance members as its own. This increases the destinations, connections and frequencies offered by the airline and provides an opportunity to increase traffic on that airline's segment of flights connecting with alliance partners. We currently do not have any alliances with U.S. or foreign airlines. Our lack of marketing alliances puts us at a competitive disadvantage to traditional network carriers who are able to attract passengers through more widespread alliances, particularly on international routes, and that disadvantage may result in a material adverse effect on our passenger traffic, business, results of operations and financial condition.

We are subject to extensive and increasing regulation by the FAA, DOT, TSA and other U.S. and foreign governmental agencies, compliance with which could cause us to incur increased costs and adversely affect our business and financial results.

Airlines are subject to extensive and increasing regulatory and legal compliance requirements, both domestically and internationally, that involve significant costs. In the last several years, Congress has passed laws, and the DOT, FAA and TSA have issued regulations, relating to the operation of airlines that have required significant expenditures. We expect to continue to incur expenses in connection with complying with government regulations. Additional laws, regulations, taxes and increased airport rates and charges have been proposed from time to time that could significantly increase the cost of airline operations or reduce the demand for air travel. If adopted, these measures could have the effect of raising ticket prices, reducing revenue and increasing costs.

DOT has been aggressive in enforcing regulations for violations of the tarmac delay rules, passenger with disability rules, advertising rules and other consumer protection rules that could increase the cost of airline operations or reduce revenues. Additional rules on providing scheduling, fare and fee information to travel agents and metasearch sites originally proposed in 2014 may be issued in 2017. Additional disability rules may be proposed in 2017, including with respect to access to lavatories on single-aisle aircraft. In addition, during 2014, the FAA issued its final regulations governing pilot rest periods and work hours for all airlines certificated under Part 121 of the Federal Aviation Regulations. The rule known as FAR 117, which became effective January 4, 2014, impacts the required amount and timing of rest periods for pilots between work assignments and modifies duty and rest requirements based on the time of day, number of scheduled segments, flight types, time zones and other factors. Compliance with these rules may increase our costs, while failure to remain in full compliance with these rules may subject us to fines or other enforcement action.

In 2016, Congress passed the FAA Extension, Safety and Security Act of 2016, which extends FAA funding through September 30, 2017. The ACT included a provision requiring airlines to refund fees for delayed checked bags if they are not delivered to the passenger within a specified number of hours. DOT is collecting information from which to develop a rule which Congress required to be issued by July 15, 2017. Congress will be considering a new FAA legislation in 2017 which may include reorganization of air traffic control function and its funding mechanism. Congress may also consider imposing taxes on carry-on and checked bag fees which has been proposed in previous legislation. If Congress were to enact any new FAA reauthorization bill or similar legislation, it is uncertain what effect it would have on our results of operations and financial condition.

We cannot assure you that these and other laws or regulations enacted in the future will not harm our business. In addition, the TSA mandates the federalization of certain airport security procedures and imposes additional security requirements on airports and airlines, most of which are funded by a per ticket tax on passengers and a tax on airlines. Prior to and for the first half of 2014, the passenger security fee was \$2.50 per passenger flight segment, subject to a \$5 per one-way trip cap. In July 2014, the TSA implemented an increased passenger security fee at a flat rate of \$5.60. On December 19, 2014, the law was amended to limit a round-trip fee to \$11.20. We cannot forecast what additional security and safety requirements may be imposed in the future or the costs or revenue impact that would be associated with complying with such requirements.

Our ability to operate as an airline is dependent on our maintaining certifications issued to us by the DOT and the FAA. The FAA has the authority to issue mandatory orders relating to, among other things, the grounding of aircraft, inspection of aircraft, installation of new safety-related items and removal and replacement of aircraft parts that have failed or may fail in the future. A decision by the FAA to ground, or require time consuming inspections of or maintenance on, our aircraft, for any reason, could negatively affect our business and financial results. Federal law requires that air carriers operating large aircraft be continuously “fit, willing and able” to provide the services for which they are licensed. Our “fitness” is monitored by the DOT, which considers factors such as unfair or deceptive competition, advertising, baggage liability and disabled passenger transportation. While the DOT has seldom revoked a carrier's certification for lack of fitness, such an occurrence would render it impossible for us to continue operating

as an airline. The DOT may also institute investigations or administrative proceedings against airlines for violations of regulations.

The U.S. government is under persistent pressure to implement cost cutting and efficiency initiatives. In addition, the U.S. government has recently and may in the future experience delays in the completion of its budget process which could delay funding for government departments and agencies that regulate or otherwise are tied to the aviation industry, including the DOT and FAA. To the extent that any such initiatives or budgeting delays affect the operations of these government departments and agencies, including by forcing mandatory furloughs of government employees, our operations and results of operations could be materially adversely effected.

International routes are regulated by treaties and related agreements between the United States and foreign governments. Our ability to operate international routes is subject to change because the applicable arrangements between the United States and foreign governments may be amended from time to time. Our access to new international markets may be limited by our ability to obtain the necessary certificates to fly the international routes. In addition, our operations in foreign countries are subject to regulation by foreign governments and our business may be affected by changes in law and future actions taken by such governments, including granting or withdrawal of government approvals and restrictions on competitive practices. We are subject to numerous foreign regulations based on the large number of countries outside the United States where we currently provide service. If we are not able to comply with this complex regulatory regime, our business could be significantly harmed. Please see “Business — Government Regulation.”

Changes in legislation, regulation and government policy as a result of the 2016 U.S. presidential and congressional elections may have a material adverse effect on our business in the future.

The recent presidential and congressional elections in the United States could result in significant changes in, and uncertainty with respect to, legislation, regulation and government policy. While it is not possible to predict whether and when any such changes will occur, changes at the local, state or federal level could significantly impact our business and the airline industry. Specific legislative and regulatory proposals discussed during and after the election that could have a material impact on us include, but are not limited to, reform of the federal tax code; infrastructure renewal programs; changes to immigration policy; modifications to international trade policy, including withdrawing from trade agreements and taxes on imports; changes to the financial legislation, including the partial or full repeal of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, or Dodd-Frank Act; public company reporting requirements; environmental regulation and antitrust enforcement. Any such changes may make it more difficult and/or more expensive for us to obtain new aircraft or engines and parts to maintain existing aircraft or engines. For example, certain tax proposals would generally (a) make net interest expense on debt non-deductible to borrowers and (b) increase the cost of importing (possibly including via lease) property. Certain proposals discussed during and after the election may make it less profitable or prevent us from flying to or from some of the destinations we currently serve.

We are currently unable to predict whether reform discussions will meaningfully change existing legislative and regulatory environments relevant for our business. To the extent that such changes have a negative impact on us or the airline industry, including as a result of related uncertainty, these changes may materially and adversely impact our business, financial condition, results of operations and cash flows

We may not be able to implement our growth strategy.

Our growth strategy includes acquiring additional aircraft, increasing the frequency of flights and size of aircraft used in markets we currently serve, and expanding the number of markets we serve where our low cost structure would likely be successful. Effectively implementing our growth strategy is critical for our business to achieve economies of scale and to sustain or increase our profitability. We face numerous challenges in implementing our growth strategy, including our ability to:

- maintain profitability;
- obtain financing to acquire new aircraft;
- access airports located in our targeted geographic markets where we can operate routes in a manner that is consistent with our cost strategy;
- obtain sufficient spare parts or related support services from our suppliers on a timely basis;
- gain access to international routes; and
- access sufficient gates and other services at airports we currently serve or may seek to serve.

Our growth is dependent upon our ability to maintain a safe and secure operation and requires additional personnel, equipment and facilities. An inability to hire and retain personnel, timely secure the required equipment and facilities

in a cost-effective manner, efficiently operate our expanded facilities or obtain the necessary regulatory approvals may adversely affect our ability to achieve our growth strategy, which could harm our business. In addition, expansion to new markets may have other risks due to factors specific to those markets. We may be unable to foresee all of the existing risks upon entering certain new markets or respond adequately to these risks, and our growth strategy and our business may suffer as a result. In addition, our competitors may reduce their fares and/or offer special promotions to deter our entry into a new market or to stop our growth into existing markets or new markets. We cannot assure you that we will be able to profitably expand our existing markets or establish new markets.

Some of our target growth markets in the Caribbean and Latin America include countries with less developed economies that may be vulnerable to unstable economic and political conditions, such as significant fluctuations in gross domestic product, interest and currency exchange rates, high inflation, civil disturbances, government instability, nationalization and expropriation of private assets and the imposition of taxes or other charges by governments. The occurrence of any of these events in markets served by us and the resulting instability may adversely affect our ability to implement our growth strategy.

In 2008, in response to record high fuel prices and rapidly deteriorating economic conditions, we modified our growth plans by terminating our leases for seven aircraft. We incurred significant expenses relating to our lease terminations, and have incurred additional expenses to acquire new aircraft in place of those under the terminated leases as we expanded our network. We may in the future determine to reduce further our future growth plans from previously announced levels, which may impact our business strategy and future profitability.

We rely heavily on technology and automated systems to operate our business and any failure of these technologies or systems or failure by their operators could harm our business.

We are highly dependent on technology and automated systems to operate our business and achieve low operating costs. These technologies and systems include our computerized airline reservation system, flight operations system, financial planning, management and accounting system, telecommunications systems, website, maintenance systems and check-in kiosks. The performance and reliability of our technology are critical to our ability to operate and compete effectively. Our Board of Directors recently approved a significant technology upgrade initiative meant to address our aging IT infrastructure. This initiative will upgrade, replace, and enhance multiple older and outdated legacy systems and hardware. The execution of our strategic plans could be negatively affected by (i) our ability to timely and effectively implement, transition, and maintain related information technology systems and infrastructure; (ii) our ability to effectively balance its investment of incremental operating expenses and capital expenditures related to its strategies against the need to effectively control cost; and (iii) our dependence on third parties with respect to its ability to implement its strategic plans. We cannot assure you that our security measures, change control procedures, and disaster recovery plans will be adequate to prevent disruptions or delays. Disruption in or changes to these systems could result in an interruption to our operations or loss of important data. Any of the foregoing could result in a material adverse effect on our business, reputation, results of operations and financial condition.

In order for our operations to work efficiently, our website and reservation system must be able to accommodate a high volume of traffic, maintain secure information and deliver flight information with a high degree of reliability. Substantially all of our tickets are issued to passengers as electronic tickets. We depend on our reservation system, which is hosted and maintained under a long-term contract by a third-party service provider, to be able to issue, track and accept these electronic tickets. If our reservation system fails or experiences interruptions, and we are unable to book seats for any period of time, we could lose a significant amount of revenue as customers book seats on competing airlines. We have experienced short duration reservation system outages from time to time and may experience similar outages in the future. For example, in November 2010, we experienced a significant service outage with our third-party reservation service provider on the day before Thanksgiving, one of the industry's busiest travel days and in August 2013, we experienced another 13 hour outage that affected our sales and customer service response times. We also rely on third-party service providers of our other automated systems for technical support, system maintenance and software upgrades. If our automated systems are not functioning or if the current providers were to fail to adequately provide technical support or timely software upgrades for any one of our key existing systems, we could experience service disruptions, which could harm our business and result in the loss of important data, increase our expenses and decrease our revenues. In the event that one or more of our primary technology or systems' vendors goes into bankruptcy, ceases operations or fails to perform as promised, replacement services may not be readily available on a timely basis, at competitive rates or at all and any transition time to a new system may be significant.

In addition, our automated systems cannot be completely protected against events that are beyond our control, including natural disasters, cyber attacks or telecommunications failures. Substantial or sustained system failures could cause service delays or failures and result in our customers purchasing tickets from other airlines. We have implemented security measures and change control procedures and have disaster recovery plans; however, we cannot

assure you that these measures are adequate to prevent disruptions. Disruption in, changes to or a breach of, these systems could result in a disruption to our business and the loss of important data. Moreover, in the event of system outages or interruptions, we may not be able to recover from our information technology and software providers all or any portion of the costs or business losses we may incur. Any of the foregoing could result in a material adverse effect on our business, results of operations and financial condition.

We are subject to cyber security risks and may incur increasing costs in an effort to minimize those risks. Our business employs systems and websites that allow for the secure storage and transmission of proprietary or confidential information regarding our customers, employees, suppliers and others, including personal identification information, credit card data and other confidential information. Security breaches could expose us to a risk of loss or misuse of

this information, litigation and potential liability. Although we take steps to secure our management information systems, and although multiple auditors review and approve the security configurations and management processes of these systems, including our computer systems, intranet and internet sites, email and other telecommunications and data networks, the security measures we have implemented may not be effective, and our systems may be vulnerable to theft, loss, damage and interruption from a number of potential sources and events, including unauthorized access or security breaches, natural or man-made disasters, cyber attacks, computer viruses, power loss, or other disruptive events. We may not have the resources or technical sophistication to anticipate or prevent rapidly evolving types of cyber attacks. Attacks may be targeted at us, our customers and suppliers, or others who have entrusted us with information. In addition, attacks not targeted at us, but targeted solely at suppliers, may cause disruption to our computer systems or a breach of the data that we maintain on customers, employees, suppliers and others.

Actual or anticipated attacks may cause us to incur increasing costs, including costs to deploy additional personnel and protection technologies, train employees and engage third-party experts and consultants, or costs incurred in connection with the notifications to employees, suppliers or the general public as part of our notification obligations to the various governments that govern our business. Advances in computer capabilities, new technological discoveries, or other developments may result in the breach or compromise of technology used by us to protect transaction or other data. In addition, data and security breaches can also occur as a result of non-technical issues, including breaches by us or by persons with whom we have commercial relationships that result in the unauthorized release of personal or confidential information. Our reputation, brand and financial condition could be adversely affected if, as a result of a significant cyber event or other security issues: our operations are disrupted or shut down; our confidential, proprietary information is stolen or disclosed; we incur costs or are required to pay fines in connection with stolen customer, employee or other confidential information; we must dedicate significant resources to system repairs or increase cyber security protection; or we otherwise incur significant litigation or other costs.

Our processing, storage, use and disclosure of personal data could give rise to liabilities as a result of governmental regulation.

In the processing of our customer transactions, we receive, process, transmit and store a large volume of identifiable personal data, including financial data such as credit card information. This data is increasingly subject to legislation and regulation, such as the Fair Accurate Credit Transparency Act and Payment Card Industry legislation, typically intended to protect the privacy of personal data that is collected, processed and transmitted. More generally, we rely on consumer confidence in the security of our system, including our website on which we sell the majority of our tickets. Our business, results of operations and financial condition could be adversely affected if we are unable to comply with existing privacy obligations or legislation or regulations are expanded to require changes in our business practices.

We may not be able to maintain or grow our non-ticket revenues.

Our business strategy includes expanding our portfolio of ancillary products and services. There can be no assurance that passengers will pay for additional ancillary products and services or that passengers will continue to choose to pay for the ancillary products and services we currently offer. Further, regulatory initiatives could adversely affect ancillary revenue opportunities. Failure to maintain our non-ticket revenues would have a material adverse effect on our results of operations and financial condition. Furthermore, if we are unable to maintain and grow our non-ticket revenues, we may not be able to execute our strategy to continue to lower base fares to address an underserved market. Please see “—Restrictions on or increased taxes applicable to charges for ancillary products and services paid by airline passengers and burdensome consumer protection regulations or laws could harm our business, results of operations and financial condition.”

Our inability to expand or operate reliably or efficiently out of our key airports where we maintain a large presence could have a material adverse effect on our business, results of operations and financial condition.

We are highly dependent on markets served from airports where we maintain a large presence. Our results of operations may be affected by actions taken by governmental or other agencies or authorities having jurisdiction over our operations at airports, including, but not limited to:

- increases in airport rates and charges;
- limitations on take-off and landing slots, airport gate capacity or other use of airport facilities;

• termination of our airport use agreements, some of which can be terminated by airport authorities with little notice to us;

• increases in airport capacity that could facilitate increased competition;

24

- international travel regulations such as customs and immigration;
- increases in taxes;
- changes in the law that affect the services that can be offered by airlines in particular markets and at particular airports;
- restrictions on competitive practices;
- the adoption of statutes or regulations that impact customer service standards, including security standards; and
- the adoption of more restrictive locally-imposed noise regulations or curfews.

In general, any changes in airport operations could have a material adverse effect on our business, results of operations and financial condition.

We rely on third-party service providers to perform functions integral to our operations.

We have entered into agreements with third-party service providers to furnish certain facilities and services required for our operations, including ground handling, catering, passenger handling, engineering, maintenance, refueling, reservations and airport facilities as well as administrative and support services. We are likely to enter into similar service agreements in new markets we decide to enter, and there can be no assurance that we will be able to obtain the necessary services at acceptable rates.

Although we seek to monitor the performance of third parties that provide us with our reservation system, ground handling, catering, passenger handling, engineering, maintenance services, refueling and airport facilities, the efficiency, timeliness and quality of contract performance by third-party service providers are often beyond our control, and any failure by our service providers to perform their contracts may have an adverse impact on our business and operations. For example, in 2008, our call center provider went bankrupt. Though we were able to quickly switch to an alternative vendor, we experienced a significant business disruption during the transition period and a similar disruption could occur in the future if we changed call center providers or if an existing provider ceased to be able to serve us. We expect to be dependent on such third-party arrangements for the foreseeable future.

We rely on third-party distribution channels to distribute a portion of our airline tickets.

We rely on third-party distribution channels, including those provided by or through global distribution systems, or GDSs, conventional travel agents and online travel agents, or OTAs, to distribute a portion of our airline tickets, and we expect in the future to rely on these channels to an increasing extent to collect ancillary revenues. These distribution channels are more expensive and at present have less functionality in respect of ancillary revenues than those we operate ourselves, such as our call centers and our website. Certain of these distribution channels also effectively restrict the manner in which we distribute our products generally. To remain competitive, we will need to successfully manage our distribution costs and rights, and improve the functionality of third-party distribution channels, while maintaining an industry-competitive cost structure. Negotiations with key GDSs and OTAs designed to manage our costs, increase our distribution flexibility, and improve functionality could be contentious, could result in diminished or less favorable distribution of our tickets, and may not provide the functionality we require to maximize ancillary revenues. Any inability to manage our third-party distribution costs, rights and functionality at a competitive level or any material diminishment in the distribution of our tickets could have a material adverse effect on our competitive position and our results of operations. Moreover, our ability to compete in the markets we serve may be threatened by changes in technology or other factors that may make our existing third-party sales channels impractical, uncompetitive, or obsolete.

We rely on a single service provider to manage our fuel supply.

As of December 31, 2016, we had a single fuel service contract with World Fuel Services Corporation to manage the sourcing and contracting of our fuel supply. A failure by this provider to fulfill its obligations could have a material adverse effect on our business, results of operations and financial condition.

Our reputation and business could be materially adversely affected in the event of an emergency, accident or similar incident involving our aircraft.

We are exposed to potential significant losses in the event that any of our aircraft is subject to an emergency, accident, terrorist incident or other similar incident, and significant costs related to passenger claims, repairs or replacement of a damaged aircraft and its temporary or permanent loss from service. There can be no assurance that we will not be affected by

such events or that the amount of our insurance coverage will be adequate in the event such circumstances arise and any such event could cause a substantial increase in our insurance premiums. Please see “—Increases in insurance costs or significant reductions in coverage could have a material adverse effect on our business, financial condition and results of operations.” In addition, any future aircraft emergency, accident or similar incident, even if fully covered by insurance or even if it does not involve our airline, may create a public perception that our airline or the equipment we fly is less safe or reliable than other transportation alternatives, or could cause us to perform time consuming and costly inspections on our aircraft or engines which could have a material adverse effect on our business, results of operations and financial condition.

Negative publicity regarding our customer service or otherwise could have a material adverse effect on our business. In the past, we have experienced a relatively high number of customer complaints related to, among other things, our customer service and reservations and ticketing systems. In particular, we generally experience a higher volume of complaints when we make changes to our unbundling policies, such as charging for baggage. In addition, in 2009, we entered into a consent order with the DOT for our procedures for bumping passengers from oversold flights and our handling of lost or damaged baggage. Under the consent order, we were assessed a civil penalty of \$375,000, of which we were required to pay \$215,000 based on an agreement with the DOT and not having similar violations in the year after the date of the consent order. Further, media reports about incidents on our aircraft unrelated to customer complaints could negatively impact our reputation and our operations. If we do not meet our customers' expectations with respect to reliability and service, customers could decide not to fly with us, which would materially adversely affect our business and reputation.

We depend on a limited number of suppliers for our aircraft and engines.

One of the elements of our business strategy is to save costs by operating a single-family aircraft fleet - currently Airbus A320-family, single-aisle aircraft, powered by engines manufactured by IAE. If Airbus, IAE, or Pratt and Whitney become unable to perform its contractual obligations, or if we are unable to acquire or lease aircraft or engines from these or other owners, operators or lessors on acceptable terms, we would have to find other suppliers for a similar type of aircraft or engine. If we have to lease or purchase aircraft from another supplier, we would lose the significant benefits we derive from our current single fleet composition. We may also incur substantial transition costs, including costs associated with retraining our employees, replacing our manuals and adapting our facilities and maintenance programs. Our operations could also be harmed by the failure or inability of aircraft, engine and parts suppliers to provide sufficient spare parts or related support services on a timely basis. Our business would be significantly harmed if a design defect or mechanical problem with any of the types of aircraft or components that we operate were discovered that would ground any of our aircraft while the defect or problem was corrected, assuming it could be corrected at all. The use of our aircraft could be suspended or restricted by regulatory authorities in the event of any actual or perceived mechanical or design problems. Our business would also be significantly harmed if the public began to avoid flying with us due to an adverse perception of the types of aircraft that we operate stemming from safety concerns or other problems, whether real or perceived, or in the event of an accident involving those types of aircraft or components. Carriers that operate a more diversified fleet are better positioned than we are to manage such events.

Reduction in demand for air transportation, or governmental reduction or limitation of operating capacity, in the domestic U.S., Caribbean or Latin American markets could harm our business, results of operations and financial condition.

A significant portion of our operations are conducted to and from the domestic U.S., Caribbean or Latin American markets. Our business, results of operations and financial condition could be harmed if we lost our authority to fly to these markets, by any circumstances causing a reduction in demand for air transportation, or by governmental reduction or limitation of operating capacity, in these markets, such as adverse changes in local economic or political conditions, negative public perception of these destinations, unfavorable weather conditions, public health concerns or terrorist related activities. Furthermore, our business could be harmed if jurisdictions that currently limit competition allow additional airlines to compete on routes we serve. Many of the countries we serve are experiencing either economic slowdowns or recessions, which may translate into a weakening of demand and could harm our business, results of operations and financial condition.

Increases in insurance costs or significant reductions in coverage could have a material adverse effect on our business, financial condition and results of operations.

We carry insurance for third-party liability, passenger liability, property damage and all-risk coverage for damage to our aircraft. As a result of the September 11, 2001 terrorist attacks, aviation insurers significantly reduced the amount of insurance coverage available to commercial air carriers for liability to persons other than employees or passengers for claims resulting from acts of terrorism, war or similar events (war risk insurance). Accordingly, our insurance costs increased significantly and our ability to continue to obtain certain types of insurance remains uncertain. While the price of commercial insurance has declined since the period immediately after the terrorist attacks, in the event commercial insurance carriers further reduce the

amount of insurance coverage available to us, or significantly increase its cost, we would be adversely affected. We currently maintain commercial airline insurance with several underwriters. However, there can be no assurance that the amount of such coverage will not be changed, or that we will not bear substantial losses from accidents. We could incur substantial claims resulting from an accident in excess of related insurance coverage that could have a material adverse effect on our results of operations and financial condition.

Beginning in July 2014, we obtained war risk insurance from the commercial market which insures against some risks of terrorism. Previous to this date, we obtained this insurance through a special program administered by the FAA, which was discontinued late 2014. Renewing coverage from commercial underwriters may result in higher premiums and more restrictive terms. Our business, results of operations and financial condition could be materially adversely affected if we are unable to obtain adequate war risk insurance. Our current war risk hull and liability insurance policy is effective until July 2017.

Failure to comply with applicable environmental regulations could have a material adverse effect on our business, results of operations and financial condition.

We are subject to increasingly stringent federal, state, local and foreign laws, regulations and ordinances relating to the protection of the environment, including those relating to emissions to the air, discharges to surface and subsurface waters, safe drinking water and the management of hazardous substances, oils and waste materials. Compliance with all environmental laws and regulations can require significant expenditures and any future regulatory developments in the United States and abroad could adversely affect operations and increase operating costs in the airline industry. For example, climate change legislation was previously introduced in Congress and such legislation could be re-introduced in the future by Congress and state legislatures, and could contain provisions affecting the aviation industry, compliance with which could result in the creation of substantial additional costs to us. Similarly, the Environmental Protection Agency issued a rule that regulates larger emitters of greenhouse gases. Future operations and financial results may vary as a result of such regulations. Compliance with these regulations and new or existing regulations that may be applicable to us in the future could increase our cost base and could have a material adverse effect on our business, results of operations and financial condition.

Governmental authorities in several U.S. and foreign cities are also considering or have already implemented aircraft noise reduction programs, including the imposition of nighttime curfews and limitations on daytime take-offs and landings. We have been able to accommodate local noise restrictions imposed to date, but our operations could be adversely affected if locally-imposed regulations become more restrictive or widespread.

If we are unable to attract and retain qualified personnel or fail to maintain our company culture, our business, results of operations and financial condition could be harmed.

Our business is labor intensive. We require large numbers of pilots, flight attendants, maintenance technicians and other personnel. The airline industry has from time to time experienced a shortage of qualified personnel, particularly with respect to pilots and maintenance technicians. In addition, we may face high employee turnover. We may be required to increase wages and/or benefits in order to attract and retain qualified personnel. If we are unable to hire, train and retain qualified employees, our business could be harmed and we may be unable to implement our growth plans.

In addition, as we hire more people and grow, we believe it may be increasingly challenging to continue to hire people who will maintain our company culture. Our company culture, which we believe is one of our competitive strengths, is important to providing high-quality customer service and having a productive, accountable workforce that helps keep our costs low. As we continue to grow, we may be unable to identify, hire or retain enough people who meet the above criteria, including those in management or other key positions. Our company culture could otherwise be adversely affected by our growing operations and geographic diversity. If we fail to maintain the strength of our company culture, our competitive ability and our business, results of operations and financial condition could be harmed.

Our business, results of operations and financial condition could be materially adversely affected if we lose the services of our key personnel.

Our success depends to a significant extent upon the efforts and abilities of our senior management team and key financial and operating personnel. In particular, we depend on the services of our senior management team.

Competition for highly qualified personnel is intense, and the loss of any executive officer, senior manager, or other key employee without adequate replacement or the inability to attract new qualified personnel could have a material adverse effect on our business, results of operations and financial condition. We do not maintain key-person life insurance on our management team.

The requirements of being a public company may strain our resources, divert management's attention and affect our ability to attract and retain qualified board members.

As a public company, we incur significant legal, accounting and other expenses, including costs associated with public company reporting requirements. We also have incurred and will continue to incur costs associated with the Sarbanes-Oxley Act of 2002, as amended, the Dodd-Frank Wall Street Reform and Consumer Protection Act and related rules implemented or to be implemented by the SEC and the NASDAQ Stock Market. The expenses incurred by public companies generally for reporting and corporate governance purposes have been increasing. We expect these rules and regulations to increase our legal and financial compliance costs and to make some activities more time-consuming and costly. These laws and regulations could also make it more difficult or costly for us to obtain certain types of insurance, including director and officer liability insurance, and we may be forced to accept reduced policy limits and coverage or incur substantially higher costs to obtain the same or similar coverage. These laws and regulations could also make it more difficult for us to attract and retain qualified persons to serve on our board of directors, our board committees, or as our executive officers and may divert management's attention. Furthermore, if we are unable to satisfy our obligations as a public company, we could be subject to delisting of our common stock, fines, sanctions and other regulatory action and potentially civil litigation.

We are required to assess our internal control over financial reporting on an annual basis, and any future adverse findings from such assessment could result in a loss of investor confidence in our financial reports, significant expenses to remediate any internal control deficiencies, and ultimately have an adverse effect on the market price of our common stock.

Pursuant to Section 404 of the Sarbanes-Oxley Act of 2002, as amended, our management is required to report on, and our independent registered public accounting firm is required to attest to, the effectiveness of our internal control over financial reporting. The rules governing the standards that must be met for management to assess our internal control over financial reporting are complex and require significant documentation, testing and possible remediation.

Annually, we perform activities that include reviewing, documenting and testing our internal control over financial reporting. During the performance of these activities, we may encounter problems or delays in completing the implementation of any changes necessary to make a favorable assessment of our internal control over financial reporting. In connection with the attestation process by our independent registered public accounting firm, we may encounter problems or delays in completing the implementation of any requested improvements and receiving a favorable attestation. In addition, if we fail to maintain the adequacy of our internal control over financial reporting we will not be able to conclude on an ongoing basis that we have effective internal control over financial reporting in accordance with Section 404. If we fail to achieve and maintain an effective internal control environment, we could suffer material misstatements in our financial statements and fail to meet our reporting obligations, which would likely cause investors to lose confidence in our reported financial information. This could harm our operating results and lead to a decline in our stock price. Additionally, ineffective internal control over financial reporting could expose us to increased risk of fraud or misuse of corporate assets and subject us to potential delisting from the NASDAQ Global Select Market, regulatory investigations, civil or criminal sanctions and class action litigation.

The market price of our common stock may be volatile, which could cause the value of an investment in our stock to decline.

The market price of our common stock may fluctuate substantially due to a variety of factors, many of which are beyond our control, including:

- announcements concerning our competitors, the airline industry or the economy in general;
- strategic actions by us or our competitors, such as acquisitions or restructurings;
- increased price competition;
- media reports and publications about the safety of our aircraft or the aircraft type we operate;
- new regulatory pronouncements and changes in regulatory guidelines;
- changes in the price of aircraft fuel;
- announcements concerning the availability of the type of aircraft we use;
- general and industry-specific economic conditions;

changes in financial estimates or recommendations by securities analysts or failure to meet analysts' performance expectations;

28

sales of our common stock or other actions by investors with significant shareholdings;
trading strategies related to changes in fuel or oil prices; and
general market, political and economic conditions.

The stock markets in general have experienced substantial volatility that has often been unrelated to the operating performance of particular companies. These types of broad market fluctuations may adversely affect the trading price of our common stock.

In the past, stockholders have sometimes instituted securities class action litigation against companies following periods of volatility in the market price of their securities. Any similar litigation against us could result in substantial costs, divert management's attention and resources and harm our business or results of operations.

If securities or industry analysts do not publish research or reports about our business, or publish negative reports about our business, our stock price and trading volume could decline.

The trading market for our common stock depends in part on the research and reports that securities or industry analysts publish about us or our business. If one or more of the analysts who cover us downgrade our stock or publish inaccurate or unfavorable research about our business, our stock price would likely decline. If one or more of these analysts cease coverage of our company or fail to publish reports on us regularly, demand for our stock could decrease, which might cause our stock price and trading volume to decline.

Our anti-takeover provisions may delay or prevent a change of control, which could adversely affect the price of our common stock.

Our amended and restated certificate of incorporation and amended and restated bylaws contain provisions that may make it difficult to remove our board of directors and management and may discourage or delay "change of control" transactions, which could adversely affect the price of our common stock. These provisions include, among others:

our board of directors is divided into three classes, with each class serving for a staggered three-year term, which prevents stockholders from electing an entirely new board of directors at an annual meeting;

actions to be taken by our stockholders may only be effected at an annual or special meeting of our stockholders and not by written consent;

special meetings of our stockholders can be called only by the Chairman of the Board or by our corporate secretary at the direction of our board of directors;

advance notice procedures that stockholders must comply with in order to nominate candidates to our board of directors and propose matters to be brought before an annual meeting of our stockholders may discourage or deter a potential acquirer from conducting a solicitation of proxies to elect the acquirer's own slate of directors or otherwise attempting to obtain control of our company; and

- our board of directors may, without stockholder approval, issue series of preferred stock, or rights to acquire preferred stock, that could dilute the interest of, or impair the voting power of, holders of our common stock or could also be used as a method of discouraging, delaying or preventing a change of control.

Our corporate charter and bylaws include provisions limiting voting by non-U.S. citizens and specifying an exclusive forum for stockholder disputes.

To comply with restrictions imposed by federal law on foreign ownership of U.S. airlines, our amended and restated certificate of incorporation and amended and restated bylaws restrict voting of shares of our common stock by non-U.S. citizens. The restrictions imposed by federal law currently require that no more than 25% of our stock be voted, directly or indirectly, by persons who are not U.S. citizens, and that our president and at least two-thirds of the members of our board of directors and senior management be U.S. citizens. Our amended and restated bylaws provide that the failure of non-U.S. citizens to register their shares on a separate stock record, which we refer to as the "foreign stock record," would result in a suspension of their voting rights in the event that the aggregate foreign ownership of the outstanding common stock exceeds the foreign ownership restrictions imposed by federal law.

Our amended and restated bylaws further provide that no shares of our common stock will be registered on the foreign stock record if the amount so registered would exceed the foreign ownership restrictions imposed by federal law. If it is determined that the amount registered in the foreign stock record exceeds the foreign ownership restrictions imposed by federal

law, shares will be removed from the foreign stock record in reverse chronological order based on the date of registration therein, until the number of shares registered therein does not exceed the foreign ownership restrictions imposed by federal law. As of December 31, 2016, we believe we were in compliance with the foreign ownership rules.

As of December 31, 2016, there are no shares of non-voting common stock outstanding. When shares of non-voting common stock are outstanding, the holders of such stock may convert such shares, on a share-for-share basis, in the order reflected on our foreign stock record as shares of common stock are sold or otherwise transferred by non-U.S. citizens to U.S. citizens.

Our amended and restated certificate of incorporation also specifies that the Court of Chancery of the State of Delaware shall be the exclusive forum for substantially all disputes between us and our stockholders.

We do not intend to pay cash dividends for the foreseeable future.

We have never declared or paid cash dividends on our common stock. We currently intend to retain our future earnings, if any, to finance the further development and expansion of our business and fund share repurchases under programs approved by our Board of Directors. We do not intend to pay cash dividends in the foreseeable future. Any future determination to pay dividends will be at the discretion of our board of directors and will depend on our financial condition, results of operations, capital requirements, restrictions contained in current or future financing instruments, business prospects and such other factors as our Board of Directors deems relevant. The timing of any share repurchases under share repurchase programs will depend upon market conditions, our capital allocation strategy and other factors.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

Aircraft

As of December 31, 2016, we operated a fleet of 95 aircraft as detailed in the following table:

Aircraft Type	Seats	Average Age (years)	Number of Aircraft	Number Owned	Number Leased
A319	145	10.5	29	7	22
A320ceo	178 - 182	3.4	45	15	30
A320neo	182	0.1	5	—	5
A321	218 - 228	2.2	16	14	2
		5.2	95	36	59

As of December 31, 2016, our firm aircraft orders consisted of 76 A320 family aircraft with Airbus (10 A320ceos, 50 A320neos, and 16 A321ceos). As of December 31, 2016, our future fleet plan, net of contractual lease returns, is illustrated in the table below.

Aircraft Type 2017 2018 2019 2020 2021

A319	29	29	28	23	18
A320ceo	49	54	55	55	55
A320neo	5	9	21	37	55
A321	25	30	30	30	30
Total Aircraft	108	122	134	145	158

Note 1: Actual fleet count may differ depending on future fleet decisions, including actual lease retirements.

We also have three spare engine orders for V2500 SelectOne engines with IAE and nine spare engine orders for PurePower PW 1100G-JM engines with Pratt & Whitney. Spare engines are scheduled for delivery from 2017 through 2023.

Ground Facilities

We lease all of our facilities at each of the airports we serve, with the exception of our newly constructed aircraft hangar in Detroit, which we own. Our leases for terminal passenger service facilities, which include ticket counter and gate space, operations support areas and baggage service offices, generally have a term ranging from month-to-month to 16 years, and contain provisions for periodic adjustments of lease rates. We also are responsible for maintenance, insurance and other facility-related expenses and services. We also have entered into use agreements at the airports we serve that provide for the non-exclusive use of runways, taxiways and other airfield facilities. Landing fees paid under these agreements are based on the number of landings and weight of the aircraft.

As of December 31, 2016, Ft. Lauderdale/Hollywood International Airport (FLL) remained our single largest airport served, with approximately 27% of our capacity operating from FLL during 2016. We operate primarily out of Terminal 4 at FLL, the international terminal. We currently use up to ten gates simultaneously at Terminal 4. We have preferential access to seven of the Terminal 4 gates, common use access to the remaining three Terminal 4 gates, and access to other Terminal 3 gates. FLL is in the middle of a concourse replacement and expansion project, which will expand the number of gates at Terminal 4 from 10 to 14. Other airports through which we conduct significant operations include Chicago O'Hare International Airport (ORD), McCarran International Airport (LAS) serving Las Vegas, Dallas-Fort Worth International Airport (DFW), Detroit Metropolitan Wayne County Airport (DTW), George Bush Intercontinental Airport (IAH) and Orlando International Airport (MCO).

Our largest maintenance facility is currently located in a leased facility at FLL under a lease that expires in January 2022. We also conduct additional maintenance operations in leased facilities in Detroit, Michigan; Chicago, Illinois; Atlantic City, New Jersey; Dallas, Texas; Houston, Texas; Las Vegas, Nevada; Orlando, Florida; Atlanta, Georgia; and Philadelphia, Pennsylvania.

In September 2015, we executed a lease agreement with Wayne County Airport Authority (the Authority), which owns and operates Detroit Metropolitan Wayne County Airport (DTW). Under the lease agreement, we lease a 10-acre site, adjacent to the airfield at DTW, in order to construct, operate and maintain an approximately 126,000-square-foot hangar facility (the project). The project allows for the development of a maintenance hangar in order to fulfill the requirements of our growing fleet and will reduce dependence on third-party facilities and contract line maintenance. The lease agreement has a 30-year term with two 10-year extension options. Upon termination of the lease, title of the project, which will be fully depreciated, will automatically pass to the Authority. We estimate to complete the project during the first quarter of 2017.

Our principal executive offices and headquarters are located in a leased facility at 2800 Executive Way, Miramar, Florida 33025, consisting of approximately 56,000 square feet. The lease for this facility expires in January 2025. In January 2014, we expanded our principal executive offices and headquarters by leasing an additional facility located at 2844 Corporate Way, Miramar, Florida 33025, consisting of approximately 15,000 square feet. The lease for this facility expires in January 2025. We also have a training center located in a leased facility at 1050 Lee Wagener Boulevard, Fort Lauderdale, Florida 33315, consisting of approximately 12,000 square feet, under a lease that expires in January 2020.

ITEM 3. LEGAL PROCEEDINGS

We are subject to commercial litigation claims and to administrative and regulatory proceedings and reviews that may be asserted or maintained from time to time. We believe the ultimate outcome of pending lawsuits, proceedings and reviews will not, individually or in the aggregate, have a material adverse effect on our financial position, liquidity, or results of operations.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Market Price of our common stock

Our common stock is listed and traded on the NASDAQ Global Select Market under the symbol "SAVE." The following table shows, for the periods indicated, the high and low per share sales prices for our common stock on the NASDAQ Global Select Market.

	High	Low
Fiscal year ended December 31, 2015		
First Quarter	\$82.03	\$69.64
Second Quarter	77.88	59.98
Third Quarter	63.54	46.95
Fourth Quarter	50.80	33.57
Fiscal year ended December 31, 2016		
First Quarter	\$50.14	\$36.53
Second Quarter	52.96	39.37
Third Quarter	48.93	37.23
Fourth Quarter	59.50	42.12

As of February 3, 2017, there were approximately 55 holders of record of our common stock. Because many of our shares are held by brokers and other institutions on behalf of stockholders, we are unable to estimate the total number of stockholders represented by the holders.

The information under the caption "Equity Compensation Plan Information" in our 2017 Proxy Statement is incorporated herein by reference.

Dividend Policy

We have never declared or paid, and do not anticipate declaring or paying, any cash dividends on our common stock. Any future determination as to the declaration and payment of dividends, if any, will be at the discretion of our board of directors and will depend on then existing conditions, including our financial condition, operating results, contractual restrictions, capital requirements, business prospects and other factors our board of directors may deem relevant.

Our Repurchases of Equity Securities

The following table reflects our repurchases of our common stock during the fourth quarter of 2016. All stock repurchases during this period were made from employees who received restricted stock grants. All employee stock repurchases were made at the election of each employee pursuant to an offer to repurchase by us. In each case, the shares repurchased constituted the portion of vested shares necessary to satisfy tax withholding requirements.

ISSUER PURCHASES OF EQUITY SECURITIES

Period	Total Number of Shares Purchased (in thousands)	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Approximate Dollar Value of Shares that May Yet be Purchased Under Plans or Programs
October 1-31, 2016	1,914	\$ 47.05	—	\$ —
November 1-30, 2016	496	\$ 53.34	—	\$ —
December 1-31, 2016	63	\$ 57.31	—	\$ —
Total	2,473	\$ 48.57	—	\$ —

During the first three quarters of 2016, we repurchased and retired 2.4 million shares for a total of \$102.4 million. Repurchases of equity securities during this period include repurchases made from employees who received restricted stock or performance share awards as well as open market repurchases made under our stock repurchase authorization that became effective in October 2015, which authorized the repurchase of up to \$100 million of our common stock. As of December 31, 2016, the company had exhausted repurchases under this program.

Stock Performance Graph

The following graph compares the cumulative total stockholder return on our common stock with the cumulative total return on the NASDAQ Composite Index and the NYSE ARCA Airline Index for the period beginning on December 31, 2011 and ending on December 31, 2016. The graph assumes an investment of \$100 in our stock and the two indices, respectively, on December 31, 2011, and further assumes the reinvestment of all dividends. Stock price performance, presented for the period from December 31, 2011 to December 31, 2016, is not necessarily indicative of future results.

	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016
Spirit	\$ 100.00	\$ 113.65	\$ 291.09	\$ 484.49	\$ 255.45	\$ 370.90
NYSE ARCA Airline Index	\$ 100.00	\$ 137.67	\$ 217.84	\$ 326.88	\$ 277.26	\$ 355.80
NASDAQ Composite Index	\$ 100.00	\$ 117.70	\$ 164.65	\$ 188.87	\$ 202.25	\$ 220.13

ITEM 6. SELECTED FINANCIAL DATA

You should read the following selected historical financial and operating data below in conjunction with “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and the financial statements, related notes and other financial information included in this annual report. The selected financial data in this section are not intended to replace the financial statements and are qualified in their entirety by the financial statements and related notes included in this annual report.

We derived the selected statements of operations data for the years ended December 31, 2016, 2015 and 2014 and the balance sheet data as of December 31, 2016 and 2015 from our audited financial statements included in this annual report. We derived the selected statements of operations data for the years ended December 31, 2013 and 2012 and the balance sheet data as of December 31, 2014, 2013 and 2012 from our audited financial statements not included in this annual report. Our historical results are not necessarily indicative of the results to be expected in the future.

	Year Ended December 31,				
	2016	2015	2014	2013	2012
	(in thousands, except share and per share data)

(1) Aircraft fuel expense is the sum of (i) “into-plane fuel cost,” which includes the cost of jet fuel and certain other charges such as fuel taxes and oil, (ii) realized gains and losses related to fuel derivative contracts and (iii)

unrealized gains and losses related to fuel derivative contracts. The following table summarizes the components of aircraft fuel expense for the periods presented:

36

	Year Ended December 31,				
	2016	2015	2014	2013	2012
	(in thousands)				
Into-plane fuel cost	\$447,553	\$454,747	\$608,033	\$542,523	\$471,542
Realized losses (gains) related to fuel derivatives contracts, net	—	10,580	995	8,958	175
Unrealized losses (gains) related to fuel derivative contracts, net	—	(3,880)	3,881	265	46
Aircraft fuel expense	\$447,553	\$461,447	\$612,909	\$551,746	\$471,763

Special charges (credits) include: (i) for 2012, a \$9.1 million gain related to the sale of four permanent air carrier slots at Ronald Reagan National Airport (DCA) offset by costs connected with the 2012 secondary offerings; and for 2013, costs related to the 2013 secondary offering; (ii) for 2013 and 2014, \$0.1 million in costs related to the DCA exit; (iii) for 2015, \$0.7 million related to restructuring charges for outsourcing of ramps and passenger services; (iv) for 2016, \$37.2 million related to lease termination charges recognized in connection with the purchase of seven aircraft formerly financed under operating lease agreements.

Interest expense in 2012 and 2013 primarily relates to interest related to the TRA. Interest expense in 2014 primarily relates to interest related to the long-term debt, commitment fees and underpayment of Federal Excise Tax for fuel purchases during the period between July 1, 2009 and August 31, 2014. Interest expense in 2015 and 2016 primarily relates to interest related to financing of purchasing aircraft.

Interest attributable to funds used to finance the acquisition of new aircraft, including PDPs is capitalized as an additional cost of the related asset. In 2015 and 2016, capitalized interest primarily represents interest related to the financing of purchased aircraft.

The following table presents balance sheet data for the periods presented:

	As of December 31,				
	2016	2015	2014	2013	2012
	(in thousands)				
Balance Sheet Data:					
Cash and cash equivalents	\$700,900	\$803,632	\$632,784	\$530,631	\$416,816
Short-term investment securities	100,155	—	—	—	—
Total assets (5)	3,151,927	2,530,545	1,592,753	1,164,522	907,293
Long-term debt, including current portion	981,713	646,330	145,663	—	—
Stockholders' equity	1,394,607	1,225,310	1,003,075	769,117	582,535

Prior period amounts have been reclassified to conform to ASU No. 2015-17 (ASU 2015-17), "Income Taxes" issued in November 2015.

OPERATING STATISTICS

Year Ended December 31,

2016 2015 2014 2013 2012

Operating Statistics (unaudited) (A)

Average aircraft	86.2	72.7	57.7	49.9	41.2
Aircraft at end of period	95	79	65	54	45
Average daily aircraft utilization (hours)	12.4	12.7	12.7	12.7	12.8
Average stage length (miles)	979	987	980	958	909

Adjusted CASM (cents)	7.21	7.69	9.55	9.89	10.15					

(C) Excludes aircraft fuel expense, loss on disposal of assets and special charges.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

You should read the following discussion of our financial condition and results of operations in conjunction with the financial statements and the notes thereto included elsewhere in this annual report.

2016 Year in Review

The year 2016 marks our tenth consecutive year of profitability. In 2016, we increased our capacity by 20.0%, as we grew our fleet of Airbus single-aisle aircraft from 79 to 95 aircraft, launched service to 29 new markets and added 4 new destinations: Seattle, Washington; Akron-Canton, Ohio; Newark, New Jersey and Havana, Cuba.

During 2016, we earned net income of \$264.9 million (\$3.76 per share, diluted), compared to net income of \$317.2 million (\$4.38 per share, diluted) in 2015. The decrease in earnings was a result of a decrease of 9.6% in our average yield, partially offset by a 20.0% increase in our capacity, year over year.

For the year ended December 31, 2016, we achieved an operating profit margin of 19.1% on \$2,322.0 million in operating revenues. Our traffic grew by 19.9% as we continued to address an underserved market with ultra-low fares. Continued competitive pressures from major domestic network carriers aggressively discounting fares led to a 9.6% decrease in average yield, year over year. As a result of this pricing environment, TRASM in 2016 was 9.11 cents, a decrease of 9.6% compared to the prior year period. Total revenue per passenger flight segment decreased 10.1%, year over year, from \$119.49 to \$107.41 driven by a decrease of 14.9% in ticket revenue per passenger flight segment. Our total non-ticket revenue increased by 15.3%, or \$149.2 million, to \$1,121.3 million in 2016. Despite the continued competitive pressures during 2016, our average non-ticket revenue per passenger flight segment declined to a lesser extent, by 4.4%, to \$51.87. Our unbundled model provides a more stable revenue stream as demonstrated during periods of lower passenger ticket yields.

Our operating cost structure is a primary area of focus and is at the core of our ULCC business model. Our unit operating costs continue to be among the lowest of any airline in the United States. During 2016, our adjusted CASM ex-fuel decreased by 0.9% to 5.45 cents. The decrease on a per-ASM basis was primarily a result of a decrease in aircraft rent expense per ASM due to our newer aircraft being purchased under secured debt financing rather than being leased through operating leases, as is the case with the older aircraft in our fleet. In addition, we purchased seven previously leased aircraft during the twelve months ended December 31, 2016, which contributed to lower aircraft rent per ASM. This decrease in aircraft rent was partially offset by higher salaries and wages expense and higher other operating expense on a per-ASM basis.

During 2016, we took delivery of 11 new aircraft financed through our EETC, purchased 7 aircraft off lease and entered into a direct lease agreement with a third-party lessor for 5 A320neos. With the delivery of these A320neo aircraft during 2016, we became the first U.S.-based carrier to take delivery of and operate such aircraft. In addition, we purchased 1 spare engine. As of December 31, 2016, our 95 Airbus A320-family aircraft fleet was comprised of 29 A319s, 45 A320ceos, 5 A320neos and 16 A321ceos of which 29 aircraft are financed through secured debt, 59 are financed under operating leases and 7 are unencumbered. As of December 31, 2016, our aircraft orders consisted of 76 A320 family aircraft with Airbus scheduled for delivery from 2017 through 2021.

Operating Revenues

Our operating revenues are comprised of passenger revenues and non-ticket revenues.

Passenger Revenues. Passenger revenues consist of the base fares that customers pay for air travel.

Non-ticket Revenues. Non-ticket revenues are generated from air travel-related charges for baggage, passenger usage fee (PUF) for bookings through certain of our distribution channels, advance seat selection, itinerary changes, hotel and rental car travel packages and loyalty programs such as our FREE SPIRIT affinity credit card program and \$9 Fare Club. Non-ticket revenues also include revenues derived from the sale of advertising to third parties on our website and on board our aircraft.

Substantially all of our revenues are denominated in U.S. dollars. Passenger revenues, as well as most non-ticket revenues, are recognized once the related flight departs. Accordingly, the value of tickets and portions of non-ticket revenues sold in advance of travel is included under our current liabilities as "air traffic liability," or ATL, until the related air travel is provided. Some of our non-ticket revenues are recognized at the time the ancillary products are

purchased or ancillary services

39

are provided, such as revenues from our subscription-based \$9 Fare Club, which we recognize on a straight-line basis over 12 months. Revenue generated from the FREE SPIRIT credit card affinity program are recognized in accordance with the criteria as set forth in Accounting Standards Update ASU No. 2009-13. Please see “—Critical Accounting Policies and Estimates—Frequent Flier Program.”

We recognize revenues net of certain taxes and airport passenger fees, which are collected by us on behalf of airports and governmental agencies and remitted to the applicable governmental entity or airport on a periodic basis. These taxes and fees include U.S. federal transportation taxes, federal security charges, airport passenger facility charges and foreign arrival and departure taxes. These items are collected from customers at the time they purchase their tickets, but are not included in our revenues. We record a liability upon collection from the customer and relieve the liability when payments are remitted to the applicable governmental agency or airport.

Operating Expenses

Our operating expenses consist of the following line items.

Salaries, Wages and Benefits. Salaries, wages and benefits expense includes the salaries, hourly wages, bonuses and equity compensation paid to employees for their services, as well as the related expenses associated with employee benefit plans and employer payroll taxes.

Aircraft Fuel. Aircraft fuel expense includes the cost of jet fuel, related federal taxes, fueling into-plane fees and transportation fees. It also includes realized and unrealized gains and losses arising from any activity on our fuel derivatives. Our fuel derivatives generally consist of United States Gulf Coast jet fuel swaps (jet fuel swaps) and United States Gulf Coast jet fuel options (jet fuel options).

Aircraft Rent. Aircraft rent expense consists of all minimum lease payments under the terms of the Company's aircraft and spare engine lease agreements recognized on a straight-line basis. Aircraft rent expense also includes supplemental rent. Supplemental rent is made up of maintenance reserves paid or expected to be paid to aircraft lessors in advance of the performance of major maintenance activities that are not probable of being reimbursed and probable return condition obligations. Aircraft rent expense is net of the amortization of gains and losses on sale leaseback transactions on our flight equipment. As of December 31, 2016, 59 of our 95 aircraft and 11 of our 12 spare engines are financed under operating leases.

Landing Fees and Other Rents. Landing fees and other rents include both fixed and variable facilities expenses, such as the fees charged by airports for the use or lease of airport facilities, overfly fees paid to other countries and the monthly rent paid for our headquarters facility.

Depreciation and Amortization. Depreciation and amortization expense includes the depreciation of fixed assets we own and leasehold improvements. It also includes the amortization of heavy maintenance expenses we defer under the deferral method of accounting for heavy maintenance events and recognize into expense on a straight-line or usage basis until the earlier of the next estimated heavy maintenance event or the remaining lease term.

Maintenance, Materials and Repairs. Maintenance, materials and repairs expense includes parts, materials, repairs and fees for repairs performed by third-party vendors directly required to maintain our fleet. It excludes direct labor cost related to our own mechanics, which is included under salaries, wages and benefits. It also excludes the amortization of heavy maintenance expenses, which we defer under the deferral method of accounting and amortize as a component of depreciation and amortization expense.

Distribution. Distribution expense includes all of our direct costs, including the cost of web support, our third-party call center, travel agent commissions and related GDS fees and credit card transaction fees, associated with the sale of our tickets and other products and services.

Special Charges. Special charges include lease termination costs and secondary offering costs.

Loss on Disposal of Assets. Loss on disposal of assets includes the net losses on the disposal of our fixed assets.

Other Operating Expenses. Other operating expenses include airport operations expense and fees charged by third-party vendors for ground handling services and food and liquor supply service expenses, passenger re-accommodation expense, the cost of passenger liability and aircraft hull insurance, all other insurance policies except for employee related insurance, travel and training expenses for crews and ground personnel, professional fees, personal property taxes and all other administrative and operational overhead expenses. No individual item included in this category represented more than 5% of our total operating expenses.

Other Expense (Income)

Interest Expense. Interest expense in 2016 and 2015 was primarily related to the financing of purchased aircraft. For 2014, interest expense primarily represented interest related to the financing of purchased aircraft, interest related to the underpayment of prior year jet fuel FET and interest charged under the Tax Receivable Agreement (TRA) which was settled during 2014.

Capitalized Interest. Capitalized interest represents interest cost incurred during the acquisition period of an aircraft which theoretically could have been avoided had we not made PDPs for that aircraft. The percent of interest expense capitalized is equal to the amount of interest which could have been avoided. As such, if the amount of PDPs on deposit is less than the amount of related debt on which interest is incurred, then only a percent of total incurred interest expense qualifies for capitalization. These amounts are capitalized as part of the cost of the aircraft upon delivery. Capitalization of interest ceases when the asset is ready for service. Capitalized interest for 2016 and 2015 primarily related to the interest incurred on long-term debt. For 2014, capitalized interest related to interest incurred on long-term debt, underpayment of prior year jet fuel FET and interest charged under the TRA.

Interest Income. For 2016 and 2015, interest income was related to interest earned on funds required to be held in escrow in accordance with the terms of our EETC. For a detailed discussion of the EETC, refer to “Notes to the Financial Statements—11. Debt and Other Obligations.” In addition, for 2016, interest income includes interest earned on our cash, cash equivalents and short-term investment securities.

Other Expense. Other expense includes realized gains and losses related to foreign currency transactions. For 2014, other expense also included \$1.4 million related to the tax receivable settlement amount in excess of the amount previously accrued for and a \$1.0 million charitable contribution that is specifically creditable against current income tax in the State of Florida, as allowed under state law.

Income Taxes

We account for income taxes using the liability method. We record a valuation allowance to reduce the deferred tax assets reported if, based on the weight of the evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized. Deferred taxes are recorded based on differences between the financial statement basis and tax basis of assets and liabilities and available tax loss and credit carryforwards. In assessing the realizability of the deferred tax assets, we consider whether it is more likely than not that some or all of the deferred tax assets will be realized. In evaluating the ability to utilize our deferred tax assets, we consider all available evidence, both positive and negative, in determining future taxable income on a jurisdiction by jurisdiction basis.

Trends and Uncertainties Affecting Our Business

We believe our operating and business performance is driven by various factors affecting airlines and their markets, trends affecting the broader travel industry and trends affecting the specific markets and customer base that we target. The following key factors may affect our future performance.

Competition. The airline industry is highly competitive. The principal competitive factors in the airline industry are fare pricing, total price, flight schedules, aircraft type, passenger amenities, number of routes served from a city, customer service, safety record, reputation, code-sharing relationships, frequent flier programs and redemption opportunities. Price competition occurs on a market-by-market basis through price discounts, changes in pricing structures, fare matching, target promotions and frequent flier initiatives. Airlines typically use discount fares and other promotions to stimulate traffic during normally slower travel periods to generate cash flow and to maximize unit revenue. The prevalence of discount fares can be particularly acute when a competitor has excess capacity that it is under financial pressure to sell.

Beginning in 2015, and continuing through most of 2016, the airline industry saw greater and more persistent price discounting than in the preceding several years. We believe that a major factor that enabled price discounting was the sharp decline in petroleum prices on world markets during the last couple years which offset general increases in non-fuel costs. In addition, significant airline capacity increases in certain major cities - such as Dallas and Chicago - exerted strong downward price pressure in those markets. Finally, beginning in mid-2015 network carriers began matching low-cost carrier and ULCC pricing on portions of their marginal unsold capacity, particularly in their key hub markets.

Absent significant increases in fuel prices and more constrained capacity, we expect the discounting trend to continue for the foreseeable future. Moreover, the network carriers have developed a fare-class pricing approach, in which a portion of available seats may be sold at or near ULCC prices, but without most product features available to their passengers paying at

higher fare levels on the same flight. Broad fare discounting may have the effect of diluting the profitability of revenues of high-cost carriers but the fare-class approach may allow network carriers to continue offering a competitive price to ULCCs on some flights or routes, while maintaining higher pricing to their traditional constituencies of business and more affluent travelers. Refer to “Risk Factors—Risks Related to Our Industry—We operate in an extremely competitive industry.”

Seasonality and Volatility. Our results of operations for any interim period are not necessarily indicative of those for the entire year because the air transportation business is subject to significant seasonal fluctuations. We generally expect demand to be greater in the second and third quarters compared to the rest of the year. The air transportation business is also volatile and highly affected by economic cycles and trends. Consumer confidence and discretionary spending, fear of terrorism or war, weakening economic conditions, fare initiatives, fluctuations in fuel prices, labor actions, changes in governmental regulations on taxes and fees, weather and other factors have resulted in significant fluctuations in revenues and results of operations in the past. We believe demand for business travel historically has been more sensitive to economic pressures than demand for low-price travel. Finally, a significant portion of our operations are concentrated in markets such as South Florida, the Caribbean, Latin America and the Northeast and northern Midwest regions of the United States, which are particularly vulnerable to weather, airport traffic constraints and other delays.

Aircraft Fuel. Fuel costs represents one of our largest operating expenses, as it does for most airlines. Fuel costs have been subject to wide price fluctuations in recent years. Fuel availability and pricing are also subject to refining capacity, periods of market surplus and shortage and demand for heating oil, gasoline and other petroleum products, as well as meteorological, economic and political factors and events occurring throughout the world, which we can neither control nor accurately predict. We source a significant portion of our fuel from refining resources located in the southeast United States, particularly facilities adjacent to the Gulf of Mexico. Gulf Coast fuel is subject to volatility and supply disruptions, particularly in hurricane season when refinery shutdowns have occurred, or when the threat of weather-related disruptions has caused Gulf Coast fuel prices to spike above other regional sources. Our derivatives, from time to time, generally may consist of United States Gulf Coast jet fuel swaps (jet fuel swaps) and United States Gulf Coast jet fuel options (jet fuel options). Both jet fuel swaps and jet fuel options can be used at times to protect the refining price risk between the price of crude oil and the price of refined jet fuel, and to manage the risk of increasing fuel prices. Our fuel hedging practices are dependent upon many factors, including our assessment of market conditions for fuel, our access to the capital necessary to support margin requirements, the pricing of hedges and other derivative products in the market, our overall appetite for risk and applicable regulatory policies. As of December 31, 2016, we had no outstanding jet fuel derivatives. As of December 31, 2016, we purchased all of our aircraft fuel under a single fuel service contract. The cost and future availability of jet fuel cannot be predicted with any degree of certainty.

Labor. The airline industry is heavily unionized. The wages, benefits and work rules of unionized airline industry employees are determined by collective bargaining agreements, or CBAs. Relations between air carriers and labor unions in the United States are governed by the RLA. Under the RLA, CBAs generally contain “amendable dates” rather than expiration dates, and the RLA requires that a carrier maintain the existing terms and conditions of employment following the amendable date through a multi-stage and usually lengthy series of bargaining processes overseen by the NMB. This process continues until either the parties have reached agreement on a new CBA, or the parties have been released to “self-help” by the NMB. In most circumstances, the RLA prohibits strikes; however, after release by the NMB, carriers and unions are free to engage in self-help measures such as strikes and lockouts.

We have four union-represented employee groups comprising approximately 73% of our employees at December 31, 2016. Our pilots are represented by the Airline Pilots Association, International, or ALPA, our flight attendants are represented by the Association of Flight Attendants, or AFA-CWA, our flight dispatchers are represented by the Transport Workers Union of America, or TWU, and our ramp service agents are represented by the International Association of Machinists and Aerospace Workers, or IAMAW. Conflicts between airlines and their unions can lead to work slowdowns or stoppages. In June 2010, we experienced a five-day strike by our pilots, which caused us to shut down our flight operations. The strike ended as a result of our reaching a tentative agreement under a Return to Work Agreement and a full flight schedule was resumed on June 18, 2010. On August 1, 2010, we entered into a

five-year collective bargaining agreement with our pilots. In August 2015, our collective bargaining agreement with its pilots, represented by ALPA, became amendable. In June 2016, ALPA requested the services of the National Mediation Board (NMB) to facilitate negotiations for an amended agreement and we joined ALPA in the request. The NMB has assigned a mediator and the parties continue to meet and work toward an amended agreement with the guidance of the mediator. Under the RLA, the parties' current agreement remains in effect until an amended agreement is reached. In August 2013, we entered into a five-year agreement with our flight dispatchers. In March 2016, with the help of the NMB, we reached a tentative agreement for a five-year contract with our flight attendants. The tentative agreement was subject to ratification by the flight attendant membership. In May 2016, we were notified that the flight attendants voted to approve the new five-year contract. In July 2014, certain ramp service agents directly employed by us voted to be represented by the IAMAW. In May 2015, we entered into a five-year interim collective bargaining agreement with the IAMAW, covering material economic terms. In June 2016, with the help of the IAMAW, we reached an agreement on the remaining terms of the collective bargaining agreement, which is amendable in June 2020. We believe the five-year term of our CBAs is valuable in

providing stability to our labor costs and provide us with competitive labor costs compared to other U.S.-based low-cost carriers. If we are unable to reach agreement with any of our unionized work groups in current or future negotiations regarding the terms of their CBAs, we may be subject to work interruptions or stoppages, such as the strike by our pilots in June 2010. A strike or other significant labor dispute with our unionized employees is likely to adversely affect our ability to conduct business. Any agreement we do reach could increase our labor and related expenses.

In 2010, the Patient Protection and Affordable Care Act was passed into law. Under the new presidential administration this law may be repealed in its entirety or certain aspects may be changed or replaced. If the law is repealed or modified or if new legislation is passed, such action could potentially increase our operating costs, with healthcare costs increasing at a higher rate than our employee headcount.

Maintenance Expense. Maintenance expense grew through 2016, 2015 and 2014 mainly as a result of a growing fleet and the gradual increase of required maintenance for the older aircraft in our fleet. As the fleet ages, we expect that maintenance costs will increase in absolute terms. The amount of total maintenance costs and related amortization of heavy maintenance (included in depreciation and amortization expense) is subject to many variables such as future utilization rates, average stage length, the interval between heavy maintenance events, the size and makeup of the fleet in future periods and the level of unscheduled maintenance events and their actual costs. Accordingly, we cannot reliably quantify future maintenance expenses for any significant period of time. However, we believe, based on our scheduled maintenance events, maintenance expense and maintenance-related amortization expense in 2017 will be approximately \$192 million. In addition, we expect to capitalize \$186 million of costs for heavy maintenance during 2017.

As a result of a significant portion of our fleet being acquired over a relatively short period of time, heavy maintenance scheduled on each of our planes will occur at roughly the same time, meaning we will incur our most expensive scheduled maintenance obligations across our current fleet around the same time. These more significant maintenance activities will result in out-of-service periods during which our aircraft will be dedicated to maintenance activities and unavailable to fly revenue service. When accounting for maintenance expense under the deferral method, heavy maintenance is amortized over the shorter of either the remaining lease term or the next estimated heavy maintenance event. As a result, deferred maintenance events occurring closer to the end of the lease term will generally have shorter amortization periods than those occurring earlier in the lease term. This will create higher depreciation and amortization expense specific to any aircraft related to heavy maintenance during the final years of the lease as compared to earlier periods. Please see “—Critical Accounting Policies and Estimates—Aircraft Maintenance, Materials, Repair Costs and Related Heavy Maintenance Amortization.”

Maintenance Reserve Obligations. The terms of some of our aircraft lease agreements require us to post deposits for future maintenance, also known as maintenance reserves, to the lessor in advance of and as collateral for the performance of major maintenance events, resulting in our recording significant prepaid deposits on our balance sheet. As a result, the cash costs of scheduled major maintenance events are paid in advance of the recognition of the maintenance event in our results of operations. Please see “—Critical Accounting Policies and Estimates—Aircraft Maintenance, Materials, Repair Costs and Related Heavy Maintenance Amortization” and “—Maintenance Reserves.”

Critical Accounting Policies and Estimates

The following discussion and analysis of our financial condition and results of operations is based on our financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amount of assets and liabilities, revenues and expenses and related disclosure of contingent assets and liabilities at the date of our financial statements. For a detailed discussion of our significant accounting policies, refer to “Notes to Financial Statements—1. Summary of Significant Accounting Policies.”

Critical accounting policies are defined as those policies that reflect significant judgments or estimates about matters both inherently uncertain and material to our financial condition or results of operations.

Revenue Recognition. Revenues from tickets sold are initially deferred as ATL. Passenger revenues are recognized when transportation is provided. An unused non-refundable ticket expires at the date of scheduled travel and is

recognized as revenue for the expired ticket value at the date of scheduled travel.

Our most significant non-ticket revenues include revenues generated from air travel-related services paid for baggage, passenger usage fees, advance seat selection, itinerary changes, and loyalty programs. The majority of our non-ticket revenues are recognized once the related flight departs. Some of our non-ticket revenues, such as those related to itinerary changes, are recognized at the time products are purchased or services are provided. These revenues also include commissions from the

sales of hotel rooms, trip insurance and rental cars recognized at the time the service is rendered. Non-ticket revenues also include revenues from our subscription-based \$9 Fare Club, recognized on a straight-line basis over 12 months. Customers may elect to change their itinerary prior to the date of departure. A service charge is assessed and recognized on the date the change is initiated and is deducted from the face value of the original purchase price of the ticket, and the original ticket becomes invalid. The amount remaining after deducting the service charge is called a credit shell which expires 60 days from the date the credit shell is created and can be used towards the purchase of a new ticket and our other service offerings. The amount of credits expected to expire unused is recognized as revenue upon issuance of the credit and is estimated based on historical experience. Estimating the amount of credits that will go unused involves some level of subjectivity and judgment.

Frequent Flier Program. We accrue for mileage credits earned through travel, including mileage credits for members with an insufficient number of mileage credits to earn an award, under our FREE SPIRIT program based on the estimated incremental cost of providing free travel for credits that are expected to be redeemed. Incremental costs include fuel, insurance, security, ticketing and facility charges reduced by an estimate of amounts required to be paid by the passenger when redeeming the award.

Under our affinity card program, funds received for the marketing of a co-branded Spirit credit card and delivery of award miles are accounted for as a multiple-deliverable arrangement. At the inception of the arrangement, we evaluated all deliverables in the arrangement to determine whether they represent separate units of accounting. We determined the arrangement had three separate units of accounting: (i) travel miles to be awarded, (ii) licensing of brand and access to member lists and (iii) advertising and marketing efforts. At inception of the arrangement, we established the estimated selling price for all deliverables that qualified for separation, as arrangement consideration should be allocated based on relative selling price. The manner in which the selling price was established was based on the applicable hierarchy of evidence. Total arrangement consideration was then allocated to each deliverable on the basis of the deliverable's relative selling price. In considering the hierarchy of evidence, we first determined whether vendor-specific objective evidence of selling price or third-party evidence of selling price existed. We determined that neither vendor-specific objective evidence of selling price nor third-party evidence existed due to the uniqueness of our program. As such, we developed our best estimate of the selling price for all deliverables. For the selling price of travel, we considered a number of entity-specific factors, including the number of miles needed to redeem an award, average fare of comparable segments, breakage, restrictions, fees to redeem miles and other charges. For licensing of brand and access to member lists, we considered both market-specific factors and entity-specific factors, including general profit margins realized in the marketplace/industry, brand power, market royalty rates and size of customer base. For the advertising and marketing element, we considered market-specific factors and entity-specific factors, including our internal costs (and fluctuations of costs) of providing services, volume of marketing efforts and overall advertising plan. Consideration allocated based on the relative selling price to both brand licensing and advertising elements is recognized as revenue when earned and recorded in non-ticket revenue. Consideration allocated to award miles is deferred and recognized ratably as passenger revenue over the estimated period the transportation is expected to be provided which is currently estimated at 17 months. We used entity-specific assumptions coupled with the various judgments necessary to determine the selling price of a deliverable in accordance with the required selling price hierarchy. Changes in these assumptions could result in changes in the estimated selling prices. Determining the frequency to reassess selling price for individual deliverables requires significant judgment. For additional information, refer to "Notes to Financial Statements—1. Summary of Significant Accounting Policies—Frequent Flier Program".

Accounting for property and equipment. Property and equipment is stated at cost, less accumulated depreciation and amortization. Depreciation of operating property and equipment is computed using the straight-line method applied to each unit of property. Property under capital leases and related obligations are initially recorded at an amount equal to the present value of future minimum lease payments computed using our incremental borrowing rate or, when known, the interest rate implicit in the lease. Amortization of property under capital leases is on a straight-line basis over the lease term and is included in depreciation and amortization expense. In accounting for property and equipment, we must make estimates about the expected useful lives of the assets, the expected residual values of the assets, and the potential for impairment based on the fair value of the assets and their future expected cash flows.

The depreciable lives used for the principal depreciable asset classifications are:

44

	Estimated Useful Life
Aircraft	25 years
Spare rotables and flight assemblies	7 to 15 years
Other equipment and vehicles	5 to 7 years
Internal use software	3 to 10 years
Capital lease	Lease term
Leasehold improvements	Lesser of lease term or estimated useful life of the improvement

As of December 31, 2016, we had 36 aircraft and 1 spare engine capitalized within flight equipment with depreciable lives of 25 years. As of December 31, 2016, we had 59 aircraft financed through operating leases with terms of 12 to 18 years and 11 spare engines financed through operating leases with terms of 10 to 13 years. Residual values for aircraft, major spare rotatable parts, avionics and assemblies are generally estimated to be 10%.

We record impairment charges on long-lived assets used in operations when events and circumstances indicate the assets may be impaired, the undiscounted cash flows estimated to be generated by those assets are less than the carrying amount of those assets, and the net book value of the assets exceeds their estimated fair value. In making these determinations, we use certain assumptions, including, but not limited to: (i) estimated fair value of the assets; and (ii) estimated, undiscounted future cash flows expected to be generated by these assets, which are based on additional assumptions such as asset utilization, length of service the asset will be used in our operations, and estimated salvage values.

Aircraft Maintenance, Materials, Repair Costs and Related Heavy Maintenance Amortization. We account for heavy maintenance under the deferral method. Under the deferral method the cost of heavy maintenance is capitalized and amortized as a component of depreciation and amortization expense over the earlier of the next estimated heavy maintenance event or the remaining lease term or useful life of the aircraft. Management expects that heavy maintenance events occurring closer to the end of the lease term will be amortized over the remaining lease term rather than over the next estimated heavy maintenance event. Amortization of engine and aircraft overhaul costs was \$43.8 million, \$43.1 million and \$35.8 million for the years ended December 31, 2016, 2015 and 2014, respectively. If heavy maintenance costs were amortized within maintenance, material and repairs expense in the statement of operations, our maintenance, material and repairs expense would have been \$142.4 million, \$123.6 million and \$109.8 million for the years ended December 31, 2016, 2015 and 2014, respectively. During the years ended December 31, 2016, 2015 and 2014, we capitalized \$35.4 million, \$9.1 million and \$33.6 million of costs for heavy maintenance, respectively. The timing of the next heavy maintenance event is estimated based on assumptions including estimated usage, FAA-mandated maintenance intervals, current condition of the related component, the age of the related component and average removal times as suggested by the manufacturer. These assumptions may change based on changes in our utilization of our aircraft, changes in government regulations and suggested manufacturer maintenance intervals. In addition, these assumptions can be affected by unplanned incidents that could damage an airframe, engine or major component to a level that would require a heavy maintenance event prior to a scheduled maintenance event. To the extent the estimated timing of the next maintenance event is extended or shortened, the related amortization period would be lengthened or shortened, resulting in higher amortization expense over a shorter period or lower amortization expense over a longer period, respectively. Heavy maintenance events include 6-year and 12-year airframe checks, engine overhauls, LLP replacement and overhauls to major components. Certain maintenance functions are outsourced under contracts that require payment based on a performance measure such as flight hours. Costs incurred for maintenance and repair under flight hour maintenance contracts, where labor and materials price risks have been transferred to the service provider, are accrued based on contractual payment terms. Routine cost for maintaining the airframes and engines and line maintenance are charged to maintenance, materials and repairs expense as performed.

Maintenance Reserves. Some of our master lease agreements provide that we pay maintenance reserves to aircraft lessors to be held as collateral in advance of our performance of major maintenance activities. These lease agreements provide that maintenance reserves are reimbursable to us upon completion of the maintenance event in an amount equal to either (1) the amount of the maintenance reserves held by the lessor associated with the specific maintenance event or (2) the qualifying costs related to the specific maintenance event. Substantially all of these maintenance

reserve payments are calculated based on a utilization measure, such as flight hours or cycles, and are used solely to collateralize the lessor for maintenance time run off the aircraft until the completion of the maintenance of the aircraft. At lease inception and at each balance sheet date, we assess whether the maintenance reserve payments required by the master lease agreements are substantively and contractually related to the maintenance of the leased asset. Maintenance reserve payments that are substantively and contractually related to the maintenance of the leased asset are accounted for as maintenance deposits. Maintenance deposits expected to be recovered from lessors are reflected as aircraft maintenance deposits in the accompanying balance sheets. We make certain assumptions to determine the recoverability of maintenance

deposits. These assumptions are based on various factors such as the estimated time between the maintenance events, the cost of future maintenance events and the number of flight hours the aircraft is estimated to be utilized before it is returned to the lessor. When it is not probable we will recover amounts currently on deposit with a lessor, such amounts are expensed as supplemental rent. We expensed \$2.2 million, \$2.3 million and \$1.6 million of paid maintenance reserves as supplemental rent during 2016, 2015 and 2014, respectively.

As of December 31, 2016 and 2015, we had aircraft maintenance deposits of \$286.4 million and \$279.9 million, respectively, on our balance sheets. We have concluded that these aircraft maintenance deposits are probable of recovery primarily due to the rate differential between the maintenance reserve payments and the expected cost for the related next maintenance event that the reserves serve to collateralize.

The master lease agreements also provide that most maintenance reserves held by the lessor at the expiration of the lease are nonrefundable to us and will be retained by the lessor. Consequently, we have determined that any usage-based maintenance reserve payments after the last major maintenance event are not substantively related to the maintenance of the leased asset and therefore are accounted for as contingent rent. Contingent rent is recorded at the time a non-refundable maintenance reserve payment is made that has been substantively determined to be contingent rent. Accordingly, management expects to incur contingent rent after the last major maintenance events resulting in higher rent expense in the final years of applicable leases. Maintenance reserves held by lessors that are refundable to us at the expiration of the lease are accounted for as aircraft maintenance deposits on the balance sheet when they are paid.

Leased Aircraft Return Costs. Our aircraft lease agreements often contain provisions that require us to return aircraft airframes and engines to the lessor in a certain condition or pay an amount to the lessor based on the airframe and engine's actual return condition. Lease return costs include all costs that would be incurred at the return of the aircraft, including costs incurred to repair the airframe and engines to the required condition as stipulated by the lease. Lease return costs could include, but are not limited to redelivery cost, redelivery crew cost, fuel, final inspections, reconfiguration of the cabin, repairs to the airframe, painting, overhaul of engines, replacement of components and checks. Lease return costs are recognized beginning when it is probable that such costs will be incurred and they can be estimated. Incurrence of lease return costs becomes probable and the amount of those costs can typically be estimated near the end of the lease term (that is, after the aircraft has completed its last maintenance cycle prior to being returned). When determining probability and estimated cost, there are various factors which need to be considered such as current condition of the aircraft, the age of the aircraft at lease expiration, number of hours run on the engines, number of cycles run on the airframe, projected number of hours run on the engine at the time of return, number of projected cycles run on the airframe at the time of return, the extent of repairs needed if any at return, return locations, current configuration of the aircraft, current paint of the aircraft, estimated escalation of cost of repairs and materials at the time of return, current flight hour agreement rates and future flight hour agreement rates. In addition, typically near the lease return date, the lessors may allow reserves to be applied as return condition consideration or pass on certain return provisions if they do not align with their current plans to remarket the aircraft. When costs become both probable and estimable, they are accrued on a straight-line basis as contingent rent, a component of supplemental rent, through the remaining lease term. Management expects return costs to be estimable near the end of the lease term, as such, contingent rent for related aircraft will be higher near the end of the lease term.

Results of Operations

In 2016, we generated operating revenues of \$2,322.0 million and operating income of \$443.7 million resulting in a 19.1% operating margin and net earnings of \$264.9 million. In 2015, we generated operating revenues of \$2,141.5 million and operating income of \$509.1 million resulting in a 23.8% operating margin and net earnings of \$317.2 million. Operating revenues increased year over year mainly as a result of a 19.9% increase in traffic. Increased operations resulted in higher operating expenses across the board with the exception of aircraft fuel which decreased due to lower fuel cost per gallon, period over period, and aircraft rent which decreased due to our newer aircraft being purchased under secured debt financing rather than being leased through operating leases, as is the case with the older aircraft in our fleet.

As of December 31, 2016, our cash and cash equivalents was \$700.9 million, a decrease of \$102.7 million compared to the prior year. Cash and cash equivalents is driven by cash from our operating activities offset by cash used to fund

PDPs, capital expenditures and repurchases of common stock. In addition to cash and cash equivalents, as of December 31, 2016, we had \$100.2 million in short-term investment securities in which we invested during 2016.

Operating Revenues

	Year Ended 2016	% change 2016 versus 2015	Year Ended 2015	% change 2015 versus 2014	Year Ended 2014
Passenger (thousands)	\$1,200,621	2.7%	\$1,169,338	2.1%	\$1,144,972
Non-ticket (thousands)	1,121,335	15.3%	972,125	23.6%	786,608
Total operating revenue (thousands)	\$2,321,956	8.4%	\$2,141,463	10.9%	\$1,931,580
Total operating revenue per ASM (TRASM) (cents)	9.11	(9.6)%	10.08	(14.7)%	11.82
Average ticket revenue per passenger flight segment	\$55.54	(14.9)%	\$65.25	(18.5)%	\$80.11
Average non-ticket revenue per passenger flight segment	51.87	(4.4)%	54.24	(1.4)%	55.03
Total revenue per passenger flight segment	\$107.41	(10.1)%	\$119.49	(11.6)%	\$135.14

2016 compared to 2015

Operating revenues increased by \$180.5 million, or 8.4%, to \$2,322.0 million in 2016 compared to 2015, primarily due to an increase in traffic of 19.9%, partially offset by a decrease in average yield of 9.6% to 10.76 cents. The decrease in average yield resulted from continued competitive pressures from major U.S. carriers aggressively discounting fare prices.

TRASM for 2016 was 9.11 cents, a decrease of 9.6% compared to 2015, as a result of lower operating yields on stable load factors. Total revenue per passenger flight segment decreased 10.1% from \$119.49 in 2015 to \$107.41 in 2016. The year-over-year decrease in total revenue per passenger flight segment was driven by a decrease of 14.9% in ticket revenue per passenger flight segment, resulting from the continued competitive pressures noted during the period.

During 2016, our average non-ticket revenue per passenger flight segment declined to a lesser extent, by 4.4%, or \$2.37, to \$51.87, mostly resulting from the competitive pressures noted above. Our unbundled model provides a more stable revenue stream as demonstrated during periods of lower passenger ticket yields. The decrease in non-ticket revenue per passenger flight segment was primarily attributable to lower bag and change fee revenue per flight segment.

2015 compared to 2014

Operating revenues increased by \$209.9 million, or 10.9%, to \$2,141.5 million in 2015 compared to 2014, primarily due to an increase in traffic of 27.1%, partially offset by a decrease in average yield of 12.8% to 11.90 cents. The decrease in average yield resulted from increased competitive pressures from major domestic network carriers aggressively discounting fare prices.

TRASM for 2015 was 10.08 cents, a decrease of 14.7% compared to 2014, as a result of lower operating yields on relatively stable load factors. Total revenue per passenger flight segment decreased 11.6% from \$135.14 in 2014 to \$119.49 in 2015. The year-over-year decrease in total revenue per passenger flight segment was driven by a decrease of 18.5% in ticket revenue per passenger flight segment, resulting from the increased competitive pressures noted during the period.

During 2015, our average non-ticket revenue per passenger flight segment remained relatively stable, declining by 1.4%, or \$0.79, to \$54.24, despite the increased competitive pressures. Our unbundling model provides a more stable revenue stream as demonstrated during periods of lower passenger ticket yields. The decrease in non-ticket revenue per passenger flight segment was primarily attributable to lower bag revenue and the outsourcing of our onboard catering to a third-party provider. The outsourcing of onboard catering resulted in improved operating margins. These declines, contributing to the decrease in non-ticket revenue, were partially offset by higher per segment convenience

charges compared to the same period last year.

47

Operating Expenses

Since adopting our ULCC model, we have continuously sought to reduce our unit operating costs and have created one of the industry's lowest cost structures in the United States. The table below presents our operating expenses, as a percentage of operating revenue for the last three years, as well as unit operating costs (CASM).

	Year Ended 2016			Year Ended 2015			Year Ended 2014
	CASM	Per-ASM Change	Percent change	CASM	Per-ASM Change	Percent change	CASM
Operating revenue							
Operating expenses:							
Salaries, wages and benefits	1.85¢	0.07¢	3.9%	1.78¢	(0.14)¢	(7.3)%	1.92¢
Aircraft fuel (1)	1.76	(0.41)	(18.9)	2.17	(1.58)	(42.1)	3.75
Aircraft rent	0.79	(0.21)	(21.0)	1.00	(0.20)	(16.7)	1.20
Landing fees and other rentals	0.59	(0.03)	(4.8)	0.62	(0.02)	(3.1)	0.64
Depreciation and amortization	0.40	0.05	14.3	0.35	0.06	20.7	0.29
Maintenance, materials and repairs	0.39	0.01	2.6	0.38	(0.07)	(15.6)	0.45
Distribution	0.38	(0.03)	(7.3)	0.41	(0.05)	(10.9)	0.46
Special charges	0.15	0.15	NM	—	—	NM	—
Loss on disposal of assets	0.02	0.01	NM	0.01	(0.01)	NM	0.02
Other operating expenses	1.05	0.07	7.1	0.98	0.06	6.5	0.92
Total operating expense							
CASM	7.37¢	(0.31)¢	(4.0)	7.68¢	(1.97)	(20.4)	9.65¢
Adjusted CASM (2)	7.21	(0.48)	(6.2)	7.69	(1.86)	(19.8)	9.55
Adjusted CASM ex fuel (3)	5.45	(0.05)	(0.9)%	5.50	(0.38)	(6.5)	5.88

(1) Aircraft fuel expense is the sum of (i) "into-plane fuel cost," which includes the cost of jet fuel and certain other charges such as fuel taxes and oil, (ii) realized gains and losses related to fuel derivative contracts and (iii) unrealized gains and losses related to fuel derivative contracts. The following table summarizes the components of aircraft fuel expense for the periods presented:

	Year Ended December 31,		
	2016	2015	2014
	(in thousands)		
Into-plane fuel cost	\$447,553	\$454,747	\$608,033
Realized losses (gains) related to fuel derivative contracts, net	—	10,580	995
Unrealized losses (gains) related to fuel derivative contracts, net	—	(3,880)	3,881
Aircraft fuel	\$447,553	\$461,447	\$612,909

(2) Reconciliation of CASM to Adjusted CASM:

	Year Ended December 31,			
	2016	2015	2014	
	(in millions)			
CASM (cents)	7.37	7.68	9.65	9.65

Less:

Edgar Filing: Spirit Airlines, Inc. - Form 10-K

Unrealized losses (gains) related to fuel derivative contracts	\$—	\$(3.9)	(0.02)	\$3.9	0.02	
Loss on disposal of assets	4.2	0.02	1.6	0.01	3.0	0.02
Special charges	37	0.15	0.7	—	—	—
Out of period fuel excise tax	—	—	—	—	9.3	0.06
Adjusted CASM (cents)	7.21	—	—	7.69	—	9.55

(3) Excludes aircraft fuel expense, loss on disposal of assets and special charges.

48

2016 compared to 2015

Operating expense increased by \$246.0 million, or 15.1%, in 2016 primarily due to our 20.0% growth in capacity which drove increases in operating expenses.

Our adjusted CASM ex fuel for 2016 decreased by 0.9% as compared to 2015. The decrease on a per-ASM basis was primarily a result of a decrease in aircraft rent expense per ASM due to our newer aircraft being purchased under secured debt financing rather than being leased through operating leases, as is the case with the older aircraft in our fleet. In addition, we purchased seven previously leased aircraft during the twelve months ended December 31, 2016 which contributed to lower aircraft rent per ASM. This decrease in aircraft rent was partially offset by higher salaries and wages expense and higher other operating expense on a per-ASM basis.

Labor costs in 2016 increased by \$95.0 million, or 25.2%, compared to 2015, due mainly to a 16.8% increase in our pilot and flight attendant workforce required to operate the 16 new aircraft deliveries in 2016. On both a dollar and per-ASM basis, labor costs increased as a result of a non-recurring ratification incentive in the amount of \$8.4 million recorded during the first quarter of 2016, related to the five-year collective bargaining agreement with our flight attendants, as well as an increase in incentive compensation expense resulting from improved metric performance year over year. Scale benefits from overall growth as well as larger gauge aircraft and a decrease in our group health care costs partially offset the increase noted above on a per-ASM basis.

Aircraft fuel expenses includes both into-plane expense (as defined below) and realized and unrealized net gains or losses from fuel derivatives. Into-plane fuel expense is defined as the price that we generally pay at the airport, or the “into-plane” price, including taxes and fees. Into-plane fuel prices are affected by the global oil market, refining costs, transportation taxes and fees, which can vary by region in the United States and other countries where we operate.

Into-plane fuel expense approximates cash paid to the supplier and does not reflect the effect of our fuel derivatives.

We had no activity related to fuel derivative instruments during 2016. Management chose not to elect hedge accounting on any fuel derivative instruments entered into during 2015 or 2014 and, as a result, changes in the fair value of these fuel derivative contracts are recorded each period as a component of aircraft fuel expense.

Aircraft fuel expense decreased by 3.0% from \$461.4 million in 2015 to \$447.6 million in 2016. The decrease was primarily due to an 18.7% decrease in fuel prices per gallon, mostly offset by an 18.7% increase in fuel gallons consumed.

The elements of the changes in aircraft fuel expense are illustrated in the following table:

	Year Ended		
	December 31,		
	2016	2015	
	(in thousands, except		Percent
	per gallon amounts)		Change
Fuel gallons consumed	302,781	255,008	18.7 %
Into-plane fuel cost per gallon	\$1.48	\$1.78	(16.9)%
Into-plane fuel expense	\$447,553	\$454,747	(1.6)%
Realized losses (gains) related to fuel derivative contracts, net	—	10,580	NM
Unrealized losses (gains) related to fuel derivative contracts, net	—	(3,880)	NM
Aircraft fuel expense (per statement of operations)	\$447,553	\$461,447	(3.0)%

Gulf Coast Jet indexed fuel is the basis for a substantial majority of our fuel consumption and is impacted by both the price of crude oil as well as increases or decreases in refining margins associated with the conversion of crude oil to jet fuel. The into-plane fuel cost per gallon decrease of 16.9% was primarily a result of a decrease in jet fuel prices.

In 2016, we did not have any realized or unrealized gains or losses related to fuel derivatives as we did not enter into any fuel derivative instruments during the twelve months ended December 31, 2016. In 2015, total realized loss related to fuel derivatives was \$10.6 million which represents premiums paid for fuel options that expired during the twelve months ended December 31, 2015. There was no cash received from fuel options that settled during 2015.

During the twelve months ended December 31, 2016, we did not pay any premiums to acquire fuel options. During the twelve months ended December 31,

49

2015, we paid \$2.5 million, in premiums to acquire fuel options. We had unrealized gains of \$3.9 million related to mark to market adjustments in the fair value of our outstanding fuel derivatives during the twelve months ended December 31, 2015.

We track economic fuel expense, which we believe is the best measure of the effect fuel prices are currently having on our business, because it most closely approximates the net cash outflow associated with purchasing fuel used for our operations during the period. We define economic fuel expense as into-plane fuel expense and realized gains or losses on derivative contracts. The key difference between aircraft fuel expense, as recorded in our statement of operations, and economic fuel expense is unrealized mark-to-market changes in the value of aircraft fuel derivatives outstanding. Many industry analysts evaluate airline results using economic fuel expense and it is used in our internal management reporting.

The elements of the changes in economic fuel expense are illustrated in the following table:

	Year Ended December 31,		
	2016	2015	
	(in thousands, except per gallon amounts)		Percent Change
Into-plane fuel expense	\$447,553	\$454,747	(1.6)%
Realized (gains) and losses related to fuel derivative contracts, net	—	10,580	NM
Economic fuel expense	\$447,553	\$465,327	(3.8)%
Fuel gallons consumed	302,781	255,008	18.7 %
Economic fuel cost per gallon	\$1.48	\$1.82	(18.7)%
Fuel gallons consumed increased 18.7% as a result of increased operations, as evidenced by a 15.4% increase in block hours.			

During 2016, aircraft rent decreased \$9.9 million, or 4.7%, compared to 2015. The decrease in aircraft rent expense was primarily driven by the purchase of seven previously leased aircraft made during the twelve months ended December 31, 2016. For further discussion on these purchases, refer to "Notes to Financial Statements—3. Special Charges." Additionally, we negotiated several lease extensions during 2016 which contributed to lower aircraft rent. On a per-ASM basis, aircraft rent expense decreased due to a change in the composition of our aircraft fleet between leased aircraft (for which rent expense is recorded under aircraft rent) and purchased aircraft (for which depreciation expense is recorded under depreciation and amortization). Since the prior year period, we have taken delivery of 11 purchased aircraft, which increased capacity but had no effect on aircraft rent expense, as these assets were purchased and are being depreciated over their useful life. Had the respective aircraft been leased, the change in rent expense, on both a dollar and per-ASM basis, would have been greater than the increase currently experienced in depreciation and amortization as a result of these purchases.

Landing fees and other rents for 2016 increased by \$20.6 million, or 15.7%, compared to 2015 primarily due to a 16.0% increase in departures. On a per-ASM basis, landing fees and other rents decreased due to scale benefits from increased volume at our airports.

Depreciation and amortization increased by \$27.2 million, or 36.8%, compared to the prior year period. The increase on both a dollar and per-ASM basis was primarily due to depreciation expense resulting from the purchase of 11 new aircraft and the purchase of 7 previously rented aircraft during 2016.

Maintenance, materials and repair costs increased by \$18.1 million, or 22.5%, in 2016, as compared to 2015. The increase in maintenance costs on a dollar basis was due to more frequent maintenance checks, year over year, as well as routine and ongoing maintenance on a growing fleet. On a per-unit basis, our growth outpaced the increase in maintenance costs during the period, as compared to the prior year period. We expect maintenance expense, on a dollar basis, to increase as our fleet continues to grow and age, resulting in the need for additional and more frequent repairs over time.

The increase in distribution expense of \$10.1 million, or 11.6%, in 2016 compared to 2015 was primarily due to increased sales volume. On a per-ASM basis, distribution costs decreased primarily due to lower average fare resulting in a decrease in credit card fees, year over year.

The following table shows our distribution channel usage:

	Year Ended		
	December 31,		
	2016	2015	Change
Website	63.6%	63.5%	0.1
Third-party travel agents	31.7	32.0	(0.3)
Call center	4.7	4.5	0.2

Special charges for the year ended 2016 consisted primarily of \$37.2 million in lease termination charges recognized in connection with the purchase of 7 aircraft previously financed under operating lease agreements. The amount recorded as lease termination charges represents the excess of the purchase price paid over the appraised fair value of the aircraft, less previously expensed supplemental rent and other non-cash items of \$14.8 million. For further discussion on these purchases, refer to "Notes to Financial Statements—3. Special Charges."

Other operating expenses in 2016 increased by \$59.6 million, or 28.7%, compared to 2015 due primarily to an increase in overall operations. As compared to the prior year period, we increased departures by 16.0% and had 20.6% more passenger flight segments, which drove increases in variable operating expenses. The outsourcing of ramp service agents at certain stations, completed in the latter part of the second quarter of 2015, also drove increases in other operating expense, on both a dollar and per-ASM basis, year over year.

2015 compared to 2014

Operating expense increased by \$56.0 million, or 3.6%, in 2015 primarily due to our 30.0% growth in capacity which drove increases in operating expenses offset almost entirely by a significant decrease in fuel cost per gallon.

Our adjusted CASM ex fuel for 2015 decreased by 6.5% as compared to 2014. The decrease on a per-ASM basis was primarily due to a decrease in aircraft rent and labor costs. The decrease in our aircraft rent per ASM was related to the purchase of aircraft with lower ownership costs recorded under depreciation and amortization versus leased aircraft recorded under aircraft rent. This decrease in aircraft rent was partially offset by higher depreciation and amortization expense related to the depreciation of our recently purchased aircraft. Labor costs per ASM were lower in 2015, as compared to the prior period, primarily due to scale benefits from overall growth as well as from larger gauge aircraft.

Labor costs in 2015 increased by \$64.1 million, or 20.5%, compared to 2014, due mainly to a 27.9% increase in our pilot and flight attendant workforce required to operate the 11 new aircraft deliveries in 2015, offset slightly by a decrease in bonus expense due to a failure to achieve bonus targets in 2015. On a per-ASM basis, labor costs decreased primarily due to scale benefits from overall growth and lower bonus expense on both a dollar and per ASM basis, offset slightly by rising health care costs which rose more than our capacity growth during the year.

Aircraft fuel expense decreased by 24.7% from \$612.9 million in 2014 to \$461.4 million in 2015. The decrease was primarily due to a 39.1% decrease in fuel prices per gallon, partially offset by a 27.2% increase in fuel gallons consumed.

The elements of the changes in aircraft fuel expense are illustrated in the following table:

	Year Ended		
	December 31,		
	2015	2014	
	(in thousands, except		Percent
	per gallon	amounts)	Change
Fuel gallons consumed	255,008	200,498	27.2 %
Into-plane fuel cost per gallon	\$1.78	\$3.03	(41.3)%
Into-plane fuel expense	\$454,747	\$608,033	(25.2)%
Realized losses (gains) related to fuel derivative contracts, net	10,580	995	NM
Unrealized losses (gains) related to fuel derivative contracts, net	(3,880)	3,881	NM
Aircraft fuel expense (per statement of operations)	\$461,447	\$612,909	(24.7)%

Gulf Coast Jet indexed fuel is the basis for a substantial majority of our fuel consumption and is impacted by both the price of crude oil as well as increases or decreases in refining margins associated with the conversion of crude oil to jet fuel. The into-plane fuel cost per gallon decrease of 41.3% was primarily a result of a decrease in jet fuel prices.

In 2015, we recognized \$10.6 million of realized loss related to fuel derivatives consisting of \$11.2 million of premiums paid for fuel options that expired during the twelve months ended December 31, 2015 offset by \$0.6 million of cash received from fuel options that settled during the period. In 2014, total realized loss related to fuel derivatives was \$1.0 million which represents premiums paid for fuel options that expired during the twelve months ended December 31, 2014. There was no cash received from fuel options that settled during 2014. During the twelve months ended December 31, 2015 and December 31, 2014, we paid \$2.5 million and \$9.7 million, respectively, in premiums to acquire fuel options. We had unrealized gains of \$3.9 million and unrealized losses of \$3.9 million related to mark to market adjustments in the fair value of our outstanding fuel derivatives during the twelve months ended December 31, 2015 and December 31, 2014, respectively.

During the third quarter of 2014, we became aware of an underpayment of Federal Excise Tax (FET) for fuel purchases during the period between July 1, 2009 and August 31, 2014. An out of period jet fuel FET amount of \$9.3 million is recorded within aircraft fuel in the statement of operations for the year ended December 31, 2014.

We track economic fuel expense, which we believe is the best measure of the effect fuel prices are currently having on our business, because it most closely approximates the net cash outflow associated with purchasing fuel used for our operations during the period. We define economic fuel expense as into-plane fuel expense and realized gains or losses on derivative contracts. The key difference between aircraft fuel expense, as recorded in our statement of operations, and economic fuel expense is unrealized mark-to-market changes in the value of aircraft fuel derivatives outstanding. In addition, in our calculation for economic fuel price for the prior year, we are excluding the out of period additional jet fuel FET amount of \$9.3 million expensed in the third quarter of 2014. Many industry analysts evaluate airline results using economic fuel expense and it is used in our internal management reporting.

The elements of the changes in economic fuel expense are illustrated in the following table:

	Year Ended		
	December 31,		
	2015	2014	
	(in thousands, except		Percent
	per gallon	amounts)	Change
Into-plane fuel expense	\$454,747	\$608,033	(25.2)%
Realized (gains) and losses related to fuel derivative contracts, net	10,580	995	NM
Out of period fuel federal excise tax	—	(9,278)) NM
Economic fuel expense	\$465,327	\$599,750	(22.4)%
Fuel gallons consumed	255,008	200,498	27.2 %
Economic fuel cost per gallon	\$1.82	\$2.99	(39.1)%

Fuel gallons consumed increased 27.2% as a result of increased operations, as evidenced by a 26.4% increase in block hours.

During 2015, aircraft rent increased \$15.7 million, or 8.0%, compared to 2014. This increase was primarily driven by the full year's rent of the seven leased aircraft delivered throughout 2014. We did not take delivery of any leased aircraft during 2015. On a per-ASM basis, aircraft rent expense decreased due to a change in composition of our aircraft fleet between leased aircraft (for which rent expense is recorded under aircraft rent) and purchased aircraft (for which depreciation expense is recorded under depreciation and amortization). Since the prior year period, we have purchased and taken delivery of 14 aircraft, which increased capacity but had no effect in aircraft rent expense, as these assets were purchased and are being depreciated over their useful life. Had the respective aircraft been leased, the change in rent expense, on both a dollar and per-ASM basis, would have been greater than the increase currently experienced in depreciation and amortization as a result of these purchases.

Landing fees and other rents for 2015 increased by \$26.0 million, or 24.7%, compared to 2014 driven by the increased flight volume. On a per-ASM basis, landing fees and other rents decreased slightly, year over year, primarily due to the scale benefits from increased volume at our airports.

Depreciation and amortization increased by \$26.9 million, or 57.3%, compared to the prior year period. The increase on both a dollar and per-ASM basis was primarily due to depreciation expense resulting from the purchase of 14 aircraft made during 2015.

Maintenance, materials and repair costs increased by \$6.5 million, or 8.8%, in 2015, as compared to 2014. The increase in maintenance costs on a dollar basis was due to routine and ongoing maintenance on a growing fleet. On a per-unit basis, our growth outpaced the increase in maintenance costs during the period, as compared to the prior year period. In addition, the timing and mix of maintenance events resulted in lower cost events in the current year period as compared to the prior year period. On a per-unit basis, maintenance expense decreased due to the purchase of \$13.0 million in rotatable inventory that was made in the third quarter of 2014 to support our aircraft fleet. The expense for these rotatables is recorded under depreciation and amortization expense instead of maintenance expense as in the prior year period when the rotatables were leased from a third party. We expect maintenance expense to increase as our fleet continues to grow and age, resulting in the need for additional or more frequent repairs over time.

The increase in distribution expense of \$11.8 million, or 15.7%, in 2015 compared to 2014 was primarily due to increased sales volume. On a per-ASM basis, distribution expense decreased primarily due to a decrease in credit card fees resulting from a renegotiation with our primary credit card processor in late 2014 and a slight shift of sales from third-party travel agents to our website.

The following table shows our distribution channel usage:

	Year Ended December 31,		
	2015	2014	Change
Website	63.5%	61.1%	2.4
Third-party travel agents	32.0	34.4	(2.4)
Call center	4.5	4.5	—

Other operating expenses in 2015 increased by \$57.3 million, or 38.1%, compared to 2014, primarily due to an increase in departures of 25.6%, our overall growth and an increase in passenger re-accommodation expense year over year. On a per-ASM basis, our other operating expenses increased primarily due to higher passenger re-accommodation expense. Re-accommodation expense was driven by an increased number of flight cancellations, as compared to the same period last year. For example, during the second quarter of 2015, we experienced consecutive storm systems in Dallas, Chicago, New York, and Detroit followed by Tropical Storm Bill that sat over Houston before moving north to Dallas. The timing and location of these storm systems produced a domino effect on our operations resulting in over 500 flight cancellations and numerous flight delays. Our travel and lodging expense was also higher, as compared to the prior year period, due to increased operations, the training of new pilots and flight attendants, and higher average lodging rates.

Other (Income) Expense 2016 compared to 2015

Other (income) expense, net increased from \$6.7 million in 2015 to \$24.2 million in 2016. This increase was primarily driven by an increase in interest expense of \$21.3 million, which primarily represented interest related to the financing of purchased aircraft, offset by an increase in interest income of \$3.2 million and an increase in the capitalization of interest of \$1.2 million. As of December 31, 2016 and 2015, we had 29 and 18 purchased aircraft financed through secured long-term debt arrangements, respectively. Refer to “Notes to Financial Statements—11. Debt and Other Obligations” for additional information. Interest income increased by \$3.2 million, year over year, as we earned interest income on our cash, cash equivalents and short-term investments and on funds required to be held in escrow in accordance with the terms of our EETC.

2015 compared to 2014

Other (income) expense, net increased from \$2.3 million in 2014 to \$6.7 million in 2015. This increase was primarily driven by an increase in interest expense of \$17.6 million, which primarily represented interest related to the financing of purchased aircraft, offset by an increase in the capitalization of interest of \$8.8 million. Additionally, interest income increased by \$1.8 million, year over year, as we earned interest income on funds required to be held in escrow in accordance with the terms of our EETC. Refer to “Notes to Financial Statements—11. Debt and Other Obligations” for additional information.

Income Taxes

In 2016, our effective tax rate was 36.9% compared to 36.9% in 2015 and 36.1% in 2014. While we expect our tax rate to be fairly consistent in the near term, it will tend to vary depending on recurring items such as the amount of income we earn in each state and the state tax rate applicable to such income. Discrete items particular to a given year may also affect our effective tax rates.

Liquidity and Capital Resources

Our primary sources of liquidity are cash on hand, cash provided by operations and capital from debt financing. Primary uses of liquidity are for working capital needs, capital expenditures, aircraft and engine pre-delivery deposit payments (PDPs), debt obligations and maintenance reserves. Our total cash at December 31, 2016 was \$700.9 million, a decrease of \$102.7 million from December 31, 2015. In addition to cash and cash equivalents, as of December 31, 2016, we had \$100.2 million in short-term investment securities in which we invested during 2016.

Currently, our single largest capital need is funding the acquisition costs of our aircraft. Aircraft are acquired through debt financing, sale leaseback transactions, direct leases or cash purchases. In debt financing transactions, capital is needed to make equity investments in capital assets and payments on debt obligations (principal and interest) after the acquisition of the aircraft. During the twelve months ended December 31, 2016, we purchased 11 aircraft through debt financing transactions and made \$115.0 million in debt payment obligations (principal, interest and fees). The debt entered into in the current year had maturity dates ranging from 2024 to 2028 and interest rates ranging from 4.100% to 4.450%. Capital resources required under debt financing transactions will generally be higher than those involving sale leaseback transactions. In sale leaseback transactions, capital is needed to fund the initial purchase of the aircraft prior to the sale to the lessor. During 2016, we entered into no sale leaseback transactions. During the twelve months ended December 31, 2016, we purchased seven A319 aircraft which were previously financed under operating leases for \$147.7 million, comprised of cash payments of \$107.1 million and the applications of maintenance security deposits held by the previous lessors of \$40.6 million. In addition, we took delivery of five A320neos financed through direct operating leases.

PDPs relating to future deliveries under our agreement with Airbus are required at various times prior to each delivery date. During 2016, we paid \$173.9 million in PDPs for future deliveries of aircraft and spare engines. As of December 31, 2016, we had \$325.7 million of PDPs on our balance sheet.

As of December 31, 2016, we had secured financing for four aircraft, scheduled for delivery in 2017, and did not have financing commitments in place for the remaining 72 Airbus firm aircraft orders, scheduled for delivery between 2017 through 2021. In January 2017, we secured financing for one additional aircraft, scheduled for delivery in 2017. Future aircraft deliveries may be paid in cash, leased or otherwise financed based on market conditions, our prevailing level of liquidity, and capital market availability.

In addition to funding the acquisition of our future fleet, we are required to make maintenance reserve payments for some of the aircraft in our current fleet. Maintenance reserves are paid to aircraft lessors and are held as collateral in advance of our performance of major maintenance activities. During the twelve months ended December 31, 2016, we paid \$57.1 million in maintenance reserves and as of December 31, 2016, we have \$286.5 million (\$87.0 million in aircraft maintenance deposits and \$199.4 million in long-term aircraft maintenance deposits) on our balance sheet.

On October 26, 2015, our Board of Directors authorized a repurchase program of up to \$100 million in aggregate value of shares of our Common Stock, par value \$0.0001 per share, from time to time in open market or privately negotiated transactions. As of December 31, 2016, we exhausted repurchases under this program.

As of December 31, 2016, we were compliant with our credit card processing agreements, and not subject to any credit card holdbacks. The maximum potential exposure to cash holdbacks by our credit card processors, based upon advance ticket sales and \$9 Fare Club memberships, as of December 31, 2016 and December 31, 2015, was \$234.6 million and \$250.2 million, respectively.

Net Cash Flows Provided By Operating Activities. Operating activities in 2016 provided \$473.7 million in cash compared to \$473.0 million provided in 2015. Cash provided by operating activities remained relatively flat, year over

year, despite lower net income, primarily due to the non-cash lease termination costs in 2016 of \$37.2 million recorded within special charges on the statement of operations. Other notable differences include \$65.0 million of federal income tax payments made in 2015 and refunded in 2016 and lower deferral of income taxes, year over year. Operating activities in 2015 provided \$473.0 million in cash compared to \$261.8 million provided in 2014. The increase resulted from higher net income, larger cash collections on flights sold but not yet flown, and higher deferrals of income taxes year over year.

Net Cash Flows Used In Investing Activities. During 2016, investing activities used \$826.3 million, compared to \$701.3 million used in 2015. The increase was mainly driven by the purchase of short-term available-for-sale investment securities of

\$103.3 million made during 2016. In addition, there was an increase in paid PDPs, net of refunds, driven by timing of future aircraft deliveries. During 2016, our main investing activities were in expenditures for flight equipment consisting primarily of the purchase of 11 new aircraft, 7 previously leased aircraft and 1 spare engine.

During 2015, investing activities used \$701.3 million, compared to \$303.7 million used in 2014. The increase was mainly due to the purchase of 14 aircraft and 1 spare engine sale leaseback transaction during 2015 and a slight increase in paid PDPs, as compared to 2014, driven by the timing of aircraft deliveries.

Net Cash Provided By Financing Activities. During 2016, financing activities provided \$249.9 million. We received \$417.3 million in connection with the debt financing of 11 aircraft delivered during 2016. We spent \$102.5 million to repurchase common stock primarily under our stock repurchase authorization, which became effective in October 2015, and we paid \$64.4 million in debt principal payment obligations related to the financing of our aircraft.

During 2015, financing activities provided \$399.1 million. We received \$7.3 million in proceeds from the sale of one spare engine as part of a sale leaseback transaction, \$536.8 million in connection with the debt financing of 14 aircraft, and retained \$8.9 million as a result of excess tax benefits related to share-based payments. We spent \$15.2 million in debt issuance costs to secure the financing of 14 aircraft purchases, spent \$112.3 million to repurchase common stock and made \$26.4 million in debt and capital lease payments.

During 2014, financing activities provided \$144.0 million. We received \$7.2 million in proceeds from the sale of one spare engine as part of a sale leaseback transaction, \$148.0 million in connection with the debt financing of four aircraft, retained \$1.9 million as a result of excess tax benefits related to share-based payments and received cash as a result of exercised stock options. We spent \$4.7 million in debt issuance costs to secure the financing of 4 aircraft delivered in 2014 and 11 aircraft delivered in 2015.

In 2014, we agreed on a settlement amount of \$7.0 million related to a Tax Receivable Agreement (TRA). This agreed upon settlement was in excess of the outstanding liability of \$5.6 million at the time of settlement. The \$5.6 million payment is recorded as cash used in financing activities in the statement of cash flows and the excess payment of \$1.4 million is recorded within other expense in the statement operations and recorded as cash from operations in the statement of cash flows.

Commitments and Contractual Obligations

We have contractual obligations and commitments primarily with regard to future purchases of aircraft and engines, payment of debt, and lease arrangements. The following table discloses aggregate information about our contractual obligations as of December 31, 2016 and the periods in which payments are due (in millions):

	2017	2018 - 2019	2020 - 2021	2022 and beyond	Total
Long-term debt (1)	\$89	\$165	\$158	\$600	\$1,012
Interest commitments (2)	42	73	58	97	270
Operating lease obligations	258	457	371	612	1,698
Flight equipment purchase obligations	660	1,328	1,602	25	3,615
Other (3)	16	4	—	—	20
Total future payments on contractual obligations	\$1,065	\$2,027	\$2,189	\$1,334	\$6,615

Includes principal only associated with senior term loans due through 2027, junior term loans due through 2022 (1) and Class A and Class B enhanced equipment trust certificates due through 2028 and 2024, respectively. Refer to “Notes to the Financial Statements—11. Debt and Other Obligations.”

(2) Related to senior and junior term loans and Class A and Class B enhanced equipment trust certificates only.

(3) Primarily related to the construction of our maintenance hangar, our A320ceo seating reconfiguration project, and our reservation system. Refer to “Notes to the Financial Statements—16. Commitments and Contingencies.”

Some of our master lease agreements provide that we pay maintenance reserves to aircraft lessors to be held as collateral in advance of our required performance of major maintenance activities. Some maintenance reserve payments are fixed contractual amounts, while others are based on utilization. In addition to the contractual obligations disclosed in the table above, we have fixed maintenance reserve payments for these aircraft and related flight equipment, including estimated amounts for contractual price escalations, which are \$7.7 million in 2017, \$7.0 million in 2018, \$5.7 million in 2019, \$5.4 million in 2020, \$5.5 million in 2021 and \$17.7 million in 2022 and beyond.

In August 2015, we created two separate pass-through trusts which issued \$576.6 million aggregate face amount of Series 2015-1 Class A and Class B EETCs in connection with the financing of 12 new Airbus A321 aircraft and 3 new Airbus A320 aircraft. The proceeds from the issuance of EETCs were initially held in escrow by a depository and, upon satisfaction of certain terms and conditions, are released and used to purchase equipment notes which are issued by the Company and secured by the Company's aircraft. As of December 31, 2016, \$538.1 million of the proceeds from the sale of the 2015-1 EETCs had been used to purchase equipment notes in connection with the financing of 3 Airbus A320 aircraft and 11 Airbus A321 aircraft. The remaining one aircraft, under the EETC, was delivered in January 2017.

We evaluated whether the pass-through trusts formed are variable interest entities (VIEs) required to be consolidated by the Company under applicable accounting guidance. We determined that the pass-through trusts are VIEs and that we do not have a variable interest in the pass-through trusts. As such, we are not required to consolidate these pass-through trusts.

As of December 31, 2016, principal and interest commitments related to our future secured debt financing for four aircraft are \$10.9 million in 2017, \$13.0 million in 2018, \$13.7 million in 2019, \$13.2 million in 2020, \$13.3 million in 2021, and \$119.1 million in 2022 and beyond.

In September 2015, we executed a lease agreement with Wayne County Airport Authority (the Authority), which owns and operates Detroit Metropolitan Wayne County Airport (DTW). Under the lease agreement, we lease a 10-acre site, adjacent to the airfield at DTW, in order to construct, operate and maintain an approximately 126,000 square foot hangar facility. The lease agreement has a 30-year term with two 10-year extension options. Upon termination of the lease, title of the project, which will be fully depreciated, will automatically pass to the Authority. We estimate we will complete the project during the first quarter of 2017. Future commitment amounts for the project are included within operating lease obligations, for future rent obligations and within other, for future construction cost obligations in the table above.

Off-Balance Sheet Arrangements

We have significant obligations for aircraft and spare engines as 59 of our 95 aircraft and 11 of our 12 spare engines are financed under operating leases and therefore are not reflected on our balance sheets. These leases expire between 2017 and 2029. Aircraft rent payments were \$213.9 million and \$217.0 million for 2016 and 2015, respectively. Our aircraft lease payments for 57 of our aircraft are fixed-rate obligations. Two of our leases provide for variable rent payments, which fluctuate based on changes in LIBOR (London Interbank Offered Rate).

Our contractual purchase commitments consist primarily of aircraft and engine acquisitions through manufacturer and aircraft leasing companies. As of December 31, 2016, our firm aircraft orders consisted of the following:

	Airbus			
	A320ceo	A320neo	A321ceo	Total
2017	4		11	15
2018	5	4	5	14
2019	1	12		13
2020		16		16
2021		18		18
	10	50	16	76

We also have three spare engine orders for V2500 SelectOne engines with IAE and nine spare engine orders for PurePower PW 1100G-JM engines with Pratt & Whitney. Spare engines are scheduled for delivery from 2017 through 2023. Committed expenditures for these aircraft and spare engines, including estimated amounts for contractual price escalations and aircraft PDPs, are expected to be \$660.3 million in 2017, \$649.8 million in 2018, \$678.3 million in

Edgar Filing: Spirit Airlines, Inc. - Form 10-K

2019, \$824.4 million in 2020, \$777.9 million in 2021, and \$24.6 million in 2022 and beyond.

As of December 31, 2016, we had lines of credit related to corporate credit cards of \$23.6 million from which we had drawn \$9.9 million.

As of December 31, 2016, we had lines of credit with counterparties for both physical fuel delivery and derivatives in the amount of \$46.5 million. As of December 31, 2016, we had drawn \$8.0 million on these lines of credit. We are required to post

59

collateral for any excess above the lines of credit if the derivatives are in a net liability position and make periodic payments in order to maintain an adequate undrawn portion for physical fuel delivery. As of December 31, 2016, we did not hold any derivatives.

As of December 31, 2016, we have \$6.6 million in uncollateralized surety bonds and a \$25.2 million unsecured standby letter of credit facility, representing an off balance-sheet commitment, of which \$19.7 million had been drawn upon for issued letters of credit.

GLOSSARY OF AIRLINE TERMS

Set forth below is a glossary of industry terms:

“Adjusted CASM” means operating expenses, excluding unrealized gains or losses related to fuel derivative contracts, out of period fuel federal excise tax, loss on disposal of assets, and special charges (credits), divided by ASMs.

“Adjusted CASM ex fuel” means operating expenses excluding aircraft fuel expense, loss on disposal of assets, and special charges (credits), divided by ASMs.

“AFA-CWA” means the Association of Flight Attendants-CWA.

“Air traffic liability” or “ATL” means the value of tickets sold in advance of travel.

“ALPA” means the Airline Pilots Association, International.

“ASIF” means an Aviation Security Infrastructure Fee assessed by the TSA on each airline.

“Available seat miles” or “ASMs” means the number of seats available for passengers multiplied by the number of miles the seats are flown, also referred to as "capacity".

“Average aircraft” means the average number of aircraft in our fleet as calculated on a daily basis.

“Average daily aircraft utilization” means block hours divided by number of days in the period divided by average aircraft.

“Average economic fuel cost per gallon” means total aircraft fuel expense, excluding unrealized gains or losses related to fuel derivative contracts and out of period fuel federal excise tax, divided by the total number of fuel gallons consumed.

“Average non-ticket revenue per passenger flight segment” means the total non-ticket revenue divided by passenger flight segments.

“Average ticket revenue per passenger flight segment” means total passenger revenue divided by passenger flight segments.

“Average stage length” represents the average number of miles flown per flight.

“Average yield” means average operating revenue earned per RPM, calculated as total revenue divided by RPMs.

“Block hours” means the number of hours during which the aircraft is in revenue service, measured from the time of gate departure before take-off until the time of gate arrival at the destination.

“CASM” or “unit costs” means operating expenses divided by ASMs.

“CBA” means a collective bargaining agreement.

“CBP” means United States Customs and Border Protection.

“DOT” means the United States Department of Transportation.

“EPA” means the United States Environmental Protection Agency.

"EETC" means enhanced equipment trust certificate.

“FAA” means the United States Federal Aviation Administration.

“FCC” means the United States Federal Communications Commission.

"FLL Airport" means the Fort Lauderdale Hollywood International Airport.

“GDS” means Global Distribution System (e.g., Amadeus, Galileo, Sabre and Worldspan).

"IAMAW" means the International Association of Machinists and Aerospace Workers.

“Into-plane fuel cost per gallon” means into-plane fuel expense divided by number of fuel gallons consumed.

“Into-plane fuel expense” represents the cost of jet fuel and certain other charges such as fuel taxes and oil.

“Load factor” means the percentage of aircraft seats actually occupied on a flight (RPMs divided by ASMs).

“NMB” means the National Mediation Board.

“OTA” means Online Travel Agent (e.g., Orbitz and Travelocity).

“Passenger flight segments” means the total number of passengers flown on all flight segments.

“PDP” means pre-delivery deposit payment.

“Revenue passenger mile” or “RPM” means one revenue passenger transported one mile. RPMs equals revenue passengers multiplied by miles flown, also referred to as “traffic”.

“RLA” means the United States Railway Labor Act.

“Total operating revenue per ASM,” “TRASM” or “unit revenue” means operating revenue divided by ASMs.

“TRA” means Tax Receivable Agreement.

“TWU” means the Transport Workers Union of America.

“TSA” means the United States Transportation Security Administration.

“ULCC” means “ultra low-cost carrier.”

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Market Risk-Sensitive Instruments and Positions

We are subject to certain market risks, including commodity prices (specifically aircraft fuel) and interest rates. We purchase the majority of our jet fuel at prevailing market prices and seek to manage market risk through execution of our hedging strategy and other means. We have market-sensitive instruments in the form of fixed-rate debt instruments, and financial derivative instruments used to hedge our exposure to jet fuel price increases and interest rate increases. We do not purchase or hold any derivative financial instruments for trading purposes. The adverse effects of changes in these markets could pose a potential loss as discussed below. The sensitivity analysis provided below does not consider the effects that such adverse changes may have on overall economic activity, nor does it consider additional actions we may take to mitigate our exposure to such changes. Actual results may differ.

Aircraft Fuel. Our results of operations can vary materially due to changes in the price and availability of aircraft fuel. Aircraft fuel expense for the years ended December 31, 2016, 2015 and 2014 represented approximately 23.8%, 28.3% and 38.9% of our operating expenses, respectfully. Volatility in aircraft fuel prices or a shortage of supply could have a material adverse effect on our operations and operating results. We source a significant portion of our fuel from refining resources located in the southeast United States, particularly facilities adjacent to the Gulf of Mexico. Gulf Coast fuel is subject to volatility and supply disruptions, particularly during hurricane season when refinery shutdowns have occurred, or when the threat of weather related disruptions has caused Gulf Coast fuel prices to spike above other regional sources. Both jet fuel swaps and jet fuel options are used at times to protect the refining price risk between the price of crude oil and the price of refined jet fuel, and to manage the risk of increasing fuel prices. Gulf Coast Jet indexed fuel is the basis for a substantial majority of our fuel consumption. Based on our annual fuel consumption, a hypothetical 10% increase in the average price per gallon of aircraft fuel would have increased into-plane aircraft fuel cost for 2016 by \$44.8 million.

As of December 31, 2016 and 2015, we did not have any outstanding fuel derivatives. We measure our financial derivative instruments at fair value. Fair value of the instruments is determined using standard option valuation models. Changes in the related commodity derivative instrument cash flows may change by more or less than the amount based upon further fluctuations in future prices. Outstanding financial derivative instruments expose us to credit loss in the event of nonperformance by the counterparties to the agreements. However, we do not expect the counterparties to fail to meet their obligations.

Interest Rates. We have market risk associated with our short-term investment securities, which had a fair market value of \$100.2 million as of December 31, 2016. As of December 31, 2015, we had no outstanding investment securities, since we did not purchase them until the third quarter of 2016. We also have market risk associated with changing interest rates due to LIBOR-based lease rates on two of our aircraft. A hypothetical 10% change in interest rates in 2016 would affect total aircraft rent expense in 2017 by less than \$0.1 million per annum.

Fixed-Rate Debt. As of December 31, 2016, we had \$1,012.4 million outstanding in fixed-rate debt related to the purchase of 15 Airbus A320 aircraft and 14 Airbus A321 aircraft, which had a fair value of \$1,033.7 million. As of December 31, 2015, we had \$659.3 million outstanding in fixed-rate debt related to the purchase of 12 Airbus A320 aircraft and 6 Airbus A321 aircraft, which had a fair value of \$652.4 million.

Notes to Financial Statements

1. Summary of Significant Accounting Policies

Basis of Presentation

Spirit Airlines, Inc. (Spirit or the Company) headquartered in Miramar, Florida, is an ultra low-cost, low-fare airline that provides affordable travel opportunities principally throughout the domestic United States, the Caribbean and Latin America. The Company manages operations on a system-wide basis due to the interdependence of its route structure in the various markets served. As only one service is offered (i.e., air transportation), management has concluded there is only one reportable segment.

Certain prior period amounts have been reclassified to conform to the current year's presentation.

Use of Estimates

The preparation of financial statements in accordance with generally accepted accounting principles in the United States of America requires the Company's management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. The Company's estimates and assumptions are based on historical experience and changes in the business environment. However, actual results may differ from estimates under different conditions, sometimes materially. Critical accounting policies and estimates are defined as those that both (i) are most important to the portrayal of the Company's financial condition and results and (ii) require management's most subjective judgments. The Company's most critical accounting policies and estimates are described below.

Cash and Cash Equivalents

The Company considers all highly liquid investments with maturities of less than three months at the date of acquisition to be cash equivalents. Investments included in this category primarily consist of money market funds.

Cash and cash equivalents are stated at cost, which approximates fair value.

Short-term Investment Securities

The Company's short-term investment securities consist of available-for-sale asset-backed securities with contractual maturities of twelve months or less. These securities are stated at fair value within current assets on the Company's balance sheet. For all short-term investments, at each reset period or upon reinvestment, the Company accounts for the transaction as proceeds from the maturity of short-term investment securities for the security relinquished, and purchase of short-term investment securities for the security purchased, in the Company's statement of cash flows. Realized gains and losses on sales of investments, if any, are reflected in non-operating income (expense) in the statements of operations. Unrealized gains and losses on investment securities are reflected as a component of accumulated other comprehensive income.

Accounts Receivable

Accounts receivable primarily consist of amounts due from credit card processors associated with the sales of tickets and amounts due from the Internal Revenue Service related to federal excise fuel tax. The Company records an allowance for doubtful accounts for amounts not expected to be collected. The Company estimates the allowance based on historical write-offs as well as aging trends. The allowance for doubtful accounts was immaterial as of December 31, 2016 and 2015.

In addition, the provision for doubtful accounts and write-offs for 2016, 2015 and 2014 were each immaterial.

Property and Equipment

Property and equipment is stated at cost, less accumulated depreciation and amortization. Depreciation of operating property and equipment is computed using the straight-line method applied to each unit of property. Residual values for aircraft, major spare rotatable parts, avionics and assemblies are generally estimated to be 10%. Property under capital leases and related obligations are initially recorded at an amount equal to the present value of future minimum lease payments computed using the Company's incremental borrowing rate or, when known, the interest rate implicit in the lease. Amortization of property under capital leases is on a straight-line basis over the lease term and is included in depreciation and amortization expense.

Notes to Financial Statements—(Continued)

The depreciable lives used for the principal depreciable asset classifications are:

	Estimated Useful Life
Aircraft	25 years
Spare rotables and flight assemblies	7 to 15 years
Other equipment and vehicles	5 to 7 years
Internal use software	3 to 10 years
Capital lease	Lease term
Leasehold improvements	Lesser of lease term or estimated useful life of the improvement

As of December 31, 2016, the Company had 36 aircraft and 1 spare engine capitalized within flight equipment with depreciable lives of 25 years. As of December 31, 2016, the Company had 59 aircraft financed through operating leases with lease terms from 12 to 18 years and 11 spare engines financed through operating leases with lease terms from 10 to 13 years.

The following table illustrates the components of depreciation and amortization expense:

	Year Ended December 31,		
	2016	2015	2014
	(in thousands)		
Depreciation	\$57,325	\$30,797	\$11,169
Amortization of heavy maintenance	43,811	43,111	35,802
Total depreciation and amortization	\$101,136	\$73,908	\$46,971

The Company capitalizes certain internal and external costs associated with the acquisition and development of internal-use software for new products, and enhancements to existing products, that have reached the application development stage and meet recoverability tests. Capitalized costs include external direct costs of materials and services utilized in developing or obtaining internal-use software, and labor cost for employees who are directly associated with, and devote time, to internal-use software projects. Capitalized computer software, included as a component of ground and other equipment in the accompanying balance sheets, net of accumulated depreciation, was \$9.4 million and \$8.8 million at December 31, 2016 and 2015, respectively.

Amortization of capitalized software costs is charged to depreciation on a straight-line method basis. Amortization of capitalized software costs was \$3.2 million, \$3.1 million and \$3.5 million for the years ended 2016, 2015 and 2014, respectively. The Company placed in service internal-use software of \$4.1 million, \$4.3 million and \$2.7 million, during the years ended 2016, 2015 and 2014, respectively.

Measurement of Asset Impairments

The Company records impairment charges on long-lived assets used in operations when events and circumstances indicate that the assets may be impaired, the undiscounted cash flows estimated to be generated by those assets are less than the carrying amount of those assets, and the net book value of the assets exceeds their estimated fair value. In making these determinations, the Company uses certain assumptions, including, but not limited to: (i) estimated fair value of the assets; and (ii) estimated, undiscounted future cash flows expected to be generated by these assets, which are based on additional assumptions such as asset utilization, length of service the asset will be used in the Company's operations, and estimated salvage values.

Passenger Revenue Recognition

Tickets sold are initially deferred as "air traffic liability." Passenger revenue is recognized at time of departure when transportation is provided. All tickets sold by the Company are nonrefundable. An unused ticket expires at the date of scheduled travel and is recognized as revenue at the date of scheduled travel.

Customers may elect to change their itinerary prior to the date of departure. A service charge is assessed and recognized on the date the change is initiated and is deducted from the face value of the original purchase price of the ticket, and the original ticket becomes invalid. The amount remaining after deducting the service charge is called a credit shell which expires 60 days from the date the credit shell is created and can be used towards the purchase of a new ticket and the Company's other service offerings. The amount of credits expected to expire is recognized as revenue upon issuance of the credit and is

Notes to Financial Statements—(Continued)

estimated based on historical experience. Estimating the amount of credits that will go unused involves some level of subjectivity and judgment. However, given the relatively short period of time to expiration, this does not have a significant impact on the Company's financial statements.

The Company is also required to collect certain taxes and fees from customers on behalf of government agencies and airports and remit to the applicable governmental entity or airport on a periodic basis. These taxes and fees include U.S. federal transportation taxes, federal security charges, airport passenger facility charges and international arrival and departure taxes. These items are collected from customers at the time they purchase their tickets, but are not included in passenger revenue. The Company records a liability upon collection from the customer and relieves the liability when payments are remitted to the applicable governmental agency or airport.

Frequent Flier Program

Flown Miles. The Company records unrecognized revenue for mileage credits earned by passengers under its FREE SPIRIT program, including mileage credits for members with an insufficient number of mileage credits to earn an award, based on the estimated incremental cost of providing free travel for credits that are expected to be redeemed. Incremental costs include fuel, insurance, security, ticketing and facility charges reduced by an estimate of fees required to be paid by the passenger when redeeming the award.

Affinity Card Program. During 2015, the Company extended its agreement with the administrator of the FREE SPIRIT affinity credit card program, which was scheduled to expire in April 2016. The renegotiated program was extended through 2022. As part of the new agreement, the Company received a \$10.7 million signing bonus that is being deferred over the contract term and has been reflected in the table below as consideration received from credit card mileage programs in 2015. This extension is considered a material change and thus at the inception of this new arrangement, the Company evaluated all deliverables in the arrangement to determine whether they represent separate units of accounting using the criteria as set forth in ASU No. 2009-13. Under the Company's affinity card program, funds received for the marketing of a co-branded Spirit credit card and delivery of award miles are accounted for as a multiple-deliverable arrangement. At the inception of the arrangement, the Company evaluated all deliverables in the arrangement to determine whether they represent separate units of accounting. The Company determined the arrangement had three separate units of accounting: (i) travel miles to be awarded, (ii) licensing of brand and access to member lists and (iii) advertising and marketing efforts. Arrangement consideration was allocated based on relative selling price. At inception of the arrangement, the Company established the estimated selling price for all deliverables that qualified for separation. The manner in which the selling price was established was based on a hierarchy of evidence the Company considered. Total arrangement consideration was then allocated to each deliverable on the basis of the deliverable's relative selling price. In considering the hierarchy of evidence, the Company first determined whether vendor specific objective evidence of selling price or third-party evidence of selling price existed. It was determined by the Company that neither vendor specific objective evidence of selling price nor third-party evidence existed due to the uniqueness of the Company's program. As such, the Company developed its best estimate of the selling price for all deliverables. For the award miles, the Company considered a number of entity-specific factors when developing the best estimate of the selling price, including the number of miles needed to redeem an award, average fare of comparable segments, breakage, restrictions and other charges. For licensing of brand and access to member lists, the Company considered both market-specific factors and entity-specific factors, including general profit margins realized in the marketplace/industry, brand power, market royalty rates and size of customer base. For the advertising element, the Company considered market-specific factors and entity-specific factors, including the Company's internal costs (and fluctuations of costs) of providing services, volume of marketing efforts and overall advertising plan. Consideration allocated based on the relative selling price to both brand licensing and advertising elements is recognized as revenue when earned and recorded in non-ticket revenue. Consideration allocated to award miles is deferred and recognized ratably as passenger revenue over the estimated period the transportation is expected to be provided which is estimated at 17 months. The Company used entity-specific assumptions coupled with the various judgments necessary to determine the selling price of a deliverable in accordance with the required selling price hierarchy. Changes in these assumptions could result in changes in the estimated selling prices. Determining the frequency to reassess selling price for individual deliverables requires significant judgment. As of December 31, 2016, there have been no changes in either the selling price or the method or assumptions used to determine selling price for

any of the identified units of accounting that would have a significant effect on the allocation of consideration.

72

Notes to Financial Statements—(Continued)

The following table illustrates total cash proceeds received from the sale of mileage credits and the portion of such proceeds recognized in revenue immediately as marketing component:

Year Ended	Consideration received from credit card mile programs (in thousands)	Portion of proceeds recognized immediately as marketing component
December 31, 2016	\$48,882	\$ 36,640
December 31, 2015	58,005	35,938
December 31, 2014	33,819	28,140

Total unrecognized revenue from future FREE SPIRIT award redemptions and the sale of mileage credits was \$15.3 million and \$14.9 million at December 31, 2016 and 2015, respectively. These balances are recorded as a component of air traffic liability in the accompanying balance sheets.

Non-ticket Revenue Recognition

Non-ticket revenues are generated from air travel-related services for baggage, bookings through the Company's call center or third-party vendors, advance seat selection, itinerary changes and loyalty programs. Non-ticket revenues also consist of services not directly related to providing transportation such as the FREE SPIRIT affinity credit card program, \$9 Fare Club and the sale of advertising to third parties on Spirit's website and on board aircraft.

The following table summarizes the primary components of non-ticket revenue and the revenue recognition method utilized for each service or product:

Non-ticket revenue	Recognition method	Year Ended December 31,		
		2016	2015	2014
		(in thousands)		
Baggage	Time of departure	\$434,269	\$381,386	\$318,103
Passenger usage fee	Time of departure	358,920	298,092	221,992
Advance seat selection	Time of departure	110,966	97,786	76,270
Service charges for changes and cancellations	When itinerary is changed	42,823	43,756	38,388
Other		174,357	151,105	131,855
Non-ticket revenue		\$1,121,335	\$972,125	\$786,608

Charges for services recognized at time of departure are initially recorded as a liability, within air traffic liability, until time of departure. The passenger usage fee is charged for tickets sold through the Company's primary sales distribution channels. The primary sales distribution channels for which passenger usage fees are charged include sales through the Company's website, sales through the third-party provided call center and sales through travel agents; the Company does not charge a passenger usage fee for sales made at its airport ticket counters. Other non-ticket revenues include revenues from other air related charges as well as non-air related charges. Other air related charges include optional services and products provided to passengers such as travel insurance, use of the Company's call center or travel agents, and commissions on sale of on-board products, among others. Non-air related charges primarily consist of revenues from advertising on the Company's aircraft and website, the Company's \$9 Fare Club subscription-based membership program and the Company's FREE SPIRIT affinity credit card program.

Airframe and Engine Maintenance

The Company accounts for heavy maintenance and major overhaul under the deferral method whereby the cost of heavy maintenance and major overhaul is deferred and amortized until the earlier of the end of the useful life of the related asset, the end of the remaining lease term or the next scheduled heavy maintenance event.

Amortization of heavy maintenance and major overhaul costs charged to depreciation and amortization expense was \$43.8 million, \$43.1 million and \$35.8 million for the years ended 2016, 2015 and 2014, respectively. During the years ended 2016, 2015 and 2014, the Company deferred \$35.4 million, \$9.1 million and \$33.6 million, respectively,

of costs for heavy maintenance. At December 31, 2016 and 2015, the Company had deferred heavy maintenance balance of \$238.3 million and \$208.1 million, and accumulated heavy maintenance amortization of \$162.8 million and \$118.9 million, respectively.

Notes to Financial Statements—(Continued)

The Company outsources certain routine, non-heavy maintenance functions under contracts that require payment on a utilization basis, such as flight hours. Costs incurred for maintenance and repair under flight hour maintenance contracts, where labor and materials price risks have been transferred to the service provider, are expensed based on contractual payment terms. All other costs for routine maintenance of the airframes and engines are charged to expense as performed.

The table below summarizes the extent to which the Company's maintenance costs are rate capped due to flight hour maintenance contracts:

	Year Ended December 31,		
	2016	2015	2014
	(in thousands)		
Flight hour-based maintenance expense	\$48,471	\$41,818	\$35,675
Non-flight hour-based maintenance expense	50,116	38,630	38,281
Total maintenance, materials and repairs	\$98,587	\$80,448	\$73,956

Leased Aircraft Return Costs

The Company's aircraft lease agreements often contain provisions that require the Company to return aircraft airframes and engines to the lessor in a certain condition or pay an amount to the lessor based on the airframe and engine's actual return condition. Lease return costs include all costs that would be incurred at the return of the aircraft, including costs incurred to repair the airframe and engines to the required condition as stipulated by the lease. Lease return costs could include, but are not limited to redelivery cost, fuel, final inspections, reconfiguration of the cabin, repairs to the airframe, painting, overhaul of engines, replacement of components, and checks. Lease return costs are recognized beginning when it is probable that such costs will be incurred and they can be estimated. Incurrence of lease return costs becomes probable and the amount of those costs can typically be estimated near the end of the lease term (that is, after the aircraft has completed its last maintenance cycle prior to being returned). When determining probability and estimated cost, there are various other factors which need to be considered such as current condition of the aircraft, the age of the aircraft at lease expiration, number of hours run on the engines, number of cycles run on the airframe, projected number of hours run on the engine at the time of return, number of projected cycles run on the airframe at the time of return, the extent of repairs needed if any at return, return locations, current configuration of the aircraft, current paint of the aircraft, estimated escalation of cost of repairs and materials at the time of return, current flight hour agreement rates and future flight hour agreement rates. In addition, typically near the lease return date, the lessors may allow reserves to be applied as return condition consideration or pass on certain return provisions if they do not align with their current plans to remarket the aircraft. When costs become both probable and estimable, they are accrued on a straight-line basis as contingent rent, a component of supplemental rent, through the remaining lease term. Management expects return costs to be estimable near the end of the lease term, as such, contingent rent for related aircraft will be higher near the end of the lease term.

Aircraft Fuel

Aircraft fuel expense includes jet fuel and associated "into-plane" costs, taxes, and oil, and realized and unrealized gains and losses associated with fuel derivative contracts, if any.

Derivative Instruments

The Company accounts for derivative financial instruments at fair value and recognizes them in the balance sheet in prepaid expenses and other current assets or other current liabilities. For derivatives designated as cash flow hedges, changes in fair value of the derivative are generally reported in other comprehensive income and are subsequently reclassified into earnings when the hedged item affects earnings. During the third quarter of 2015, the Company settled six forward interest rate swaps having a total notional amount of \$120 million. These interest rate swaps fixed the benchmark interest rate component of interest payments on the debt related to three Airbus A321 aircraft, which the Company took delivery of during the third quarter of 2015. These instruments limited the Company's exposure to changes in the benchmark interest rate in the period from the trade date through the date of maturity. The interest rate swaps were designated as cash flow hedges. The Company accounts for interest rate swaps at fair value and recognizes them in the balance sheet in prepaid expenses and other current assets or other current liabilities with changes in fair value recorded within accumulated other comprehensive income (AOCI). Realized gains and losses

from cash flow hedges are recorded in the statement of cash flows as a component of cash flows from operating activities. Subsequent to the issuance of each debt instrument, amounts remaining in AOCI are amortized over the life of the fixed-rate debt instrument.

Notes to Financial Statements—(Continued)

For the years ended 2016, 2015 and 2014, the Company did not hold fuel derivative instruments that were designated as cash flow hedges for accounting purposes. As a result, changes in the fair value of such fuel derivative contracts were recorded within aircraft fuel expense in the accompanying statements of operations. These amounts include both realized gains and losses and mark-to-market adjustments of the fair value of unsettled derivative instruments at the end of each period. For additional information, refer to Note 13, Financial Instruments and Risk Management.

Advertising

The Company expenses advertising and the production costs of advertising as incurred. Marketing and advertising expenses of \$3.2 million, \$3.5 million and \$3.0 million for the years ended 2016, 2015 and 2014, respectively, were recorded within distribution expense in the statement of operations.

Income Taxes

The Company accounts for income taxes using the liability method. The Company records a valuation allowance to reduce the deferred tax assets reported if, based on the weight of the evidence, it is more likely than not that some portion or all of the deferred tax assets will be not realized. As of December 31, 2016 and 2015, the Company had no valuation allowance recorded against any deferred tax assets.

Stock-Based Compensation

The Company recognizes cost of employee services received in exchange for awards of equity instruments based on the fair value of each instrument at the date of grant. Compensation expense is recognized on a straight-line basis over the period during which an employee is required to provide service in exchange for an award. The Company has issued and outstanding restricted stock awards, stock option awards and performance share awards. Restricted stock awards are valued at the fair value of the shares on the date of grant. The fair value of share option awards is estimated on the date of grant using the Black-Scholes valuation model. The fair value of performance share awards is estimated through the use of a Monte Carlo simulation model. For additional information, refer to Note 9, Stock-Based Compensation.

Concentrations of Risk

The Company's business may be adversely affected by increases in the price of aircraft fuel, the volatility of the price of aircraft fuel, or both. Aircraft fuel, one of the Company's largest expenditures, represented approximately 24%, 28% and 39% of total operating expenses in 2016, 2015 and 2014, respectively.

The Company's operations are largely concentrated in the southeast United States with Fort Lauderdale being the highest volume fueling point in the system. Gulf Coast Jet indexed fuel is the basis for a substantial majority of the Company's fuel consumption. Any disruption to the oil production or refinery capacity in the Gulf Coast, as a result of weather or any other disaster, or disruptions in supply of jet fuel, dramatic escalations in the costs of jet fuel and/or the failure of fuel providers to perform under fuel arrangements for other reasons could have a material adverse effect on the Company's financial condition and results of operations.

The Company's operations will continue to be vulnerable to weather conditions (including hurricane season or snow and severe winter weather), which could disrupt service or create air traffic control problems. These events may result in decreased revenue and/or increased costs.

Due to the relatively small size of the fleet and high utilization rate, the unavailability of one or more aircraft and resulting reduced capacity could have a material adverse effect on the Company's business, results of operations and financial condition.

As of December 31, 2016, the Company had four union-represented employee groups that together represented approximately 73% of all employees. As of December 31, 2015, the Company had four union-represented employee groups that together represented approximately 73% of all employees. A strike or other significant labor dispute with the Company's unionized employees is likely to adversely affect the Company's ability to conduct business. Additional disclosures are included in Note 16, Commitments and Contingencies.

2. Recent Accounting Developments**Revenue from Contracts with Customers**

Notes to Financial Statements—(Continued)

In May 2014, the Financial Accounting Standards Board (the FASB) issued Accounting Standards Update (ASU) No. 2014-09, (ASU 2014-09), "Revenue from Contracts with Customers." The objective of ASU 2014-09 is to establish a single comprehensive model for entities to use in accounting for revenue arising from contracts with customers. ASU 2014-09 will supersede most of the existing revenue recognition guidance, including industry-specific guidance. The core principle of ASU 2014-09 is that an entity recognizes revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. ASU 2014-09 applies to all contracts with customers except those that are within the scope of other topics in the FASB Accounting Standards Codification. The new guidance is effective for the Company in the first quarter of 2018. Early adoption is permitted, but not before the first quarter of 2017. Entities have the option to use either a full retrospective or modified approach to adopt ASU 2014-09. The Company is currently evaluating the new guidance and has neither determined the full impact this standard may have on its financial statements nor decided upon the planned method of adoption. While the Company is still evaluating the impact, it expects the accounting for its frequent flier program to be impacted as ASU 2014-09 will no longer allow use of the incremental cost method when recording revenue related to the Company's loyalty programs. The Company also expects the adoption of ASU 2014-09 to impact the classification and timing of recognition of certain ancillary fees as well as the timing of recognition of certain costs to obtain a contract.

Financial Instruments

In January 2016, the FASB issued ASU 2016-01, "Financial Instruments – Overall (Subtopic 825-10)." ASU 2016-01 makes several modifications to Subtopic 825-10, including the elimination of the available-for-sale classification of equity investments, and requires equity investments with readily determinable fair values to be measured at fair value with changes in fair value recognized in net income. ASU 2016-01 is effective for interim and annual periods beginning after December 15, 2017 and is not expected to have a material impact on the Company's financial statements.

Leases

In February 2016, the FASB issued ASU No. 2016-02, "Leases (Topic 842)." This standard will require all leases with durations greater than twelve months to be recognized on the balance sheet and is effective for the Company in the first quarter of 2019, with early adoption permitted. The Company is currently evaluating the new guidance and believes adoption of this standard will have a significant impact on its balance sheets although adoption is not expected to significantly change the recognition, measurement or presentation of lease expenses within the statements of operations and cash flows. Refer to Note 16, Commitments and Contingencies for information regarding the Company's undiscounted future lease payments and the timing of those payments.

Share-Based Compensation

In March 2016, the FASB issued ASU No. 2016-09, "Improvements to Employee Share-Based Payment Accounting," which simplifies several aspects of the accounting for employee share-based payment transactions, including the accounting for income taxes, forfeitures, and statutory tax withholding requirements, as well as classification on the statement of cash flows. The new guidance is effective for the Company in the first quarter of 2017, with early adoption permitted. The Company expects that any excess tax benefits or deficiencies will be recorded within the Company's statement of operations instead of being recorded within additional paid in capital on its balance sheet. The new standard may cause volatility in the Company's effective tax rates and diluted earnings per share due to the tax effects related to share-based payments being recorded within the income statement. The Company will continue to evaluate the impact of adoption of this guidance on its financial statements.

Accounting for Credit Losses

In June 2016, the FASB issued ASU No. 2016-13, "Financial Instruments – Credit Losses." The standard requires the use of an "expected loss" model on certain types of financial instruments. The standard also amends the impairment model for available-for-sale debt securities and requires estimated credit losses to be recorded as allowances instead of reductions to amortized cost of the securities. This standard is effective for fiscal years, and interim periods within those years, beginning after December 15, 2019, with early adoption permitted. The Company is evaluating the new guidance, but does not expect it to have a material impact on its financial statements.

Statement of Cash Flows

In August 2016, the FASB issued ASU No. 2016-15, "Statement of Cash Flows." The standard is intended to reduce diversity in practice in how certain transactions are classified in the statement of cash flows. This standard is effective for fiscal

Notes to Financial Statements—(Continued)

years, and interim periods within those years, beginning after December 15, 2017, with early adoption permitted. The Company is evaluating the new guidance, but does not expect it to have a material impact on its financial statements.

3.Special Charges

During the twelve months ended December 31, 2016, the Company purchased seven A319 aircraft which were previously financed under operating lease agreements. The purchase price for the seven aircraft was \$147.7 million, comprised of cash payments of \$107.1 million and the application of maintenance and security deposits held by the previous lessors of \$40.6 million. The Company estimated the fair value of the aircraft to be \$95.7 million and has recorded the seven purchased aircraft within flight equipment on the balance sheets. The Company determined the valuation of the aircraft based on a third-party appraisal considering the condition of each aircraft (a Level 3 measurement). The Company recognized \$37.2 million as a cost of terminating the leases within special charges on the statement of operations, made up of the excess of the purchase price paid over the fair value of the aircraft, less previously expensed supplemental rent and other non-cash items of \$14.8 million.

During the twelve months ended December 31, 2015, the Company incurred \$0.7 million in special charges related to restructuring charges for outsourcing of ramps and passenger services.

4.Letters of Credit

As of December 31, 2016 and 2015, the Company had a \$25.2 million and \$25.1 million unsecured standby letter of credit facility, of which \$19.7 million and \$13.0 million had been drawn upon for issued letters of credit, respectively.

5.Credit Card Processing Arrangements

The Company has agreements with organizations that process credit card transactions arising from the purchase of air travel, baggage charges and other ancillary services by customers. As it is standard in the airline industry, the Company's contractual arrangements with credit card processors permit them, under certain circumstances, to retain a holdback or other collateral, which the Company records as restricted cash, when future air travel and other future services are purchased via credit card transactions. The required holdback is the percentage of the Company's overall credit card sales that its credit card processors hold to cover refunds to customers if the Company fails to fulfill its flight obligations.

The Company's credit card processors do not require the Company to maintain cash collateral provided that the Company satisfies certain liquidity and other financial covenants. Failure to meet these covenants would provide the processors the right to place a holdback, resulting in a commensurate reduction of unrestricted cash. As of December 31, 2016 and 2015, the Company was in compliance with such liquidity and other financial covenants in its credit card processing agreements, and the processors were holding back no remittances.

The maximum potential exposure to cash holdbacks by the Company's credit card processors, based upon advance ticket sales and \$9 Fare Club memberships as of December 31, 2016 and 2015, was \$234.6 million and \$250.2 million, respectively.

6.Short-term Investment Securities

The Company's short-term investment securities consist of available-for-sale asset-backed securities with contractual maturities of twelve months or less. These securities are stated at fair value within current assets on the Company's balance sheet. Realized gains and losses on sales of investments, if any, are reflected in non-operating income (expense) in the statements of operations. Unrealized gains and losses on investment securities are reflected as a component of accumulated other comprehensive income, (AOCI).

As of December 31, 2016, the Company had \$100.2 million in short-term available-for-sale investment securities, earning interest income at a weighted-average fixed rate of approximately 1.1%. For the twelve months ended December 31, 2016, an unrealized loss of \$23 thousand, net of deferred taxes of \$13 thousand, was recorded within AOCI related to these investment securities. The Company has not recognized any realized gains or losses related to these securities as the Company has not transacted any sales of these securities.

Notes to Financial Statements—(Continued)

7. Accrued Liabilities

Accrued liabilities included in other current liabilities as of December 31, 2016 and 2015 consist of the following:

	As of December 31,	
	2016	2015
	(in thousands)	
Salaries and wages	\$54,578	\$34,123
Airport obligations	43,989	30,849
Federal excise and other passenger taxes and fees payable	42,064	38,254
Aircraft maintenance	30,233	21,688
Fuel	14,828	7,084
Aircraft and facility lease obligations	10,378	24,014
Interest payable	8,499	12,355
Other	21,442	14,362
Other current liabilities	\$226,011	\$182,729

8. Common Stock and Preferred Stock

The Company's amended and restated certificate of incorporation dated June 1, 2011, authorizes the Company to issue up to 240,000,000 shares of common stock, \$0.0001 par value per share, 50,000,000 shares of non-voting common stock, \$0.0001 par value per share and 10,000,000 shares of preferred stock, \$0.0001 par value per share. All of the Company's issued and outstanding shares of common stock and preferred stock are duly authorized, validly issued, fully paid and non-assessable. The Company's shares of common stock and non-voting common stock are not redeemable and do not have preemptive rights.

Common Stock

Dividend Rights. Holders of the Company's common stock are entitled to receive dividends, if any, as may be declared from time to time by the Company's board of directors out of legally available funds ratably with shares of the Company's non-voting common stock, subject to preferences that may be applicable to any then outstanding preferred stock and limitations under Delaware law.

Voting Rights. Each holder of the Company's common stock is entitled to one vote for each share on all matters submitted to a vote of the stockholders, including the election of directors. The Company's stockholders do not have cumulative voting rights in the election of directors. Accordingly, holders of a majority of the voting shares are able to elect all of the directors properly up for election at any given stockholders' meeting.

Liquidation. In the event of the Company's liquidation, dissolution or winding up, holders of the Company's common stock will be entitled to share ratably with shares of the Company's non-voting common stock in the net assets legally available for distribution to stockholders after the payment of all of the Company's debts and other liabilities and the satisfaction of any liquidation preference granted to the holders of any then outstanding shares of preferred stock.

Rights and Preferences. Holders of the Company's common stock have no preemptive, conversion, subscription or other rights and there are no redemption or sinking fund provisions applicable to the Company's common stock. The rights, preferences and privileges of the holders of the Company's common stock are subject to and may be adversely affected by, the rights of the holders of shares of any series of the Company's preferred stock that the Company may designate in the future.

Non-Voting Common Stock

Dividend Rights. Holders of the Company's non-voting common stock are entitled to receive dividends, if any, as may be declared from time to time by the Company's board of directors out of legally available funds ratably with shares of the Company's common stock, subject to preferences that may be applicable to any then outstanding preferred stock and limitations under Delaware law.

Voting Rights. Shares of the Company's non-voting common stock are not entitled to vote on any matters submitted to a vote of the stockholders, including the election of directors, except to the extent required under Delaware law.

Notes to Financial Statements—(Continued)

Conversion Rights. Shares of the Company's non-voting common stock will be convertible on a share-for-share basis into common stock at the election of the holder subject to the Company remaining in compliance with applicable foreign ownership limitations.

Liquidation. In the event of the Company's liquidation, dissolution or winding up, holders of the Company's non-voting common stock will be entitled to share ratably with shares of the Company's common stock in the net assets legally available for distribution to stockholders after the payment of all of the Company's debts and other liabilities and the satisfaction of any liquidation preference granted to the holders of any then outstanding shares of preferred stock.

Rights and Preferences. Holders of the Company's non-voting common stock have no preemptive, subscription or other rights, and there are no redemption or sinking fund provisions applicable to the Company's common stock. The rights, preferences and privileges of the holders of the Company's common stock are subject to and may be adversely affected by, the rights of the holders of shares of any series of the Company's preferred stock that the Company may designate in the future.

As of December 31, 2016 and 2015, there were no shares of non-voting common stock outstanding.

Preferred Stock

The Company's board of directors has the authority, without further action by the Company's stockholders, to issue up to 10,000,000 shares of preferred stock in one or more series and to fix the rights, preferences, privileges and restrictions thereof. These rights, preferences and privileges could include dividend rights, conversion rights, voting rights, terms of redemption, liquidation preferences, sinking fund terms and the number of shares constituting any series or the designation of such series, any or all of which may be greater than the rights of common stock. The Company's issuance of preferred stock could adversely affect the voting power of holders of common stock and the likelihood that such holders will receive dividend payments and payments upon liquidation. In addition, the issuance of preferred stock could have the effect of delaying, deferring or preventing a change of control of the Company or other corporate action. As of December 31, 2016 and 2015, there were no shares of preferred stock outstanding.

9. Stock-Based Compensation

The Company has stock plans under which directors, officers, key employees and consultants of the Company may be granted restricted stock awards, stock options and other equity-based instruments as a means of promoting the Company's long-term growth and profitability. The plans are intended to encourage participants to contribute to, and participate in, the success of the Company.

On December 16, 2014, the Company's Board of Directors approved the 2015 Incentive Award Plan, or 2015 Plan, which was subsequently approved by the Company's stockholders on June 16, 2015. The number of shares reserved for issuance or transfer pursuant to awards under the 2015 Plan will be increased by the number of shares represented by awards outstanding under the Company's former equity plan, the 2011 Equity Incentive Award Plan (2011 Plan), that are forfeited or lapse unexercised and which, following the effective date of the 2015 Plan, are not issued under the Company's 2011 Plan. No further awards will be granted under the 2011 Stock Plan, and all outstanding awards will continue to be governed by their existing terms. As of December 31, 2016 and December 31, 2015, 2,358,283 and 2,428,990 shares of the Company's common stock, respectively, remained available for future issuance under the 2015 Plan.

Stock-based compensation cost is included within salaries, wages and benefits in operating expenses in the accompanying statements of operations. Stock-based compensation cost amounted to \$7.1 million, \$9.2 million and \$8.8 million for 2016, 2015 and 2014, respectively. During 2016, 2015 and 2014, there was \$2.6 million, \$3.4 million and \$3.2 million tax benefit recognized in income related to stock-based compensation, respectively.

Restricted Stock and Restricted Stock Units

Restricted stock and restricted stock unit awards are valued at the fair value of the shares on the date of grant. Generally, granted shares and units vest 25% per year on each anniversary of issuance. Each restricted stock unit represents the right to receive one share of common stock upon vesting of such restricted stock unit. Vesting of restricted stock units is based on time-based service conditions. In order to vest, the participant must still be employed by the Company, with certain contractual exclusions, at each vesting event. Generally, within 30 days after vesting, the shares underlying the award will be issued to the participant. In the event a successor corporation in a change in

control situation fails to assume or substitute for the restricted stock units, the restricted stock units will automatically vest in full as of immediately prior to the consummation of such change in control. In the event of death or permanent disability of a participant, the restricted stock units will automatically vest in full. Compensation expense, net of forfeitures, is recognized on a straight-line basis over the requisite service period.

Notes to Financial Statements—(Continued)

A summary of the status of the Company's restricted stock shares (restricted stock awards and restricted stock unit awards) as of December 31, 2016 and changes during the year ended December 31, 2016 is presented below:

	Number of Shares	Weighted-Average Grant Date Fair Value (\$)
Outstanding at December 31, 2015	294,680	49.19
Granted	237,001	42.91
Vested	(138,949)	39.34
Forfeited	(118,087)	47.26
Outstanding at December 31, 2016	274,645	49.55

There were 237,001 and 74,772 restricted stock shares granted during the years ended December 31, 2016 and December 31, 2015, respectively. As of December 31, 2016 and December 31, 2015, there was \$9.2 million and \$9.8 million, respectively, of total unrecognized compensation cost related to nonvested restricted stock to be recognized over 2.5 years and 2.4 years, respectively.

The weighted-average fair value of restricted stock granted during the years ended December 31, 2016, 2015 and 2014 was \$42.91, \$75.40 and \$55.14, respectively. The total fair value of restricted stock shares vested during the years ended December 31, 2016, 2015 and 2014 was \$6.6 million, \$9.2 million and \$6.5 million respectively.

Stock Options

Stock option awards are granted with an exercise price equal to the fair market value of the Company's common stock at the date of grant, vest over four years of continuous service and have ten-year contractual terms. The fair value of each stock option award is estimated on the date of grant using the Black Scholes model. There were no options granted during 2016, 2015, or 2014. The Company has not granted options since 2011, at which time the Company's weighted average assumptions for expected volatility, dividends, term and risk-free interest rate were 46.25%, 0%, 6.25 years and 2.03%, respectively. Expected volatilities are based on the historical volatility of a group of peer entities within the same industry. The expected term of options is based upon the simplified method, which represents the average of the vesting term and the contractual term. The risk-free interest rate is based on U.S.

Treasury yields for securities with terms approximating the expected term of the option.

Prior to the Company's IPO, to the extent a market price was not available, the fair value of the Company's common stock was estimated using a discounted cash flow analysis and market multiples, based on management's estimates of revenue, driven by assumed market growth rates, and estimated costs as well as appropriate discount rates. These estimates were consistent with the plans and estimates management used to manage the Company's business.

A summary of share option activity as of December 31, 2016 and changes during the year ended December 31, 2016 is presented below:

	Number of Options	Weighted- Average Exercise Price (\$)	Average Remaining Contractual Term (Years)	Aggregate Intrinsic Value (\$000)
Outstanding at December 31, 2015	28,125	8.20	4.7	890
Exercised	(11,500)	7.98		
Forfeited or expired	(375)	7.80		
Outstanding at December 31, 2016	16,250	8.37	3.7	804
Exercisable at December 31, 2016	16,250	8.37	3.7	804
Vested at December 31, 2016	16,250	8.37	3.7	804

The total intrinsic value of share options exercised during the years ended December 31, 2016, 2015 and 2014 was \$0.4 million, \$0.2 million and \$1.3 million, respectively. There were no options that vested during the year ended December 31, 2016. The total fair value of options vested during the years ended December 31, 2015 and 2014 was \$4 thousand and \$100 thousand, respectively.

Notes to Financial Statements—(Continued)

As of December 31, 2016 and 2015, there was no unrecognized compensation cost related to options as all option awards were fully vested. As of December 31, 2014, there was \$3 thousand of total unrecognized compensation cost related to options expected to be recognized over 0.7 years.

Performance Share Awards

The Company grants certain senior-level executives performance stock units that vest based on market and time-based service conditions as part of a long-term incentive plan, which are referred to herein as performance share awards. The number of shares of common stock underlying each award is determined at the end of a three-year performance period. In order to vest, the senior level executive must still be employed by the Company, with certain contractual exclusions, at the end of the performance period. At the end of the performance period, the percentage of the stock units that will vest will be determined by ranking the Company's total shareholder return compared to the total shareholder return of the peer companies identified in the plan. Based on the level of performance, between 0% and 200% of the award may vest. Within 60 days after vesting, the shares underlying the award will be issued to the participant. In the event of a change in control of the Company or the death or permanent disability of a participant, the payout of any award is limited to a pro-rated portion of such award based upon a performance assessment prior to the change-in-control date or date of death or permanent disability.

The market condition requirements are reflected in the grant date fair value of the award, and the compensation expense, net of forfeitures, for the award is recognized assuming that the requisite service is rendered regardless of whether the market conditions are achieved.

The grant date fair value of the performance share awards is determined through the use of a Monte Carlo simulation model, which utilizes multiple input variables that determine the probability of satisfying the market condition requirements applicable to each award as follows:

	Weighted-Average at Grant Date for Twelve Months Ended December 31, 2016	Weighted-Average at Grant Date for Twelve Months Ended December 31, 2015	
Expected volatility factor	0.39	0.36	
Risk free interest rate	1.12	%0.91	%
Expected term (in years)	2.94	2.55	
Expected dividend yield	—	%—	%

For grants awarded in 2016, 2015 and 2014, the volatility was based upon a weighted average historical volatility for the Company. The Company chose to use historical volatility to value these awards because historical prices were used to develop the correlation coefficients between the Company and each of the peer companies within the peer group in order to model stock price movements. The volatilities used were calculated as the remaining term of the performance period at the date of grant. The risk-free interest rate was based on the implied yield available on U.S. Treasury zero-coupon issues with remaining terms equivalent to the remaining performance period. The Company does not intend to pay dividends on its common stock in the foreseeable future. Accordingly, the Company used a dividend yield of zero in its model.

The following table summarizes the Company's performance share awards for the year ended December 31, 2016:

	Number of Awards	Weighted-Average Fair Value at Grant Date (\$)
Outstanding at December 31, 2015	86,778	66.44
Granted	119,508	51.40
Vested	(27,579)	77.57
Forfeited	(44,800)	67.01
Outstanding at December 31, 2016	133,907	50.54

As of December 31, 2016 and 2015, there was \$4.3 million and \$2.9 million, respectively, of total unrecognized compensation cost related to performance share awards expected to be recognized over 1.90 years and 1.51 years,

respectively.

Notes to Financial Statements—(Continued)

10. Net Income per Share

The following table sets forth the computation of basic and diluted earnings per common share:

	Year Ended December 31,		
	2016	2015	2014
	(in thousands, except per share amounts)		
Numerator:			
Net income	\$264,879	\$317,220	\$225,464
Denominator:			
Weighted-average shares outstanding, basic	70,344	72,208	72,739
Effect of dilutive stock awards	164	218	555
Adjusted weighted-average shares outstanding, diluted	70,508	72,426	73,294
Net Income per Share:			
Basic earnings per common share	\$3.77	\$4.39	\$3.10
Diluted earnings per common share	\$3.76	\$4.38	\$3.08
Anti-dilutive weighted-average shares	66	52	29

11. Debt and Other Obligations

Long-term debt

As of December 31, 2016, the Company held non public and public debt instruments. The Company's indebtedness includes the 2014 Framework Agreement, the 2015 Facility Agreements, 2015-1 EETCs and 2016 Facility Agreement described below.

2014 Framework Agreement

During 2014, the Company entered into a Framework Agreement, with a bank syndicate, which as of December 31, 2016, provided \$379.0 million of debt financing for seven Airbus A320 aircraft and three Airbus A321 aircraft. Each loan extended under the Framework Agreement was funded on or about the delivery date of each aircraft and is secured by a first-priority security interest in the individual aircraft. Each loan amortizes on a mortgage-style basis, which requires quarterly payments, with senior loans having a 12-year term and junior loans having a 7-year term. Loans bear interest payable quarterly on a fixed-rate basis. As of December 31, 2016, the Company has taken delivery of all Airbus A320 and Airbus A321 aircraft financed through the Framework Agreement.

2015 Facility Agreements

During 2015, the Company entered into two Facility Agreements, which as of December 31, 2016, provided \$185.0 million of debt financing for five Airbus A320 aircraft. Each loan extended under the Facility Agreements was funded on or near the delivery date of each aircraft and was secured by a first-priority security interest on the individual aircraft. Each loan amortizes on a mortgage-style basis, which requires quarterly payments, with senior loans having a 12-year term and junior loans having a 7-year term. Loans bear interest payable quarterly on a fixed-rate basis. As of December 31, 2016, the Company has taken delivery of all Airbus A320 aircraft financed through the Facility Agreements.

2015-1 EETCs

In August 2015, the Company created two separate pass-through trusts, which issued approximately \$576.6 million aggregate face amount of Series 2015-1 Class A and Class B enhanced equipment trust certificates (EETCs) in connection with the financing of 12 new Airbus A321 aircraft and 3 new Airbus A320 aircraft. Each class of certificates represents a fractional undivided interest in the respective pass-through trusts and is not an obligation of the Company. The proceeds from the issuance of these certificates are initially held in escrow by a depository and, upon satisfaction of certain terms and conditions, are

82

Notes to Financial Statements—(Continued)

released and used to purchase equipment notes which are issued by the Company and secured by the Company's aircraft. Interest on the issued and outstanding equipment notes are payable semiannually on April 1 and October 1 of each year, which commenced on April 1, 2016, and principal on such equipment notes is scheduled for payment on April 1 and October 1 of certain years, which commenced on October 1, 2016. Issued and outstanding Series A and Series B equipment notes mature in April 2028 and April 2024, respectively, and accrue interest at a rate of 4.100% per annum and 4.450% per annum, respectively.

As of December 31, 2016, \$538.1 million of the proceeds from the sale of the 2015-1 EETCs had been used to purchase equipment notes in connection with the financing of 3 Airbus A320 aircraft and 11 Airbus A321 aircraft. The remaining \$38.5 million of escrowed proceeds held by the pass-through trusts were used to purchase equipment notes when the remaining new Airbus A321 aircraft was delivered in January 2017. Equipment notes that are issued are reported as debt on the Company's balance sheets.

The Company evaluated whether the pass-through trusts formed are variable interest entities (VIEs) required to be consolidated by the Company under applicable accounting guidance. The Company determined that the pass-through trusts are VIEs and that it does not have a variable interest in the pass-through trusts. Based on this analysis, the Company determined that it is not required to consolidate these pass-through trusts.

2016 Facility Agreement

In December 2016, the Company entered into a Facility Agreement, which will provide up to \$106.0 million of debt financing for two Airbus A320 aircraft and one Airbus A321 aircraft. Each loan extended under the Facility Agreement is funded on or near the delivery date of each aircraft and is secured by a first-priority security interest on the individual aircraft. Each loan amortizes on a mortgage-style basis and has a 10-year term. Loans bear interest payable quarterly on a fixed-rate basis. The two Airbus A320 aircraft and one Airbus A321 aircraft under the Company's existing Facility Agreement are scheduled for delivery between March 2017 and April 2017.

Long-term debt is comprised of the following:

	As of December 31,		Year Ended December 31,	
	2016	2015	2016	2015
	(in millions)		(weighted-average interest rates)	
Fixed-rate senior term loans due through 2027	\$451.9	\$484.2	4.10 %	4.10 %
Fixed-rate junior term loans due through 2022	47.1	54.3	6.90 %	6.90 %
Fixed-rate class A enhanced equipment trust certificates due through 2028	409.8	95.8	4.10 %	4.03 %
Fixed-rate class B enhanced equipment trust certificates due through 2024	103.6	25.0	4.45 %	4.37 %
Long-term debt	\$1,012.4	\$659.3		
Less current maturities	84.4	49.6		
Less unamortized discount, net	30.6	13.0		
Total	\$897.4	\$596.7		

During the year ended December 31, 2016 and 2015, the Company made scheduled principal payments of \$64.4 million and \$25.4 million on its outstanding debt obligations, respectively.

At December 31, 2016, long-term debt principal payments for the next five years and thereafter are as follows:

Notes to Financial Statements—(Continued)

	December 31, 2016 (in millions)
2017	\$ 88.9
2018	83.1
2019	81.5
2020	79.7
2021	78.2
2022 and thereafter	601.0
Total debt principal payments	\$ 1,012.4

Interest Expense

Interest expense related to long-term debt consists of the following:

	Year Ended December 31, 2016 2015 (in thousands)	
Senior term loans	\$19,759	\$15,429
Junior term loans	3,568	2,997
Class A enhanced equipment trust certificates	11,509	494
Class B enhanced equipment trust certificates	3,243	140
Commitment fees	127	54
Amortization of deferred financing costs	3,435	1,165
Total	\$41,641	\$20,279

As of December 31, 2016 and 2015, the Company had a line of credit for \$23.6 million and \$18.6 million related to corporate credit cards. Respectively, the Company had drawn \$9.9 million and \$7.3 million as of December 31, 2016 and 2015, which is included in accounts payable.

As of December 31, 2016 and 2015, the Company had lines of credit with counterparties for derivatives and physical fuel delivery in the amount of \$46.5 million and \$38.0 million, respectively. As of December 31, 2016 and 2015, the Company had drawn \$8.0 million and \$6.9 million on these lines of credit, which is included in other current liabilities. The Company is required to post collateral for any excess above the lines of credit if the fuel derivatives are in a net liability position and make periodic payments in order to maintain an adequate undrawn portion for physical fuel delivery. As of December 31, 2016 and 2015, the Company did not have any outstanding fuel derivatives.

12. Leases and Aircraft Maintenance Deposits

The Company leases various types of equipment and property, primarily aircraft, spare engines and airport facilities under leases, which expire in various years through 2032. Lease terms are generally 12 to 18 years for aircraft and up to 30 years for other leased equipment and property.

Total rental expense for all leases charged to operations for the years ended 2016, 2015 and 2014 was \$283.9 million, \$282.7 million and \$254.3 million, respectively. Total rental expense charged to operations for aircraft and engine operating leases for the years ended December 31, 2016, 2015 and 2014 was \$201.7 million, \$211.5 million and \$195.8 million, respectively. Supplemental rent is made up of maintenance reserves paid or expected to be paid to aircraft lessors in advance of the performance of major maintenance activities that are not probable of being reimbursed and probable return condition obligations. The Company expensed \$9.0 million, \$7.7 million and \$7.5 million of supplemental rent recorded within aircraft rent during 2016, 2015 and 2014, respectively.

Some of the Company's master lease agreements provide that the Company pays maintenance reserves to aircraft lessors to be held as collateral in advance of the Company's required performance of major maintenance activities. Substantially all of these maintenance reserve payments are calculated based on a utilization measure, such as flight

hours or cycles, while some

84

Notes to Financial Statements—(Continued)

maintenance reserve payments are fixed contractual amounts. Fixed maintenance reserve payments for these aircraft and related flight equipment, including estimated amounts for contractual price escalations, are expected to be \$7.7 million in 2017, \$7.0 million in 2018, \$5.7 million in 2019, \$5.4 million in 2020, \$5.5 million in 2021, and \$17.7 million in 2022 and beyond. These lease agreements provide that maintenance reserves are reimbursable to the Company upon completion of the maintenance event in an amount equal to either (1) the amount of the maintenance reserve held by the lessor associated with the specific maintenance event or (2) the qualifying costs related to the specific maintenance event. Some of the master lease agreements do not require that the Company pay maintenance reserves so long as the Company's cash balance does not fall below a certain level. As of December 31, 2016, the Company is in full compliance with those requirements and does not anticipate having to pay reserves related to these master leases in the future.

At lease inception and at each balance sheet date, the Company assesses whether the maintenance reserve payments required by the master lease agreements are substantively and contractually related to the maintenance of the leased asset. Maintenance reserve payments that are substantively and contractually related to the maintenance of the leased asset are accounted for as maintenance deposits to the extent they are expected to be recoverable and are reflected as aircraft maintenance deposits in the accompanying balance sheets. The Company makes certain assumptions to determine the recoverability of maintenance deposits. These assumptions are based on various factors such as the estimated time between the maintenance events, the date the aircraft is due to be returned to the lessor, the cost of future maintenance events and the number of flight hours the aircraft is estimated to be utilized before it is returned to the lessor. When it is not probable the Company will recover amounts currently on deposit with a lessor, such amounts are expensed as supplemental rent. The Company expensed \$2.2 million, \$2.3 million and \$1.6 million of paid maintenance reserves as supplemental rent during 2016, 2015 and 2014, respectively.

As of December 31, 2016 and 2015, the Company had short-term and long-term aircraft maintenance deposits of \$286.4 million and \$279.9 million, respectively, on its balance sheets. The Company has concluded that these aircraft maintenance deposits are probable of recovery primarily due to the rate differential between the maintenance reserve payments and the expected cost for the related next maintenance event that the reserves serve to collateralize. The Company's master lease agreements also provide that some maintenance reserves held by the lessor at the expiration of the lease are nonrefundable to the Company and will be retained by the lessor. Consequently, any usage-based maintenance reserve payments after the last major maintenance event are not substantively related to the maintenance of the leased asset and therefore are accounted for as contingent rent. Supplemental rent is recorded at the time a non-refundable maintenance reserve payment is made that has been substantively determined to be contingent rent.

As of December 31, 2016, the Company had a fleet consisting of 95 A320 family aircraft. As of December 31, 2016, the Company owned 36 of these aircraft and financed 59 aircraft under operating leases with expirations between 2017 and 2029. In addition, as of December 31, 2016, the Company had 11 spare engines financed under operating leases with lease term expiration dates ranging from 2018 to 2027 and owned 1 spare engine. Two of the Company's leased aircraft have variable rent payments, which fluctuate based on changes in LIBOR (London Interbank Offered Rate). The Company entered into sale leaseback transactions with third-party aircraft lessors for the majority of these aircraft and engine leases. Deferred losses resulting from these sale leaseback transactions are included in other long-term assets on the accompanying balance sheet. Deferred losses are recognized as an increase to rent expense on a straight-line basis over the term of the respective operating leases. Deferred gains are included in deferred gains and other long-term liabilities on the accompanying balance sheet. Deferred gains are recognized as a decrease to rent expense on a straight-line basis over the term of the respective operating leases.

During the twelve months ended December 31, 2016, the Company took delivery of 11 aircraft under secured debt arrangements, purchased 7 previously leased aircraft and entered into a direct lease agreement with a third-party lessor for 5 A320neos. In addition, the Company purchased one spare engine. All of the Company's aircraft and engine leases are accounted for as operating leases. Under the terms of the lease agreements, the Company will continue to operate and maintain the aircraft. Payments under the lease agreements are fixed for the term of the lease. The lease agreements contain standard termination events, including termination upon a breach of the Company's obligations to make rental payments and upon any other material breach of the Company's obligations under the leases, and standard

maintenance and return condition provisions. Upon a termination of the lease due to a breach by the Company, the Company would be liable for standard contractual damages, possibly including damages suffered by the lessor in connection with remarketing the aircraft or while the aircraft is not leased to another party.

Notes to Financial Statements—(Continued)

Future minimum lease payments under noncancellable operating leases with initial or remaining terms in excess of one year at December 31, 2016 were as follows:

	Operating Leases		Total Operating Leases
	Aircraft and Spare Leases	Property Facility Leases	
	(in thousands)		
2017	\$218,484	\$39,189	\$257,673
2018	203,465	38,048	241,513
2019	184,566	30,451	215,017
2020	176,590	18,928	195,518
2021	166,967	8,969	175,936
2022 and thereafter	558,038	53,734	611,772
Total minimum lease payments	\$1,508,110	\$189,319	\$1,697,429

13. Financial Instruments and Risk Management

As part of the Company's risk management program, the Company from time to time uses a variety of financial instruments to reduce its exposure to fluctuations in the price of jet fuel and interest rates. The Company does not hold or issue derivative financial instruments for trading purposes.

The Company is exposed to credit losses in the event of nonperformance by counterparties to these financial instruments. The Company periodically reviews and seeks to mitigate exposure to the financial deterioration and nonperformance of any counterparty by monitoring the absolute exposure levels, each counterparty's credit ratings and the historical performance of the counterparties relating to hedge transactions. The credit exposure related to these financial instruments is limited to the fair value of contracts in a net receivable position at the reporting date. The Company also maintains security agreements that require the Company to post collateral if the value of selected instruments falls below specified mark-to-market thresholds. The Company records financial derivative instruments at fair value, which includes an evaluation of each counterparty's credit risk. As of December 31, 2016 and 2015, the Company did not hold any derivatives.

Fuel Derivative Instruments

From time to time, the Company may enter into fuel derivative contracts in order to mitigate the risk of future volatility in fuel prices. The Company's fuel derivative contracts generally consist of United States Gulf Coast jet fuel swaps (jet fuel swaps) and United States Gulf Coast jet fuel options (jet fuel options). Both jet fuel swaps and jet fuel options are used at times to protect the refining price risk between the price of crude oil and the price of refined jet fuel, and to manage the risk of increasing fuel prices. Fair value of the instruments is determined using standard option valuation models.

The Company accounts for its fuel derivative contracts at fair value and recognizes them in the balance sheet in prepaid expenses and other current assets or other current liabilities. The Company did not enter into any fuel derivative instruments during 2016. The Company did not elect hedge accounting on any fuel derivative instruments entered into during 2015 and 2014 and, as a result, changes in the fair value of these fuel derivative contracts are recorded in aircraft fuel expense. In 2016, the Company did not pay any premiums to acquire jet fuel options. The Company paid \$2.5 million and \$9.7 million in premiums to acquire jet fuel options during 2015 and 2014, respectively.

Notes to Financial Statements—(Continued)

The following table summarizes the components of aircraft fuel expense for the years ended December 31, 2016, 2015 and 2014:

	Year Ended December 31,		
	2016	2015	2014
	(in thousands)		
Into-plane fuel cost	\$447,553	\$454,747	\$608,033
Realized losses (gains) related to fuel derivative contracts, net	—	10,580	995
Unrealized losses (gains) related to fuel derivative contracts, net	—	(3,880)	3,881
Aircraft fuel	\$447,553	\$461,447	\$612,909

Premiums and settlements received or paid on fuel derivative contracts are reflected in the accompanying statements of cash flows in net cash provided by operating activities.

During the third quarter of 2014, the Company became aware of an underpayment of Federal Excise Tax (FET) for fuel purchases during the period between July 1, 2009 and August 31, 2014. The commencement of the period in which the Company underpaid FET coincided with a change in its fuel service provider that took place in July 2009. The out of period jet fuel FET amount of \$9.3 million is recorded within aircraft fuel in the statement of operations for the year ended December 31, 2014.

As of December 31, 2016 and 2015, the Company did not have any outstanding fuel derivatives and had no fuel hedging activity for the twelve months ended December 31, 2016.

Interest Rate Swaps

During 2015, the Company settled six forward interest rate swaps that were designed to fix the benchmark interest rate component of the interest payments on the debt related to three Airbus A321 aircraft, which the company took delivery of during the third quarter of 2015. These instruments limited the Company's exposure to changes in the benchmark interest rate in the period from the trade date through the date of maturity. The interest rate swaps were designated as cash flow hedges. The Company accounts for these interest rate swaps at fair value and recognizes them in the balance sheet in prepaid expenses and other current assets or other current liabilities with changes in fair value recorded within accumulated other comprehensive income (AOCI). As of December 31, 2016 and 2015, the Company did not have any outstanding interest rate swaps.

Realized gains and losses from cash flow hedges are recorded in the statement of cash flows as a component of cash flows from operating activities. Subsequent to the issuance of each debt instrument, amounts remaining in AOCI are amortized over the life of the fixed-rate debt instrument. During the twelve months ended December 31, 2016, there were no unrealized gains or losses recorded within AOCI related to these instruments as they settled in 2015. During the twelve months ended December 31, 2015, an unrealized loss of \$0.9 million, net of deferred taxes of \$0.6 million, was recorded within AOCI related to these instruments. During the twelve months ended December 31, 2016, the Company reclassified interest rate swap losses of \$224 thousand, net of tax of \$130 thousand, into earnings. During the twelve months ended December 31, 2015, the Company reclassified interest rate swap losses of \$82 thousand, net of tax of \$50 thousand, into earnings. As of December 31, 2016 and December 31, 2015, \$1.3 million and \$1.5 million, net of tax, remained in AOCI related to these instruments.

14. Defined Contribution 401(k) Plan

The Company sponsors three defined contribution 401(k) plans, Spirit Airlines, Inc. Employee Retirement Savings Plan (first plan), Spirit Airlines, Inc. Pilots' Retirement Savings Plan (second plan) and Spirit Airlines, Inc. Puerto Rico Retirement Savings Plan (third plan). The first plan is for all employees that are not covered by the pilots' collective bargaining agreement, who have at least 60 days of service and have attained the age of 21. The Company may make a Qualified Discretionary Contribution, as defined in the plan, or provide matching contributions to this plan. For flight attendants and dispatchers participating in the first plan, the Company currently matches 100% of the employee's contribution, up to a maximum of 6% of the employee's annual compensation. Prior to May 1, 2016, the Company matched 50% of the flight attendant and dispatcher's contribution, up to a maximum of 6% of the employee's annual compensation. For all other employees participating in the first plan, the Company matches 50% of the employee's contribution, up to a maximum of 6% of the employee's annual compensation.

Notes to Financial Statements—(Continued)

The second plan is for the Company's pilots, and contains the same service requirements as the first plan. Throughout 2016, the Company matched 100% of the pilot's contribution, up to 9% of the individual pilot's annual compensation. Both the first and the second plans are subject to the annual IRS elective deferral limit, which was \$18,000 for 2016. The third plan is for all Company employees residing in Puerto Rico and was adopted on April 16, 2012. It contains the same service requirements as the first and second plans. For pilots participating in the Puerto Rico plan, the Company matched 100% of their contribution, up to 9% of the individual pilot's annual compensation, but subject to the annual Puerto Rico pre-tax elective deferral limit, which was \$18,000 for 2016. For all other employees participating in the Puerto Rico plan, the Company matches 50% of the employee's contribution, up to 6% of the employee's annual compensation.

Matching contributions made to all plans were \$16.2 million, \$12.5 million and \$9.7 million in 2016, 2015 and 2014, respectively, and were included within salaries, wages and benefits in the accompanying statements of operations.

15. Income Taxes

Significant components of the provision for income taxes from continuing operations are as follows:

	Year Ended December 31,		
	2016	2015	2014
	(in thousands)		
Current:			
Federal	\$60,079	\$21,632	\$85,966
State and local	6,322	6,702	5,389
Foreign	2,034	1,235	2,057
Total current expense	68,435	29,569	93,412
Deferred:			
Federal	82,455	149,583	34,240
State and local	3,691	6,031	(122)
Total deferred expense (benefit)	86,146	155,614	34,118
Total income tax expense (benefit)	\$154,581	\$185,183	\$127,530

The income tax provision differs from that computed at the federal statutory corporate tax rate as follows:

	Year Ended		
	December 31,		
	2016	2015	2014
Expected provision at federal statutory tax rate	35.0%	35.0%	35.0%
State tax expense, net of federal benefit	1.6%	1.7%	1.0%
Income tax credits	—%	—%	(0.4)%
Other	0.3%	0.2%	0.5%
Total income tax expense (benefit)	36.9%	36.9%	36.1%

Notes to Financial Statements—(Continued)

The Company accounts for income taxes using the asset and liability method. Deferred taxes are recorded based on differences between the financial statement basis and tax basis of assets and liabilities and available tax loss and credit carryforwards. At December 31, 2016 and 2015, the significant components of the Company's deferred taxes consisted of the following:

	December 31,	
	2016	2015
	(in thousands)	
Deferred tax assets:		
Deferred revenue	3,057	3,381
Nondeductible accruals	20,547	11,056
Deferred manufacturing credits	910	822
Accrued maintenance	1,854	830
Equity compensation	3,882	4,485
Other	4,026	2,751
Deferred tax assets	34,276	23,325
Deferred tax liabilities:		
Capitalized interest	—	286
Deferred gain (loss) on leases, net	2,435	2,393
Accrued rent	14,025	6,724
Prepaid expenses	1,217	2,151
Property, plant and equipment	278,872	168,813
Deferred financing costs	5,358	—
Accrued aircraft and engine maintenance	40,512	64,439
Deferred tax liabilities	342,419	244,806
Net deferred tax assets (liabilities)	\$(308,143)	\$(221,481)

In assessing the realizability of the deferred tax assets, management considered whether it is more likely than not that some or all of the deferred tax assets would be realized. In evaluating the Company's ability to utilize its deferred tax assets, it considered all available evidence, both positive and negative, in determining future taxable income on a jurisdiction by jurisdiction basis. Management does not believe that the realization of deferred tax assets is in jeopardy and thus a valuation allowance for 2016 has not been recorded. Management will continue to monitor the status of Spirit's operations and reassess the need for a valuation allowance on a quarterly basis.

In accordance with ASC 718, excess tax benefits are only recognized in the financial statements upon actual realization of the related tax benefit. The Company recognized a tax deficiency of \$0.5 million and an excess tax benefit of \$8.9 million for tax years ended December 31, 2016 and 2015, respectively. The excess tax benefit/(deficiency) was recorded as a reduction/(increase) to income tax payable and a corresponding entry to additional paid in capital.

In December 2015, bonus depreciation was extended with the passage of the Protecting Americans from Tax Hikes Act (the Act). The Company made estimated payments during 2015 excluding the impact of a potential extension of bonus depreciation. The passage of the Act allowed the Company to claim bonus depreciation deductions in 2015 on all bonus eligible acquisitions, including purchased aircraft. These deductions resulted in an overpayment of current year federal income taxes of \$72.3 million as of December 31, 2015 which is recorded as a component of current assets on the balance sheet.

The Company's policy is to recognize interest and penalties accrued on any unrecognized tax benefits as a component of selling, general and administrative expenses. For tax years ended December 31, 2016, 2015 and 2014, the Company did not recognize any liabilities for uncertain tax positions nor any interest and penalties on unrecognized tax benefits. For tax years 2016, 2015 and 2014, the entire income before income taxes for the Company is subject to domestic income taxes.

The Company files its tax returns as prescribed by the tax laws of the jurisdictions in which it operates. The Company's federal income tax returns for 2013 through 2015 tax years are still subject to examination in the U.S. Various state and foreign

Notes to Financial Statements—(Continued)

jurisdiction tax years remain open to examination. The Company believes that any potential assessment would be immaterial to its financial statements.

16. Commitments and Contingencies

Aircraft-Related Commitments and Financing Arrangements

The Company's contractual purchase commitments consist primarily of aircraft and engine acquisitions through manufacturers and aircraft leasing companies. As of December 31, 2016, the Company's firm aircraft orders consisted of the following:

	Airbus			
	A320ceo	A320neo	A321ceo	Total
2017	4		11	15
2018	5	4	5	14
2019	1	12		13
2020		16		16
2021		18		18
	10	50	16	76

On April 27, 2016, the Company entered into an amendment to the Airbus A320 Family Purchase Agreement, by and between the Company and Airbus S.A.S., dated May 5, 2004 (Airbus Amendment), which included the conversion of ten Airbus A321neo orders to Airbus A320neo orders. The Company has three spare engine orders for V2500 SelectOne engines with IAE and nine spare engine orders for PurePower PW 1100G-JM engines with Pratt & Whitney. Spare engines are scheduled for delivery from 2017 through 2023. Purchase commitments for these aircraft and engines, including estimated amounts for contractual price escalations and pre-delivery payments, are expected to be \$660.3 million in 2017, \$649.8 million in 2018, \$678.3 million in 2019, \$824.4 million in 2020, \$777.9 million in 2021, and \$24.6 million in 2022 and beyond. As of December 31, 2016, the Company had secured financing commitments of \$144.5 million for four aircraft, scheduled for delivery in 2017, and did not have financing commitments in place for the remaining 72 Airbus aircraft currently on firm order, which are scheduled for delivery in 2017 through 2021. In January 2017, the Company secured financing of \$39.0 million for one additional aircraft, scheduled for delivery in 2017.

Interest commitments related to the secured debt financing of 29 delivered aircraft as of December 31, 2016 are \$42.2 million in 2017, in \$38.2 million 2018, \$34.6 million in 2019, \$30.9 million in 2020, \$27.4 million in 2021, and \$96.8 million in 2022 and beyond. For principal commitments related to these financed aircraft, refer to Note 11, Debt and Other Obligations. As of December 31, 2016, principal and interest commitments related to the Company's future secured debt financing of one undelivered aircraft under an EETC and three undelivered aircraft under bank debt are approximately \$10.9 million in 2017, \$13.0 million in 2018, \$13.7 million in 2019, \$13.2 million in 2020, \$13.3 million in 2021, and \$119.1 million in 2022 and beyond.

In July 2015, the Company executed an upgrade service agreement with Airbus Americas Customer Services Inc. (Airbus) to reconfigure the seating and increase capacity in 40 of the Company's A320ceos from 178 to 182 seats (reconfiguration). The reconfiguration of the aircraft commenced in the first quarter of 2016 and is expected to be completed in the fourth quarter of 2017 for a remaining committed cost of \$2.6 million, as of December 31, 2016. These amounts will be capitalized within flight equipment on the balance sheet.

In September 2015, the Company executed a lease agreement with Wayne County Airport Authority (the Authority), which owns and operates Detroit Metropolitan Wayne County Airport (DTW). Under the lease agreement, the Company leases a 10-acre site, adjacent to the airfield at DTW, in order to construct, operate and maintain an approximately 126,000-square-foot hangar facility (the project). The project allows for the development of a maintenance hangar in order to fulfill the requirements of the Company's growing fleet and will reduce dependence on third-party facilities and contract line maintenance. The lease agreement has a 30-year term with two 10-year extension options. Upon termination of the lease, title of the project, which will be fully depreciated, will automatically pass to the Authority. The Company estimates it will complete the project during the first quarter of

2017 for a remaining committed cost of \$7.3 million, as of December 31, 2016.

90

Notes to Financial Statements—(Continued)

The Company is contractually obligated to pay the following minimum guaranteed payments for its reservation system, advertising media, data center, weather system and call center as of December 31, 2016: \$5.7 million in 2017, \$3.9 million in 2018, \$0.3 million in 2019, \$0.3 million in 2020, \$0.1 million in 2021, and \$0.0 million in 2022 and beyond. The Company's current agreement with its reservation system provider expires in 2018.

Litigation

The Company is subject to commercial litigation claims and to administrative and regulatory proceedings and reviews that may be asserted or maintained from time to time. The Company believes the ultimate outcome of such lawsuits, proceedings and reviews will not, individually or in the aggregate, have a material adverse effect on its financial position, liquidity or results of operations.

Employees

The Company has four union-represented employee groups that together represent approximately 73% of all employees at December 31, 2016. The Company had four union-represented employee groups that together represented approximately 73% of all employees at December 31, 2015. The table below sets forth the Company's employee groups and status of the collective bargaining agreements as of December 31, 2016.

Employee Groups	Representative	Amendable Date	Percentage of Workforce
Pilots	Air Line Pilots Association, International (ALPA)	August 2015	26%
Flight Attendants	Association of Flight Attendants (AFA-CWA)	May 2021	42%
Dispatchers	Transport Workers Union (TWU)	August 2018	1%
Ramp Service Agents	International Association of Machinists and Aerospace Workers (IAMAW)	June 2020	4%

In August 2015, the Company's collective bargaining agreement with its pilots, represented by ALPA, became amendable. In June 2016, ALPA requested the services of the National Mediation Board (NMB) to facilitate negotiations for an amended agreement and the Company joined ALPA in the request. The NMB has assigned a mediator and the parties continue to meet and work toward an amended agreement with the guidance of the mediator. Under the RLA, the parties' current agreement remains in effect until an amended agreement is reached.

In March 2016, under the supervision of the National Mediation Board (NMB), the Company and AFA-CWA reached a tentative agreement for a five-year contract with the Company's flight attendants. In May 2016, the flight attendants voted to approve the new five-year contract with the Company. In connection with this agreement, the Company paid a \$9.6 million ratification incentive payment to the flight attendants recorded within salaries, wages and benefits in the statement of operations.

In July 2014, certain ramp service agents directly employed by the Company voted to be represented by the IAMAW. In May 2015, the Company entered into a five-year interim collective bargaining agreement with the IAMAW, covering material economic terms. In June 2016, the Company and the IAMAW reached an agreement on the remaining terms of the collective bargaining agreement, which is amendable in June 2020. As of December 31, 2016, these ramp service agents served 1 of the 59 airports where the Company operates.

The Company is self-insured for health care claims, subject to a stop-loss policy, for eligible participating employees and qualified dependent medical claims, subject to deductibles and limitations. The Company's liabilities for claims incurred but not reported are determined based on an estimate of the ultimate aggregate liability for claims incurred. The estimate is calculated from actual claim rates and adjusted periodically as necessary. The Company has accrued \$5.7 million and \$3.7 million, for health care claims as of December 31, 2016, and 2015, respectively.

Notes to Financial Statements—(Continued)

17. Fair Value Measurements

Under ASC 820, Fair Value Measurements and Disclosures, disclosures relating to how fair value is determined for assets and liabilities are required, and a hierarchy for which these assets and liabilities must be grouped is established, based on significant levels of inputs, as follows:

Level 1—Quoted prices in active markets for identical assets or liabilities.

Level 2—Observable inputs other than Level 1 prices such as quoted prices for similar assets or liabilities; quoted prices in markets that are not active; or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities.

Level 3—Unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities.

Fair value is defined as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. The Company utilizes several valuation techniques in order to assess the fair value of the Company's financial assets and liabilities.

Fuel Derivative Instruments

From time to time, the Company may enter into fuel derivative contracts in order to mitigate the risk of future volatility in fuel prices. The Company's fuel derivative contracts generally consist of jet fuel swaps and jet fuel options. These instruments are valued using energy and commodity market data, which is derived by combining raw inputs with quantitative models and processes to generate forward curves and volatilities.

The Company utilizes the market approach to measure fair value for its fuel derivative instruments, if any. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities.

The Company does not elect hedge accounting on its fuel derivative instruments. As a result, the Company records the fair value adjustment of its fuel derivatives in the accompanying statement of operations within aircraft fuel and on the balance sheet within prepaid expenses and other current assets or other current liabilities, depending on whether the net fair value of the derivatives is in an asset or liability position as of the respective date. Fair values of the fuel derivative instruments are determined using standard option valuation models. The Company also considers counterparty risk and its own credit risk in its determination of all estimated fair values. The Company offsets fair value amounts recognized for derivative instruments executed with the same counterparty under a master netting arrangement. The Company determines fair value of jet fuel options utilizing an option pricing model based on inputs that are either readily available in public markets or can be derived from information available in publicly quoted markets. The Company has consistently applied these valuation techniques in all periods presented and believes it has obtained the most accurate information available for the types of derivative contracts it holds.

The fair value of the Company's jet fuel swaps are determined based on inputs that are readily available in public markets or can be derived from information available in publicly quoted markets; therefore, the Company categorizes these instruments as Level 2. Due to the fact that certain inputs utilized to determine the fair value of jet fuel options are unobservable (principally implied volatility), the Company categorizes these derivatives as Level 3. Implied volatility of a jet fuel option is the volatility of the price of the underlying commodity that is implied by the market price of the option based on an option pricing model. Thus, it is the volatility that when used in a particular pricing model, yields a theoretical value for the option equal to the current market price of that option. Implied volatility, a forward-looking measure, differs from historical volatility because the latter is calculated from known past returns. At each balance sheet date, the Company substantiates and adjusts unobservable inputs. The Company routinely assesses the valuation model's sensitivity to changes in implied volatility. Based on the Company's assessment of the valuation model's sensitivity to changes in implied volatility, it concluded that holding other inputs constant, a significant increase (decrease) in implied volatility would result in significantly higher (lower) determination of fair value measurement for the Company's aircraft fuel derivatives. As of December 31, 2016 and 2015, the Company had no

outstanding jet fuel derivatives.

Notes to Financial Statements—(Continued)

Long-Term Debt

The estimated fair value of the Company's non publicly held debt agreements has been determined to be Level 3 as certain inputs used to determine the fair value of these agreements are unobservable. The Company utilizes a discounted cash flow method to estimate the fair value of the Level 3 long-term debt. The estimated fair value of the Company's publicly held debt agreements has been determined to be Level 2 as the Company utilizes quoted market prices to estimate the fair value of it's public long-term debt.

The carrying amounts and estimated fair values of the Company's long-term debt, including current maturities, at December 31, 2016 and December 31, 2015, were as follows:

	As of December 31, 2016		2015		Fair value level hierarchy
	Carrying Value	Estimated Fair Value	Carrying Value	Estimated Fair Value	
	(in millions)				
Senior long-term debt	\$451.9	\$463.9	\$484.2	\$ 477.8	Level 3
Junior long-term debt	47.1	48.1	54.3	54.6	Level 3
Class A enhanced equipment trust certificates	409.8	416.0	95.8	94.8	Level 2
Class B enhanced equipment trust certificates	103.6	105.7	25.0	25.2	Level 2
Total long-term debt	\$1,012.4	\$ 1,033.7	\$659.3	\$ 652.4	

Cash and Cash Equivalents

Cash and cash equivalents at December 31, 2016 and December 31, 2015 are comprised of liquid money market funds and cash and are categorized as Level 1 instruments. The Company maintains cash with various high-quality financial institutions.

Short-term Investment Securities

Investment securities at December 31, 2016 are comprised of short-term available-for-sale securities and are categorized as Level 1 instruments, as the Company uses quoted market prices in active markets when determining the fair value of these securities. As of December 31, 2015, the Company had no outstanding investment securities.

Assets and liabilities measured at gross fair value on a recurring basis are summarized below:

	Fair Value Measurements as of December 31, 2016			
	Total	Level 1	Level 2	Level 3
	(in millions)			
Cash and cash equivalents	\$ 700.9	\$ 700.9	\$ —	\$ —
Short-term investment securities	100.2	100.2	—	—
Total assets	\$ 801.1	\$ 801.1	\$ —	\$ —
Total liabilities	\$ —	\$ —	\$ —	\$ —

Notes to Financial Statements—(Continued)

	Fair Value Measurements as of December 31, 2015			
	Total	Level 1	Level 2	Level 3
	(in millions)			
Cash and cash equivalents	\$ 803.6	\$ 803.6	\$ —	\$ —
Total assets	\$ 803.6	\$ 803.6	\$ —	\$ —
Total liabilities	\$ —	\$ —	\$ —	\$ —

The Company had no transfers of assets or liabilities between any of the above levels during the years ended December 31, 2016 or 2015.

The Company's Valuation Group, which reports to the Chief Financial Officer, is made up of individuals from the Company's Treasury and Corporate Accounting departments. The Valuation Group is responsible for the execution of the Company's valuation policies and procedures. The Valuation Group compares the results of the Company's internally developed valuation methods with counterparty reports at each balance sheet date, assesses the Company's valuation methods for accurateness and identifies any needs for modification. For additional information, refer to Note 6, Short-term Investment Securities.

18. Operating Segments and Related Disclosures

The Company is managed as a single business unit that provides air transportation for passengers. Operating revenues by geographic region as defined by the Department of Transportation (DOT) area are summarized below:

	2016	2015	2014
	(in millions)		
DOT—Domestic	\$2,136.2	\$1,940.2	\$1,728.8
DOT—Latin America	\$5.8	201.3	202.8
Total	\$2,322.0	\$2,141.5	\$1,931.6

During 2016, 2015 and 2014, no revenue from any one foreign country represented greater than 4% of the Company's total passenger revenue. The Company attributes operating revenues by geographic region based upon the origin and destination of each passenger flight segment. The Company's tangible assets consist primarily of flight equipment, which are mobile across geographic markets and, therefore, have not been allocated.

19. Quarterly Financial Data (Unaudited)

Quarterly results of operations for the years ended December 31, 2016 and 2015 are summarized below:

Three Months Ended

March 31 June 30 September 30 December 31

(in thousands, except per share amounts)

2016

Operating revenue	\$538,143	\$584,133	\$621,329	\$578,351
Operating income	101,299	121,835	135,216	85,311
Net income	61,920	73,084	81,382	48,493
Basic earnings per share	0.87	1.03	1.17	0.70
Diluted earnings per share	0.86	1.03	1.17	0.70

2015

Operating revenue	\$493,355	\$553,421	\$574,841	\$519,846
Operating income	109,251	122,315	157,219	120,337
Net income	69,002	76,704	97,114	74,400
Basic earnings per share	0.94	1.06	1.35	1.04
Diluted earnings per share	0.94	1.05	1.35	1.04

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of
Spirit Airlines, Inc.

We have audited the accompanying balance sheets of Spirit Airlines, Inc. as of December 31, 2016 and 2015, and the related statements of operations, comprehensive income, shareholders' equity and cash flows for each of the three years in the period ended December 31, 2016. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Spirit Airlines, Inc. at December 31, 2016 and 2015, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2016, in conformity with U.S. generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Spirit Airlines, Inc.'s internal control over financial reporting as of December 31, 2016, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) and our report dated February 13, 2017 expressed an unqualified opinion thereon.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders of
Spirit Airlines, Inc.

We have audited Spirit Airlines, Inc.'s internal control over financial reporting as of December 31, 2016 based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework), as applicable (the COSO criteria). Spirit Airlines, Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Annual Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Spirit Airlines, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the accompanying balance sheet of Spirit Airlines, Inc. as of December 31, 2016 and 2015, and the related statement of operations, comprehensive income, shareholders' equity and cash flows for each of the three years in the period ended December 31, 2016 of Spirit Airlines, Inc. and our report dated February 13, 2017 expressed an unqualified opinion thereon.

ITEM 9. CHANGES AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Management, with the participation of our Chief Executive Officer and our Chief Financial Officer, evaluated the effectiveness of our disclosure controls and procedures as of December 31, 2016. The term “disclosure controls and procedures,” as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act, means controls and other procedures of a company that are designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the SEC’s rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Exchange Act is accumulated and communicated to our management, including its principal executive and principal financial officers, as appropriate to allow timely decisions regarding required disclosure.

Management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving their objectives and management necessarily applies its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Based on the evaluation of our disclosure controls and procedures as of December 31, 2016, our Chief Executive Officer and Chief Financial Officer concluded that, as of such date, our disclosure controls and procedures were effective at the reasonable assurance level.

Management's Annual Report on Internal Control Over Financial Reporting

Management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934. Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies may deteriorate.

Management conducted an evaluation of the effectiveness of our internal control over financial reporting based on the 2013 framework established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO Framework). Based on that evaluation, management believes that our internal control over financial reporting was effective as of December 31, 2016.

The effectiveness of our internal control over financial reporting as of December 31, 2016 has been audited by Ernst & Young LLP, an independent registered public accounting firm, which also audited our Financial Statements for the year ended December 31, 2016. Ernst & Young LLP's report on our internal control over financial reporting is included herein.

Changes in Internal Control over Financial Reporting

There were no changes in our internal control over financial reporting during 2016 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

ITEM 9B. OTHER INFORMATION

None.
