 - Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))
-

Item 8.01 Other Events

On January 30, 2018, Cumberland announced a new publication in Leukemia & Lymphoma, with study results showing that amifostine decreases gastro-intestinal (GI) toxicity in patients who receive treatment for their multiple myeloma. Cumberland markets branded amifostine in the U.S. under the name Ethyol®.

The investigator study, led by Ehsan Malek, MD at Case Western Reserve University, assessed multiple myeloma patients receiving high dose melphalan followed by auto-HTC. It consisted of patients at University Hospitals Seidman Cancer Center in Cleveland, OH and the MD Anderson Cancer Center in Houston, TX. It evaluated the effect amifostine has on this method of treatment.

Amifostine is used to reduce the side effects of certain chemotherapy agents and radiation treatment. It is known as a cytoprotective agent, protecting the body from some of the potentially serious side effects of treatment.

A copy of the press release is furnished as Exhibit 99.1.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.
