THE COMPANY

We are one of the world's largest manufacturers of the broadest range of high quality graphite electrodes, products essential to the production of electric arc furnace (EAF) steel and various other ferrous and nonferrous metals. We are the largest manufacturer of high quality natural graphite products enabling thermal management solutions for the electronics industry and fuel cell solutions for the transportation and power generation industries. We are one of the world's largest manufacturers and providers of other synthetic graphite and carbon products, as well as related technical services, including cathodes for the aluminum industry and other advanced graphite and carbon materials for the semiconductor, transportation, petrochemical and other metals markets. We service customers in about 80 countries, including industry leaders such as Arcelor S.A., Bao Steel, Gerdau S.A. and Mittal Steel in steel, Alcoa and Alcan in aluminum, Dell, Samsung and Sony in electronics, MEMC Electronic Materials in semiconductors and Ballard Power Systems in fuel cells.

Our vision is to enable customer leadership, better and faster than our competition, through the creation, innovation and manufacture of graphite and carbon material science-based solutions. We have over 100 years of experience in the research and development of graphite and carbon-based solutions and our intellectual property portfolio is extensive. Our business was founded in 1886 by the National Carbon Company.

We currently manufacture our products in 13 state-of-the-art manufacturing facilities strategically located on four continents and have more diverse locations than the facilities of any of our competitors. We believe our unique global manufacturing network cannot be replicated by any of our competitors due to the capital investment, technology and process know-how required to do so. We believe our network has the largest manufacturing capacity, has one of the lowest manufacturing cost structures of all of our major competitors and delivers the highest-level quality products. We currently have the operating capability, depending on product demand and mix, to manufacture approximately 230,000 metric tons of graphite electrodes annually from our existing assets. We believe that our unique global manufacturing network provides us with significant competitive advantages in product quality, proximity to customers, timely and reliable product delivery, and product costs. Given our global network, we are well positioned to serve the growing number of consolidated, global, multi-plant steel and aluminum customers as well as certain smaller, regional customers and segments.

We operate the premier research, development and testing facilities in the graphite and carbon industry, and we believe we are the industry leader in graphite and carbon material science and high temperature processing know-how. We believe our technological capabilities for developing products with superior thermal, electrical and physical characteristics provide us with a competitive advantage. These capabilities have enabled us to accelerate development and commercialization of our technologies

to exploit markets with high growth potential, including products for electronic thermal management and fuel cell applications.
