Item 1

FIRST RESULTS FROM SAINT I TRIAL SHOW ASTRAZENECA'S CEROVIVE (NXY-059) DEMONSTRATES A REDUCTION IN DISABILITY IN PATIENTS WITH ACUTE ISCHEMIC STROKE

SAINT II and CHANT trials for CEROVIVE will continue as planned

AstraZeneca today announced that a first analysis of data from the SAINT I trial involving more than 1700 patients shows a statistically significant reduction versus placebo on the primary outcome of disability after an acute ischemic stroke ($p=0.038$), as measured by the Modified Rankin Scale (MRS). However, on the National Institute of Health Stroke Scale (NIHSS), there was no significant difference between the treatment groups in measurement of change in neurological impairment. The clinical significance of these findings need to be assessed in light of the outcome of SAINT II and CHANT.

Half of the SAINT I phase III trial's 1700 patients were randomised to receive CEROVIVE (NXY-059). The incidence and profile of adverse events was similar to placebo.

This result, together with the ongoing phase III SAINT II trial will enable AstraZeneca to continue its evaluation of the efficacy and safety profile of CEROVIVE (NXY-059) in acute ischemic stroke patients. AstraZeneca plans to file regulatory submissions in the second half of 2006. Such filings for CEROVIVE will be dependent on the final data package, including results from SAINT II and CHANT.

AstraZeneca is encouraged by these data as acute ischemic stroke is a condition for which an effective and well-tolerated treatment is urgently needed. However, the full potential of CEROVIVE will only be clear after completion of the clinical development programme.

The SAINT trials for CEROVIVE (NXY-059) are being conducted worldwide in approximately 400 centres across 40 countries to evaluate the effect of the compound in acute ischemic stroke patients. These countries and regions include: Europe, Asia, Australia, New Zealand, South Africa, United States, Canada and Latin America.

The CHANT (Cerebral Hemorrhagic And NXY-059 Treatment) trial will also continue as planned. CHANT is a double-blind, randomised, placebo-controlled, parallel-group, multi-centre, Phase IIb study to assess the safety and tolerability of CEROVIVE (NXY-059) in adult patients with acute intracerebral hemorrhage. The independent data safety monitoring board recently conducted a planned safety review on the first 200 patients and recommended the trial to proceed per plan. The trial will involve 150 centres in 21 countries.

CEROVIVE (NXY-059), an investigational drug under development by AstraZeneca and licensed from Renovis, Inc., has a proposed mechanism of action of free radical trapping. It is being studied as a neuroprotectant in clinical trials based on effects seen in experimental models of acute ischemic stroke.

Modified Rankin Scale (MRS): the most commonly used global disability scale for assessing stroke patients. It is a simple measure of independence primarily used in the rehabilitation phases of stroke.

Edgar Filing: ASTRAZENECA PLC - Form 6-K

National Institute of Health Stroke Scale (NIHSS): provides a quantitative assessment of the neurological examination findings that are most relevant to stroke patients. This scale assesses neurological impairment, providing a measure of the severity of the stroke and was developed specifically for use in acute stroke trials.

Item 2

Dealing by Directors

Companies Act 1985 Sections 324/329

We hereby inform you that the interest of David R. Brennan, a Director of the Company, in the American Depositary Shares (ADSs) of AstraZeneca PLC has changed as detailed below. One ADS equals one Ordinary Share.

As previously notified on 31 March 2005, Mr Brennan became unconditionally entitled to 18,925 ADSs on the partial vesting of an award under the terms of the AstraZeneca US Executive Performance Share Plan. Mr Brennan has elected to defer the value of those ADSs, less certain mandatory tax deductions, into the AstraZeneca US Executive Deferral Plan, a unitised stock fund established in 2000, in which Mr Brennan, in common with other participating US executives, is deemed to have a notional interest in ADSs calculated by reference to the fund value and the closing price of AstraZeneca ADSs. This deferral occurred on 29 April 2005, following which Mr Brennan has a notional interest in 74,073 ADSs in the AstraZeneca US Executive Deferral Plan as at 29 April 2005 based on that day's closing price of US\$43.95.

In total, Mr Brennan now has an interest in 169,993 AstraZeneca ADSs, including the notional interest in ADSs in the AstraZeneca US Executive Deferral Plan referred to above.

Item 5

**Dealing by Directors
Companies Act 1985 Sections 324/329**

We hereby inform you that, on 5 May 2005, Mr J R Symonds, a Director of the Company, acquired 298 of the Company's USD0.25 Ordinary Shares at a price of £22.64 per share following the exercise of an option under the AstraZeneca Savings-Related Share Option Scheme.

On 5 May 2005, Mr Symonds also purchased 300 of the Company's USD0.25 Ordinary Shares at a price of £23.64 per share using the proceeds of a savings account linked to an option under the AstraZeneca Savings-Related Share granted to him in 2001 at an option price of £29.71. This option will lapse on 1 June 2005 if not exercised before then.

Mr Symonds' interest in the Ordinary Shares of the Company has increased to 11,527 shares, which represents less than 0.001 per cent of the number of shares in issue. Mr Symonds now has options over 312,753 Ordinary Shares.
