Notes to Schedule of Investments:

*Portfolio securities and other financial instruments for which market quotations are readily available are stated at market value. Market value is generally determined on the basis of last reported sales prices, or if no sales are reported, based on quotes obtained from a quotation reporting system, established market makers, or pricing services. Portfolio securities and other financial instruments for which market quotations are not readily available or if a development/event occurs that may significantly impact the value, are fair-valued, in good faith, by the Board of Directors or persons acting at the Board s direction pursuant to guidelines established by the Board of Directors. The Fund s investments are valued daily and the net asset value (NAV) is calculated as of the close of regular trading (normally 4:00 p.m. Eastern time) on the New York Stock Exchange (NYSE) on each day the NYSE is open for business using prices supplied by dealer quotations, or by using the last sale price on the exchange that is the primary market for such securities, or the last quoted mean price for those securities for which the over-the-counter market is the primary market or for listed securities in which there were no sales. With respect to Korean equity securities, the Fund fair values its securities daily using modeling tools provided by a statistical research service. This service utilizes statistics and programs based on historical performance of markets and other economic data (which may include changes in the value of U.S. securities or security indices). Short-term securities maturing in 60 days or less are valued at amortized cost, if their original term to maturity was 60 days or less, or by amortizing their value on the 61st day prior to maturity, if the original term to maturity exceeded 60 days. The prices used by the Fund to value securities may differ from the value that would be realized if the securities were sold.

- (a) Securities with an aggregate value of \$395,310,993, representing 93.5% of net assets, have been valued utilizing modeling tools provided by a third-party vendor.
- (b) Non-income producing.
- (c) Security purchased with cash proceeds from securities on loan.
- (d) All or portion of securities on loan with an aggregate market value of \$89,399,847; cash collateral of \$97,296,755 was received with which the Fund purchased short-term investments.

Fair Value Measurements Effective July 1, 2008, the Fund adopted Financial Accounting Standards Board Statement of Financial Accounting Standards No. 157, Fair Value Measurements (SFAS 157). This standard clarifies the definition of fair value for financial reporting, establishes a framework for measuring fair value and requires additional disclosures about the use of the fair value measurements. The three levels of the fair value hierarchy under SFAS 157 are described below:

Level 1 quoted prices in active markets for identical investments

Level 2 other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)

Level 3 significant unobservable inputs (including the Funds own assumptions in determining the fair value of investments)

The valuation techniques used by the Fund to measure fair value during the three months ended September 30, 2008 maximized the use of observable inputs and minimized the use of unobservable inputs. The Fund utilized the following fair value technique: estimation of the price that would have prevailed in a liquid market for international equities given information available at the time of evaluation.

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities.

The following is a summary of the inputs used at September 30, 2008 in valuing the Fund s investments carried at value:

	Iı	nvestments in
