**Item 2.02 Results of Operation and Financial Condition.**

On April 25, 2007, LSI Corporation issued a news release regarding its financial results for the quarter ended April 1, 2007. A copy of the news release is furnished as Exhibit 99.1 to this Form 8-K and is incorporated by reference herein.

The news release contains non-GAAP financial information. Management believes that the presentation of non-GAAP net income and non-GAAP net income per basic and diluted share provides important supplemental information to management and investors about financial and business trends relating to the Company's financial condition and results of operations. Management believes that the use of these non-GAAP financial measures provides consistency and comparability with our past financial reports.

Management has historically used these non-GAAP measures when evaluating operating performance because we believe that the inclusion or exclusion of the items described below provides an additional measure of our core operating results and facilitates comparisons of our core operating performance against prior periods and our business model objectives. We have chosen to provide this information to investors to enable them to perform additional analyses of past, present and future operating performance and as a supplemental means to evaluate our ongoing core operations. Externally, we believe that these non-GAAP measures continue to be useful to investors in their assessment of our operating performance and their valuation of the company.

Internally, these non-GAAP measures are significant measures used by management for purposes of:

evaluating the core operating performance of the company;

determination of bonuses for certain key employees;

establishing internal budgets;

calculating return on investment for development programs and growth initiatives;

comparing performance with internal forecasts and targeted business models;

strategic planning;

evaluating and valuing potential acquisition candidates and how their operations compare to the company's operations; and

benchmarking performance externally against our competitors.

**Non-GAAP financial measures:**

**Non-GAAP net income:**

Non-GAAP net income is important to the Company for the reasons noted above and excludes the following items:

**Stock-based compensation.** Stock-based compensation relates primarily to LSI stock awards such as stock options and restricted stock units. Stock-based compensation is a non-cash expense that varies in amount from period to period and is dependent on market forces that are difficult to predict. As a result of this unpredictability, management excludes this item from its internal operating forecasts and models. Management believes that non-GAAP measures adjusted for stock-based compensation provide investors with a basis to measure the company's core performance against the performance of other companies without the variability created by stock-based compensation.

**Amortization of acquisition related intangibles and in-process research and development.** These charges are acquisition-related charges. Amortization of acquisition-related intangibles relates to purchased technology in acquisitions such as existing technology, patents and trademarks. In-process research and development relates to projects in process as of the

**Table of Contents**

acquisition date that have not reached technological feasibility and are immediately expensed. These charges are not factored into management's evaluation of potential acquisitions, or our performance after completion of acquisitions, because they are not related to our core operating performance, and the frequency and amount of such charges vary significantly based on the size and timing of our acquisitions and the maturities of the businesses being acquired. Excluding this data provides investors with a basis to compare the company against the performance of other companies without this variability.

**Restructuring of operations and other items, net.** This represents charges/losses and gains that are not directly related to the company's ongoing or core business results. Management regularly excludes such items from internal operating forecasts and models because they are not considered a core operating activity for the company and because the frequency and variability in the nature of the charges can vary significantly from period to period. Excluding this data provides investors with a basis to compare our company against the performance of other companies without this variability.

**Other charges and gains.** Other charges and gains consist of gains or losses on equity investments and certain non-operating gains and losses that occur on an infrequent basis and vary greatly in amount. We do not regularly trade public equity securities nor do we typically use these securities to fund ongoing operations. Management excludes these items because they do not affect our core operations. Excluding this data provides investors with a basis to compare our company against the performance of other companies without this variability.

**Non-GAAP income tax expense/benefit.** This item represents the additional amount of tax expense or benefit that the company would accrue if it used non-GAAP results instead of GAAP results in the calculation of its tax liability.

**Non-GAAP net income per basic and diluted share:**

The numerator used in the calculation of non-GAAP net income per diluted share is non-GAAP net income computed as described above. In the denominator, the number of non-GAAP diluted shares excludes the following item:

The treasury stock method used to calculate weighted average outstanding shares on a diluted basis requires amounts related to compensation costs attributable to future services and not yet recognized in the financial statements to be treated as proceeds that are assumed to be used to repurchase shares. This reduces the total number of weighted average shares in the GAAP computation. LSI does not include stock-based compensation costs in its non-GAAP net income and accordingly does not consider these amounts in applying the treasury stock method.

Some of the limitations of relying on non-GAAP financial measures include:

**Stock-based compensation.** LSI's stock-based incentive plans are important components of our employee incentive compensation arrangements and are reflected in our GAAP results under Statement of Financial Accounting Standards No. 123 (revised 2004), Share-Based Payment. Stock-based compensation should be considered for a complete view of the costs of our compensation arrangements.

**Amortization of acquisition-related intangibles and in-process research and development.** Acquisitions have been an important part of our business strategy and the corresponding acquisition-related charges reflect the costs of choosing acquisitions as a form of growth strategy.

**Restructuring of operations and other items, net.** This item reflects charges for severance, exit costs associated with leased facilities, asset impairment charges and gains on sales of assets

**Table of Contents**

that are no longer strategic. While no longer strategic to the future of the company, such items reflect the costs of decisions made as part of running a business and are critical to a complete view of our historical results.

**Other charges and gains.** These amounts should be included for a complete view of our historical performance even though they are not related to our core operations.

**Non-GAAP income tax expense/benefit.** This item represents the additional amount of tax expense or benefit that the company would accrue if it used non-GAAP results instead of GAAP results in the calculation of its tax liability. The limitation in it is that it does not include the effect of all the items excluded from the non-GAAP financial statements.

All supplemental non-GAAP financial measures should be read in conjunction with the comparable information presented in accordance with generally accepted accounting principles in the United States of America.

**Item 9.01 Financial Statements and Exhibits.**
