## Edgar Filing: BOSTON SCIENTIFIC CORP - Form 8-K

On June 22, 2004, Boston Scientific Corporation launched a public offering of \$500 million aggregate principal amount of senior notes under the company's existing shelf registration statement. Boston Scientific plans to use the proceeds to repay commercial paper borrowings and for other general corporate purposes. Approximately \$740 million of commercial paper borrowings were incurred to finance Boston Scientific's recent acquisition of Advance Bionics Corporation.

On June 1, 2004, Boston Scientific acquired 100 percent of the fully diluted equity of Advanced Bionics Corporation, a privately-held company located in Valencia, California, for an initial payment of approximately \$740 million cash, plus earnout payments tied to future performance milestones. The initial purchase price was funded by the issuance of commercial paper.

The acquisition will expand Boston Scientific's technology portfolio into the rapidly growing implantable microelectronic device market. Advanced Bionics has developed implantable microelectronics for treating numerous neurological disorders. Its neuromodulation technology includes a range of neurostimulators (or implantable pulse generators), programmable drug pumps and cochlear implants.

The acquisition has been structured to include a substantial earnout mechanism. Performance milestones are primarily based on the achievement of net sales, with certain milestone payments also tied to profitability. The milestones are segmented by the four principal technology platforms (cochlear implants, implantable pulse generators, drug pumps and bion microstimulators), each with a 72-month earnout horizon. Base earnout payments on these performance milestones approximate two and a quarter times incremental sales for each annual period. There are also bonus earnout payments available based on the attainment of certain aggregate sales performance targets and a certain gross margin level.

Boston Scientific's best estimate of future contingent consideration (undiscounted) that it would be required to make associated with its acquisition of Advanced Bionics is approximately \$2.0 billion. The estimated cumulative specified revenue level associated with Boston Scientific's best estimate is approximately \$4.5 billion during the period from 2004 through 2013.
