6. Investments

As of June 30, 2005 and December 31, 2004, the Company's short-term investments and marketable debt securities consisted of certificates of deposit, auction rate securities, municipal bonds, asset backed securities, Federal Agency Notes and U.S. Treasury Notes and marketable equity securities consisted of equity investments in publicly traded companies. All marketable securities are classified as available-for-sale. The following table summarizes the amortized cost basis and estimated fair value of the Company's investments:

	June 30, 2005		December 31, 2004	
	Cost Basis	Fair Value	Cost Basis	Fair Value
Cash and cash equivalents	\$ 35,930	\$ 35,930	\$ 46,019	\$ 46,019
Short-term investments	151,459	152,005	62,077	61,675
Marketable securities - long term	326,984	327,276	516,188	515,881

The amortized cost and estimated fair value by maturity of securities are shown in the following table. Securities are classified according to their contractual maturities without consideration of principal

Table of Contents**WEBMD CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

amortization, potential prepayments or call options. Accordingly, actual maturities may differ from contractual maturities.

	Cost or Amortized Cost	Fair Value
Due in one year or less	\$ 151,459	\$ 152,005
Due after one year through three years	325,492	323,182
Total	\$ 476,951	\$ 475,187

7. Comprehensive Income (Loss)

Comprehensive income (loss) is comprised of net income and other comprehensive loss. Other comprehensive loss includes certain changes in equity that are excluded from net income, such as changes in unrealized holding gains (losses) or gains (losses) on available-for-sale marketable securities and foreign currency translation adjustments. The following table presents the components of other comprehensive loss for the three and six months ended June 30, 2005 and 2004:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2005	2004	2005	2004
Foreign currency translation losses	\$ 1,736	\$ 40	\$ 2,658	\$ 349
Unrealized losses on securities:				
Unrealized holding gains (losses)	1,788	(9,225)	(2,095)	(10,798)
Less: reclassification adjustment for net gains (losses) realized in net income	190	447	(3,642)	363
Net unrealized gains (losses) on securities	1,598	(9,672)	1,547	(11,161)
Other comprehensive loss	(138)	(9,712)	(1,111)	(11,510)
Net income	16,166	5,775	26,015	11,476
Comprehensive income (loss)	\$ 16,028	\$ (3,937)	\$ 24,904	\$ (34)

The foreign currency translation losses are not currently adjusted for income taxes as they relate to permanent investments in non-U.S. subsidiaries.

Accumulated other comprehensive income includes the following:

	June 30, 2005	December 31, 2004
Unrealized gains (losses) on securities	\$ 838	\$ (709)

Foreign currency translation gains	6,008	8,666
Total accumulated other comprehensive income	\$ 6,846	\$ 7,957

During the three months ended March 31, 2005, the Company recorded a loss on investments of \$4,251 related to marketable debt securities which were identified by the Company as securities to be liquidated in the event funds were needed for redemption of the 3¹/₄% Notes. The loss represents the excess of the original book value of those investments over the market value at March 31, 2005. Prior to the recognition of this loss, any excess of book value over the market value of these investments was reflected in accumulated other comprehensive income in the accompanying consolidated balance sheet. In addition, during the six months ended June 30, 2005, the Company recognized gains on the sale of certain of its investments of \$609. Both of the above amounts are included in other expense (income) in the accompanying consolidated statements of operations.

8. Goodwill and Other Intangible Assets

The changes in the carrying amount of goodwill for the year ended December 31, 2004 and the six months ended June 30, 2005 are as follows:

	Emdeon Business Services	Emdeon Practice Services	WebMD Health	Porex	Total
Balance as of January 1, 2004	\$ 585,988	\$ 182,809	\$ 36,843	\$ 38,808	\$ 844,448
Acquisitions during the period	99,829		14,942	4,122	118,893
Contingent consideration payments/accruals related to prior period acquisitions	60,955	155	1,500		62,610
Tax reversals	(7,141)	(7,321)			(14,462)
Adjustments to finalize purchase price allocations	(1,263)		(116)		(1,379)
Effects of exchange rates				454	454
Balance as of January 1, 2005	738,368	175,643	53,169	43,384	1,010,564
Acquisition during the period			23,141		23,141
Contingent consideration payments related to prior period acquisitions(b)	(1,106)	30	1,000		(76)
Tax reversals(a)	(3,294)			(545)	(3,839)
Adjustments to finalize purchase price allocations	566		(1,253)		(687)
Effects of exchange rates				(511)	(511)
Balance as of June 30, 2005	\$ 734,534	\$ 175,673	\$ 76,057	\$ 42,328	\$ 1,028,592

- (a) In accordance with EITF 93-7, *Uncertainties Related to Income Taxes in a Purchase Business Combination*, the Company reduced goodwill and accrued liabilities by \$1,148 and \$545 for the Emdeon Business Services and Porex segments during the six months ended June 30, 2005. The reduction related to the favorable resolution of estimated tax liabilities established in connection with certain 2000 acquisitions. Additionally, during the three and six months ended June 30, 2005, the Company reduced goodwill by \$2,146 as a result of the reversal of a portion of the income tax valuation allowances that were originally established in connection with the purchase accounting of prior acquisitions within the Emdeon Business Services segment.
- (b) During the six months ended June 30, 2005, the Company made contingent consideration payments in the amount of \$1,960, \$30 and \$1,000 for the Emdeon Business Services, Emdeon Practice Services and WebMD Health segments 2004 and 2003 Acquisitions, respectively. In addition, during the six months ended June 30, 2005, the Company adjusted goodwill by \$3,066 in connection with an over accrual of contingent consideration in the Emdeon Business Services segment.

Table of Contents**WEBMD CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

Intangible assets subject to amortization consist of the following:

	June 30, 2005			December 31, 2004		
	Gross Carrying Amount	Accumulated Amortization	Net	Gross Carrying Amount	Accumulated Amortization	Net
Customer lists	\$ 370,481	\$ (224,846)	\$ 145,635	\$ 369,704	\$ (217,874)	\$ 151,830
Technology and patents	235,423	(162,557)	72,866	234,722	(155,687)	79,035
Trade names	40,716	(29,139)	11,577	40,716	(26,923)	13,793
Non-compete agreements and other	27,913	(4,742)	23,171	17,920	(2,069)	15,851
Total	\$ 674,533	\$ (421,284)	\$ 253,249	\$ 663,062	\$ (402,553)	\$ 260,509

Amortization expense was \$9,745 and \$18,731 for the three and six months ended June 30, 2005, respectively, and \$6,125 and \$12,140 for the three and six months ended June 30, 2004, respectively. Aggregate amortization expense for intangible assets is estimated to be:

Year ended December 31, 2005 (July 1st to December 31st)	\$ 18,249
2006	34,662
2007	33,369
2008	28,185
2009	20,698
Thereafter	118,086

9. Commitments and Contingencies

In April 2004, the Company, through its Emdeon Business Services segment, acquired Dakota, a provider of automated healthcare claims processing technology and business process outsourcing services.

On April 6, 2005, the Company's Dakota subsidiary terminated, for cause, the employment of Sandeep Goel, who was its President, and Pradeep Goel, who was its Chief Operating Officer and Chief Technology Officer, each of whom was also a shareholder of Dakota prior to its acquisition by Emdeon Business Services. In addition, Dakota filed a complaint in the Delaware Court of Chancery against Sandeep Goel and Pradeep Goel alleging breach of their respective employment agreements and related causes of action.

On May 9, 2005, the defendants filed an Answer and Counterclaim against Dakota. In the Answer and Counterclaim, defendants allege that Dakota did not have the right to terminate them for cause and that Dakota violated provisions of their employment agreements. Defendants seek damages for the alleged breaches of their employment agreements. Defendants also allege that Dakota, as well as the Company and Envoy Corporation, a subsidiary of the Company, violated the merger agreement pursuant to which Envoy acquired Dakota. Defendants allege that the terminations and other actions taken by the Company, Envoy and Dakota interfered with the defendants' rights with respect to potential contingent earn-out consideration under provisions contained in the merger agreement. The merger agreement provides for contingent consideration based on achievement of certain financial milestones in specified time periods and defendants seek damages in excess of \$25,000, the maximum aggregate amount of

contingent consideration that could be earned under the earn-out provisions of the merger agreement.

We believe that the counterclaims are without merit and intend to vigorously defend against them.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

In the normal course of business, the Company and its subsidiaries are involved in various other claims and legal proceedings. While the ultimate resolution of these matters, including those discussed in the Company's 2004 Annual Report on Form 10-K under the heading "Legal Proceedings," has yet to be determined, the Company does not believe that their outcome will have a material adverse effect on the Company's consolidated financial position or results of operations.

Table of Contents

ITEM 2. *Management's Discussion and Analysis of Financial Condition and Results of Operations*

This Item 2 contains forward-looking statements with respect to possible events, outcomes or results that are, and are expected to continue to be, subject to risks, uncertainties and contingencies, including those identified in this Item. See Forward-Looking Statements on page 3.

Overview

Management's discussion and analysis of financial condition and results of operations, or MD&A, is provided as a supplement to the consolidated financial statements and notes thereto included elsewhere in this Quarterly Report and to provide an understanding of our results of operations, financial condition, and changes in financial condition. Our MD&A is organized as follows:

Introduction. This section provides a general description of our company, a brief discussion of our operating segments, a description of certain recent developments, and background information on certain trends, strategies and other matters discussed in this MD&A.

Critical Accounting Policies and Estimates. This section discusses those accounting policies that both are considered important to our financial condition and results of operations, and require us to exercise subjective or complex judgments in their application. In addition, all of our significant accounting policies, including our critical accounting policies, are summarized in Note 1 to the Consolidated Financial Statements contained in our 2004 Annual Report on Form 10-K filed with the Securities and Exchange Commission.

Results of Operations and Results of Operations by Operating Segment. These sections provide our analysis and outlook for the significant line items on our consolidated statements of operations, on both a company-wide and a segment-by-segment basis.

Liquidity and Capital Resources. This section provides an analysis of our liquidity and cash flows, as well as a discussion of our outstanding debt and commitments, that existed as of June 30, 2005.

Recent Accounting Pronouncements. This section provides a summary of the most recent authoritative accounting standards and guidance that have either been recently adopted or may be adopted in the future.

Factors That May Affect Our Future Financial Condition or Results of Operations. This section describes circumstances or events that could have a negative effect on our financial condition or results of operations, or that could change, for the worse, existing trends in some or all of our businesses. The factors discussed in this section are in addition to factors that may be described elsewhere in this Quarterly Report.

In this MD&A, dollar amounts are in thousands, unless otherwise noted.

Introduction

WebMD Corporation is a Delaware corporation that was incorporated in December 1995 and commenced operations in January 1996 as Healtheon Corporation. We changed our name to Healtheon/ WebMD Corporation in November 1999 and to WebMD Corporation in September 2000. Our common stock has traded on the Nasdaq National Market under the symbol HLTH since February 11, 1999.

Operating Segments

We have aligned our business into four operating segments as follows:

Emdeon Business Services (formerly known as WebMD Business Services). We provide healthcare reimbursement cycle management services for healthcare providers and transaction-related administrative services for healthcare payers, together with related technology solutions. We transmit transactions electronically between healthcare payers and providers and provide healthcare payers with transaction processing technology, consulting services and outsourcing services,

Table of Contents

including document management services for transaction processing and print-and-mail services for the distribution of checks, remittance advice and explanation of benefits. We also provide automated patient billing services to healthcare providers, including statement printing and mailing services. In addition, we provide software products, including decision support and data warehousing solutions, and related maintenance services to Blue Cross Blue Shield and commercial healthcare payers and perform software maintenance and consulting services for certain governmental agencies.

Emdeon Practice Services (formerly known as WebMD Practice Services). We develop and market information technology systems for healthcare providers and related services, primarily under The Medical Manager, Intergy and Emdeon Network Services brands. These systems and services allow physician offices to automate their scheduling, billing and other administrative tasks, to transmit transactions electronically, to maintain electronic medical records and to automate documentation of patient encounters.

WebMD Health. We provide health information services to consumers, physicians and healthcare professionals through online portals and specialized publications. Our public and private online portals provide access to news and articles, searchable in-depth information and dynamic interactive services. Our public portals sell advertising and sponsorship programs, including online continuing medical education (CME) services, to companies interested in reaching consumers and physicians online, including pharmaceutical, biotechnology, medical device and consumer products companies. Our private portals are licensed to employers and health plans for use by their employees and members. In addition, we publish medical reference textbooks, healthcare provider directories and *WebMD the Magazine*, a consumer magazine distributed to physician office waiting rooms.

Porex. We develop, manufacture and distribute proprietary porous plastic products and components used in healthcare, industrial and consumer applications, as well as in finished products used in the medical device and surgical markets.

Recent Developments

WebMD Health IPO. As previously announced, WebMD Health Corp. (formerly known as WebMD Health Holdings, Inc.), a wholly owned subsidiary formed by us to be a holding company for our WebMD Health segment, has filed a Registration Statement on Form S-1 with respect to an initial public offering of its Class A common stock, which would have one vote per share. We expect that WebMD Health will sell between 10% and 14% of its equity to the public in the offering. We would own the remaining equity of WebMD Health in the form of Class B common stock, which would have ten votes per share, and would control WebMD Health. The timing for the sale has not yet been determined. We believe that the benefits of an initial public offering by WebMD Health Corp. include:

creating a security that allows investors to participate directly in the performance of our WebMD Health segment;

enabling us to motivate WebMD Health employees through equity compensation plans that provide for equity participation in that business; and

enabling WebMD Health to make acquisitions using its own equity as consideration.

Because the WebMD name has been more closely associated with WebMD Health's business and its Web sites than with our other businesses, our Board of Directors has determined that WebMD Health will, following its initial public offering, have the sole right to use the name WebMD and related trademarks and that our other businesses will cease to use that name except, under a temporary license from WebMD Health, as needed for an orderly transition. We believed that the WebMD name was not strongly associated with any of our other businesses, none of which has had a long history of using the name. In addition, we believed that not only would the businesses included in our Emdeon Practice Services and Emdeon Business Services segments not be harmed by ceasing to use WebMD as a brand, they would be likely to benefit from use of new branding and related marketing campaigns that emphasize the breadth of the product and service offerings of those businesses. Many of the products and services of

Table of Contents

those businesses have not been associated by customers with the WebMD name, but instead have been associated with names of companies that we acquired, including ABF, Medifax and ExpressBill. Accordingly, in August 2005, we began to use Emdeon in the names of those segments. We are also using Emdeon as a brand for many of the products and services of those segments. There has not been any change in the name of our Porex segment or its branding. We plan to seek stockholder approval, at our Annual Meeting of Stockholders on September 29, 2005, for changing our corporate name from WebMD Corporation to Emdeon Corporation and, on August 4, 2005, filed preliminary proxy materials with the SEC that include a proposal relating to the name change.

We intend to enter into a number of agreements with WebMD Health governing the future relationship of the companies, including a services agreement, a tax sharing agreement, and a release and indemnity agreement. These agreements cover a variety of matters, including responsibility for certain liabilities, including tax liabilities, as well as matters related to providing WebMD Health with administrative services, such as payroll, accounting, tax, employee benefit plan, employee insurance, intellectual property, legal and information processing services. The specific services and the terms on which those services will be provided will be determined prior to completion of the offering. It is our intention that, under the services agreement, we will receive an amount that reasonably approximates our cost of providing services to WebMD Health. We expect to agree to make the services available to WebMD Health for up to five years. However, we expect that WebMD Health would not be required, under the services agreement, to continue to obtain services from us and would be able to terminate services, in whole or in part, at any time generally by providing, with respect to the specified services or groups of services, 60 days prior notice and, in some cases, paying a nominal termination fee to cover costs relating to the termination.

Redemption of 3¹/₄% Convertible Subordinated Notes. On June 2, 2005, we completed the redemption of all of our outstanding 3¹/₄% Convertible Subordinated Notes due 2007. During the three months ended June 30, 2005, holders of the 3¹/₄% Notes converted a total of \$214,880 principal amount of the 3¹/₄% Notes into 23,197,650 shares of our common stock, plus cash in lieu of fractional shares, at a price of \$9.26 per share. We redeemed the balance of \$85,119 principal amount of the 3¹/₄% Notes at an aggregate redemption price, together with accrued interest and redemption premium, of \$86,694. The write-off of the unamortized portion of the deferred issuance costs and the payment of the redemption premium resulted in a total charge of \$1,902. This charge is included in other expense in the accompanying consolidated statements of operations and in loss on redemption of convertible debt in the accompanying consolidated statements of cash flows.

Background Information on Certain Trends and Strategies

Diversification of Emdeon Business Services. Submission of claims electronically assists healthcare payers in reducing the cost of processing and servicing claims and can expedite the reimbursement process for providers. However, this is just a starting point for increasing administrative efficiency. We are continuing our efforts to transform Emdeon Business Services from an electronic transactions clearinghouse to a provider of more comprehensive reimbursement cycle management services for healthcare providers and transaction-related administrative services for healthcare payers. As we had expected, during the first half of 2005, our revenue and earnings from providing electronic clearinghouse services for healthcare transactions, on their own, declined. We expect that to continue during the rest of 2005. However, the revenue and earnings of our business process outsourcing and other transaction-related services offset this decline during the first half of 2005 and, in general, we expect that to continue during the rest of 2005. It is possible that, during certain reporting periods, revenue from basic clearinghouse services could decline faster than we are able to increase the revenue from our additional services, in part because of the length of the implementation cycle for the additional services. We intend to continue the transformation of Emdeon Business Services by developing or acquiring additional transaction-related services and updating our existing ones. Our strategy is to continue to increase the value we are able to provide our payer and provider customers in all aspects of their adoption and implementation of information technology solutions for healthcare transactions.

Table of Contents

Transaction Processing Infrastructure Investments. Our electronic transaction services automate the data exchange between healthcare providers and payers for patient eligibility and benefits information, claims transactions, remittance information, referrals, claim status information and other processes. During 2003 and 2004, the key area of focus for Emdeon Business Services, with respect to its operational and technological infrastructure, was preparing for and implementing the transaction standards of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and working with our customers on their own implementations. We incurred significant costs in these HIPAA implementation efforts. Our goal during the remainder of 2005 and in 2006 is to implement infrastructure improvements that enable us to provide our services more efficiently, to consolidate and integrate the infrastructure used by the companies we have acquired and to create additional value-added services for healthcare payers and providers. We expect to make significant capital expenditures on Emdeon Business Services infrastructure improvements in 2005 and 2006.

Governmental Initiatives Relating to Healthcare Information Technology. There are currently numerous federal, state and private initiatives seeking ways to increase the use of information technology in healthcare. These initiatives are generally intended to foster improvements in the quality of care, while reducing costs. A key focus of many of these initiatives is creating incentives for healthcare providers to make investments in information technology or reducing the costs of doing so. Most significantly, in April 2004, Executive Order 13335 directed the appointment of a National Coordinator for Health Information Technology to coordinate programs and policies regarding health information technology across the federal government. The National Coordinator is charged with directing the health information technology programs within the Department of Health and Human Services, or HHS, and coordinating them with those of other relevant Executive Branch agencies. We believe that we are a good candidate to work with HHS on its initiatives and projects as a result of our experience working with parties throughout the healthcare industry, including

processing large volumes of electronic healthcare transactions for healthcare payers and providers;

providing electronic health records and practice management software to medical practices and clinics;

providing IT services to private and governmental healthcare payers; and

providing personal health records and other health information services to consumers.

Critical Accounting Policies and Estimates

Our discussion and analysis of WebMD's financial condition and results of operations are based upon our Consolidated Financial Statements and Notes to Consolidated Financial Statements, which were prepared in conformity with U.S. generally accepted accounting principles. The preparation of the consolidated financial statements requires us to make estimates and assumptions that affect the amounts reported in the consolidated financial statements and accompanying notes. We base our estimates on historical experience, current business factors, and various other assumptions that we believe are necessary to form a basis for making judgments about the carrying values of assets and liabilities and disclosure of contingent assets and liabilities. We are subject to uncertainties such as the impact of future events, economic, environmental and political factors, and changes in our business environment; therefore, actual results could differ from these estimates. Accordingly, the accounting estimates used in preparation of our financial statements will change as new events occur, as more experience is acquired, as additional information is obtained and as our operating environment changes. Changes in estimates are made when circumstances warrant. Such changes in estimates and refinements in estimation methodologies are reflected in reported results of operations; if material, the effects of changes in estimates are disclosed in the notes to our consolidated financial statements.

We evaluate our estimates on an ongoing basis, including those related to revenue recognition, short-term and long-term investments, deferred tax assets, income taxes, collectibility of customer receivables, prepaid advertising and distribution services, long-lived assets including goodwill and other intangible

Table of Contents

assets, software development costs, inventory valuation, certain accrued expenses, contingencies, litigation and the value attributed to warrants issued for services.

We believe the following reflects our critical accounting policies and our more significant judgments and estimates used in the preparation of our consolidated financial statements:

Revenue Our revenue recognition policies for each reportable segment are as follows:

Emdeon Business Services. Healthcare payers and providers pay us fees for transaction services, generally on either a per transaction basis or, in the case of some providers, on a monthly fixed fee basis. Healthcare payers and providers also pay us fees for patient statement and paid-claims communication services, typically on a per statement or per communication basis. Additionally, payers, including government payers, pay us fees to license decision support software and provide related support and maintenance for that decision support software, and provide information technology consulting services. Healthcare payers pay us annual license fees, which are based on the number of covered members, for use of our software and pay us time and materials fees for providing business and information technology consulting services to them. The professional consulting services we provide to certain governmental agencies are typically billed on a cost-plus fee structure.

Revenue for transaction services, patient statement and paid-claims communication services is recognized as the services are provided. Decision support software and the related support and maintenance agreements are generally sold as bundled time-based license agreements and, accordingly, the revenue for both the software and related support and maintenance is recognized ratably over the term of the license and maintenance agreement. Revenue for consulting services is recognized as the services are provided.

Emdeon Practice Services. Healthcare providers pay us fees to license our Medical Manager and Intergy practice management systems and Intergy EHR electronic medical records system. Our practice management systems are sold as multiple-element arrangements as these software arrangements typically include related hardware, support and maintenance agreements and implementation and training services. We also charge healthcare providers fees for transmitting, through Emdeon Network Services, transactions to payers and billing statements to patients. We recognize revenue from these fees, which are generally paid on a per transaction or monthly basis, as we provide the service.

Software revenue is recognized in accordance with SOP No. 97-2, Software Revenue Recognition, as amended by SOP 98-9, Modification of SOP 97-2, Software Revenue Recognition, With Respect to Certain Transactions. Software license revenue is recognized when a customer enters into a non-cancelable license agreement, the software product has been delivered, there are no uncertainties surrounding product acceptance, there are no significant future performance obligations, the license fees are fixed or determinable and collection of the license fee is considered probable. Amounts received in advance of meeting these criteria are deferred. As required by SOP 98-9, the Company determines the value of the software component of its multiple-element arrangements using the residual method as vendor specific objective evidence (VSOE) of fair value exists for the undelivered elements such as the support and maintenance agreements and related implementation and training services, but not for all the delivered elements such as the software itself. The residual method requires revenue to be allocated to the undelivered elements based on the fair value of such elements, as indicated by VSOE. VSOE is based on the price charged when an element is sold separately.

The vast majority of our practice management and medical records systems include support and maintenance agreements of the underlying software and hardware. These arrangements provide customers with rights to unspecified software product upgrades released during the term of the support period, as well as Internet and telephone access to technical support personnel. Revenue from support and maintenance agreements is recognized ratably over the term of the arrangement,

Table of Contents

typically one year or less. Additionally, many of our software arrangements include implementation and training services. Revenues from these services are accounted for separately from the software revenue, as they are not essential to the functionality of any other element of the software arrangement, and are generally recognized as the services are performed.

WebMD Health. Revenues from advertising are recognized as advertisements are delivered or as publications are distributed. Revenues from sponsorship arrangements, content syndication and distribution arrangements and licenses of our healthcare management tools and private online portals are recognized ratably over the term of the applicable agreement. Revenue from the sponsorship of CME is recognized over the period we deliver the minimum number of CME credit hours required by the applicable agreements. Subscription revenue is recognized over the subscription period. When contractual arrangements contain multiple elements, revenue is allocated to the elements based on their relative fair values, determined using prices charged when elements are sold separately.

Porex. We develop, manufacture and distribute porous plastic products and components. For standard products, we recognize revenue upon shipment of product, net of sales returns and allowances. For sales of certain custom products, we recognize revenue upon completion and customer acceptance. Recognition of amounts received in advance of meeting these criteria is deferred until we meet these criteria.

Long-Lived Assets Our long-lived assets consist of property and equipment, goodwill and other intangible assets. Goodwill and other intangible assets arise from the acquisitions we have made. The amount assigned to intangible assets is subjective and based on our estimates of the future benefit of the intangible asset using accepted valuation techniques, such as discounted cash flow and replacement cost models. Our long-lived assets, excluding goodwill, are amortized over their estimated useful lives, which we determined based on the consideration of several factors, including the period of time the asset is expected to remain in service. We evaluate the carrying value and remaining useful lives of long-lived assets, excluding goodwill, whenever indicators of impairment are present. We evaluate the carrying value of goodwill annually, or whenever indicators of impairment are present. We use a discounted cash flow approach to determine the fair value of goodwill. There was no impairment of goodwill noted as a result of our impairment testing in 2004.

Investments Our investments, at June 30, 2005, consisted principally of certificates of deposit, municipal bonds, auction rate securities, asset-backed securities, Federal Agency Notes, U.S. Treasury Notes and marketable equity securities in publicly traded companies. Each reporting period we evaluate the carrying value of our investments and record a loss on investments when we believe an investment has experienced a decline in value that is other than temporary. Our investments are classified as available-for-sale and are carried at fair value. We do not recognize gains on an investment until sold. Unrealized gains and losses are recorded as a component of accumulated other comprehensive income. Future changes in market or economic conditions or operating results of our investments could result in gains or losses or an inability to recover the carrying value of the investments that may not be reflected in an investment's carrying value. For the six months ended June 30, 2005, we recognized a loss of \$4,251 for unrealized losses on marketable debt securities that we determined were not temporary in nature.

Deferred Tax Assets Our deferred tax assets are comprised primarily of net operating loss carryforwards. At June 30, 2005, we had net operating loss carryforwards of approximately \$2.0 billion. These loss carryforwards may be used to offset taxable income in future periods, reducing the amount of taxes we might otherwise be required to pay. Due to a lack of a history of generating taxable income, we record a valuation allowance equal to 100% of our net deferred tax assets. In the event that we are able to generate taxable earnings in the future and determine it is more likely than not that we can realize our deferred tax assets, an adjustment to the valuation allowance would be made which may increase income in the period that such determination was made.

Table of Contents

Tax Contingencies Our tax contingencies are recorded to address potential exposures involving tax positions we have taken that could be challenged by tax authorities. These potential exposures result from the varying application of statutes, rules, regulations and interpretations. Our estimates of tax contingencies reflect assumptions and judgments about potential actions by taxing jurisdictions. We believe that these assumptions and judgments are reasonable; however, our accruals may change in the future due to new developments in each matter and the ultimate resolution of these matters may be greater or less than the amount that we have accrued.

Results of Operations

The following table sets forth our consolidated statements of operations data and expresses that data as a percentage of revenue for the periods presented (amounts in thousands):

	Three Months Ended June 30,				Six Months Ended June 30,			
	2005		2004		2005		2004	
	\$	%	\$	%	\$	%	\$	%
Revenue	\$ 322,556	100.0	\$ 281,881	100.0	\$ 626,490	100.0	\$ 553,095	100.0
Costs and expenses:								
Cost of operations	181,950	56.4	163,961	58.2	354,113	56.5	326,603	59.0

Revenue is derived from our four business segments: Emdeon Business Services, Emdeon Practice Services, WebMD Health and Porex. Emdeon Business Services provides: electronic transmission services for medical, dental and pharmacy transactions and related technology solutions, consulting services and outsourcing services for healthcare payers, including document management services for transaction processing and print-and-mail services for the distribution of checks, remittance advice and explanation of benefits; and automated patient billing services for healthcare providers, including statement printing and mailing services. Additionally, Emdeon Business Services provides software products including decision support and data warehousing, and related maintenance services to Blue Cross Blue Shield and commercial healthcare payers, and performs software maintenance and consulting services for certain governmental agencies. A significant portion of Emdeon Business Services revenue is generated from the country's largest national and regional healthcare payers. Emdeon Practice Services provides information technology

systems for healthcare providers, including administrative, financial and clinical applications, primarily under The Medical Manager, Intergy and Emdeon Network Services brands. Emdeon Practice Services also provides support and maintenance services related to the hardware and software associated with our practice management systems. WebMD Health services include advertising, sponsorship, continuing medical education (CME), content syndication and distribution, and licenses of private online portals to employers and healthcare payers for use by their employees and plan members. Our customers include pharmaceutical companies, biotech companies, medical device companies and media companies. Our Porex revenue includes the sale of porous plastic components used to control the flow of fluids and

Table of Contents

gases for use in healthcare, industrial and consumer applications, as well as in finished products used in the medical device and surgical markets.

Cost of operations consists of costs related to services and products we provide to customers and costs associated with the operation and maintenance of our networks. These costs include salaries and related expenses for network operations personnel and customer support personnel, telecommunication costs, maintenance of network equipment, cost of postage related to our automated print-and-mail services and paid-claims communication services, cost of hardware related to the sale of practice management systems, a portion of facilities expenses, leased personnel and facilities costs, sales commissions paid to certain distributors of our Emdeon Business Services products and non-cash expenses related to content and distribution services. In addition, cost of operations includes raw materials, direct labor and manufacturing overhead, such as fringe benefits and indirect labor related to our Porex segment.

Development and engineering expense consists primarily of salaries and related expenses associated with the development of applications and services. Expenses include compensation paid to development and engineering personnel, fees to outside contractors and consultants, and the maintenance of capital equipment used in the development process.

Sales, marketing, general and administrative expense consists primarily of advertising, product and brand promotion, salaries and related expenses for sales, administrative, finance, legal, information technology, human resources and executive personnel. These expenses include items related to account management and marketing personnel, commissions, costs and expenses for marketing programs and trade shows, and fees for professional marketing and advertising services, as well as fees for professional services, costs of general insurance and costs of accounting and internal control systems to support our operations. Also included are non-cash expenses related to advertising and distribution services acquired in exchange for our equity securities and non-cash stock compensation expense.

Legal expense consists of costs and expenses incurred related to the investigation by the United States Attorney for the District of South Carolina and the SEC.

Our discussions throughout MD&A make references to certain non-cash expenses. We consider non-cash expenses to be those expenses that result from the issuance of our equity instruments. The following is a summary of our principal non-cash expenses:

Non-cash advertising expense. Expense related to the usage of our prepaid advertising inventory that we received from News Corporation in exchange for equity instruments we issued in connection with an agreement we entered into with News Corporation in 1999 and subsequently amended in 2000. Our non-cash advertising expense is included in cost of operations when we utilize prepaid advertising in conjunction with online advertising and sponsorship programs. Our non-cash advertising expense is included in sales, marketing, general and administrative expense when we utilize the prepaid advertising for promotion of our brand.

Non-cash distribution expense. Expense related to the amortization of a warrant that we issued to AOL as part of a strategic alliance we entered into with Time Warner in May 2001 under which we became the primary provider of healthcare content, tools and services for use on certain AOL properties. The value of the warrant was amortized over the original three-year term of the strategic alliance and accordingly we have not recorded any non-cash distribution expense since April 2004.

Non-cash stock compensation expense. Expense related to restricted stock awards in our common stock that have been granted to certain of our employees as well as the intrinsic value of the unvested portion of stock options assumed in connection with certain acquisitions in 2000 and options granted in 2000 with exercise prices less than the fair market value of our stock on the date of grant. Non-cash stock compensation expense is reflected in sales, marketing, general and administrative expense within the accompanying consolidated statements of operations.

The following discussion includes a comparison of the results of operations for the three and six months ended June 30, 2005 to the three and six months ended June 30, 2004.

Table of Contents*Revenues*

Revenues for the three months ended June 30, 2005 were \$322,556, compared to \$281,881 a year ago. The Emdeon Business Services, WebMD Health and Emdeon Practice Services segments were responsible for \$25,477, \$8,613 and \$6,823, respectively, of the revenue increase for the quarter, which was partially offset by a decrease in revenue of \$340 in Porex. In addition, there was a decrease of \$102 in inter-segment eliminations.

Revenues for the six months ended June 30, 2005 were \$626,490, compared to \$553,095 a year ago. The Emdeon Business Services, WebMD Health, Emdeon Practice Services and Porex segments were responsible for \$47,431, \$15,879, \$8,835 and \$1,095, respectively, of the revenue increase for the six months ended June 30, 2005. In addition, there was a decrease of \$155 in inter-segment eliminations.

Revenue from customers acquired through the 2005 Acquisition and 2004 Acquisitions contributed \$26,995, of the overall increase in revenue of \$40,675 for the three months ended June 30, 2005, and \$51,830 of the overall increase in revenue of \$73,395 for the six months ended June 30, 2005. For purposes of this discussion, only revenue from existing customers of the acquired business on the date of the acquisition is considered to be revenue from acquired customers. We integrate acquisitions as quickly as practicable and only revenue recognized during the first twelve months following the quarter in which the acquisition closed is considered to be revenue from acquired customers. The remaining increase in revenues is largely attributable to increased revenues in our WebMD Health segment from licensing of our private online portal services to large employers and health plans and from increased advertising and sponsorship revenues from pharmaceutical and medical device companies as well as increased revenues in our Emdeon Practice Services segment related to higher systems revenue, Network Services revenue and maintenance revenue.

Costs and Expenses

Cost of Operations. Cost of operations was \$181,950 and \$354,113 for the three and six months ended June 30, 2005, compared to \$163,961 and \$326,603 in the prior year periods. Our cost of operations represented 56.4% and 56.5% of revenue for the three and six months ended June 30, 2005, compared to 58.2% and 59.0% for the three and six months ended June 30, 2004. Favorably impacting cost of operations as a percentage of revenue for the three and six months ended June 30, 2005 compared to a year ago, was the impact of productivity gains as a result of streamlining our delivery and service infrastructure within the Emdeon Practice Services operating segment as well as lower sales commissions paid to our channel partners and lower data communication expenses in our Emdeon Business Services segment. Offsetting these items for the three months ended June 30, 2005 were increased compensation related costs in our WebMD Health segment due to increased headcount, as well as higher costs associated with our April and June 2005 issues of *WebMD the Magazine*. Included in cost of operations were non-cash expenses related to advertising services of \$217 in both the three and six months ended June 30, 2005, compared to \$346 and \$601 in the prior year periods.

Development and Engineering. Development and engineering expense was \$14,457 and \$29,097 for the three and six months ended June 30, 2005, compared to \$12,991 and \$24,087 in the prior year periods. Our development and engineering expenses represented 4.5% and 4.6% of revenue for the three and six months ended June 30, 2005, compared to 4.6% and 4.4% for the three and six months ended June 30, 2004. The increase in development and engineering expense was primarily attributable to the ViPS, Dakota and HealthShare operations which, due to the timing of these acquisitions, were excluded or partially excluded from our results for the three and six months ended June 30, 2004. Also contributing to the increase in development and engineering expense for the three and six months ended June 30, 2005, compared to a year ago, was the increased investment in our product development efforts within the Emdeon Practice Services segment.

Sales, Marketing, General and Administrative. Sales, marketing, general and administrative expense was \$83,533 and \$165,670 for the three and six months ended June 30, 2005, compared to \$83,298 and \$160,292 in the prior year periods. Our sales, marketing, general and administrative expenses represented

Table of Contents

25.9% and 26.4% of revenue for the three and six months ended June 30, 2005, compared to 29.5% and 29.0% of revenue for the three and six months ended June 30, 2004. Included in sales, marketing, general and administrative expense are non-cash expenses related to advertising services, distribution services and stock compensation. Non-cash expenses related to advertising and distribution services were \$2,169 and \$4,796 for the three and six months ended June 30, 2005, compared to \$5,645 and \$10,683 in the prior year periods. The decrease in non-cash advertising and distribution expense was the result of lower utilization of our prepaid advertising inventory during the three and six months ended June 30, 2005, as well as a decline in the expense related to our distribution arrangement with AOL which was fully amortized in May of 2004. Non-cash stock compensation was \$716 and \$2,367 for the three and six months ended June 30, 2005, compared to \$2,736 and \$4,441 in the prior year periods. The decrease in non-cash stock compensation is primarily related to the vesting schedule of options issued and assumed in connection with business combinations and the restricted stock issued to certain employees in March 2004.

Sales, marketing, general and administrative expense, excluding the non-cash expenses discussed above, was \$80,648 and \$158,507 or 25.0% and 25.3% of revenue, for the three and six months ended June 30, 2005, compared to \$74,917 and \$145,168 or 26.6% and 26.2% of revenue in the prior year periods. The decrease in sales, marketing, general and administrative expense, excluding the non-cash expenses discussed above, as a percentage of revenue, was due to lower professional service costs related to our implementation efforts with respect to the HIPAA transaction standards and our readiness efforts related to Section 404 of the Sarbanes-Oxley Act of 2002. Our implementation efforts with respect to the HIPAA transaction standards were substantially completed in the fourth quarter of 2004. Also contributing to the decrease in our sales, marketing, general and administrative expense, as a percentage of revenue, was the inclusion of the ViPS operations in the current period, which have lower administrative expenses. Offsetting this decrease in expense, as a percentage of revenue, was approximately \$3,100 of severance and recruiting expenses within our WebMD Health segment.

Depreciation and Amortization. Depreciation and amortization expense was \$17,541 and \$34,045 for the three and six months ended June 30, 2005, compared to \$13,148 and \$25,733 in the prior year periods. Depreciation and amortization expense represented 5.4% of revenue for the three and six months ended June 30, 2005, compared to 4.7% and 4.6% of revenue in the prior year periods. The increase was primarily due to additional depreciation and amortization expense relating to the 2005 Acquisition and 2004 Acquisitions and as a result of capital expenditures made in our Emdeon Practice Services segment during 2004. These increases were slightly offset by a decrease in amortization expense as a result of the intangible asset for Medifax's trade name becoming fully amortized since the beginning of the prior year periods.

Legal Expense. Legal expense was \$4,283 and \$8,443 for the three and six months ended June 30, 2005, compared to \$2,215 and \$4,252 in the prior year periods. Legal expense represents the costs and expenses incurred related to the investigation by the United States Attorney for the District of South Carolina and the SEC. Over the course of the investigation, we expect that these costs may continue to be significant.

Interest Income. Interest income was \$3,936 and \$8,257 during the three and six months ended June 30, 2005, compared to \$4,511 and \$9,994 in the prior year periods. This decrease was primarily due to lower average investment balances.

Interest Expense. Interest expense was \$3,895 and \$8,676 for the three and six months ended June 30, 2005, compared to \$4,838 and \$9,586 in the prior year periods. The decrease for both periods is due to the redemption of the 3¹/₄% Notes on June 2, 2005.

Other Expense (Income), Net. Other expense (income) for the three and six months ended June 30, 2005 represents a loss of \$1,712 and \$5,544, compared to a gain of \$447 and \$484 in the prior year periods. Other expense (income) during the three and six months ended June 30, 2005 includes a loss of \$1,902 related to the redemption of the 3¹/₄% Notes on June 2, 2005. During the three months ended March 31, 2005, we recorded \$4,251 for unrealized losses on marketable securities that we identified as securities to be liquidated in the event funds were needed for redemption of our 3¹/₄% Notes. Included in

Table of Contents

other expense (income) for the three and six months ended June 30, 2005 is \$190 and \$609, compared to \$447 and \$484 in the prior year periods, related to net gains on the sale of marketable securities and on the sale of property and equipment.

Income Tax Provision. The income tax provision of \$2,955 and \$3,144 for the three and six months ended June 30, 2005 and \$613 and \$1,544 for the three and six months ended June 30, 2004, includes tax expense for operations that are profitable in certain state and foreign jurisdictions. In addition, the three and six months ended June 30, 2005 includes a provision for federal taxes that has not been reduced by the decrease in valuation allowance as these tax benefits were acquired through business combinations.

Results of Operations by Operating Segment

We evaluate the performance of our business segments based upon income or loss before taxes, non-cash and other items. Non-cash and other items include depreciation, amortization, gain or loss on investments, redemption of 3¹/₄% Notes, sales of property and equipment, costs and expenses related to the investigation by the United States Attorney for the District of South Carolina and the SEC (legal expense), non-cash expenses related to advertising and distribution services acquired in exchange for our equity securities in acquisitions and strategic alliances, and stock compensation expense primarily related to stock options issued and assumed in connection with acquisitions and restricted stock issued to employees. The accounting policies of the segments are consistent with those described in the summary of significant accounting policies in Note 1 to the consolidated financial statements contained in our 2004 Annual Report on Form 10-K. We record inter-segment revenues at rates comparable to those charged to third parties for comparable services. Inter-segment revenues are eliminated in consolidation.

Summarized financial information for each of our operating segments and a reconciliation to net income are presented below (amounts in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2005	2004	2005	2004

The following discussion is a comparison of the results of operations for each of our operating segments for the three and six months ended June 30, 2005 to the three and six months ended June 30, 2004.

Emdeon Business Services. Revenues were \$191,514 and \$377,247 for the three and six months ended June 30, 2005, an increase of \$25,477 or 15.3% and \$47,431 or 14.4%, compared to the prior year periods. Revenues from customers acquired through the 2004 Acquisitions contributed \$23,996 and \$47,195 to the increase in revenue for the three and six months ended June 30, 2005. Excluding the 2004 Acquisitions, revenue increased as a result of growth in our paid claims communication services and our patient statement services, offset by the continued decrease in revenue for traditional medical services and EDI revenues.

Income before taxes, non-cash and other items was \$40,420 and \$78,673 for the three and six months ended June 30, 2005, compared to \$28,914 and \$58,764 in the prior year periods. As a percentage of revenue, income before taxes, non-cash and other items was 21.1% and 20.9% for the three and six months ended June 30, 2005, compared to 17.4% and 17.8% for the prior year periods. The increase in our operating margin is primarily the result of lower sales commissions paid to our channel partners, lower data communication expenses and lower professional service costs related to our implementation efforts with respect to the HIPAA transaction standards, which were substantially completed in the fourth quarter of 2004. These lower costs for the three and six months ended June 30, 2005 were slightly offset by the ViPS and Dakota acquisitions, which had lower operating margins compared to other services offered by the Emdeon Business Services segment.

Emdeon Practice Services. Revenues were \$78,596 and \$151,614 for the three and six months ended June 30, 2005, an increase of \$6,823 or 9.5% and \$8,835 or 6.2%, compared to the prior year periods. The increase in revenue for the three months ended June 30, 2005, compared to the prior year period, was due to higher Network Services revenue, higher systems revenues and higher maintenance revenues. The increase in revenue during the six months ended June 30, 2005 compared to the prior year period was primarily driven by higher systems revenues and higher maintenance revenues. Increased maintenance revenues reflect continued higher renewals of our maintenance and support service contracts.

Income before taxes, non-cash and other items was \$8,183 and \$12,580 for the three and six months ended June 30, 2005, compared to \$1,771 and \$3,122 in the prior year periods. As a percentage of revenue, income before taxes, non-cash and other items was 10.4% and 8.3% for the three and six months ended June 30, 2005, compared to 2.5% and 2.2% for the prior year periods. The increased operating margin is due to revenue mix as well as improvements in our delivery and service infrastructure. This increased operating margin is slightly offset during the six months ended June 30, 2005 by approximately \$1,300 of severance provided to former members of management and for other employees.

WebMD Health. Revenues were \$40,465 and \$74,040 for the three and six months ended June 30, 2005, an increase of \$8,613 or 27.0% and \$15,879 or 27.3%, compared to the prior year periods. The increase in revenues is the result of increased sales from licensing our private online portal services to

Table of Contents

employers and health plans and from advertising and sponsorship revenues from our pharmaceutical and medical device customers. Also contributing to the increases for the three and six months ended June 30, 2005 is \$2,669 and \$3,872, respectively from customers acquired through both the 2005 Acquisition and 2004 Acquisitions. Partially offsetting these increases during the three and six months ended June 30, 2005, is the loss of revenue from our content syndication agreement with News Corporation, which expired in January of 2005. Included in revenue was \$1,000 during the six months ended June 30, 2005, compared to revenue of \$3,000 and \$6,000 during the three and six months ended June 30, 2004 related to the News Corporation agreement.

Income before taxes, non-cash and other items was \$4,350 and \$9,201 for the three and six months ended June 30, 2005, compared to \$7,626 and \$12,168 in the prior year periods. As a percentage of revenue, income before taxes, non-cash and other items was 10.8% and 12.4% for the three and six months ended June 30, 2005, compared to 23.9% and 20.9% for the prior year periods. These decreases in operating margin were due to increased expenses in the areas of website operations and development, specifically information technology and creating and licensing content, as well as the decline in revenues due to the expiration of the content syndication agreement with News Corporation referred to above. Additionally, we incurred charges of approximately \$3,600 during the three months ended June 30, 2005 primarily related to severance and recruiting expenses. Partially offsetting this decrease in operating margin during the three months ended June 30, 2005 was the inclusion of the 2005 Acquisition and 2004 Acquisitions which on a combined basis have higher operating margins compared to the other operations of the WebMD Health segment.

Porex. Revenues were \$20,397 and \$40,253 for the three and six months ended June 30, 2005, a decrease of \$340 or 1.6% and an increase of \$1,095 or 2.8%, compared to the prior year periods. The decrease in revenues for the three months ended June 30, 2005, compared to the prior year period, was due to increased pricing pressure for certain of our products and the delay of certain of our customers' product launches for which we produce some of the components. Additionally, the three and six months ended June 30, 2005 included revenues from customers acquired through our 2004 Acquisitions, the favorable shift in foreign exchange rates and higher sales of surgical implant products. Revenues from customers acquired through the 2004 Acquisitions contributed \$330 and \$763 for the three and six months ended June 30, 2005.

Income before taxes, non-cash and other items was \$6,064 and \$11,461 for the three and six months ended June 30, 2005, compared to \$6,275 and \$11,317 in the prior year periods. As a percentage of revenue, income before taxes, non-cash and other items was 29.7% and 28.5% for the three and six months ended June 30, 2005, compared to 30.3% and 28.9% for the prior year periods. These decreases in operating margin were due to slightly higher personnel and professional costs.

Corporate. Corporate includes expenses shared across all segments, such as executive personnel, corporate finance, legal, human resources and risk management. Corporate expenses were \$13,299 or 4.1% of revenue and \$26,925 or 4.3% of revenue for the three and six months ended June 30, 2005, compared to \$14,228 or 5.0% of revenue and \$27,533 or 5.0% of revenue for the prior year period. These expenses, in absolute dollars and as a percentage of revenue, decreased as a result of lower professional costs related to our Sarbanes-Oxley readiness efforts and lower personnel related costs. Additionally, our corporate expenses as a percentage of revenue continue to decrease when compared to the prior periods reflecting our ability to increase revenues without a proportionate increase in corporate costs.

Inter-Segment Eliminations. The decrease in inter-segment eliminations for the three and six months ended June 30, 2005 compared to a year ago resulted from lower sales of Emdeon Business Services products into the Emdeon Practice Services customer base.

Liquidity and Capital Resources

We have incurred significant operating and net losses since we began operations and, as of June 30, 2005, had an accumulated deficit of approximately \$10.1 billion. We plan to continue to invest in acquisitions, strategic relationships, infrastructure and product development.

Table of Contents

As of June 30, 2005, we had approximately \$187,935 in cash and cash equivalents and short-term investments and working capital of \$184,519. Additionally, we had long-term investments of \$323,182 in marketable debt securities and \$4,094 in marketable equity securities. We invest our excess cash principally in U.S. Treasury obligations and Federal Agency Notes and expect to do so in the future. As of June 30, 2005, all of our marketable securities were classified as available-for-sale.

Cash provided by operating activities was \$62,700 for the six months ended June 30, 2005, compared to cash provided by operating activities of \$40,648 for the six months ended June 30, 2004. The cash provided by operating activities for the six months ended June 30, 2005 was attributable to net income of \$26,015 and non-cash and non-operating items of \$52,024, partially offset by net changes in operating assets and liabilities of \$15,339. The impact of changes in operating assets and liabilities may change in future periods, depending on the timing of each period end in relation to items such as internal payroll and billing cycles, payments from customers, payments to vendors, interest payments and interest receipts relating to our investments in marketable securities. The cash provided by operating activities for the six months ended June 30, 2004 was attributable to net income of \$11,476 and non-cash and non-operating items of \$45,386, partially offset by net changes in operating assets and liabilities of \$16,214. The non-cash and non-operating items consist of depreciation and amortization, non-cash expenses related to advertising and distribution services and stock-based compensation, bad debt expense, amortization of debt issuance costs, loss on the redemption of convertible debt, losses and gains on investments and gains on sales of property and equipment.

Cash used in investing activities was \$16,104 for the six months ended June 30, 2005, compared to cash used in investing activities of \$161,652 for the six months ended June 30, 2004. Cash used in investing activities for the six months ended June 30, 2005 included \$190,673 of proceeds from maturities and sales of available-for-sale securities offset by \$94,350 of purchases of available-for-sale securities. Cash paid for business combinations, net of cash acquired, was \$74,110, which primarily related to an ABF contingent consideration payment and the 2005 Acquisition of HealthShare. Cash used in investing activities for the six months ended June 30, 2004 included \$1,011,914 of proceeds from maturities and sale of available-for-sale securities offset by \$1,103,876 of purchases of available-for-sale securities. Cash paid for business combinations for the six months ended June 30, 2004, net of cash acquired, was \$58,060, which primarily related to the 2004 Acquisition of Dakota and an ABF contingent consideration payment of \$17,455. Investments in property and equipment were \$38,717 for the six months ended June 30, 2005, compared to \$12,047 a year ago. Our investments in property and equipment during the six months ended June 30, 2005 included approximately \$14,000 related to the build-out of WebMD Health's new corporate offices in New York City.

Cash used in financing activities was \$55,561 for the six months ended June 30, 2005, compared to cash provided by financing activities of \$117,992 for the six months ended June 30, 2004. Cash used in financing activities for the six months ended June 30, 2005 consisted of cash paid of \$86,694 for the redemption of the 3¹/₄% Notes in June 2005, partially offset by \$31,437 related to the issuance of common stock, primarily resulting from exercises of employee stock options. Cash provided by financing activities for the six months ended June 30, 2004 principally related to the net proceeds of \$98,115 from the issuance of our Convertible Redeemable Exchangeable Preferred Stock and proceeds of \$25,011 related to the issuance of common stock, primarily related to exercises of employee stock options. For the six months ended June 30, 2004, \$4,877 was used for repurchases of our common stock. We did not repurchase our common stock during the six months ended June 30, 2005.

Our principal commitments at June 30, 2005 were our commitments related to the \$350,000 1.75% Convertible Subordinated Notes due in June of 2023, the \$100,000 Convertible Redeemable Exchangeable Preferred Stock due in 2012, obligations under operating leases and contingent consideration payments of up to an aggregate of \$144,576 related to certain acquisitions achieving certain milestones.

We believe that, for the foreseeable future, we will have sufficient cash resources to meet the commitments described above and our current anticipated working capital and capital expenditure requirements, including the capital requirements related to the roll-out of new or updated products in 2005

Table of Contents

and 2006. Our future liquidity and capital requirements will depend upon numerous factors, including retention of customers at current volume and revenue levels, our existing and new application and service offerings, competing technological and market developments, costs of maintaining and upgrading the information technology platforms and communications systems that Emdeon Business Services and WebMD Health use to provide their services, potential future acquisitions and additional repurchases of our common stock. We may need to raise additional funds to support expansion, develop new or enhanced applications and services, respond to competitive pressures, acquire complementary businesses or technologies or take advantage of unanticipated opportunities. If required, we may raise such additional funds through public or private debt or equity financing, strategic relationships or other arrangements. There can be no assurance that such financing will be available on acceptable terms, if at all, or that such financing will not be dilutive to our stockholders.

WebMD Health Corp., a wholly owned subsidiary of WebMD formed to be a holding company for our WebMD Health segment, has filed a Registration Statement on Form S-1 with respect to an initial public offering of its Class A common stock. As previously announced, WebMD Health Corp. intends to sell approximately 10%-14% of its equity in the offering. See Introduction Recent Developments. Our current intention is that WebMD Health Corp. will retain all of the proceeds of the offering. The offering will not result in any changes to the terms of our long-term debt or other principal commitments and we believe that we will continue, for the foreseeable future after the offering, to have sufficient cash resources to meet the commitments described above in this section and that WebMD Health Corp. will, as a result of its retention of the proceeds of the offering, also have sufficient cash resources to meet its commitments and anticipated working capital and capital expenditure requirements.

Recent Accounting Pronouncements

In December 2004, the Financial Accounting Standards Board (FASB) issued SFAS No. 123, (Revised 2004): Share-Based Payment (SFAS 123R), which replaces SFAS No. 123, Accounting for Stock-Based Compensation, (SFAS 123) and supersedes APB Opinion No. 25, Accounting for Stock Issued to Employees. SFAS 123R requires all share-based payments to employees, including grants of employee stock options, to be recognized in the financial statements based on their fair values beginning with the fiscal year that begins after June 15, 2005. The pro forma disclosures previously permitted under SFAS 123 no longer will be an alternative to financial statement recognition. We are required to adopt SFAS 123R in the first quarter of fiscal 2006, beginning January 1, 2006. Under SFAS 123R, we must determine the appropriate fair value model to be used for valuing share-based payments, the amortization method for compensation cost and the transition method to be used at the date of adoption. The transition methods include prospective and retroactive adoption options. Under the retroactive option, prior periods may be restated either as of the beginning of the year of adoption or for all periods presented. The prospective method requires that compensation expense be recorded for all unvested stock options and restricted stock at the beginning of the first quarter of adoption of SFAS 123R. We are evaluating the requirements of SFAS 123R and expect that the adoption of SFAS 123R will have a material impact on the consolidated results of operations and earnings per share. We have not yet determined the method of adoption or the effect of adopting SFAS 123R.

Factors That May Affect Our Future Financial Condition or Results of Operations

This section describes circumstances or events that could have a negative effect on our financial results or operations or that could change, for the worse, existing trends in some or all of our businesses. The occurrence of one or more of the circumstances or events described below could have a material adverse effect on our financial condition, results of operations and cash flows or on the trading prices of the common stock and convertible notes that we have issued. The risks and uncertainties described below are not the only ones facing our company. Additional risks and uncertainties that are not currently known to us or that we currently believe are immaterial may also adversely affect our business and operations.

Table of Contents

**Risks Related to the Businesses of
Emdeon Business Services and Emdeon Practice Services**

The financial results of Emdeon Business Services could be adversely affected if payers conduct electronic data interchange, or EDI, transactions without using a clearinghouse or if their ability to do so allows them to terminate or modify their relationships with us

There can be no assurance that healthcare payers will continue to use Emdeon Business Services and other independent companies to transmit healthcare transactions. Some payers currently offer electronic data transmission services to healthcare providers that bypass third-party EDI service providers such as Emdeon Business Services. In addition, some payers currently offer electronic data transmission services through affiliated clearinghouses that compete with Emdeon Business Services. See Some of our customers compete with us and some, instead of using a third party provider, perform internally some of the services that we offer below. We cannot provide assurance that we will be able to maintain our existing relationships with payers or develop new relationships on satisfactory terms, if at all. Although we believe the use of clearinghouses will continue to be the most efficient way for most providers to transact electronically with multiple payers, the HIPAA transaction standards may facilitate use of EDI links for transmission of transactions between a greater number of healthcare payers and providers without use of a clearinghouse. Any significant increase in the utilization of links between healthcare providers and payers without use of a third party clearinghouse could have a material adverse effect on Emdeon Business Services transaction volume and financial results. In addition, any increase in the ability of payers to bypass third party EDI service providers may adversely affect the terms and conditions we are able to negotiate in our agreements with them, which could also have a material adverse impact on Emdeon Business Services business and financial results.

Some of our customers compete with us and some, instead of using a third party provider, perform internally some of the services that we offer

Some of our existing payer and provider customers and some of our strategic partners compete with us or may plan to do so or belong to alliances that compete with us or plan to do so, either with respect to the same products and services we provide to them or with respect to some of our other lines of business. See Business Competition for Our Healthcare Information Services and Technology Solutions in our Annual Report on Form 10-K for the year ended December 31, 2004. For example, some payers currently offer, through affiliated clearinghouses, Web portals and other means, electronic data transmission services to healthcare providers that allow the provider to bypass third party EDI service providers such as Emdeon Business Services, and additional payers may do so in the future. The ability of payers to do so may adversely affect the terms and conditions we are able to negotiate in our connectivity agreements with them and our transaction volume. We cannot provide assurance that we will be able to maintain our existing relationships for connectivity services with payers or develop new relationships on satisfactory terms, if at all. In addition, some of our services allow healthcare payers to outsource business processes that they have been or could be performing internally and, in order for us to be able to compete, use of our services must be more efficient for them than use of internal resources.

Emdeon Business Services transaction volume and financial results could be adversely affected if we do not maintain relationships with practice management system vendors and large submitters of healthcare EDI transactions

We have developed relationships with practice management system vendors and large submitters of healthcare claims to increase the usage of our Emdeon Business Services transaction services. Emdeon Practice Services is a competitor of these practice management system vendors. Some of these vendors have, as a result of our ownership of Emdeon Practice Services or for other reasons, chosen to diminish or terminate their relationships with Emdeon Business Services, and others may do so in the future. Some other large submitters of claims compete with, or may have significant relationships with entities that compete with, Emdeon Business Services or WebMD Health. We could also lose transaction volume from

Table of Contents

practice management system vendors and other large submitters of claims if the payments we offer them as an inducement to use our transaction services are not competitive with other alternatives available to them. To the extent that we are not able to maintain mutually satisfactory relationships with the larger practice management system vendors and large submitters of healthcare EDI transactions, Emdeon Business Services' transaction volume and financial results could be adversely affected.

Contractual relationships with governmental customers may impose special burdens on us and provide special benefits to those customers, including the right to change or terminate the contract in response to budgetary constraints or policy changes

A portion of Emdeon Business Services' revenues comes from customers that are governmental agencies. The acquisition of ViPS has increased that portion and we intend to seek additional government contracts and subcontracts. Government contracts and subcontracts may be subject to some or all of the following:

termination when appropriated funding for the current fiscal year is exhausted;

termination for the governmental customer's convenience, subject to a negotiated settlement for costs incurred and profit on work completed, along with the right to place contracts out for bid before the full contract term, as well as the right to make unilateral changes in contract requirements, subject to negotiated price adjustments;

most-favored pricing disclosure requirements that are designed to ensure that the government can negotiate and receive pricing akin to that offered commercially and requirements to submit proprietary cost or pricing data to ensure that government contract pricing is fair and reasonable;

commercial customer price tracking requirements that require contractors to monitor pricing offered to a specified class of customers and to extend price reductions offered to that class of customers to the government;

reporting and compliance requirements related to, among other things: equal employment opportunity, affirmative action for veterans and for workers with disabilities, and accessibility for the disabled;

broader audit rights than we would usually grant to non-governmental customers; and

specialized remedies for breach and default, including setoff rights, retroactive price adjustments, and civil or criminal fraud penalties, as well as mandatory administrative dispute resolution procedures instead of state contract law remedies.

In addition, certain violations of federal law may subject government contractors to having their contracts terminated and, under certain circumstances, suspension and/or debarment from future government contracts. Finally, some of our governmental contracts are priced based on our cost of providing products and services. Those contracts are subject to regulatory cost-allowability standards and a specialized system of cost accounting standards.

Lengthy sales, installation and implementation cycles for some Emdeon Business Services applications and some Emdeon Practice Services applications may result in unanticipated fluctuations in their revenues

Emdeon Practice Services. Emdeon Practice Services is seeking to increase its sales to larger physician groups and clinics. These sales are typically not only larger in size, but also involve more complex practice management and electronic medical records applications. As a result, we expect longer sales, contracting and implementation cycles for these customers. These sales may be subject to delays due to customers' internal procedures for approving large expenditures and for deploying new technologies; implementation may be subject to delays based on the availability of the internal customer resources needed. We are unable to control many of the factors that will influence the timing of the buying decisions of potential customers or the pace at which installation and training may occur. Unexpected delays in

Table of Contents

these sales or in their implementation may result in unanticipated fluctuations in the revenues of Emdeon Practice Services.

ViPS. ViPS, which is included in our Emdeon Business Services segment, provides licensed software products and related services to payers and information technology services to government customers. The period from our initial contact with a potential ViPS client and the purchase of our solution by the client is difficult to predict. In the past, it has generally ranged from six to 12 months, but in some cases has extended much longer. Sales by ViPS may be subject to delays due to customers' internal procedures for approving large expenditures, due to delays in government funding and due to other factors outside of our control. The time it takes to implement a licensed software solution is also difficult to predict and has lasted as long as 12 months from contract execution to the commencement of live operation. Implementation may be subject to delays based on the availability of the internal resources of the client that are needed and other factors outside of our control. As a result, we have only limited ability to forecast the timing of revenue from new ViPS sales. During the sales cycle and the implementation period, we may expend substantial time, effort and money preparing contract proposals and negotiating the contract without receiving any related revenue.

Emdeon Practice Services faces competition in providing support services to owners of The Medical Manager and other systems

Emdeon Practice Services faces competition for the support services it markets to owners of The Medical Manager systems, as well as for similar services that we market to owners of certain other practice management systems that we have acquired. Physician practices may seek such support from third parties, including businesses that support or manage information technology for various types of clients and businesses that specialize in systems for physicians, some of whom may formerly have been independent dealers of The Medical Manager software or of practice management systems we have acquired. We cannot provide assurance that we will be able to compete successfully against these service providers. In addition, some physician practices, especially larger ones, may use their own employees and other internal resources to support their practice management systems. Some of our clients have terminated their support services contracts in the past and we expect such terminations to occur in the future.

Risks Related to the Businesses of WebMD Health

WebMD Health's online businesses are difficult to evaluate because they have a limited operating history

WebMD Health's online businesses have a limited operating history and participate in relatively new and rapidly evolving markets. These businesses have undergone significant changes during their short history, including changes in the services provided and changes in ownership and management, and may continue to change as a result of changes in market conditions, their regulatory environment and other factors outside of our control. We cannot assure you that our current business strategy will be successful in the long term.

Many companies with business plans based on providing healthcare information through the Internet have failed to be profitable and some have filed for bankruptcy and/or ceased operations. WebMD Health has only been profitable in three of our historical fiscal quarters and, even if demand from users exists, we cannot assure you that WebMD Health will be profitable in the future.

The timing of WebMD Health's advertising and sponsorship revenues may vary significantly from quarter to quarter, which could have adverse effects on its operating results

WebMD Health's advertising and sponsorship revenues may vary significantly from quarter to quarter due to a number of factors, not all of which are in our control, and any of which may be difficult to forecast accurately. The majority of WebMD Health's advertising and sponsorship contracts are for terms of approximately four to 12 months. WebMD Health has relatively few longer term contracts. We cannot

Table of Contents

assure you that WebMD Health's current customers will continue to participate in advertising and sponsorship programs beyond the terms of their existing contracts or that they will enter into any additional contracts for new programs.

In addition, the time between the date of initial contact with a potential advertiser or sponsor regarding a specific program and the execution of a contract with the advertiser or sponsor for that program may be lengthy, especially for larger contracts, and may be subject to delays over which we have little or no control, including as a result of budgetary constraints of the advertiser or sponsor or their need for internal approvals.

Factors that could affect the timing of our revenues from advertisers and sponsors include:

timing of Food and Drug Administration, or FDA, approval for new products or for new approved uses for existing products;

seasonal factors relating to the prevalence of specific health conditions and other seasonal factors that may affect the timing of promotional campaigns for specific products; and

the scheduling of conferences for physicians and other healthcare professionals.

Lengthy sales and implementation cycles for WebMD Health's private online portals make it difficult to forecast revenues from these applications

WebMD Health provides private online portals to employers and payers for use by their employees and members. The period from WebMD Health's initial contact with a potential client for a private online portal and the first purchase of a solution by the client is difficult to predict. In the past, it has generally ranged from six to 12 months, but in some cases has been longer. These sales may be subject to delays due to clients' internal procedures for approving large expenditures and other factors beyond our control. The time it takes to implement a customized private online portal is also difficult to predict and has lasted as long as six months from contract execution to the commencement of live operation. Implementation may be subject to delays based on the availability of the internal resources of the client that are needed and other factors outside of our control. As a result, we have limited ability to forecast the timing of revenue from new clients. This, in turn, makes it more difficult to predict WebMD Health's financial performance from quarter to quarter.

During the sales cycle and the implementation period, WebMD Health may expend substantial time, effort and money preparing contract proposals, negotiating contracts and implementing the private online portal without receiving any related revenue. In addition, many of the expenses related to providing online portals are relatively fixed in the short-term, including personnel costs and technology and infrastructure costs. Even if WebMD Health's revenues from providing private online portals is lower than expected, WebMD Health may not be able to reduce its short-term spending in response. Any shortfall in revenue would have a direct impact on WebMD Health's results of operations.

If WebMD Health is unable to provide content that attracts and retains users to The WebMD Health Network at a level that is attractive to advertisers and sponsors, WebMD Health's revenues will be reduced

We believe that interest in WebMD Health's public portals for consumers, physicians and healthcare professionals is based upon WebMD Health's ability to make available high quality health content, decision-support tools and other services that meet the needs of its users. Its ability to do so depends, in turn, on:

its ability to hire and retain qualified authors, journalists and independent writers;

its ability to license quality content from third parties; and

its ability to monitor and respond to increases and decreases in user interest in specific topics.

Table of Contents

We cannot assure you that WebMD Health will be able to continue to get needed content at a reasonable cost. If WebMD Health is unable to provide content that attracts and retains users of *The WebMD Health Network* at a level that is attractive to advertisers and sponsors, WebMD Health's revenues will be reduced. In addition, WebMD Health's ability to deploy new interactive tools and other features will require it to continue to improve the technology underlying its Web sites. The required changes may be significant and expensive, and there can be no assurance that WebMD Health will be able to execute them quickly and efficiently.

If WebMD Health is unable to provide high quality healthcare content for its publishing services business that attracts and retains users, its revenues will be reduced

We believe that interest in WebMD Health's publications for physicians, such as *The Little Blue Book* and *ACP Medicine* and *ACS Surgery: Principles and Practice*, is based upon its ability to make available up-to-date, high quality health content that meets the needs of its physician users. Although WebMD Health has been able to continue to update and maintain the physician practice information that it publishes in *The Little Blue Book*, if it is unable to continue to do so for any reason, the value of *The Little Blue Book* would diminish and interest in this publication and advertising in this publication would be adversely affected.

Similarly, WebMD Health's ability to maintain or increase the subscriptions to *ACP Medicine* and *ACS Surgery* is based upon its ability to make available up-to-date, high quality content which depends on its ability to retain qualified physician authors and writers in the disciplines covered by these publications. We cannot assure you that WebMD Health will be able to retain qualified physician editors or authors to provide and review needed content at a reasonable cost. If WebMD Health is unable to provide content that attracts and retains subscribers, subscriptions to these products will be reduced. In addition, the American College of Physicians permits WebMD Health to use the ACP name in the title of *ACP Medicine* and the American College of Surgeons permits WebMD Health to use the name ACS in the title of *ACS Surgery: Principles and Practice*. If WebMD Health loses the right to use the ACP or ACS name in its publications, subscribers may find the publication less attractive and cease to subscribe to these publications.

WebMD the Magazine was launched in April 2005 and as a result has a very short operating history. We cannot assure you that *WebMD the Magazine* will be able to attract advertisers to make this publication successful in the long term.

A decline in user traffic levels for The WebMD Health Network could have a material adverse effect on its advertising and sponsorship revenues

We cannot assure you that WebMD Health will be able to continue to attract a large audience of health-involved consumers and clinically-active healthcare professionals to *The WebMD Health Network*. WebMD Health generates revenues by, among other things, selling sponsorships of specific pages, sections or events on its network of publicly available online Web sites for healthcare providers and consumers and related e-mailed newsletters. WebMD Health's advertisers and sponsors include pharmaceutical, biotech, medical device and consumer products companies that are interested in communicating with and educating our audience or parts of our audience. We cannot provide assurance that WebMD Health will be able to retain or increase usage of its online public portals by consumers and physicians. There are numerous other online and offline sources of healthcare information services that compete with WebMD Health for traffic. In addition, since users may be attracted to *The WebMD Health Network* as a result of a specific condition or for a specific purpose, it is difficult for us to predict the rate at which users will return. Further, some users may visit *The WebMD Health Network* as a result of its existing third party relationships and, as a result, WebMD Health's traffic may vary based on the amount of traffic to Web sites of these third parties and other factors outside its control. If one or more of these third parties engages in conduct that negatively affects users of those third party Web sites, users that come to *The WebMD Health Network* through these third party Web sites may decrease. A decline in user traffic levels

Table of Contents

or a reduction in the number of pages viewed by users may cause WebMD Health's revenues to decrease and could have a material adverse effect on its results of operations.

Although a substantial majority of the visitors to *The WebMD Health Network* and the page views generated on *The WebMD Health Network* are from Web sites WebMD Health owns, some are from Web sites owned by third parties that carry WebMD Health's content and, as a result, WebMD Health's traffic may vary based on the amount of traffic to Web sites of these third parties and other factors outside our control. During the six months ended June 30, 2005, AOL accounted for approximately 17% of *The WebMD Health Network's* unique users and approximately 8% of its aggregate page views and other third party Web sites accounted for approximately 7% of *The WebMD Health Network's* unique users and approximately 5% of its aggregate page views during such period. In the event that our relationship with AOL or other third party Web sites is terminated, the user traffic and page views in *The WebMD Health Network* may be negatively affected, which may negatively affect WebMD Health's results of operations.

WebMD Health may be unsuccessful in its efforts to increase advertising and sponsorship revenue from consumer products companies

Most of WebMD Health's advertising and sponsorship revenues have, in the past, come from pharmaceutical, biotechnology and medical device companies. During the past year, WebMD Health has begun to focus on increasing sponsorship revenue from consumer products companies that are interested in communicating health-related or safety-related information about their products to its audience. However, while a number of consumer products companies have indicated an intent to increase the portion of their promotional spending used on the Internet, we cannot assure you that these advertisers and sponsors will find WebMD Health's consumer Web sites to be as effective as other Web sites or traditional media for promoting their products and services. If WebMD Health encounters difficulties in competing with the other alternatives available to consumer products companies, this portion of its business may develop more slowly than we expect or may fail to develop.

WebMD Health may be subject to claims brought against it as a result of content it provides

WebMD Health has editorial procedures in place to provide quality control of the information that it publishes or provides. However, there can be no assurance that its editorial and other quality control procedures will be sufficient to ensure that there are no errors or omissions in particular content. Consumers access health-related information on WebMD Health's public Web sites and through its private online portals, including information regarding particular medical conditions and possible adverse reactions or side effects from medications. If WebMD Health's content, or content it obtains from third parties, contains inaccuracies, it is possible that users of those sites or other third parties may seek to sue WebMD Health for various causes of action. Although our Web sites contain terms and conditions of use, including disclaimers of liability that are intended to reduce or eliminate our liability to users, the law governing the validity and enforceability of online agreements, including those disclaimers, is new and evolving. Even if potential claims do not result in liability to WebMD Health, investigating and defending against these claims could be expensive and time consuming and could divert management's attention away from our operations. In addition, WebMD Health's business is based on establishing itself as a trustworthy and dependable source of healthcare information. Allegations of impropriety or negligence, even if unfounded, could harm its reputation and business.

WebMD Health faces potential liability related to the privacy and security of personal information it collects on its Web sites

Internet user privacy has become a controversial issue both in the United States and abroad. Web Health has privacy policies posted on its public Web sites and its private online portals that we believe comply with applicable laws requiring notice to users about its information collection, use and disclosure practices. However, whether and how existing privacy and consumer protection laws in various jurisdictions apply to the Internet is still uncertain and may take years to resolve. Any legislation or regulation in the area of privacy of personal information could affect the way WebMD Health operates its public Web sites

Table of Contents

and its private online portals and could harm its business. Further, we can give no assurance that the privacy policies and other statements on WebMD Health's Web sites, or its practices, will be found sufficient to protect it from liability or adverse publicity in this area.

Changes in industry guidelines or government regulation could adversely affect our online Medscape CME offerings

Our CME activities are planned and implemented in accordance with the Essential Areas and Policies of the Accreditation Council for Continuing Medical Education, or ACCME, which oversees providers of CME credit, and other applicable accreditation standards. In September 2004, ACCME revised its standards for commercial support of CME. The revised standards are intended to ensure, among other things, that CME activities of ACCME-accredited providers are independent of providers of healthcare goods and services that fund the development of CME. ACCME required accredited providers to implement these standards by May 2005. Implementation has required additional disclosures to CME participants about those in a position to influence content and other adjustments to the management and operations of our CME programs. We believe we have modified our procedures as appropriate to meet the revised standards. However, we cannot be certain whether these adjustments will ensure that we meet the new standards or predict whether ACCME may impose additional requirements.

In the event that ACCME concludes that we have not met its revised standards relating to CME, we would not be permitted to offer accredited ACCME activities to physicians and healthcare professionals, and we may be required, instead, to use third parties to accredit such CME-related services on *Medscape from WebMD*. In addition, any failure to maintain our status as an accredited ACCME provider as a result of a failure to comply with existing or new ACCME standards could discourage potential sponsors from engaging in CME or education related activities with us, which could have a material adverse effect on our business.

CME activities may also be subject to government regulation by the FDA, the Office of Inspector General, or HHS, the federal agency responsible for interpreting certain federal laws relating to healthcare, and state regulatory agencies.

During the past several years, educational programs, including CME, directed toward physicians have been subject to increased scrutiny to ensure that sponsors do not influence or control the content of the program. In response to governmental and industry initiatives, pharmaceutical companies and medical device companies have been developing and implementing internal controls and procedures that promote adherence to applicable regulations and requirements. In implementing these controls and procedures, different clients may interpret the regulations and requirements differently and may implement procedures or requirements that vary from client to client. These controls and procedures:

- may discourage pharmaceutical companies from engaging in educational activities;

- may slow their internal approval for such programs;

- may reduce the volume of sponsored educational programs implemented through our Medscape Web site to levels that are lower than in the past; and

- may require us to make changes to how we offer or provide educational programs, including CME.

In addition, future changes to existing regulations or accreditation standards, or to the internal compliance programs of potential clients may further discourage or prohibit pharmaceutical companies from engaging in educational activities with us, or may require us to make further changes in the way we offer or provide educational programs.

Table of Contents

Risks Related to the Development and Performance of the Products and Services of Emdeon Business Services, Emdeon Practice Services and WebMD Health

Our ability to generate revenue could suffer if we do not continue to update and improve our existing products and services and develop new ones

We must introduce new healthcare information services and technology solutions and improve the functionality of our existing products and services in a timely manner in order to retain existing customers and attract new ones. However, we may not be successful in responding to technological and regulatory developments and changing customer needs. The pace of change in the markets we serve is rapid, and there are frequent new product and service introductions by our competitors and by vendors whose products and services we use in providing our own products and services. If we do not respond successfully to technological and regulatory changes and evolving industry standards, our products and services may become obsolete. Technological changes may also result in the offering of competitive products and services at lower prices than we are charging for our products and services, which could result in our losing sales unless we lower the prices we charge. In addition, there can be no assurance that the products we develop or license will be able to compete with the alternatives available to our customers. For more information about the competition we face, see *Business Healthcare Information Services and Technology Solutions Competition for Our Healthcare Information Services and Technology Solutions* in our Annual Report on Form 10-K for the year ended December 31, 2004.

Developing and implementing new or updated products and services may take longer and cost more than expected

We rely on a combination of internal development, strategic relationships, licensing and acquisitions to develop our products and services. The cost of developing new healthcare information services and technology solutions is inherently difficult to estimate. Our development and implementation of proposed products and services may take longer than originally expected, require more testing than originally anticipated and require the acquisition of additional personnel and other resources. If we are unable to develop new or updated products and services on a timely basis and implement them without significant disruptions to the existing systems and processes of our customers, we may lose potential sales and harm our relationships with current or potential customers.

New or updated products and services will not become profitable unless they achieve sufficient levels of market acceptance

There can be no assurance that customers and potential customers will accept from us new or updated products and services or products and services that result from integrating existing and/or acquired products and services, including:

our updated electronic medical records products;

the business process outsourcing services for payers we have developed internally and through acquisition; and

our updated clinical transaction services.

The future results of Emdeon Practice Services and Emdeon Business Services will depend, in significant part, on the success of these products and services and on our ability to keep our other information technology and connectivity products up to date. Providers and payers may choose to use similar products and services offered by our competitors if they are already using products and services of those competitors and have made extensive investments in hardware, software and training relating to the competitors' existing products and services. Even providers and payers who are already our customers may not purchase new or updated products or services, especially when they are initially offered and if they require changes in equipment or workflow. In addition, there can be no assurance that payers who use our services for sending and receiving claims will use our other pre- and post-adjudication services.

Table of Contents

For services we are developing or may develop in the future, there can be no assurance that we will attract sufficient customers or that such services will generate sufficient revenues to cover the costs of developing, marketing and providing those services. Furthermore, there can be no assurance that any pricing strategy that we implement for any new products and services will be economically viable or acceptable to the target markets. Failure to achieve broad penetration in target markets with respect to new or updated products and services could have a material adverse effect on our business prospects.

Achieving market acceptance of new or updated products and services is likely to require significant efforts and expenditures

Achieving market acceptance for new or updated products and services is likely to require substantial marketing efforts and expenditure of significant funds to create awareness and demand by participants in the healthcare industry. In addition, deployment of new or updated products and services may require the use of additional resources for training our existing sales force and customer service personnel and for hiring and training additional salespersons and customer service personnel. There can be no assurance that the revenue opportunities from new or updated products and services will justify amounts spent for their development, marketing and roll-out.

We could be subject to breach of warranty, product liability or other claims if our software products, information technology systems or transmission systems contain errors or experience failures

Errors in the software and systems we provide to customers or the software and systems we use to provide services could cause serious problems for our customers. For example, errors in our transaction processing systems can result in healthcare payers paying the wrong amount or making payments to the wrong payee. If problems like these occur, our customers may seek compensation from us or may seek to terminate their agreements with us, withhold payments due to us, seek refunds from us of part or all of the fees charged under those agreements or initiate litigation or other dispute resolution procedures. We also provide products and services that assist in healthcare decision-making, including some that relate to patient medical histories and treatment plans. If these products malfunction or fail to provide accurate and timely information, we could be subject to product liability claims. In addition, we could face breach of warranty or other claims or additional development costs if our software and systems do not meet contractual performance standards, do not perform in accordance with their documentation, or do not meet the expectations that our customers have for them. Our software and systems are inherently complex and, despite testing and quality control, we cannot be certain that errors will not be found in prior versions, current versions or future versions or enhancements. See also During times when we are making significant changes to our products and services, there are increased risks of performance problems below.

We attempt to limit, by contract, our liability for damages arising from our negligence, errors or mistakes. However, contractual limitations on liability may not be enforceable in certain circumstances or may otherwise not provide sufficient protection to us from liability for damages. We maintain liability insurance coverage, including coverage for errors and omissions. However, it is possible that claims could exceed the amount of our applicable insurance coverage, if any, or that this coverage may not continue to be available on acceptable terms or in sufficient amounts. Even if these claims do not result in liability to us, investigating and defending against them could be expensive and time consuming and could divert management's attention away from our operations. In addition, negative publicity caused by these events may delay market acceptance of our products and services, including unrelated products and services.

Performance problems with our systems or system failures could cause us to lose business or incur liabilities

Our customer satisfaction and our business could be harmed if we experience transmission delays or failures or loss of data in the systems we use to provide services to our customers, including the transaction-related services that Emdeon Business Services provides to healthcare payers and providers and the online services that WebMD Health provides. These systems are complex and, despite testing and quality control, we cannot be certain that problems will not occur or that they will be detected and

Table of Contents

corrected promptly if they do occur. See also During times when we are making significant changes to our products and services, there are increased risks of performance problems below. To operate without interruption, both we and the service providers we use must guard against:

damage from fire, power loss and other natural disasters;

communications failures;

software and hardware errors, failures or crashes;

security breaches, computer viruses and similar disruptive problems; and

other potential interruptions.

We have contingency plans for emergencies with the systems we use to provide services; however, we have limited backup facilities if these facilities are not functioning. The occurrence of a major catastrophic event or other system failure at any of our facilities or at a third-party facility we use could interrupt our services or result in the loss of stored data, which could have a material adverse impact on our business or cause us to incur material liabilities. Although we maintain insurance for our business, we cannot guarantee that our insurance will be adequate to compensate us for all losses that may occur or that this coverage will continue to be available on acceptable terms or in sufficient amounts.

During times when we are making significant changes to our products and services or to systems we use to provide services, there are increased risks of performance problems

If we do not respond successfully to technological and regulatory changes and evolving industry standards, our products and services may become obsolete. See Our ability to generate revenue could suffer if we do not continue to update and improve our existing products and services and develop new ones above. The software and systems that we sell and that we use to provide services are inherently complex and, despite testing and quality control, we cannot be certain that errors will not be found in any enhancements, updates and new versions that we market or use. Even if new products and services do not have performance problems, our technical and customer service personnel may have difficulties in installing them or in their efforts to provide any necessary training and support to customers.

We expect to make significant changes later in 2005 and during 2006 to the hardware and software Emdeon Business Services uses to provide connectivity services and to the systems WebMD Health uses to create, manage and deliver its portals. Our implementation of changes in these platforms may cost more than originally expected, may take longer than originally expected, and may require more testing than originally anticipated. While the new hardware and software will be tested before it is used in production, we cannot be sure that the testing will uncover all problems that may occur in actual use. If significant problems occur as a result of these changes, we may fail to meet our contractual obligations to customers, which could result in claims being made against us or in the loss of customer relationships. In addition, we cannot provide assurance that changes in these platforms will provide the additional functionality and other benefits that were originally expected.

If our systems or the Internet experience security breaches or are otherwise perceived to be insecure, our business could suffer

A security breach could damage our reputation or result in liability. We retain and transmit confidential information, including patient health information, in our processing centers and other facilities. It is critical that these facilities and infrastructure remain secure and be perceived by the marketplace as secure. We may be required to expend significant capital and other resources to protect against security breaches and hackers or to alleviate problems caused by breaches. Despite the implementation of security measures, this infrastructure or other systems that we interface with, including the Internet and related systems, may be vulnerable to physical break-ins, hackers, improper employee or contractor access, computer viruses, programming errors, attacks by third parties or similar disruptive problems. Any compromise of our security, whether as a result of our own systems or systems that they interface with,

Table of Contents

could reduce demand for our services. See also Business Government Regulation Health Insurance Portability and Accountability Act of 1996 Security Standards in our Annual Report on Form 10-K for the year ended December 31, 2004.

Performance problems with Emdeon Business Services systems could affect our relationships with customers of Emdeon Practice Services

Emdeon Business Services provides the transaction services used by the Network Services customers of Emdeon Practice Services. Disruptions to those services could cause some of those customers to obtain some or all of their software support requirements from competitors of ours or could cause some customers to switch to a competing physician practice management or billing software solution.

Emdeon Business Services ability to provide transaction services depends on services provided by telecommunications companies

Emdeon Business Services relies on a limited number of suppliers to provide some of the telecommunications services necessary for its transaction services. The telecommunications industry has been subject to significant changes as a result of changes in technology, regulation and the underlying economy. In the past several years, many telecommunications companies have experienced financial problems and some have sought bankruptcy protection. Some of these companies have discontinued telecommunications services for which they had contractual obligations to Emdeon Business Services. Emdeon Business Services inability to source telecommunications services at reasonable prices due to a loss of competitive suppliers could affect its ability to maintain its margins until it is able to raise its prices to its customers and, if it is not able to raise its prices, could have a material adverse effect on its financial results.

Risks Applicable to Our Use of the Internet

Most of WebMD Health s services are provided through the Internet. In addition, Emdeon Business Services and Emdeon Practice Services provide some Internet-based services and use the Internet to receive some data from customers. The following risks apply to our use of the Internet in our businesses:

Our Internet-based services are dependent on the development and maintenance of the Internet infrastructure

Our ability to deliver our Internet-based services is dependent on the development and maintenance of the infrastructure of the Internet by third parties. This includes maintenance of a reliable network backbone with the necessary speed, data capacity and security, as well as timely development of complementary products such as high-speed modems, for providing reliable Internet access and services. The Internet has experienced, and is likely to continue to experience, significant growth in the number of users and the amount of traffic. If the Internet continues to experience increased usage, the Internet infrastructure may be unable to support the demands placed on it. In addition, the reliability and performance of the Internet may be harmed by increased usage.

The Internet has experienced a variety of outages and other delays as a result of damages to portions of its infrastructure, and it could face outages and delays in the future. These outages and delays could reduce the level of Internet usage as well as the availability of the Internet to us for delivery of our Internet-based services. In addition, our customers who utilize our Web-based services depend on Internet service providers, online service providers and other Web site operators for access to our Web site. All of these providers have experienced significant outages in the past and could experience outages, delays and other difficulties in the future due to system failures unrelated to our systems. Any significant interruptions in our services or increases in response time could result in a loss of potential or existing users of and advertisers and sponsors on our Web site and, if sustained or repeated, could reduce the attractiveness of our services.

Table of Contents

Delivery of Web-based services requires uninterrupted communications and computer service from third-party service providers and our own systems

Our Web-based services, including WebMD Health's public Web sites and private online portals, are designed to operate 24 hours a day, seven days a week, without interruption. To do so, we rely on internal systems as well as communications and hosting services provided by third parties. We have experienced periodic system interruptions in the past, and we cannot guarantee that they will not occur again. We do not maintain redundant systems or facilities for some of these services. In the event of a catastrophic event at one of our data centers, we may experience an extended period of system unavailability, could negatively impact our business. See **Risks Related to the Development and Performance of Our Products and Services** Performance problems with our systems or system failures could cause us to lose business or incur liabilities above. In addition, some of our Web-based services may, at times, be required to accommodate higher than expected volumes of traffic. At those times, we may experience slower response times or system failures. Any sustained or repeated interruptions or disruptions in these systems or increase in their response times could damage our relationships with clients, customers, advertisers and sponsors.

Third parties may challenge the enforceability of our online agreements

The law governing the validity and enforceability of online agreements and other electronic transactions is evolving. We could be subject to claims by third parties that the online terms and conditions for use of our Web sites, including disclaimers or limitations of liability, are unenforceable. A finding by a court that these terms and conditions or other online agreements are invalid could harm our business.

Government regulation of the Internet could adversely affect our business

The Internet and its associated technologies are subject to government regulation. Our failure, or the failure of our business partners, to accurately anticipate the application of laws and regulations affecting our products and services and the manner in which we deliver them, or any other failure to comply, could create liability for us, result in adverse publicity, or negatively affect our business. In addition, new laws and regulations, or new interpretations of existing laws and regulations, may be adopted with respect to the Internet or other online services covering user privacy, patient confidentiality, consumer protection and other issues, including pricing, content, copyrights and patents, distribution, and characteristics and quality of products and services. We cannot predict whether these laws or regulations will change or how such changes will affect our business. For more information regarding government regulation of the Internet to which we are or may be subject, see **Business Government Regulation** in our Annual Report on Form 10-K for the year ended December 31, 2004.

Risks Related to Providing Products and Services to the Healthcare Industry

Almost all of the revenues of WebMD Health, Emdeon Business Services and Emdeon Practice Services come from customers in various parts of the healthcare industry. In addition, a significant portion of Porex's revenues come from products used in healthcare or related applications. The following risks arise out of this:

Developments in the healthcare industry could adversely affect our business

Developments that result in a reduction of expenditures by customers or potential customers in the healthcare industry could have a material adverse effect on our business. General reductions in expenditures by healthcare industry participants could result from, among other things:

government regulation or private initiatives that affect the manner in which healthcare providers interact with patients, payers or other healthcare industry participants, including changes in pricing or means of delivery of healthcare products and services (for additional discussion of the potential

Table of Contents

effects of regulatory matters on our business and on participants in the healthcare industry, see the other Risks Related to Providing Products and Services to the Healthcare Industry described below in this section and Business Government Regulation in our Annual Report on Form 10-K for the year ended December 31, 2004);

consolidation of healthcare industry participants;

reductions in governmental funding for healthcare; and

adverse changes in business or economic conditions affecting healthcare payers or providers, pharmaceutical companies, medical device manufacturers or other healthcare industry participants.

Even if general expenditures by industry participants remain the same or increase, developments in the healthcare industry may result in reduced spending on information technology and services or in some or all of the specific segments of that market we serve or are planning to serve. For example, use of our products and services could be affected by:

changes in the billing patterns of healthcare providers;

changes in the design of health insurance plans;

changes in the contracting methods payers use in their relationships with providers; and

decreases in marketing expenditures by pharmaceutical companies or medical device manufacturers, including as a result of governmental regulation or private initiatives that discourage or prohibit promotional activities by pharmaceutical or medical device companies.

In addition, our customers' expectations regarding pending or potential industry developments may also affect their budgeting processes and spending plans with respect to products and services of the types we provide. See also Governmental and private initiatives to support adoption of healthcare information technology may encourage additional companies to enter our markets or result in the development of technology solutions that compete with ours below.

WebMD Health's advertising and sponsorship revenues are particularly dependent on pharmaceutical, biotechnology and medical device companies. WebMD Health's business will be adversely impacted if, as a result of changes in business, economic or regulatory conditions or other factors affecting the pharmaceutical, biotechnology or medical device industries, pharmaceutical, biotechnology or medical device companies reduce or postpone: spending on marketing and educational services;

their use of the Internet as a vehicle for marketing and education; or

their use of any specific service or combination of services that we provide.

The healthcare industry has changed significantly in recent years and we expect that significant changes will continue to occur. However, the timing and impact of developments in the healthcare industry are difficult to predict. We cannot provide assurance that the markets for our products and services will continue to exist at current levels or that we will have adequate technical, financial and marketing resources to react to changes in those markets.

Governmental and private initiatives to support adoption of healthcare information technology may encourage additional companies to enter our markets or result in the development of technology solutions that compete with ours

There are currently numerous federal, state and private initiatives and studies seeking ways to increase the use of information technology in healthcare, including in the physician's office, as a means of improving care and reducing costs. For example, the Department of Health and Human Services (HHS) issued a report during 2004 entitled The Decade of Health Information Technology: Delivering Consumer-centric and Information-rich Health Care. At WebMD, an important part of our mission has

Table of Contents

been fostering adoption of information technology and electronic communications in healthcare. Accordingly, we welcome governmental and private initiatives designed to achieve the same goals. However, these initiatives may encourage more companies to enter our markets or result in the development of technology solutions that compete with ours. For example, as part of its initiatives, HHS has indicated that it intends to facilitate the development and transfer of knowledge and technology used by the federal government to the private sector. As a result, the Centers for Medicare & Medicaid Services has been collaborating with the Veterans Health Administration (VHA) and other key federal agencies on the development and distribution of electronic health record software called VistA-Office EHR for use in clinics and physician offices, based on the VistA system VHA uses for its own hospitals. VistA-Office EHR will compete with our IntergyEHR solution and appears likely to be offered at a significantly lower cost than IntergyEHR.

The effect that these initiatives may have on our business is difficult to predict and there can be no assurances that we will adequately address the risks created by these initiatives or that we will be able to take advantage of any resulting opportunities. In addition, competition from information technology products and services made available to healthcare providers on a not-for-profit or other low-cost basis by or on behalf of governmental entities, including VistA-Office EHR, could have an adverse impact on sales of our products and services, including IntergyEHR.

Government regulation of healthcare creates risks and challenges with respect to our compliance efforts and our business strategies

The healthcare industry is highly regulated and is subject to changing political, legislative, regulatory and other influences. Existing and new laws and regulations affecting the healthcare industry could create unexpected liabilities for us, cause us to incur additional costs and could restrict our operations. Many healthcare laws are complex and their application to specific products and services may not be clear. In particular, many existing healthcare laws and regulations, when enacted, did not anticipate the healthcare information services and technology solutions that we provide. However, these laws and regulations may nonetheless be applied to our products and services. Our failure to accurately anticipate the application of these laws and regulations, or other failure to comply, could create liability for us, result in adverse publicity and negatively affect our businesses. Some of the risks we face from healthcare regulation are as follows:

because we are in the business of applying information technology to healthcare, various aspects of HIPAA have had and are expected to continue to have significant consequences for Emdeon Business Services and Emdeon Practice Services and, to a lesser extent, WebMD Health;

because our WebMD Health business involves advertising and promotion of prescription and over-the-counter drugs and medical devices, any increase in regulation of these areas by the Federal Drug Administration or the Federal Trade Commission could make it more difficult for us to contract for sponsorships and advertising;

because we sell items and services to healthcare providers and physicians, our sales and promotional practices must comply with federal and state anti-kickback laws;

our healthcare connectivity and transaction-related administrative services must be provided in compliance with federal and state false claims laws; and

in providing health information to consumers, we must not engage in activities that could be deemed to be practicing medicine and a violation of applicable laws.

For more information regarding the risks that healthcare regulation creates for our businesses, see Business Government Regulation in our Annual Report on Form 10-K for the year ended December 31, 2004.

Table of Contents

Risks Related to Porex's Business and Industry

Porex's success depends upon demand for its products, which in some cases ultimately depends upon end-user demand for the products of its customers

Demand for our Porex products may change materially as a result of economic or market conditions and other trends that affect the industries in which Porex participates. In addition, because a significant portion of our Porex products are components that are eventually integrated into or used with products manufactured by customers for resale to end-users, the demand for these product components is dependent on product development cycles and marketing efforts of these other manufacturers, as well as variations in their inventory levels, which are factors that we are unable to control. Accordingly, the amount of Porex's sales to manufacturer customers can be difficult to predict and subject to wide quarter-to-quarter variances.

Porex's product offerings must meet changing customer requirements

A significant portion of our Porex products are integrated into end products used by manufacturing companies in various industries, some of which are characterized by rapidly changing technology, evolving industry standards and frequent new product introductions. Accordingly, to satisfy its customers, Porex must develop and introduce, in a timely manner, products that meet changing customer requirements at competitive prices. To do this, Porex must:

develop new uses of existing porous plastics technologies and applications;

innovate and develop new porous plastics technologies and applications;

commercialize those technologies and applications;

manufacture at a cost that allows it to price its products competitively;

manufacture and deliver its products in sufficient volumes and on time;

accurately anticipate customer needs; and

differentiate its offerings from those of its competitors.

We cannot assure you that Porex will be able to develop new or enhanced products or that, if it does, those products will achieve market acceptance. If Porex does not introduce new products in a timely manner and make enhancements to existing products to meet the changing needs of its customers, some of its products could become obsolete over time, in which case Porex's customer relationships, revenue and operating results would be negatively impacted.

Potential new or enhanced Porex products may not achieve sufficient sales to be profitable or justify the cost of their development

We cannot be certain, when we engage in Porex research and development activities, whether potential new products or product enhancements will be accepted by the customers for which they are intended. Achieving market acceptance for new or enhanced products may require substantial marketing efforts and expenditure of significant funds to create awareness and demand by potential customers. In addition, sales and marketing efforts with respect to these products may require the use of additional resources for training our existing Porex sales forces and customer service personnel and for hiring and training additional salespersons and customer service personnel. There can be no assurance that the revenue opportunities from new or enhanced products will justify amounts spent for their development and marketing. In addition, there can be no assurance that any pricing strategy that we implement for any new or enhanced Porex products will be economically viable or acceptable to the target markets.

Table of Contents

Porex may not be able to source the raw materials it needs or may have to pay more for those raw materials

Some of Porex's products require high-grade plastic resins with specific properties as raw materials. While Porex has not experienced any material difficulty in obtaining adequate supplies of high-grade plastic resins that meet its requirements, it relies on a limited number of sources for some of these plastic resins. If Porex experiences a reduction or interruption in supply from these sources, it may not be able to access alternative sources of supply within a reasonable period of time or at commercially reasonable rates, which could have a material adverse effect on its business and financial results.

Disruptions in Porex's manufacturing operations could have a material adverse effect on its business and financial results

Any significant disruption in Porex's manufacturing operations, including as a result of fire, power interruptions, equipment malfunctions, labor disputes, material shortages, earthquakes, floods, computer viruses, sabotage, terrorist acts or other force majeure, could have a material adverse effect on Porex's ability to deliver products to customers and, accordingly, its financial results.

Porex may not be able to keep third parties from using technology it has developed

Porex uses proprietary technology for manufacturing its porous plastics products and its success is dependent, to a significant extent, on its ability to protect the proprietary and confidential aspects of its technology. Although Porex owns certain patents, it relies primarily on non-patented proprietary manufacturing processes. To protect its proprietary processes, Porex relies on a combination of trade secret laws, license agreements, nondisclosure and other contractual provisions and technical measures, including designing and manufacturing its porous molding equipment and most of its molds in-house. Trade secret laws do not afford the statutory exclusivity possible for patented processes. There can be no assurance that the legal protections afforded to Porex or the steps taken by Porex will be adequate to prevent misappropriation of its technology. In addition, these protections do not prevent independent third-party development of competitive products or services.

The nature of Porex's products exposes it to product liability claims that may not be adequately covered by indemnity agreements or insurance

The products sold by Porex, whether sold directly to end-users or sold to other manufacturers for inclusion in the products that they sell, expose it to potential risk of product liability claims, particularly with respect to Porex's life sciences, clinical, surgical and medical products. Some of Porex's products are designed to be permanently implanted in the human body. Design defects and manufacturing defects with respect to such products sold by Porex or failures that occur with the products of Porex's manufacturer customers that contain components made by Porex could result in product liability claims and/or a recall of one or more of Porex's products. Porex believes that it carries adequate insurance coverage against product liability claims and other risks. We cannot assure you, however, that claims in excess of Porex's insurance coverage will not arise. In addition, Porex's insurance policies must be renewed annually. Although Porex has been able to obtain adequate insurance coverage at an acceptable cost in the past, we cannot assure you that Porex will continue to be able to obtain adequate insurance coverage at an acceptable cost.

In most instances, Porex enters into indemnity agreements with its manufacturing customers. These indemnity agreements generally provide that these customers would indemnify Porex from liabilities that may arise from the sale of their products that incorporate Porex components to, or the use of such products by, end-users. While Porex generally seeks contractual indemnification from its customers, any such indemnification is limited, as a practical matter, to the creditworthiness of the indemnifying party. If Porex does not have adequate contractual indemnification available, product liability claims, to the extent not covered by insurance, could have a material adverse effect on its business, operating results and financial condition.

Table of Contents

Since March 1991, Porex has been named as one of many co-defendants in a number of actions brought by recipients of mammary implants distributed by Porex in the United States. For a description of these actions, see the information under Legal Proceedings Porex Mammary Implant Litigation in our Annual Report on Form 10-K for the fiscal year ended December 31, 2004.

Economic, political and other risks associated with Porex's international sales and geographically diverse operations could adversely affect Porex's operations and financial results

Since Porex sells its products worldwide, its business is subject to risks associated with doing business internationally. In addition, Porex has manufacturing facilities in the United Kingdom, Germany and Malaysia. Accordingly, Porex's operations and financial results could be harmed by a variety of factors, including:

changes in foreign currency exchange rates;

changes in a specific country's or region's political or economic conditions, particularly in emerging markets;

trade protection measures and import or export licensing requirements;

potentially negative consequences from changes in tax laws;

differing protection of intellectual property; and

unexpected changes in regulatory requirements.

Environmental regulation could adversely affect Porex's business

Porex is subject to foreign and domestic environmental laws and regulations and is subject to scheduled and random checks by environmental authorities. Porex's business involves the handling, storage and disposal of materials that are classified as hazardous. Although Porex's safety procedures for handling, storage and disposal of these materials are designed to comply with the standards prescribed by applicable laws and regulations, Porex may be held liable for any environmental damages that result from Porex's operations. Porex may be required to pay fines, remediation costs and damages, which could have a material adverse effect on its results of operations.

Risks Applicable to Our Entire Company

The ongoing investigations by the United States Attorney for the District of South Carolina and the SEC could negatively impact our company and divert management attention from our business operations

The United States Attorney for the District of South Carolina is conducting an investigation of our company. Based on the information available to WebMD as of the date of this Quarterly Report, we believe that the investigation relates principally to issues of financial accounting improprieties for Medical Manager Corporation, a predecessor of WebMD (by its merger into WebMD in September 2000), and our Medical Manager Health Systems subsidiary; however, we cannot be sure of the investigation's exact scope or how long it may continue. In addition, WebMD understands that the SEC is conducting a formal investigation into this matter. Adverse developments in connection with the investigations, if any, including as a result of matters that the authorities or WebMD may discover, could have a negative impact on our company and on how it is perceived by investors and potential investors and customers and potential customers. In addition, the management effort and attention required to respond to the investigations and any such developments could have a negative impact on our business operations. For additional information, see Legal Proceedings in our Annual Report on Form 10-K for the year ended December 31, 2004.

Table of Contents

WebMD intends to continue to fully cooperate with the authorities in this matter. While we are not able to estimate, at this time, the amount of the expenses that we will incur in connection with the investigations, we expect that they may continue to be significant.

We face significant competition for our products and services

The markets in which we operate are intensely competitive, continually evolving and, in some cases, subject to rapid technological change. Many of our competitors have greater financial, technical, product development, marketing and other resources than we do. These organizations may be better known than we are and have more customers than we do. We cannot provide assurance that we will be able to compete successfully against these organizations or any alliances they have formed or may form. For more information about the competition we face, see Business Healthcare Information Services and Technology Solutions Competition for Our Healthcare Information Services and Technology Solutions and Business Porex Competition in our Annual Report on Form 10-K for the year ended December 31, 2004.

Third parties may bring claims as a result of the activities of our strategic partners or resellers of our products and services

We could be subject to claims by third parties, and to liability, as a result of the activities, products or services of our strategic partners or resellers of our products and services. Even if these claims do not result in liability to us, investigating and defending these claims could be expensive, time-consuming and result in adverse publicity that could harm our business.

Our success depends, in part, on our attracting and retaining qualified executives and employees

The success of our business depends, in part, on our ability to attract and retain qualified executives, writers and editors, software developers and other technical personnel and sales and marketing personnel. We anticipate the need to hire and retain qualified employees in these areas from time to time. We cannot assure you that we will be able to hire or retain a sufficient number of qualified personnel to meet our requirements, or that we will be able to do so at the salary and benefit costs that are acceptable to us. Failure to do so may have an adverse effect on our business.

We may not be successful in protecting our intellectual property and proprietary rights

Our intellectual property is important to all of our businesses. We rely on a combination of trade secret, patent and other intellectual property laws and confidentiality procedures and non-disclosure contractual provisions to protect our intellectual property. We believe that our non-patented proprietary technologies and business and manufacturing processes are protected under trade secret, contractual and other intellectual property rights. However, those rights do not afford the statutory exclusivity provided by patented processes. In addition, the steps that we take to protect our intellectual property, proprietary information and trade secrets may prove to be inadequate and, whether or not adequate, may be expensive.

There can be no assurance that we will be able to detect potential or actual misappropriation or infringement of our intellectual property, proprietary information or trade secrets. Even if we detect misappropriation or infringement by a third party, there can be no assurance that we will be able to enforce our rights at a reasonable cost, or at all. In addition, our rights to intellectual property, proprietary information and trade secrets may not prevent independent third-party development and commercialization of competing products or services.

Third parties may claim that we are infringing their intellectual property, and we could suffer significant litigation or licensing expenses or be prevented from selling products or services

We could be subject to claims that we are misappropriating or infringing intellectual property or other proprietary rights of others. These claims, even if not meritorious, could be expensive to defend and divert management's attention from our operations. If we become liable to third parties for infringing these

Table of Contents

rights, we could be required to pay a substantial damage award and to develop non-infringing technology, obtain a license or cease selling the products or services that use or contain the infringing intellectual property. We may be unable to develop non-infringing products or services or obtain a license on commercially reasonable terms, or at all. We may also be required to indemnify our customers if they become subject to third-party claims relating to intellectual property that we license or otherwise provide to them, which could be costly.

We have incurred and may continue to incur losses

We began operations in January 1996 and, until 2004, had incurred net losses in each year since our inception and, as of June 30, 2005, we had an accumulated deficit of approximately \$10.1 billion. We currently intend to continue to invest in infrastructure development, applications development, marketing and acquisitions. Whether we continue to incur losses in a particular period will depend on, among other things, the amount of such investments and whether those investments lead to increased revenues.

We may be subject to litigation

Our business and operations may subject us to claims, litigation and other proceedings brought by private parties and governmental authorities. For information regarding certain proceedings to which we are currently a party, see *Legal Proceedings* in our Annual Report on Form 10-K for the year ended December 31, 2004 and our Quarterly Report on Form 10-Q for the quarter ended March 31, 2005.

Acquisitions, business combinations and other transactions may be difficult to complete and, if completed, may have negative consequences for our business and our securityholders

Our company has been built, in part, through a series of acquisitions. We intend to continue to seek to acquire or to engage in business combinations with companies engaged in complementary businesses. In addition, we may enter into joint ventures, strategic alliances or similar arrangements with third parties. These transactions may result in changes in the nature and scope of our operations and changes in our financial condition. Our success in completing these types of transactions will depend on, among other things, our ability to locate suitable candidates and negotiate mutually acceptable terms with them, as well as the availability of financing. Significant competition for these opportunities exists, which may increase the cost of and decrease the opportunities for these types of transactions. Financing for these transactions may come from several sources, including:

cash and cash equivalents on hand and marketable securities;

proceeds from the incurrence of indebtedness; and

proceeds from the issuance of additional common stock, preferred stock, convertible debt or other securities. Our issuance of additional securities could:

cause substantial dilution of the percentage ownership of our stockholders at the time of the issuance;

cause substantial dilution of our earnings per share;

subject us to the risks associated with increased leverage, including a reduction in our ability to obtain financing or an increase in the cost of any financing we obtain;

subject us to restrictive covenants that could limit our flexibility in conducting future business activities; and

adversely affect the prevailing market price for our outstanding securities.

We do not intend to seek securityholder approval for any such acquisition or security issuance unless required by applicable law or regulation or the terms of existing securities.

Table of Contents

Our business will suffer if we fail to successfully integrate acquired businesses and technologies or to assess the risks in particular transactions

We have in the past acquired, and may in the future acquire, businesses, technologies, services, product lines and other assets. The successful integration of the acquired businesses and assets into our operations, on a cost-effective basis, can be critical to our future performance. The amount and timing of the expected benefits of any acquisition, including potential synergies between our company and the acquired business, are subject to significant risks and uncertainties. These risks and uncertainties include, but are not limited to, those relating to:

our ability to maintain relationships with the customers of the acquired business;

our ability to cross-sell products and services to customers with which we have established relationships and those with which the acquired businesses have established relationships;

our ability to retain or replace key personnel;

potential conflicts in payer, provider, strategic partner, sponsor or advertising relationships;

our ability to coordinate organizations that are geographically diverse and may have different business cultures; and

compliance with regulatory requirements.

We cannot guarantee that any acquired businesses will be successfully integrated with our operations in a timely or cost-effective manner, or at all. Failure to successfully integrate acquired businesses or to achieve anticipated operating synergies, revenue enhancements or cost savings could have a material adverse effect on our business, financial condition and results of operations.

Although our management attempts to evaluate the risks inherent in each transaction and to value acquisition candidates appropriately, we cannot assure you that we will properly ascertain all such risks or that acquired businesses and assets will perform as we expect or enhance the value of our company as a whole. In addition, acquired companies or businesses may have larger than expected liabilities that are not covered by the indemnification, if any, that we are able to obtain from the sellers.

We may not be able to raise additional funds when needed for our business or to exploit opportunities

Our future liquidity and capital requirements will depend upon numerous factors, including the success of the integration of our businesses, our existing and new applications and service offerings, competing technologies and market developments, potential future acquisitions and additional repurchases of our common stock. We may need to raise additional funds to support expansion, develop new or enhanced applications and services, respond to competitive pressures, acquire complementary businesses or technologies or take advantage of unanticipated opportunities. If required, we may raise such additional funds through public or private debt or equity financing, strategic relationships or other arrangements. There can be no assurance that such financing will be available on acceptable terms, if at all, or that such financing will not be dilutive to our stockholders.

We expect that accounting for employee stock options using the fair value method will have a material impact on our consolidated results of operations and earnings per share

The FASB has issued SFAS 123R, which will require us to recognize, in our financial statements, all share-based payments to our employees, including grants of employee stock options, based on their fair values beginning with the first quarter of 2006. WebMD expects that the adoption of SFAS 123R will have a material impact on our consolidated results of operations and earnings per share. See Note 1 to the Consolidated Financial Statements included in this Quarterly Report for more information regarding accounting for stock-based compensation plans. We cannot predict what effect the reduction in our net income may have on the market prices of WebMD's securities.

Table of Contents

We cannot assure you that the proposed initial public offering by WebMD Health Corp. will be successfully completed and, if completed, the offering may expose holders of WebMD common stock to additional risks

WebMD Health Corp., a wholly owned subsidiary of WebMD formed to be a holding company for our WebMD Health segment, has filed a Registration Statement on Form S-1 with respect to an initial public offering of its Class A common stock. As previously announced, WebMD Health Corp. intends to sell approximately 10%-14% of its equity in the offering. The proposed initial public offering is subject to a number of uncertainties, both within and outside of our control, including those related to prevailing market conditions. As a result, we cannot assure you that the initial public offering will be successfully completed or, if completed, that it would occur within a specified time period.

If the initial public offering is completed, WebMD Health Corp. would be a new public company. We are unable to predict what the market prices of our common stock and WebMD Health Corp. common stock would be after the initial public offering. We cannot assure you that the initial public offering, if completed, will produce any increase for our stockholders in the market value of their holdings in our company. In addition, the market prices of our common stock and WebMD Health Corp. common stock could be highly volatile for several months after the initial public offering and may each continue to be more volatile than our common stock would have been if a transaction had not occurred.

Our use of a new corporate name and the related rebranding of some of our products and services could cause temporary disruptions in some of our businesses

As previously announced and as discussed above in Introduction Recent Developments, we plan to seek stockholder approval, at our 2005 Annual Meeting of Stockholders, for changing our corporate name from WebMD Corporation to Emdeon Corporation and have begun to use Emdeon in the names of two of our segments, Emdeon Business Services and Emdeon Practice Services, and as a brand for some of their products and services. Until the Emdeon name becomes recognized in the markets in which we compete, we could experience some confusion by existing and potential customers and temporarily be at a competitive disadvantage. Although we intend to devote significant resources to publicizing our new name and communicating with existing and potential customers, the transition period may take longer than anticipated and there may, during that period, be temporary disruptions in some of our businesses.

ITEM 3. *Quantitative and Qualitative Disclosures About Market Risk*
Interest Rate Sensitivity

The primary objective of our investment activities is to preserve principal and maintain adequate liquidity, while at the same time maximizing the yield we receive from our investment portfolio. This objective is accomplished by adherence to our investment policy, which establishes the list of eligible securities and credit requirements for each investment.

Changes in prevailing interest rates will cause the principal amount of the investment to fluctuate. To minimize this risk, we maintain our portfolio of cash equivalents, short-term investments and marketable securities in commercial paper, non-government debt securities, money market funds and highly liquid United States Treasury notes. We view these high grade securities within our portfolio as having similar market risk characteristics.

Principal amounts expected to mature are \$0.4 million, \$334.7 million and \$115.0 million during the remainder of 2005, 2006 and 2007, respectively. These include investments totaling \$352.6 million in Federal Agency Notes that are callable subjecting us to interest rate risk on the reinvestment of these securities. We believe that the impact of any call and resulting reinvestment of proceeds would not have a material effect on our financial condition or results of operations.

We have not utilized derivative financial instruments in our investment portfolio.

Exchange Rate Sensitivity

Currently, substantially all of our sales and expenses are denominated in United States dollars; however, Porex is exposed to fluctuations in foreign currency exchange rates, primarily the rate of exchange of the United States dollar against the Euro. This exposure arises primarily as a result of translating the results of Porex's foreign operations to the United States dollar at exchange rates that have fluctuated from the beginning of the accounting period. Porex has not engaged in foreign currency hedging activities to date. Foreign currency translation losses were \$1.7 million and \$2.7 million, during the three and six month periods ended June 30, 2005, respectively, and \$0.0 million and \$0.3 million, during the three and six month periods ended June 30, 2004, respectively.

ITEM 4. *Controls and Procedures*

As required by Exchange Act Rule 13a-15(b), WebMD management, including the Chief Executive Officer and Chief Financial Officer, conducted an evaluation of the effectiveness of WebMD's disclosure controls and procedures, as defined in Exchange Act Rule 13a-15(e), as of June 30, 2005. Based on that evaluation, the Chief Executive Officer and Chief Financial Officer concluded that WebMD's disclosure controls and procedures provided reasonable assurance that all material information required to be filed in this Quarterly Report has been made known to them in a timely fashion.

In connection with the evaluation required by Exchange Act Rule 13a-15(d), WebMD management, including the Chief Executive Officer and Chief Financial Officer, concluded that no changes in WebMD's internal control over financial reporting occurred during the second quarter of 2005 that have materially affected, or are reasonably likely to materially affect, WebMD's internal control over financial reporting.

**PART II
OTHER INFORMATION**

ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds

(c) The following table provides information about purchases by WebMD during the three months ended June 30, 2005 of equity securities that are registered by us pursuant to Section 12 of the Exchange Act:

Issuer Purchases of Equity Securities

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number (or Approximate Dollar Value) of Shares that May Yet Be Purchased Under the Plans or Programs
04/01/05-04/30/05	440(1)	\$ 8.95		\$ 61,531,935
05/01/05-05/31/05				\$ 61,531,935
06/01/05-06/30/05	575(1)	\$ 9.46		\$ 61,531,935
Total	1,017	\$ 9.24		\$ 61,531,935

(1) Represents shares withheld from restricted stock awards that vested during the three months ended June 30, 2005 to satisfy the withholding tax requirements related to the vesting of the awards.
