## Exhibit

Exhibit	Description
99.1	Announcement on Jan 7, 2003: UMC Unveils `IP Master' Online Design Resource
99.2	Announcement on Jan 9, 2003: disposal of Sampo Corporation securities
99.3	Announcement on Jan 9, 2003: December Sales
99.4	Announcement on Jan 14, 2003: MOSYS' 1T-SRAM-R MEMORY IS SILICON-PROVEN ONUMC'S 0.13 MICRON LOGIC PROCESS
99.5	Announcement on Jan 15, 2003: disposal of Sampo Corporation securities
99.6	Announcement on Jan 15, 2003: 1) the trading and pledge of UMC common shares by directors, supervisors, executive officers and 10% shareholders of UMC 2) the acquisition and disposition of assets by UMC
99.7	Announcement on Jan 15, 2003: disposal of MediaTek Incorporation securities
99.8	Announcement on Jan 15, 2003: acquisition of Silicon Integrated Systems Corporation securities
99.9	Announcement on Jan 16, 2003: UMC EXTENDS LICENSING AGREEMENT FORPHASE-SHIFTING TECHNOLOGY FROM NUMERICALTECHNOLOGIES AS FOUNDRY MIGRATES TO 90 NM
99.10	Announcement on Jan 16, 2003: By TSE request, to explain the effects on operation and sales by the strategic partnership between UMC AND SiS
99.11	Announcement on Jan 16, 2003: acquisition of Silicon Integrated Systems Corporation securities
99.12	Announcement on Jan 20, 2003: acquisition of Silicon Integrated Systems Corporation securities
99.13	Announcement on Jan 22, 2003: Represent subsidiary company UMCi Pte Ltd to announce Equipment Move-in at 300mm Fab
99.14	Announcement on Jan 27, 2003: acquisition of Pacific Technology Partners, L.P. securities
99.15	Announcement on Jan 28, 2003: acquisition of Taiwan High Speed Rail Corp. securities
99.16	Announcement on Jan 29, 2003: UMC Financial Report for the fourth quarter of 2002.
99.17	Announcement on Feb 10, 2003: January Sales
99.18	Announcement on Feb 11, 2003: acquisition of UMC JAPAN securities
99.19	Announcement on Feb 13, 2003: Change of the acting spokesperson

EXHIBIT 99.1

UMC Unveils 'IP Master' Online Design Resource

1. Date of occurrence of the event:2003/01/07

2. Cause of occurrence: UMC (NYSE: UMC), a world leading semiconductor foundry, and Synchronicity today introduced the foundry industry's most comprehensive online design support and customer service resource, named IP Master. IP Master boosts UMC's customers productivity by enabling them to quickly find, evaluate, acquire and use design elements, such as design libraries and semiconductor intellectual property (IP) via UMC's customer web portal at <http://my.umc.com>.

In order to rapidly deploy a comprehensive service with broad industry compatibility, UMC selected the Synchronicity Publisher Suite, as the basis for IP Master. IP Master has two key elements that improve customer design productivity:

1) SOC Platform - is UMC's online shopping mall for SOC development. SOC Platform is built from the IP Gear Catalog component of the Synchronicity Publisher Suite where customers can find, evaluate and gain information on the silicon production status of every IP core that targets UMC's process technology. Users can use automated search tools or browse a component hierarchy of broadly applicable IP from UMC's Gold IP Program (e.g. libraries, memories, mixed-signal functions and embedded processors). Users can also browse by vertical market application, for example for a DSP suitable for a set-top box SOC to be manufactured on UMC's 0.13 micron CMOS process. The data in SOC Platform is continuously updated and includes the additional information that truly makes IP usable, such as whether the IP has been proven in silicon.

2) UMC HelpDesk - is a comprehensive online support system for UMC customers. It is an implementation of the IP Gear HelpDesk component of the Synchronicity Publisher Suite tuned to UMC's customer requirements. The HelpDesk manages customer queries from initiation to closure and includes useful functions such as automatic assignment to the appropriate expert, query escalation, reminders, private internal notation, and management reporting on response status and speed.

Additionally, users can often quickly find answers by searching the Knowledge Base of non-confidential, past support responses.

Synchronicity and its Taiwanese distributor Maojet Technology Corporation, worked with UMC to set up the IP Master system. UMC is the first foundry, using the de facto standard for design reuse and IP distribution, to provide a comprehensive IP management system that includes back-end fabrication information.

3. Countermeasures:none

4. Any other matters that need to be specified:none

EXHIBIT 99.2

To announce related materials on disposal of Sampo Corporation securities

1. Name of the security: common shares of Sampo Corporation

2. Trading date: 2002/12/16~2003/01/08

## Edgar Filing: UNITED MICROELECTRONICS CORP - Form 6-K

3. Trading volume, unit price, and total monetary amount of the transaction:  
trading volume: 8,937,000 shares; average unit price: \$13.11 NTD; total amount:  
\$117,182,500 NTD

4. Gain (or loss) on disposal (not applicable in cases of acquisition of securities): \$4,524,784 NTD in profit.

5. Relationship with the underlying company of the trade: Sampo Corporation, investee company under cost method

6. Current cumulative volume, amount, and shareholding percentage of holdings of the security being traded (including the current trade) and status of restriction of rights: cumulative volume: 16,273,137 shares; amount: \$205,135,330 NTD; percentage of holdings: 1.58%; status of restriction of rights: no

7. Current ratio of long or short term securities investment (including the current trade) to the total assets and shareholder's equity as shown in the most recent financial statement and the operational capital as shown in the most recent financial statement: ratio of total assets: 19.54%; ratio of shareholder's equity: 27.12%; the operational capital as shown in the most recent financial statement: \$61,639,615 thousand NTD

8. Concrete purpose/objective of the acquisition or disposal: financing operation

9. Opinions of directors expressing opposition to the current trade: none

10. Any other matters that need to be specified: none

EXHIBIT 99.4

MOSYS' 1T-SRAM-R MEMORY IS SILICON-PROVEN ONUMC'S 0.13 MICRON LOGIC PROCESS

1. Date of occurrence of the event: 2003/01/14

2. Cause of occurrence: SUNNYVALE, Calif. MoSys, Inc. (NASDAQ: MOSY) the industry's leading provider of high density SoC embedded memory solutions, and UMC (NYSE: UMC), a world-leading semiconductor foundry, today announced that MoSys' 1T-SRAM-R technology incorporating Transparent Error Correction is silicon-proven in UMC's 0.13 micron logic process. With this milestone, MoSys' customers can now access 1T-SRAM memory technology that has been verified on three of UMC's standard logic processes: 0.18, 0.15 and 0.13 micron.

The 1T-SRAM-R technology for 0.13 micron silicon is currently available from MoSys, and is slated to be listed in UMC's IP Master online design resource and support center in mid-February. UMC will also offer customer specific 1T-SRAM macros, based on customer requirements, directly to customers in Q2 2003.

EXHIBIT 99.9

UMC EXTENDS LICENSING AGREEMENT FOR PHASE-SHIFTING TECHNOLOGY FROM NUMERICAL TECHNOLOGIES AS FOUNDRY MIGRATES TO 90 NM

1. Date of occurrence of the event: 2003/01/16

2. Cause of occurrence: SANTA CLARA, Calif. and HSINCHU, Taiwan, --Numerical Technologies, Inc. (Nasdaq: NMTC) the world's leading provider of subwave length lithography-enabling technology to the global semiconductor industry, and UMC (NYSE: UMC), a world-leading semiconductor foundry, today announced that UMC has extended its agreement to license Numerical's phase-shifting technology as the foundry migrates to the 90-nm process generation. The three-year agreement takes effect immediately, providing a seamless continuation of a licensing partnership that first began in December 2000. The companies will continue their ongoing collaboration for technology development to facilitate production of sub-100-nm integrated circuits (ICs), which began in early 1999.

UMC's 90-nm process is expected to begin pilot production in Q2 of this year. The foundry, which is already working with customers such as Xilinx on 90-nm test chips, continues to evaluate and invest in technologies that will help speed the introduction of next-generation processes.

Numerical's phase shifting is the only commercially available strong phase-shifting technology that is currently used in IC production. It has been employed to fabricate transistors as small as 9 nm in a research environment--the world's most miniscule transistors manufactured with 248-nm lithography equipment. In addition to licensing its phase-shifting technology, UMC also plans to deploy Numerical's Virtual Stepper mask qualification software as part of its standard production flow.

3. Countermeasures: none

4. Any other matters that need to be specified: none

EXHIBIT 99.10

By TSE request, to explain the effects on operation and sales by the strategic partnership between UMC AND SiS

1. Date of occurrence of the event: 2003/01/16

2. Cause of occurrence: By TSE request, to explain the effects on operation and sales by the strategic partnership between UMC AND SiS

3. Countermeasures: none

4. Any other matters that need to be specified: Based upon the strategic partnership between UMC AND SiS, customers of both companies will benefit from greater manufacturing capacity and process technology support and under a broader umbrella of intellectual property. The respective customers of both companies will benefit the most.

EXHIBIT 99.13

Represent subsidiary company UMCi Pte Ltd to announce Equipment Move-in at 300mm Fab

1. Date of occurrence of the event: 2003/01/22

2. Cause of occurrence: UMCi, the Singapore-based 300mm joint venture between world-leading semiconductor foundry UMC, Infineon Technologies AG, and EDB Investments, the Singapore Economic Development Board's investment arm, today announced that equipment move-in has begun for the state-of-the-art fab beginning with copper processing equipment from US-based Applied Materials and Japan's Tokyo Electron Limited. This important milestone signifies the beginning of UMC's operation in Singapore and further demonstrates UMC's commitment to 300mm manufacturing. This new manufacturing facility will enable a more cost-efficient manufacturing process, and as Singapore's first operating 300mm fab, will greatly enhance the competitiveness of its high technology industry.

UMCi is located in the Pasir Ris Wafer Fab Park and was first announced in December of 2000. Total planned capacity for the facility is 40,000 wafers per month and overall investment is expected to be US\$3.6 billion. Current installation will primarily focus on copper backend processing equipment, with front-end equipment expected to follow later this year as market conditions require.

300-mm wafers have more than twice the usable area of industry-standard 200-mm wafers, yielding roughly 2.5 times as many die. These benefits are expected to reduce overall production cost by up to 30 percent.

3. Countermeasures: none

shall also be publicly announced: Not applicable

11. Current cumulative volume, amount, and shareholding percentage of holdings of the security being traded (including the current trade) and status of restriction of rights (not applicable of the transacted assets are not securities): cumulative volume: 30,000,000 shares; amount: \$300,000,000 NTD; percentage of holdings: Not applicable; status of restriction of rights: private placement securities; conversion must be in connection with Securities and Exchange Law #43-8

12. Current ratio of long or short term securities investment (including the current trade) to the total assets and shareholder's equity as shown in the most recent financial statement and the operational capital as shown in the most recent financial statement: ratio of total assets: 20.92%; ratio of shareholder's equity: 29.03%; the operational capital as shown in the most recent financial statement: \$61,639,615 thousand NTD

13. If there is broker, and the broker is an actual related party, the identity of the broker and the broker's fee to be paid: none

14. Concrete purpose or use of the acquisition or disposition: long term investment

15. Opinions of directors expressing opposition to the trade: none

16. Any other matters that need to be specified: none

EXHIBIT 99.16

UMC Financial Report for the fourth quarter of 2002.

1. Date of the investor/press conference: 2003/01/29

2. Location of the investor/press conference: The Westin Taipei's Yong Le Kong; B3, no.133 nanking east road, section 3, Taipei, Taiwan

3. Financial and business related information:

Revenue for 4Q02 was NT\$17.54 billion, representing a 25.8% YoY increase from NT\$13.94 billion in 4Q01, and an 8.4% QoQ decrease from NT\$19.15 billion in 3Q02. Gross profit for the quarter was NT\$2.58 billion. Net income for 4Q02 was NT\$986 million. Earnings per ordinary share (EPS) for the quarter were NT\$0.07. 4Q02 8 inches equivalent wafer shipments were 434 thousand wafers excluding UMCj, better than our previously released guidance, only decreased 1000 wafers compared to 3Q02. Utilization for the quarter was 64%, due to last-minute rush orders. The blended average selling price (ASP, in NT dollar terms) for the fourth quarter decreased by 8 percent compared with the previous quarter, mainly due to an increase of rush orders of lagging-age technology that is priced lower than our blended ASP. In the fourth quarter, leading-edge 0.13-micron shipments accounted for 6% of UMC's revenue, compared to 2% in 3Q02. The leading-edge 0.18-micron and below technology shipments accounted for 36% of UMC's 4Q02 revenue.

"The past year was extremely challenging for the high-technology industry. Despite the contraction of the global semiconductor market, we returned UMC to profitability in 2002. By fine-tuning our foundry marketing strategy, and optimizing our resource allocation, we have built a more competitive UMC," UMC Vice Chairman & CEO John Hsuan said. "We have continued to invest heavily in R&D and state-of-the-art 300mm manufacturing facilities that will enable us to maximize long-term profitability. The leading-edge 0.13-micron shipments have

## Edgar Filing: UNITED MICROELECTRONICS CORP - Form 6-K

been growing rapidly to contribute to our sales revenue. Also, we are making steady progress on, and continue to develop, 90-nanometer process technology. Together with Xilinx, we have produced a 90-nanometer FPGA test chip." "We have two 300-mm manufacturing facilities. At Fab12A, our 300-mm manufacturing facility in southern Taiwan, we have produced for our clients wafers with lower cost and better yields. Also, in the beginning of 2003, as originally planned we launched the equipment move-in at UMCi, our Singapore-based 300mm joint venture. The combined capacity of these two facilities will enable UMC to respond rapidly to any industry expansion that may occur in the foreseeable future. Additionally, our customers will benefit from the cost advantages associated with our 300mm advanced manufacturing process technologies. It's a win-win situation for both our customers and UMC."

4. Any other matters that need to be specified: None.
