This report contains forward-looking statements within the meaning of the federal securities laws, including but not limited to statements regarding: (1) the amount, timing and focus of our expected capital investments in 2013 including expenditures related to our new factory and research and development facility in Korea, (2) our ability to fund our operating activities for the next twelve months, (3) the effect of net sales or capacity utilization on our gross profit and gross margin, (4) the focus of our research and development activities, (5) the expiration of tax holidays in jurisdictions in which we operate and expectations regarding our effective tax rate, (6) the release of valuation allowances related to taxes in the future, (7) our repurchase or repayment of outstanding debt or the conversion of debt in the future, (8) payment of dividends, (9) compliance with our covenants, (10) expected contributions to foreign pension plans, (11) liability for unrecognized tax benefits, (12) the effect of foreign currency exchange rate exposure on our financial results, (13) the volatility of the trading price of our common stock, (14) changes to our internal controls related to integration of acquired operations and implementation of our enterprise resource planning ("ERP") system and other systems, (15) our estimates regarding the possible amount of, and funding for, any payments due in conjunction with our litigation with Tessera, (16) the anticipated schedule for construction of our new factory and research and development facility in Korea, (17) our expected increase in ownership of J-Devices and consolidation of J-Devices' results into our consolidated financial statements and (18) other statements that are not historical facts. In some cases, you can identify forward-looking statements by terminology such as "may," "will," "should," "expects," "plans," "anticipates," "believes," "estimates," "predicts," "potential," "continue," "intend" or the negative of these terms or other comparable terminology. Because such statements include risks and uncertainties, actual results may differ materially from those anticipated in such forward-looking statements as a result of certain factors, including those set forth in the following discussion as well as in Part II, Item 1A of this Quarterly Report. You should read the following discussion in

conjunction with Item 1 in this Quarterly Report as well as other reports we file with the Securities and Exchange Commission.

Table of Contents

AMKOR TECHNOLOGY, INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

1. Interim Financial Statements

Basis of Presentation. The Consolidated Financial Statements and related disclosures as of September 30, 2013 and for the three and nine months ended September 30, 2013 and 2012, are unaudited, pursuant to the rules and regulations of the United States Securities and Exchange Commission ("SEC"). The December 31, 2012, Consolidated Balance Sheet data was derived from audited financial statements, but does not include all disclosures required by accounting principles generally accepted in the United States of America ("U.S."). Certain information and footnote disclosures normally included in financial statements prepared in accordance with U.S. generally accepted accounting principles ("U.S. GAAP") have been condensed or omitted pursuant to such rules and regulations. In our opinion, these financial statements include all adjustments (consisting only of normal recurring adjustments) necessary for the fair statement of the results for the interim periods. These financial statements should be read in conjunction with the financial statements included in our Annual Report for the year ended December 31, 2012, filed on Form 10-K with the SEC on March 8, 2013. The results of operations for the three and nine months ended September 30, 2013, are not necessarily indicative of the results to be expected for the full year. Unless the context otherwise requires, all references to "Amkor," "we," "us," "our" or the "company" are to Amkor Technology, Inc. and our subsidiaries.

On July 31, 2013, we completed the purchase of Toshiba Electronics Malaysia Sdn. Bhd. The financial results of the entity have been included in our Consolidated Financial Statements from the date of acquisition (Note 3).

Use of Estimates. The Consolidated Financial Statements have been prepared in conformity with U.S. GAAP, using management's best estimates and judgments where appropriate. These estimates and judgments affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements. The estimates and judgments will also affect the reported amounts for certain revenues and expenses during the reporting period. Actual results could differ materially from these estimates and judgments.

2. New Accounting Standards

Recently Adopted Standards

In February 2013, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") 2013-02, Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income (Topic 220). ASU 2013-02 requires an entity to provide information about the amounts reclassified out of accumulated other comprehensive income ("AOCI") by component. In addition, an entity is required to present, either on the face of the financial statements or in the notes, significant amounts reclassified out of AOCI by the respective line items of net income, but only if the amount reclassified is required to be reclassified in its entirety in the same reporting period. For amounts that are not required to be reclassified in their entirety to net income, an entity is required to cross-reference to other disclosures that provide additional details about those amounts. ASU 2013-02 does not change the current requirements for reporting net income or other comprehensive income in the financial statements. This ASU is effective for reporting periods beginning after December 15, 2012. ASU 2013-02 was adopted on January 1, 2013 and did not have a significant impact on our financial statements.

Recently Issued Standards

In March 2013, the FASB issued ASU 2013-04, Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation Is Fixed at the Reporting Date (Topic 405). ASU 2013-04 provides guidance for the recognition, measurement and disclosure of obligations resulting from joint and several liability arrangements for which the total amount of the obligation is fixed at the reporting date, except for obligations addressed within existing guidance in U.S. GAAP. The guidance requires an entity to measure those obligations as the sum of the amount the reporting entity agreed to pay on the basis of its arrangement among its co-obligors and any additional amount the reporting entity expects to pay on behalf of its co-obligors. The guidance in ASU 2013-04 also requires an entity to disclose the nature and amount of the obligation as well as other information about those obligations. This ASU is effective for reporting periods beginning after December 15, 2013. ASU 2013-04 is not expected to have a significant effect on our financial statements.

Table of Contents

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

In March 2013, the FASB issued ASU 2013-05, Parent's Accounting for the Cumulative Translation Adjustment upon Derecognition of Certain Subsidiaries or Groups of Assets within a Foreign Entity or of an Investment in a Foreign Entity (Topic 830). ASU 2013-05 provides guidance to resolve the diversity in practice regarding the release into net income of the cumulative translation adjustment when a company sells or ceases to hold a controlling interest in a subsidiary or group of assets within a foreign entity. This ASU is effective for reporting periods beginning after December 15, 2013. ASU 2013-05 may affect our financial statements to the extent we sell or cease to hold a controlling interest in subsidiaries or groups of assets within a foreign entity.

In July 2013, the FASB issued ASU 2013-11, Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists (Topic 740). ASU 2013-11 requires that unrecognized tax benefits be presented in the financial statements as a reduction to a deferred tax asset for a net operating loss carryforward, a similar tax loss, or a tax credit carryforward, except in certain circumstances. When those circumstances exist, the unrecognized tax benefit should be presented in the financial statements as a liability and should not be combined with deferred tax assets. This ASU is effective for reporting periods beginning after December 15, 2013. ASU 2013-11 is not expected to have a significant impact on our financial statement presentation.

3. Business Acquisitions

On July 31, 2013, we completed the purchase of 100% of the shares of Toshiba Electronics Malaysia Sdn. Bhd., Toshiba's power discrete semiconductor packaging and test operation in Malaysia, and subsequently changed the name of the entity to Amkor Technology Malaysia Sdn. Bhd. The total price for the shares was \$61.9 million, based on the estimated net asset value at closing. The price for the shares is subject to adjustment to the extent the actual net asset value at closing was more or less than the estimate. We paid \$42.4 million in cash at closing and are obligated to pay the remaining \$19.5 million by March 31, 2014. We were also granted a non-exclusive, royalty bearing license by Toshiba to certain intellectual property rights for providing packaging and test services for power discrete and certain other semiconductor products. The license has a royalty cap of ¥1.5 billion (approximately \$15 million). Under the purchase method of accounting, we allocated the purchase price to the assets acquired and liabilities assumed based on their estimated fair values on the date of acquisition. We did not record any goodwill as a result of the acquisition.

4. Share-Based Compensation Plans

The following table presents share-based compensation expense attributable to stock options and restricted shares.

	For the Three Months Ended		For the Nine Months Ended	
	September 30,		September 30,	
	2013	2012	2013	2012
	(In thousands)			
Stock options	\$243	\$251	\$498	\$908
Restricted shares	640	360	1,567	1,140
Total share-based compensation expense	\$883	\$611	\$2,065	\$2,048

The following table presents share-based compensation expense as included in the Consolidated Statements of Income:

Edgar Filing: AMKOR TECHNOLOGY INC - Form 10-Q

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2013	2012	2013	2012
	(In thousands)			
Selling, general and administrative	\$769	\$532	1,800	1,783
Research and development	114	79	265	265
Total share-based compensation expense	\$883	\$611	\$2,065	\$2,048

There is no corresponding deferred income tax benefit for stock options or restricted shares.

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

Stock Options

The following table summarizes our stock option activity for the nine months ended September 30, 2013:

	Number of Shares (In thousands)	Weighted Average Exercise Price Per Share	Weighted Average Remaining Contractual Term (Years)	Aggregate Intrinsic Value (In thousands)
Outstanding at December 31, 2012	4,893	\$9.52		
Granted	2,045	4.37		
Exercised	—	—		
Forfeited or expired	(1,973)	11.73		
Outstanding at September 30, 2013	4,965	\$6.51	5.85	\$69
Fully vested at September 30, 2013 and expected to vest thereafter	4,922	\$6.53	5.82	\$69
Exercisable at September 30, 2013	2,820	\$8.12	2.91	\$52

The following assumptions were used to calculate weighted average fair values of the options granted in the three and nine months ended September 30, 2013 and 2012:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2013	2012	2013	2012
Expected life (in years)	6.1	6.0	6.2	6.0
Risk-free interest rate	2.2	% 1.0	% 1.7	% 1.0
Volatility	60	% 65	% 60	% 65
Dividend yield	—	—	—	—
Weighted average grant date fair value per option granted	\$2.44	\$2.68	\$2.48	\$2.68

The intrinsic value of options exercised for the three and nine months ended September 30, 2012, was less than \$0.1 million and \$0.1 million, respectively. For the nine months ended September 30, 2012, cash received under all share-based payment arrangements was \$0.2 million. The related cash receipts are included in financing activities in the accompanying Condensed Consolidated Statements of Cash Flows. Total unrecognized compensation expense from stock options, net of a forfeiture estimate, was approximately \$4.9 million as of September 30, 2013, which is expected to be recognized over a weighted-average period of 3.6 years beginning October 1, 2013. To the extent the actual forfeiture rate is different than what we have anticipated, share-based compensation expense related to these options will be different from our expectations.

Table of Contents

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

Restricted Shares

The following table summarizes our restricted share activity for the nine months ended September 30, 2013:

	Number of Shares (In thousands)	Weighted Average Grant-Date Fair Value (Per share)
Nonvested at December 31, 2012	816	\$5.61
Awards granted	750	4.50
Awards vested	(141)) 7.13
Awards forfeited	(95)) 4.80
Nonvested at September 30, 2013	1,330	\$4.88

The fair value of shares vested during the nine months ended September 30, 2013, was \$0.6 million.

Unrecognized compensation cost, net of a forfeiture estimate, was \$5.0 million as of September 30, 2013, which is expected to be recognized over a weighted average period of approximately 3.1 years beginning October 1, 2013. To the extent that the actual forfeiture rate is different than what we have anticipated, the share-based compensation expense related to these awards will be different from our expectations.

5. Income Taxes

Our income tax expense of \$12.2 million for the three months ended September 30, 2013, primarily reflects \$6.6 million of expense related to income taxes at certain of our foreign operations and foreign withholding taxes, \$2.8 million of expense for the revaluation of certain deferred taxes resulting from the approval of a tax incentive in Korea and a \$2.8 million addition to our unrecognized tax benefits related to the characterization of a deduction in a foreign jurisdiction. Our income tax expense also reflects income taxed in foreign jurisdictions where we benefit from tax holidays.

Our income tax expense of \$6.0 million for the nine months ended September 30, 2013, primarily reflects \$16.2 million of expense related to income taxes at certain of our foreign operations and foreign withholding taxes, \$2.8 million of expense for the revaluation of certain deferred taxes resulting from the approval of a tax incentive in Korea and a \$2.8 million addition to our unrecognized tax benefits related to the characterization of a deduction in a foreign jurisdiction. These income tax expense items were partially offset by a \$9.2 million benefit for the reversal of a deferred tax liability associated with the undistributed earnings from our investment in J-Devices Corporation (“J-Devices”) and by a \$6.6 million release of a valuation allowance on deferred tax assets at one of our foreign jurisdictions.

At September 30, 2013, we had U.S. net operating loss carryforwards totaling \$341.3 million, which expire at various times through 2033. Additionally, at September 30, 2013, we had \$40.2 million of non-U.S. net operating loss carryforwards, which expire at various times through 2019.

We maintain a valuation allowance on all of our U.S. net deferred tax assets, including our net operating loss carryforwards. We also have valuation allowances on deferred tax assets in certain foreign jurisdictions. Such valuation allowances are released as the related tax benefits are realized or when sufficient net positive evidence exists to conclude that it is more likely than not that the deferred tax assets will be realized.

Our gross unrecognized tax benefits increased from \$8.2 million at December 31, 2012, to \$11.9 million as of September 30, 2013, primarily because of a \$1.6 million addition related to the application of a law change in a foreign jurisdiction, a \$2.8 million addition related to the characterization of a deduction in a foreign jurisdiction and a \$0.8 million addition related to revenue attribution in a foreign jurisdiction. The additions were partially offset by \$1.5 million of net reductions related to the settlement of contested prior year deductions in a foreign jurisdiction. At September 30, 2013, all of our unrecognized tax benefits would reduce our effective tax rate, if recognized. Our unrecognized tax benefits are subject to change as

examinations of tax years are completed. Tax return examinations involve uncertainties, and there can be no assurances that the outcome of examinations will be favorable.

6. Earnings Per Share

Basic earnings per share (“EPS”) is computed by dividing net income attributable to Amkor common shareholders by the weighted average number of common shares outstanding during the period. The weighted average number of common shares outstanding includes restricted shares held by retirement eligible recipients and is reduced for treasury stock. Unvested share-based compensation awards that contain nonforfeitable rights to dividends or dividend equivalents are considered participating securities and are included in the computation of EPS pursuant to the two-class method. We grant restricted shares which entitle recipients to voting and nonforfeitable dividend rights from the date of grant. As a result, we have applied the two-class method to determine EPS.

Diluted EPS is computed on the basis of the weighted average number of shares of common stock plus the effect of dilutive potential common shares outstanding during the period. Dilutive potential common shares include outstanding stock options, unvested restricted shares and convertible debt. The following table summarizes the computation of basic and diluted EPS:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2013	2012	2013	2012
(In thousands, except per share data)				
Net income attributable to Amkor	\$25,349	\$22,317	\$68,458	\$34,672
Income allocated to participating securities	(155)	(55)	(511)	(81)
Net income available to Amkor common stockholders	25,194	22,262	67,947	34,591
Adjustment for dilutive securities on net income:				
Net income reallocated to participating securities	7	55	78	81
Interest on 6.0% convertible notes due 2014, net of tax	907	4,026	8,533	12,077
Net income attributable to Amkor — diluted	\$26,108	\$26,343	\$76,558	\$46,749
Weighted average shares outstanding — basic	216,499	154,365	176,839	162,699
Effect of dilutive securities:				
Stock options and restricted share awards	12	37	13	74
6.0% convertible notes due 2014	18,632	82,658	58,267	82,658
Weighted average shares outstanding — diluted	235,143	237,060	235,119	245,431
Net income attributable to Amkor per common share:				
Basic	\$0.12	\$0.14	\$0.38	\$0.21
Diluted	0.11	0.11	0.33	0.19

The following table summarizes the potential shares of common stock that were excluded from diluted EPS, because the effect of including these potential shares was antidilutive:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,

The following table presents depreciation expense as included in the Consolidated Statements of Income:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2013	2012	2013	2012
	(In thousands)			
Cost of sales	\$97,648	\$85,172	\$277,621	\$247,160
Selling, general and administrative	3,672	4,670	11,667	15,066
Research and development	3,914	2,889	10,023	7,666
Total depreciation expense	\$105,234	\$92,731	\$299,311	\$269,892

The following table reconciles our activity related to property, plant and equipment additions as presented on the Consolidated Balance Sheets to purchases of property, plant and equipment as presented on the Condensed Consolidated Statements of Cash Flows:

	For the Nine Months Ended September 30,	
	2013	2012
	(In thousands)	
Property, plant and equipment additions	\$380,179	\$446,767
Net change in related accounts payable and deposits	21,825	(66,423)
Purchases of property, plant and equipment	\$402,004	\$380,344

In February 2013, we entered into an agreement for the purchase of land for a factory and research and development center in Korea. The agreement to purchase the land for the facility is subject to our compliance with various construction, investment, hiring, regulatory and other requirements. We made a non-refundable deposit of 10.9 billion (\$10 million) at signing, a deposit of 43.4 billion (\$39 million) in the three months ended September 30, 2013 and have one remaining payment of 54.2 billion (approximately \$51 million) due during the three months ending December 31, 2013. As of September 30, 2013, the deposits are recorded in other assets on our Consolidated Balance Sheets.

10. Intangible Assets

Intangibles as of September 30, 2013, consist of the following:

	Gross	Accumulated Amortization	Net
	(In thousands)		
Patents and technology rights	\$22,361	\$(18,861)	\$3,500
Customer relationships	8,000	(7,442)	558
Total intangibles	\$30,361	\$(26,303)	\$4,058

Intangibles as of December 31, 2012, consist of the following:

	Gross	Accumulated Amortization	Net
	(In thousands)		
Patents and technology rights	\$22,169	\$(19,636)	\$2,533

Edgar Filing: AMKOR TECHNOLOGY INC - Form 10-Q

Amortization of identifiable intangible assets for the three and nine months ended September 30, 2013, was \$1.0 million and \$2.7 million, respectively. Amortization of identifiable intangible assets for the three and nine months ended September 30, 2012, was \$1.0 million and \$3.0 million, respectively. Based on the amortizing assets recognized in our balance sheet at September 30, 2013, amortization for each of the next five years is estimated as follows:

	Amortization (In thousands)
2013 remaining	\$928
2014	1,022
2015	731
2016	513
2017	477
Thereafter	387
Total amortization	\$4,058

11. Investments

Investments consist of the following:

	September 30, 2013		December 31, 2012		
	Carrying Value (In thousands)	Ownership Percentage	Carrying Value (In thousands)	Ownership Percentage	
Investment in unconsolidated affiliate	\$105,097	60.0	% \$38,690	30.0	%

J-Devices Corporation

In October 2009, Amkor and Toshiba Corporation (“Toshiba”) invested in Nakaya Microdevices Corporation (“NMD”) and formed a joint venture to provide semiconductor packaging and test services in Japan. As a result of the transaction, NMD changed its name to J-Devices Corporation. In April 2013, we completed the exercise of our option to increase our ownership interest in J-Devices from 30% to 60% for an aggregate purchase price of ¥6.7 billion (\$67.4 million). J-Devices is now owned 60% by Amkor, 34% by the former shareholders of NMD and 6% by Toshiba.

At September 30, 2013, our investment includes our 60% equity interest and options to acquire additional equity interests. The options are exercisable at our discretion and permit us to increase our ownership interest in J-Devices up to 66% in 2014 by purchasing shares owned by Toshiba and up to 80% in 2015 and thereafter by purchasing shares owned by the other shareholders. In 2014 and beyond, Toshiba has the option, at its discretion, to sell shares it owns to us. If we decline Toshiba's offer to sell their shares to us, then J-Devices shall have the obligation to purchase the shares. If J-Devices is unable to fulfill its obligation to purchase the shares offered by Toshiba, then we will be obligated to purchase the shares offered by Toshiba. The options in 2014 and 2015 become exercisable in the fourth quarter of such year, and if exercised, we would expect closing to occur in the first half of the following year, subject to regulatory approval. After we own 80% or more shares, the original shareholders of NMD have a put option which allows them to sell their shares to us. The exercise price for all options is payable in cash and is determined using a

formula based upon the net book value and a multiple of earnings before interest, taxes, depreciation and amortization of J-Devices.

The governance provisions currently applicable to J-Devices restrict our ability, even with our majority ownership, to cause J-Devices to take certain actions without the consent of the other investors. Accordingly, we account for our investment in J-Devices using the equity method of accounting. Under the equity method of accounting, we recognize our proportionate share of J-Devices' net income or loss, which is after J-Devices' income taxes in Japan, during each accounting period as a change in our investment in unconsolidated affiliate. In addition, we record equity method adjustments as a change in our investment in unconsolidated affiliate. Because our incremental proportionate share of J-Devices' equity exceeded the cost

- 14-

Table of Contents

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

of our additional investment, these adjustments include the amortization of a \$5.1 million basis difference. For the three and nine months ended September 30, 2013, our equity in earnings in J-Devices, net of J-Devices' income taxes in Japan, was \$3.2 million and \$4.7 million, respectively. For the three and nine months ended September 30, 2012, our equity in earnings in J-Devices, net of J-Devices' income taxes in Japan, was \$2.5 million and \$5.4 million, respectively.

In conjunction with entering into the joint venture, one of our subsidiaries in Japan purchased packaging and test equipment from Toshiba and leased the equipment to J-Devices under an agreement which was accounted for as a direct financing lease. At the end of the lease in October 2012, J-Devices exercised an option to purchase the remaining packaging and test equipment for ¥761.4 million. In January 2013, we received payment of ¥761.4 million (\$8.8 million) for the purchased equipment.

12. Accrued Expenses

Accrued expenses consist of the following:

	September 30, 2013	December 31, 2012
	(In thousands)	
Payroll and benefits	\$79,570	\$56,651
Deferred revenue and customer advances	52,968	52,773
Accrued interest	44,275	19,048
Accrued royalties (Note 17)	43,324	33,324
Acquisition payable (Note 3)	19,459	—
Accrued severance plan obligations (Note 14)	10,411	9,516
Income taxes payable	8,549	8,341
Other accrued expenses	32,287	33,311
Total accrued expenses	\$290,843	\$212,964

Accrued royalties relate to our estimate of royalties due as a result of our pending patent license arbitration (Note 17).

Long-term debt (including related party)	\$1,594,527	\$1,545,000

- In September 2012, ATI issued \$300.0 million of 6.375% Senior Notes due October 2022 (the “2022 Notes”). The 2022 Notes were issued at par and are senior unsecured obligations. Interest is payable semi-annually on April 1 and October 1 of each year, and commenced April 1, 2013. In May 2013, we issued an additional \$225.0 million of (1) 6.375% Senior Notes due October 2022 (the “Additional 2022 Notes”) under the same terms as the 2022 Notes. The Additional 2022 Notes were issued at a premium of 103% or \$6.8 million. The net proceeds from the issuance of the Additional 2022 Notes were designated for general corporate purposes. We incurred \$3.4 million of debt issuance costs associated with the Additional 2022 Notes.
- (2) In April 2009, we issued \$250 million of our 6.0% Convertible Senior Subordinated Notes due April 2014 (the “2014 Notes”). The 2014 Notes are convertible at any time prior to the maturity date into our common stock at a price of approximately \$3.02 per share, subject to adjustment. The 2014 Notes are subordinated to the prior payment in full of all of our senior debt. The 2014 Notes were purchased by certain qualified institutional buyers and an entity controlled by Mr. James J. Kim, our Executive Chairman of the Board of Directors. Mr. Kim's

affiliate

- 16-

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

purchased \$150.0 million of the 2014 Notes. In June 2013, we completed a tender offer for the 2014 Notes and exchanged \$193.7 million of the 2014 Notes, including the \$150.0 million held by Mr. Kim's affiliate, for an aggregate 64.0 million shares of our common stock and a cash payment of \$11.6 million. The cash payment was equivalent to the remaining coupons for the tendered notes and was recorded as a charge in our Consolidated Statements of Income for the nine months ended September 30, 2013.

(3) In June 2012, Amkor Technology Korea, Inc., a Korean subsidiary ("ATK") entered into a \$41.0 million revolving credit facility with a Korean Bank with a term of 12 months. Principal is payable upon maturity and interest is paid monthly. The loan is collateralized with substantially all the land, factories and equipment at our ATK facilities. In June 2013, the facility was amended by extending the term by three years to June 2016. The facility now bears interest at the foreign currency funding-linked base rate plus 2.00% (4.13% as of September 30, 2013). As of September 30, 2013, \$41.0 million was available to be borrowed for general working capital purposes.

(4) In April 2013, ATK entered into a loan agreement with a Korean bank pursuant to which ATK may borrow up to \$150.0 million for a term of three years. The loan is collateralized by substantially all the land, factories and equipment located at our ATK facilities. Principal is payable at maturity. Interest is due quarterly beginning three months after the first draw down date. Interest is payable at a rate of LIBOR plus 3.80% (4.07% as of September 30, 2013). As of September 30, 2013, \$140.0 million was available to be borrowed for general working capital purposes and the repayment of inter-company debt.

(5) In March 2013, ATK entered into a loan agreement with a Korean bank pursuant to which ATK may borrow up to \$150.0 million for a term of four and a half years. The loan is collateralized by substantially all the land, factories and equipment located at our ATK facilities. Principal is payable in quarterly installments of \$5.0 million starting in December 2014, with the remaining balance due at maturity. Interest is paid quarterly, at a foreign currency funding-linked base rate plus 1.75% (3.96% as of September 30, 2013). As of September 30, 2013, \$140.0 million was available to be borrowed for capital expenditures.

(6) In November 2012, ATK entered into a loan agreement with a Korean Bank pursuant to which ATK may borrow up to \$100.0 million by November 2013 for a term of seven years. The loan is collateralized by substantially all the land, factories and equipment located at our ATK facilities. Principal is payable upon maturity. Interest is payable quarterly in arrears, at LIBOR plus 3.70% (3.97% as of September 30, 2013). As of September 30, 2013, \$52.0 million was available to be borrowed for capital expenditures.

(7) In September 2012, Amkor Technology Taiwan Ltd, a subsidiary in Taiwan, entered into a revolving credit facility. The credit facility bears interest at the Taipei Foreign Exchange ("TAIFX") six month U.S. dollar rate plus a bank-determined spread. Availability under the revolving credit facility was originally \$44.0 million and subsequent availability steps down \$5.0 million every six months from the original available balance. Principal is payable at maturity. As of September 30, 2013, \$34.0 million was available to be drawn for general corporate purposes and capital expenditures.

The debt of Amkor Technology, Inc. is structurally subordinated in right of payment to all existing and future debt and other liabilities of our subsidiaries. Our collateralized bank debt agreements and the indentures governing our senior and senior subordinated notes contain a number of affirmative and negative covenants which could restrict our operations. We were in compliance with all of our covenants as of September 30, 2013.

14. Pension and Severance Plans

Foreign Defined Benefit Pension Plans

Our subsidiaries in Japan, Malaysia, the Philippines and Taiwan sponsor defined benefit pension plans that cover substantially all of their respective employees who are not covered by statutory plans. Charges to expense are based upon actuarial analyses. The components of net periodic pension cost for these defined benefit plans are as follows:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,	
	2013	2012	2013	2012
	(In thousands)			
Components of net periodic pension cost and total pension expense:				
Service cost	\$ 1,500	\$ 1,561	\$ 4,373	\$ 4,789
Interest cost	842	817	2,363	2,439
Expected return on plan assets	(852)) (800) (2,646) (2,370
Amortization of transition obligation	3	2	7	6
Amortization of prior service cost	50	54	148	179
Recognized actuarial loss	33	51	99	154
Net periodic pension cost	1,576	1,685	4,344	5,197
Curtailment (gain) loss	(148)) —	(148)) 1,089
Settlement gain	(209)) —	(209)) (100
Total pension expense	\$ 1,219	\$ 1,685	\$ 3,987	\$ 6,186

During the nine months ended September 30, 2012, we recognized net curtailment and settlement losses of \$1.0 million, resulting from the remeasurement of our defined benefit plan in Japan due to reductions in workforce (Note 19).

For the three and nine months ended September 30, 2013, we contributed \$0.1 million and \$0.3 million to the defined benefit pension plans, respectively. We expect to contribute approximately \$2.5 million to the pension plans during the remainder of 2013. For the three and nine months ended September 30, 2012, we contributed \$0.1 million and \$0.3 million to the defined benefit pension plans, respectively.

Korean Severance Plan

Our subsidiary in Korea participates in an accrued severance plan that covers employees with at least one year of service. To the extent eligible employees are terminated, our subsidiary in Korea would be required to make lump-sum severance payments on behalf of these eligible employees based on their length of service, seniority and rate of pay at the time of termination. Accrued severance benefits are estimated assuming all eligible employees were to terminate their employment at the balance sheet date. Our contributions to the National Pension Plan of the Republic of Korea are deducted from accrued severance benefit liabilities.

Table of Contents

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

The provision recorded for severance benefits for the three and nine months ended September 30, 2013, was \$6.9 million and \$19.8 million, respectively. The provision recorded for severance benefits for the three and nine months ended September 30, 2012, was \$7.0 million and \$14.6 million, respectively. The balance of our Korean severance obligation consists of the following:

	September 30, 2013	December 31, 2012
	(In thousands)	
Current (Accrued expenses)	\$10,411	\$9,516
Non-current (Pension and severance obligations)	127,590	116,997
Total Korean severance obligation	\$138,001	\$126,513

15. Treasury Stock

Stock Repurchase Program

Our Board of Directors previously authorized the repurchase of up to \$300.0 million of our common stock, exclusive of any fees, commissions or other expenses. The purchase of stock under the program may be made in the open market or through privately negotiated transactions. Since inception of the program, we have purchased a total of 45.0 million shares at an aggregate purchase price of \$208.4 million, net of \$0.9 million of commissions. The timing, manner, price and amount of any repurchases will be determined by us at our discretion and will depend upon a variety of factors including economic and market conditions, the cash needs and investment opportunities for the business, price, applicable legal requirements and other factors. Our stock repurchase program has been and is expected to be funded with available cash and may be suspended or discontinued at any time.

During the three and nine months ended September 30, 2013, we made no purchases under the stock repurchase program. During the three and nine months ended September 30, 2012, we purchased 8.4 million and 16.5 million shares of common stock for an aggregate purchase price of \$41.8 million and \$79.5 million, respectively, net of \$0.2 million and \$0.3 million of commissions, respectively, for an average price of \$4.99 and \$4.83, respectively. At September 30, 2013, there were no unsettled shares, and there was approximately \$91.6 million available to repurchase common stock pursuant to the stock repurchase program.

16. Fair Value Measurements

The accounting framework for determining fair value includes a hierarchy for ranking the quality and reliability of the information used to measure fair value, which enables the reader of the financial statements to assess the inputs used to develop those measurements. The fair value hierarchy consists of three tiers as follows: Level 1, defined as quoted market prices in active markets for identical assets or liabilities; Level 2, defined as inputs other than Level 1 that are observable, either directly or indirectly, such as quoted prices for similar assets or liabilities, quoted prices in markets that are not active, model-based valuation techniques for which all significant assumptions are observable in the market or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities and Level 3, defined as unobservable inputs that are not corroborated by market data.

Our assets and liabilities recorded at fair value on a recurring basis include cash equivalent money market funds, restricted cash money market funds and foreign currency forward contracts. Cash equivalent money market funds and

restricted cash money market funds are invested in U.S. money market funds and various U.S. and foreign bank operating and time deposit accounts, which are due on demand or carry a maturity date of less than three months when purchased. No restrictions have been imposed on us regarding withdrawal of balances with respect to our cash equivalents as a result of liquidity or other credit market issues affecting the money market funds we invest in or the counterparty financial institutions holding our deposits. Money market funds are valued using quoted market prices in active markets for identical assets.

Table of Contents

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

	September 30, 2013		December 31, 2012	
	Fair Value	Carrying Value	Fair Value	Carrying Value
	(In thousands)			
Senior notes (Level 1)	\$1,262,938	\$1,276,527	\$1,061,945	\$1,045,000
Convertible senior subordinated notes (Level 1)	83,325	56,350	371,975	250,000
Term loans (Level 2)	302,698	318,000	269,200	250,000
Total debt	\$1,648,961	\$1,650,877	\$1,703,120	\$1,545,000

The estimated fair value of the debt is based primarily on quoted market prices reported on or near the respective balance sheet dates for our senior and senior subordinated notes. The estimated fair value for the debt of our subsidiaries was calculated using a discounted cash flow analysis, which utilized market based assumptions including bond and credit default swap indices and was adjusted for credit risk.

17. Commitments and Contingencies

We have a letter of credit sub-facility of \$25.0 million under our \$150.0 million senior secured revolving credit facility that matures in June 2017. As of September 30, 2013, we had \$0.3 million of standby letters of credit outstanding and had an additional \$24.7 million available for letters of credit. Such standby letters of credit are used in the ordinary course of our business and are collateralized by our cash balances.

We generally warrant that our services will be performed in a professional and workmanlike manner and in compliance with our customers' specifications. We accrue costs for known warranty issues. Historically, our warranty costs have been immaterial.

Legal Proceedings

We are involved in claims and legal proceedings and may become involved in other legal matters arising in the ordinary course of our business. We evaluate these claims and legal matters on a case-by-case basis to make a determination as to the impact, if any, on our business, liquidity, results of operations, financial condition or cash flows. Except as indicated below, we believe that the ultimate outcome of these claims and proceedings, individually and in the aggregate, will not have a material adverse impact to us. Our evaluation of the potential impact of these claims and legal proceedings on our business, liquidity, results of operations, financial condition or cash flows could change in the future.

In accordance with the accounting guidance for loss contingencies, including legal proceedings, lawsuits, pending claims and other legal matters, we accrue for a loss contingency when we conclude that the likelihood of a loss is probable and the amount of the loss can be reasonably estimated. When the reasonable estimate of the loss is within a range of amounts, and no amount in the range constitutes a better estimate than any other amount, we accrue for the amount at the low end of the range. We adjust our accruals from time to time as we receive additional information, but the loss we incur may be significantly greater than or less than the amount we have accrued. We disclose loss contingencies if there is at least a reasonable possibility that a loss has been incurred. Attorney fees related to legal matters are expensed as incurred.

Proceedings with Tessera, Inc.

Since March 2006, we have been involved in several proceedings with Tessera, Inc. (“Tessera”) related to a license agreement (the “License Agreement”) entered into in 1996 between Tessera and our predecessor. The proceedings generally involve disputes about whether or not Amkor owes Tessera royalties under the License Agreement with respect to certain packages and the termination of the License Agreement. The main proceeding that is pending is with the International Court of Arbitration of the International Chamber of Commerce (the “ICC”) captioned Amkor Technology, Inc. v. Tessera, Inc. (the “2009 Tessera Arbitration”), which we initiated in August 2009. In that proceeding, the ICC arbitration panel issued partial awards and interim orders finding that royalties are due to Tessera with respect to certain asserted patents and packages and

- 21-

Table of Contents

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

that the License Agreement was terminated by Tessera as of February 17, 2011. The arbitration panel reserved for later decision the issues of the amount of royalties and pre-judgment interest due, and the allocation of costs.

In July 2012, Tessera filed a complaint in the U.S. District Court for the District of Delaware. The complaint seeks injunctive relief and damages with respect to Amkor's alleged infringement of one of the U.S. patents that the arbitration panel found to be royalty bearing in the 2009 Tessera Arbitration. We strongly dispute Tessera's claims and intend to vigorously defend against them. However, the outcome of this matter is uncertain, and an adverse decision could have a material adverse effect on our results of operations, financial condition and cash flows.

In February 2013, Tessera publicly announced its intention to seek an amount in excess of \$150 million in the 2009 Tessera Arbitration. That same month, we filed a petition in the Superior Court for San Francisco County to vacate or correct a portion of the arbitration panel's interim order relating to the panel's authority to award royalties for the period after the termination of the License Agreement. The Superior Court has denied our request and we have appealed that decision to the California First District Court of Appeal.

In October 2013, the arbitration panel issued another interim order which included, among other things, some substantive findings concerning the calculation of royalties under the License Agreement.

We recorded a charge to cost of goods sold in 2012 of \$50.0 million representing our estimate of the low end of the range of possible royalties owed to Tessera and a charge of \$6.0 million for related interest due to date in respect of the 2009 Tessera Arbitration. As a result of the latest interim order, we estimate the possible range of royalties due to Tessera to be from \$60 million to \$115 million (excluding interest). Because we believe that no amount in the range constitutes a better estimate than any other amount within that range, we recorded a charge to cost of goods sold of \$10.0 million during the three months ended September 30, 2013, to increase our accrual for royalties to the low end of the range. Of the \$60.0 million of charges we have recognized for royalties, we paid \$16.7 million to Tessera in August 2012, plus related interest.

As of September 30, 2013, our accrual for royalties was \$43.3 million, and our estimate of the possible range of royalties due to Tessera (net of the royalties paid in August 2012) is from \$43.3 million to \$98.3 million. The ultimate amount of damages and interest is subject to determination by the arbitration panel based on a number of complex factors, including the panel's determination of which package families the patents apply to, whether those packages meet criteria previously laid out by the panel, overlaps among the packages, the final date through which royalties are applicable and other factors. The final award could be more than the amounts paid or recognized. We may record additional charges as information develops or upon the issuance of the final award. We expect to record our estimate of interest accruing with the passage of time.

Amkor Technology, Inc. v. Carsem (M) Sdn Bhd, Carsem Semiconductor Sdn Bhd, and Carsem Inc.

Since November 2003, we have been involved in several proceedings against Carsem (M) Sdn Bhd, Carsem Semiconductor Sdn Bhd, and Carsem Inc. (collectively "Carsem") in which we allege that with its Carsem Dual and Quad Flat No-Lead Packages, Carsem has infringed on one or more of our MicroLeadFrame packaging technology patent claims. We initiated the action with the U.S International Trade Commission (the "ITC") in Washington, D.C. seeking, under Section 337 of the Tariff Act of 1930, an exclusion order barring the importation by Carsem of infringing products. We also filed a complaint against Carsem in the U.S. District Court for the Northern District of

California, alleging patent infringement and seeking an injunction, damages and costs. This District Court action has been stayed pending resolution of the ITC case.

The ITC determined that certain Carsem Dual and Quad Flat No-Lead Packages infringe some patent claims of Amkor's U.S. Patent No. 6,433,277 (the "277 Patent") but that these infringed claims are invalid and, as a result, there is no violation of the Tariff Act. We appealed the ITC's ruling of invalidity for the claims of the 277 Patent to the U.S. Court of Appeals for the Federal Circuit (the "Federal Circuit").

In 2012, the Federal Circuit reversed the ITC's determination of invalidity on the 277 Patent, denied Carsem's petition for a rehearing and remanded the matter to the ITC for further proceedings consistent with its ruling.

Table of Contents

AMKOR TECHNOLOGY, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(Unaudited)

On January 10, 2013, in response to Carsem, Inc.'s requests for reexamination of the 277 Patent, the United States Patent and Trademark Office issued an Office Action rejecting all of the 277 Patent claims as invalid. Amkor believes that all of the 277 Patent claims are valid and filed a response to the Office Action in March 2013 contesting this finding.

18. Business Segments

We have two reportable segments, packaging and test. Packaging and test are integral steps in the process of manufacturing semiconductor devices, and our customers may engage with us for both packaging and test services, or for packaging or test services individually. We have concluded that our packaging and test services constitute a group of similar services within each reportable segment.

The accounting policies for segment reporting are the same as those for our Consolidated Financial Statements as a whole. We evaluate our operating segments based on gross profit and gross property, plant and equipment. We do not specifically identify and allocate total assets by operating segment. Summarized financial information concerning reportable segments is shown in the following table. The "other" column includes corporate adjustments, gross property, plant and equipment of our corporate and sales offices and capital additions that do not directly support manufacturing operations, such as research and development and infrastructure projects.

	Packaging (In thousands)	Test	Other	Total
Three months ended September 30, 2013				
Net sales	\$655,294	\$112,693	\$—	\$767,987
Depreciation expense	67,357	30,291	—	97,648

19. Exit Activities and Reductions in Force

As part of our ongoing efforts to improve our manufacturing operations and manage costs, we regularly evaluate our staffing levels and facility requirements compared to business needs. The following table summarizes our exit activities and reduction in force initiatives associated with these efforts. “Charges” represents the initial charge related to the exit activity. “Cash Payments” consists of the utilization of “Charges.” “Non-cash Amounts” consists of asset impairments, pension plan curtailments and settlements and foreign currency adjustments.

	Employee Separation Costs (In thousands)
Accrual at December 31, 2012	\$1,607
Charges, net	8,083
Cash Payments	(10,061)
Non-cash Amounts	371
Accrual at September 30, 2013	\$—
	Employee Separation Costs (In thousands)
Accrual at December 31, 2011	\$—
Charges, net	7,160
Cash Payments	(6,209)
Non-cash Amounts	(951)
Accrual at September 30, 2012	\$—

Reductions in Force

During the three and nine months ended September 30, 2013, we reduced our workforce through voluntary retirement and other workforce reduction programs. During the three months ended September 30, 2013, we recorded \$2.1 million in net charges for termination benefits, of which \$1.7 million and \$0.4 million were charged to cost of sales and selling, general and administrative expenses, respectively. During the nine months ended September 30, 2013, we recorded \$8.1 million in net charges for termination benefits, of which \$6.8 million, \$1.0 million and \$0.3 million were charged to cost of sales; selling, general and administrative expenses and research and development expenses, respectively. All amounts were paid as of September 30, 2013.

During the nine months ended September 30, 2012, we reduced our workforce at one of our manufacturing operations. We recorded \$7.2 million in charges for termination benefits including \$1.0 million in net curtailment and settlement charges, of which \$5.5 million, \$1.6 million and \$0.1 million were charged to cost of sales; selling, general and administrative expenses and research and development expenses, respectively. All amounts were paid as of December 31, 2012.

Table of Contents

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

MANAGEMENT'S DISCUSSION AND ANALYSIS OF
FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Amkor is one of the world's leading providers of outsourced semiconductor packaging and test services. Packaging and test are integral steps in the process of manufacturing semiconductor devices. The semiconductor manufacturing process begins with the fabrication of individual transistors, or multiple transistors and other electronic elements combined into an integrated circuit (generally known as a "chip" or "die"), onto semiconductor material such as a silicon wafer. Each chip on the wafer is probe tested. The good chips are identified and the wafer is then separated into individual die. Each good die is then assembled into a package that typically encapsulates the die for protection and creates the electrical connections used to connect the package to a printed circuit board, module or other part of the electronic device. In some packages, chips are attached to a substrate or leadframe carrier through wirebonding or flip chip interconnects and then encased in a protective material. Or, for a wafer-level package, the electrical interconnections are created directly on the surface of the die (while the wafer is still intact) so that the chip may be attached directly to other parts of an electronic device without a substrate or leadframe. The packages are then tested using sophisticated equipment to ensure that each packaged chip meets its design and performance specifications. The test services we offer include probe testing and final testing.

Our packaging services are designed to meet application and chip specific requirements including the type of interconnect technology employed; size; thickness and electrical, mechanical and thermal performance. We are able to provide turnkey packaging and test services including semiconductor wafer bump, wafer probe, wafer backgrind, package design, packaging, test and drop shipment services.

Our business is impacted by market conditions in the semiconductor industry, which is cyclical by nature and impacted by broad economic factors, such as world-wide gross domestic product and consumer spending. Historical trends indicate there has been a strong correlation between world-wide gross domestic product levels, consumer spending and semiconductor industry cycles. The semiconductor industry has experienced significant and sometimes prolonged cyclical downturns in the past. We cannot predict the timing, strength or duration of any economic slowdown or subsequent economic recovery.

Our net sales, gross profit, operating income, cash flows, liquidity and capital resources have historically fluctuated significantly from quarter to quarter as a result of many factors, including the seasonality of our business, the cyclical nature of the semiconductor industry and other factors discussed in Part II, Item 1A of this Quarterly Report.

On July 31, 2013, we completed the purchase of 100% of the shares of Toshiba Electronics Malaysia Sdn. Bhd., Toshiba's power discrete semiconductor packaging and test operation in Malaysia. The financial results of the entity have been included in our Consolidated Financial Statements from the date of acquisition.

Our net sales increased \$72.6 million or 10.4% to \$768.0 million for the three months ended September 30, 2013, from \$695.4 million for the three months ended September 30, 2012. The increase was driven by a \$39.4 million or 6.4% increase in packaging net sales as well as a \$33.3 million or 41.9% increase in test net sales. The increases in packaging and test net sales were driven by strong demand for NAND memory, test and wafer-level processing services supporting mobile communications, as well as incremental business from our newly acquired power discrete business in Malaysia. These increases were partially offset by a decrease in net sales of packaging services related to products in the consumer end market.

Gross margin for the three months ended September 30, 2013, increased to 18.4% from 16.8% for the three months ended September 30, 2012. The increase was primarily driven by higher net sales of wafer-level processing, NAND memory and test services supporting mobile communications. Our gross margin for the three months ended September 30, 2013, was negatively impacted by a \$10.0 million charge to cost of sales relating to our pending patent license arbitration.

We operate in a capital intensive industry and have a significant level of debt. Servicing our current and future customers requires that we incur significant operating expenses and continue to make significant capital expenditures, which are generally made in advance of the related revenues and without any firm customer commitments. We fund our operations, including capital expenditures and debt service requirements, with cash flows from operations, existing cash and cash equivalents, borrowings under available credit facilities and proceeds from any additional financing. Maintaining an

Table of Contents

appropriate level of liquidity is important to our business and depends on, among other things, the performance of our business, our capital expenditure levels and our ability to repay debt out of our operating cash flows or proceeds from debt or equity financings.

Driven by continued customer demand for services supporting mobile communications products, our capital additions totaled \$380.2 million or 17.3% of net sales for the nine months ended September 30, 2013, compared to \$446.8 million or 21.9% of net sales for the nine months ended September 30, 2012. During the nine months ended September 30, 2013, 55.2% of our capital additions were made in packaging, 30.8% in test and 14.0% in research and development and infrastructure projects. During the nine months ended September 30, 2012, 41.4% of our capital additions were made in packaging, 39.6% in test and 19.0% in research and development and infrastructure projects.

Net cash provided by operating activities was \$375.2 million for the nine months ended September 30, 2013, compared to \$284.4 million for the nine months ended September 30, 2012. For the nine months ended September 30, 2013, we experienced negative free cash flow of \$26.8 million, primarily due to our capital purchases to support anticipated customer demand for packaging and test services related to mobile communications. We define free cash flow as net cash provided by operating activities less purchases of property, plant and equipment. Free cash flow is not defined by U.S. generally accepted accounting principles ("U.S. GAAP"), and a reconciliation of free cash flow to net cash provided by operating activities is set forth under the caption "Cash Flows" below.

Table of Contents

Results of Operations

The following table sets forth certain operating data as a percentage of net sales for the periods indicated:

	For the Three Months Ended September 30,		For the Nine Months Ended September 30,		
	2013	2012	2013	2012	
Net sales	100.0	% 100.0	% 100.0	% 100.0	%
Materials	39.0	% 42.8	% 41.0	% 43.6	%
Labor	14.1	% 14.8	% 14.3	% 14.4	%

Income before income taxes	5.0	% 4.6	% 3.5	% 2.2	%
Net income attributable to Amkor	3.3	% 3.2	% 3.1	% 1.7	%

Net Sales

	For the Three Months Ended September 30,					For the Nine Months Ended September 30,				
	2013	2012	Change			2013	2012	Change		
	(In thousands, except percentages)									
Net sales	\$767,987	\$695,353	\$72,634	10.4	%	\$2,201,575	\$2,036,890	\$164,685	8.1	%
Packaging net sales	655,294	615,933	39,361	6.4	%	1,895,462	1,808,111	87,351	4.8	%
Test net sales	112,693	79,420	33,273	41.9	%	306,113	228,779	77,334	33.8	%

Net Sales. Net sales in the three and nine months ended September 30, 2013, increased compared to the three and nine months ended September 30, 2012, as a result of higher net sales of our packaging and test services.

Packaging Net Sales. The increase in packaging net sales for the three and nine months ended September 30, 2013 was primarily driven by strong demand for NAND memory and wafer-level processing services supporting mobile communications along with incremental business from our newly acquired power discrete business in Malaysia. Our investments supporting mobile communications have continued to drive our growth in this end market. The increase in packaging net sales for the nine months ended September 30, 2013, was also attributable to high demand for our flip chip packaging services. These increases in net sales were partially offset by weakness in demand for products in the consumer end market, including gaming and home electronics. For the nine months ended September 30, 2013, our packaging net sales were also impacted by weakness in the computing end market as net sales in the prior year benefitted from incremental demand from customers whose supply chains were disrupted by the flooding in Thailand.

Packaging unit volume increased to 3.8 billion units during the three months ended September 30, 2013, compared to 2.2 billion units during the three months ended September 30, 2012. Packaging unit volume increased to 8.8 billion units during the nine months ended September 30, 2013, compared to 6.2 billion units during the nine months ended September 30, 2012. The increase for the three and nine months ended September 30, 2013, was primarily due to an increase in packaging services for discrete products from our newly acquired business in Malaysia, leadframe products and wafer-level processing services for mobile communications products.

Test Net Sales. The increase in test net sales in the three and nine months ended September 30, 2013 was primarily attributable to higher demand for test services for mobile communications and our continued investments in support of this end market as many of our mobile communications customers require turnkey packaging and test solutions.

Table of Contents

Cost of Sales

	For the Three Months Ended				For the Nine Months Ended			
	September 30,		September 30,		September 30,		September 30,	
	2013	2012	Change		2013	2012	Change	
	(In thousands, except percentages)							
Cost of sales	\$626,979	\$578,566	\$48,413	8.4	% \$1,807,235	\$1,725,802	\$81,433	4.7 %

Our cost of sales consists principally of materials, labor, depreciation and manufacturing overhead. Since a substantial portion of the costs at our factories is fixed, relatively modest increases or decreases in capacity utilization rates can have a significant effect on our gross margin.

Material costs as a percentage of net sales decreased to 39.0% and 41.0% for the three and nine months ended September 30, 2013, respectively, from 42.8% and 43.6% for the three and nine months ended September 30, 2012, respectively. The decrease was primarily due to a change in mix to packaging and test services with lower material content.

Labor costs as a percentage of net sales decreased to 14.1% and 14.3% for the three and nine months ended September 30, 2013, respectively, from 14.8% and 14.4% for the three and nine months ended September 30, 2012, respectively. The decrease was primarily due to higher net sales of packaging and test services while our labor costs remained consistent. Increases in our employee compensation costs were offset by net savings from restructuring activities at our manufacturing operations.

Other manufacturing costs as a percentage of net sales increased to 28.5% for the three months ended September 30, 2013, from 25.6% for the three months ended September 30, 2012. Our other manufacturing costs for the three months ended September 30, 2013, included a charge of \$10.0 million relating to our pending patent license arbitration. Other manufacturing costs as a percentage of net sales also increased as a result of higher depreciation expense due to our continued investments in property, plant and equipment to service the demand of our customers, primarily in support of mobile communications.

Other manufacturing costs as a percentage of net sales of 26.8% for the nine months ended September 30, 2013, remained consistent with other manufacturing costs as a percentage of sales of 26.7% for the nine months ended September 30, 2012. Our other manufacturing costs for the nine months ended September 30, 2013, included higher depreciation expense and a \$10.0 million charge from our pending patent license arbitration. Our results for the nine months ended September 30, 2012, included a \$30.0 million charge for the same arbitration.

Gross Profit

	For the Three Months Ended				For the Nine Months Ended			
	September 30,		September 30,		September 30,		September 30,	
	2013	2012	Change		2013	2012	Change	
	(In thousands, except percentages)							
Gross profit	\$141,008	\$116,787	\$24,221		\$394,340	\$311,088	\$83,252	
Gross margin	18.4	% 16.8	% 1.6		% 17.9	% 15.3	% 2.6	%

Gross profit and gross margin for the three and nine months ended September 30, 2013, increased compared to the three and nine months ended September 30, 2012. The increase in gross profit and gross margin was primarily driven by higher net sales of wafer-level processing, NAND memory and test services. Gross profit and gross margin for the three months ended September 30, 2013, were negatively impacted by a \$10.0 million charge to cost of sales for our pending patent license arbitration, which related entirely to the packaging segment. Our results for the nine months

ended September 30, 2012, included a \$30.0 million charge for the same arbitration.

- 28-

Table of Contents

	For the Three Months Ended September 30,			For the Nine Months Ended September 30,		
	2013	2012	Change	2013	2012	Change
	(In thousands, except percentages)					
Packaging gross profit	\$105,366	\$96,550	\$8,816	\$296,074	\$251,851	\$44,223
Packaging gross margin	16.1	% 15.7	% 0.4	% 15.6	% 13.9	% 1.7

Packaging Gross Profit. Gross profit and gross margin for packaging net sales for the three and nine months ended September 30, 2013, increased compared to the three and nine months ended September 30, 2012. The increase in gross profit and gross margin was primarily driven by higher net sales of wafer-level processing and NAND memory services. Gross profit and gross margin for packaging services for the three months ended September 30, 2013, were negatively impacted by a \$10.0 million charge to cost of sales for our pending patent license arbitration, which related entirely to the packaging segment. Our results for the nine months ended September 30, 2013, included a \$30.0 million charge for the same arbitration.

	For the Three Months Ended September 30,			For the Nine Months Ended September 30,		
	2013	2012	Change	2013	2012	Change
	(In thousands, except percentages)					
Test gross profit	\$35,642	\$20,237	\$15,405	\$98,266	\$59,237	\$39,029
Test gross margin	31.6	% 25.5	% 6.1	% 32.1	% 25.9	% 6.2

Test Gross Profit. Gross profit and gross margin for test net sales for the three and nine months ended September 30, 2013, increased compared to the three and nine months ended September 30, 2012. The increase in gross profit and margin was driven by higher test net sales in support of mobile communications. Costs of sales for test services are primarily fixed in nature and have relatively low material content. Accordingly, increases in net sales or utilization generally result in increased gross profit and gross margin due to the high degree of operating leverage for these services.

Selling, General and Administrative Expenses

	For the Three Months Ended September 30,					For the Nine Months Ended September 30,				
	2013	2012	Change			2013	2012	Change		
	(In thousands, except percentages)									
Selling, general and administrative	\$64,347	\$49,297	\$15,050	30.5	%	\$189,524	\$160,041	\$29,483	18.4	%

Selling, general and administrative expenses for the three and nine months ended September 30, 2013, increased compared to the three and nine months ended September 30, 2012. The increase for the three and nine months ended September 30, 2013, was attributable to higher employee compensation costs as well as professional fees associated with acquisitions and pending litigation.

Research and Development

	For the Three Months Ended September 30,					For the Nine Months Ended September 30,				
	2013	2012	Change			2013	2012	Change		
	(In thousands, except percentages)									
Research and development	\$18,647	\$13,472	\$5,175	38.4	%	\$47,261	\$40,764	\$6,497	15.9	%

Research and development activities are focused on developing new packaging interconnect and test services and improving the efficiency and capabilities of our existing production processes. Areas of focus include 3D packaging (including embedded die) silicon interposers and through silicon via technologies, fine pitch copper pillar packaging, wafer-level processing in support of advanced wafer nodes. The increase in research and development expenses for the three and nine months ended September 30, 2013, compared to the three and nine months ended September 30, 2012, was primarily

- 29-

Table of Contents

attributable to increased employee compensation costs along with higher depreciation as a result of our continued investments in research and development initiatives.

Other Expense, Net

	For the Three Months Ended September 30,					For the Nine Months Ended September 30,				
	2013	2012	Change			2013	2012	Change		
	(In thousands, except percentages)									
Interest expense, net	\$25,742	\$22,410	\$3,332	14.9	%	\$76,740	\$68,715	\$8,025	11.7	%
Foreign currency (gain) loss, net	(2,716)	2,394	(5,110)	213.5	%	(1,841)	4,461	(6,302)	141.3	%
Loss on debt retirement, net	—	—	—	—	%	11,619	—	11,619	100.0	%
Equity in earnings of unconsolidated affiliate	(3,179)	(2,541)	(638)	25.1	%	(4,679)	(5,421)	742	(13.7)	%
Other income, net	(7)	(359)	352	(98.1)	%	(344)	(1,511)	1,167	(77.2)	%
Total other expense, net	\$19,840	\$21,904	\$(2,064)	(9.4)	%	\$81,495	\$66,244	\$15,251	23.0	%

Interest expense for the three and nine months ended September 30, 2013, increased due to higher levels of long-term debt in 2013. In June 2013, we completed a tender offer for our Convertible Senior Subordinated Notes due 2014 and exchanged \$193.7 million of these notes for shares of our common stock. As a result of this transaction, we recorded a debt retirement charge of \$11.6 million related to the cash payment we made to holders of the notes.

Our foreign currency gains and losses are primarily the result of fluctuations of certain Asian based currencies and our net monetary exposure to those currencies at our foreign subsidiaries. During the three months ended September 30, 2013, we recorded a foreign currency gain of \$2.7 million primarily due to the appreciation of the Korean won relative to the U.S. dollar and the associated impact on our forward contracts. During the nine months ended September 30, 2013, we recorded a foreign currency gain of \$1.8 million, which was mainly driven by the depreciation of the Japanese yen relative to the U.S. dollar and the associated impact on our U.S. dollar denominated net monetary assets.

During the nine months ended September 30, 2013, we increased our ownership interest in J-Devices Corporation ("J-Devices") from 30% to 60%, and J-Devices completed its acquisition of three packaging and test factories from Renesas. Revenues for J-Devices have increased substantially during the three and nine months ended September 30, 2013, over the prior year periods as a result of acquisitions. However, J-Devices' profitability for such periods has been constrained due primarily to increased costs related to acquisitions and ongoing integration efforts, as well as lower overall utilization of fixed assets. The constrained profitability at J-Devices had a corresponding impact on our equity in earnings of J-Devices.

Income Tax Expense

	For the Three Months Ended September 30,					For the Nine Months Ended September 30,				
	2013	2012	Change			2013	2012	Change		
	(In thousands, except percentages)									
Income tax expense	\$12,170	\$9,538	\$2,632	27.6	%	\$5,961	\$9,009	\$(3,048)	(33.8)%	

Generally, our effective tax rate is below the U.S. federal tax rate of 35% because we have experienced taxable losses in the U.S. and our income is taxed in foreign jurisdictions where we benefit from tax holidays or tax rates lower than the U.S. statutory rate. Our income tax expense for the three and nine months ended September 30, 2013 and 2012, was attributable to income tax on profits earned in certain foreign jurisdictions and foreign withholding taxes, partially offset by discrete income tax benefits. During the nine months ended September 30, 2013, we recorded a discrete income tax benefit of \$9.2 million for the reversal of a deferred tax liability associated with the undistributed earnings from our investment in J-Devices and a discrete income tax benefit of \$6.6 million for the release of a valuation allowance on deferred tax assets at one of our foreign jurisdictions. During the three months ended September 30, 2013, we also recorded \$2.8 million of income tax expense for the revaluation of certain deferred taxes resulting from the approval of a tax incentive in Korea and \$2.8 million of income tax expense for an addition to our unrecognized tax benefits related to the characterization of a deduction in a

Table of Contents

foreign jurisdiction. During the three months ended September 30, 2012, we recorded \$3.1 million of income tax expense as a result of an addition to our unrecognized tax benefits related to the interpretation of a tax law change in a foreign jurisdiction.

During 2013, our subsidiaries in Korea, Malaysia, the Philippines and Taiwan have operated under tax holidays which will continue to expire in whole or in part at various dates through 2022. We expect our effective tax rate to increase as the tax holidays expire as income earned in these jurisdictions will be subject to higher statutory income tax rates.

At September 30, 2013, we had U.S. net operating loss carryforwards totaling \$341.3 million, which expire at various times through 2033. Additionally, at September 30, 2013, we had \$40.2 million of non-U.S. net operating loss carryforwards, which expire at various times through 2019. We maintain a valuation allowance on all of our U.S. net deferred tax assets, including our net operating loss carryforwards, and on deferred tax assets in certain foreign jurisdictions. We will release such valuation allowances as the related tax benefits are realized or when sufficient net positive evidence exists to conclude that it is more likely than not that the deferred tax assets will be realized.

Table of Contents

Liquidity and Capital Resources

We assess our liquidity based on our current expectations regarding sales, operating expenses, capital spending and debt service requirements. Based on this assessment, we believe that our cash flow from operating activities, together with existing cash and cash equivalents and availability under our revolving credit facilities, will be sufficient to fund our working capital, capital expenditure and debt service requirements for at least the next twelve months. Thereafter, our liquidity will continue to be affected by, among other things, volatility in the global economy and credit markets, the performance of our business, our capital expenditure levels, other uses of our cash including the final amount of payments due in our disputes with Tessera, any purchases of stock under our stock repurchase program, any investments in joint ventures or acquisitions and our ability to either repay debt out of operating cash flow or refinance at or prior to maturity with the proceeds of debt or equity offerings. There can be no assurance that we will generate the necessary net income or operating cash flows to meet the funding needs of our business beyond the next twelve months due to a variety of factors, including the cyclical nature of the semiconductor industry and other factors discussed in Part II, Item 1A of this Quarterly Report.

Our primary source of cash and the source of funds for our operations are cash flows from operations, current cash and cash equivalents, borrowings under available debt facilities and proceeds from any additional debt or equity financings. As of September 30, 2013, we had cash and cash equivalents of \$591.3 million, \$1,650.9 million of debt and availability of \$149.7 million under our \$150.0 million first lien senior secured revolving credit facility. Additionally, our foreign subsidiaries had \$75.0 million available to be drawn under secured revolving credit facilities for general corporate purposes, general working capital purposes and capital expenditures and \$332.0 million available to be borrowed under secured term loan credit facilities for general working capital purposes, capital expenditures and the repayment of inter-company debt.

Included in our cash balance as of September 30, 2013, is \$237.2 million held offshore by our foreign subsidiaries. If we were to distribute this offshore cash to the U.S. as repatriated earnings of our foreign subsidiaries, we would incur foreign withholding taxes; however, we would not incur a significant amount of U.S. federal income taxes, due to the availability of tax loss carryovers and foreign tax credits.

We sponsor an accrued severance plan for our subsidiary in Korea, which under existing tax laws in Korea, limits our ability to currently deduct related severance expenses accrued under that plan. The purpose of these limitations is to encourage companies to migrate to a defined contribution or defined benefit plan. If we retain our existing severance plan, the deduction for severance expenses will be limited to severance payments made to retired employees, which results in a larger current income tax liability in Korea. If we decide to adopt a new plan, we would be required to fund a significant portion of the existing liability, which would provide a current tax deduction upon funding. Our Korean severance liability was \$138.0 million as of September 30, 2013.

We refer you to Note 17 to our Consolidated Financial Statements in Part I, Item 1 of this Quarterly Report for a discussion of the pending arbitration relating to Amkor's license agreement with Tessera. We expect to use cash on hand, proceeds from borrowings under our existing lines of credit or other sources to make any payments due in connection with our litigation with Tessera.

We operate in a capital intensive industry. Servicing our current and future customers may require that we incur significant operating expenses and make significant investments in equipment and facilities, which are generally made in advance of the related revenues and without any firm customer commitments. Additionally, in April 2013 we completed the exercise of our option to increase our ownership interest of J-Devices, and in July 2013, we acquired Toshiba Electronics Malaysia Sdn. Bhd. We refer you to "Investments" below for further discussion.

In January 2013, we sold office space and land located in Chandler, Arizona for \$22.8 million, net of selling costs of \$1.2 million.

In May 2013, we issued an additional \$225.0 million of 6.375% Senior Notes due October 2022 (the “Additional 2022 Notes”) under the same terms as the original \$300.0 million of 6.375% Senior Notes due October 2022. The Additional 2022 Notes were issued at a premium of 103% or \$6.8 million. The net proceeds from the issuance of the Additional 2022 Notes were designated for general corporate purposes.

Table of Contents

In June 2013, we completed a tender offer for the 6.0% Convertible Senior Subordinated Notes due April 2014 (the “2014 Notes”) and exchanged \$193.7 million of the 2014 Notes, including the \$150.0 million held by Mr. Kim's affiliate, for an aggregate 64.0 million shares of our common stock and a cash payment of \$11.6 million. The cash payment was equivalent to the remaining coupons for the tendered notes.

Our scheduled principal repayments on debt include \$61.4 million due in 2014, \$105.0 million due in 2015, \$10.0 million due in 2016, \$150.0 million due in 2017 and \$1,318.0 million due thereafter. We were in compliance with all of our debt covenants at September 30, 2013, and expect to remain in compliance with these covenants for at least the next twelve months.

In order to reduce leverage and future cash interest payments, we may from time to time repurchase our outstanding notes for cash or exchange shares of our common stock for our outstanding notes. Any such transaction may be made in the open market, through privately negotiated transactions or otherwise and is subject to the terms of our indentures and other debt agreements, market conditions and other factors.

Certain debt agreements have restrictions on dividend payments and the repurchase of stock and subordinated securities, including our convertible notes. These restrictions are determined by calculations based upon cumulative net income. We have never paid a dividend to our stockholders, and we do not have any present plans for doing so. Amkor Technology, Inc. also guarantees certain debt of our subsidiaries.

Our Board of Directors previously authorized the repurchase of up to \$300.0 million of our common stock, exclusive of any fees, commissions or other expenses. We did not purchase any stock under the plan for the three months ended September 30, 2013. Since inception of the program, we have purchased a total of 45.0 million shares at an aggregate purchase price of \$208.4 million, net of \$0.9 million of commissions. At September 30, 2013, approximately \$91.6 million was available to repurchase common stock pursuant to the stock repurchase program. The purchase of stock may be made in the open market or through privately negotiated transactions. The timing, manner, price and amount of any repurchases will be determined by us at our discretion and will depend upon a variety of factors including economic and market conditions, the cash needs and investment opportunities for the business, price, applicable legal requirements and other factors. Our stock repurchase program may be suspended or discontinued at any time.

Investments

We expect that our 2013 capital additions will be approximately \$450 million, in addition to \$100 million of spending for the acquisition of land relating to our new factory and research and development center in Korea. We refer you below for further discussion. Our expected capital additions for 2013 primarily support customer demand for packaging and test services related to mobile communications. During the nine months ended September 30, 2013, our capital additions were \$380.2 million. Of this total, approximately 55.2% of our capital additions were made in packaging, 30.8% in test and 14.0% in research and development and infrastructure projects. Ultimately, the amount of our 2013 capital additions will depend on several factors including, among others, the timing and implementation of any capital projects under review, the performance of our business, economic and market conditions, the cash needs and investment opportunities for the business, the need for additional capacity to service anticipated customer demand and the availability of cash flows from operations or financing.

In February 2013, we entered into an agreement for the purchase of land for a factory and research and development center in Korea. The land purchase price was 108.5 billion (approximately \$100 million), payable in installments over ten months. We made a nonrefundable deposit of 10.9 billion (\$10 million) at signing, a deposit of 43.4 billion (\$39 million) in the three months ended September 30, 2013, and have one remaining payment of 54.2 billion (approximately \$51 million) due during the three months ending December 31, 2013. The agreement to purchase the

land for the facility is subject to our compliance with various construction, investment, hiring, regulatory and other requirements. We anticipate beginning construction of our new factory and research and development center in late 2014. Construction work will continue through 2015 and into early 2016. There can be no assurance that the new facility project will proceed at all, or that the actual scope, costs, timeline or benefits of the project will be consistent with our current expectations.

We are subject to risks associated with our capital additions, including those discussed in Part II, Item 1A of this Quarterly Report. The following table reconciles our activity related to property, plant and equipment additions as presented on the

- 33-

Table of Contents

Consolidated Balance Sheets to purchases of property, plant and equipment as presented on the Condensed Consolidated Statements of Cash Flows:

	For the Nine Months Ended September 30,	
	2013	2012
	(In thousands)	
Property, plant and equipment additions	\$380,179	\$446,767
Net change in related accounts payable and deposits	21,825	(66,423)
Purchases of property, plant and equipment	\$402,004	\$380,344

In April 2013, we completed the exercise of our option to increase our ownership interest of J-Devices, a joint venture to provide semiconductor packaging and test services in Japan, from 30% to 60% for an aggregate purchase price of ¥6.7 billion (\$67.4 million). J-Devices is now owned 60% by Amkor, 34% by the former shareholders of NMD and 6% by Toshiba. We also have options to acquire additional equity interests in J-Devices. The options are exercisable at our discretion and permit us to increase our ownership interest in J-Devices up to 66% in 2014 and up to 80% in 2015 and thereafter. We expect to exercise our options and increase our ownership interest to 80% at which time certain governance restrictions will lapse and we will begin consolidating J-Devices' results. The exercise price for all options is payable in cash and is determined using a formula based upon the net book value and a multiple of earnings before interest, taxes, depreciation and amortization of J-Devices.

On July 31, 2013, we completed the purchase of 100% of the shares of Toshiba Electronics Malaysia Sdn. Bhd., Toshiba's power discrete semiconductor packaging and test operation in Malaysia. The total price for the shares was \$61.9 million, based on the estimated net asset value at closing. The price for the shares is subject to adjustment to the extent the actual net asset value at closing was more or less than the estimate. We paid \$42.4 million in cash at closing and are obligated to pay the remaining \$19.5 million by March 31, 2014.

Contractual Obligations

The following table summarizes our contractual obligations at September 30, 2013, and the effect such obligations are expected to have on our liquidity and cash flow in future periods:

	Total	Payments Due for Year Ending December 31,					
		2013 - Remaining	2014	2015	2016	2017	Thereafter
	(In thousands)						
Total debt	\$1,644,350	\$—	\$61,350	\$105,000	\$10,000	\$150,000	\$1,318,000
Scheduled interest payment obligations (1)	704,185	47,756	100,522	95,043	93,819	90,468	276,577
Purchase obligations (2)	76,935	59,733	3,079	2,159	1,857	1,857	8,250
Operating lease obligations	69,095	5,464	19,444	13,517	11,367	11,250	8,053
Severance obligations (3)	138,001	10,411	9,589	8,873	8,201	7,593	93,334
Total contractual obligations	\$2,632,566	\$123,364	\$193,984	\$224,592	\$125,244	\$261,168	\$1,704,214

(1) Scheduled interest payment obligations were calculated using stated coupon rates for fixed rate debt and interest rates applicable at September 30, 2013, for variable rate debt.

(2) Represents capital-related purchase obligations and long-term supply contracts outstanding at September 30, 2013.

(3) Represents estimated benefit payments for our Korean subsidiary severance plan.

In addition to the obligations identified in the table above, other non-current liabilities recorded in our Consolidated Balance Sheets at September 30, 2013, include:

\$31.4 million of net foreign pension plan obligations for which the timing and actual amount of funding required is uncertain. We expect to contribute approximately \$2.5 million to the defined benefit pension plans during the remainder of 2013.

- 34-

Table of Contents

\$2.3 million net liability associated with unrecognized tax benefits. Due to the uncertainty regarding the amount and the timing of any future cash outflows associated with our unrecognized tax benefits, we are unable to reasonably estimate the amount and period of ultimate settlement, if any, with the various taxing authorities.

Off-Balance Sheet Arrangements

As of September 30, 2013, we had no off-balance sheet guarantees or other off-balance sheet arrangements as defined in Item 303(a)(4)(ii) of SEC Regulation S-K, other than our operating lease obligations described above in "Contractual Obligations."

Contingencies, Indemnifications and Guarantees

We refer you to Note 17 to our Consolidated Financial Statements in Part I, Item 1 of this Quarterly Report for a discussion of our contingencies related to litigation and other legal matters. If an unfavorable ruling were to occur in these matters, there exists the possibility of a material adverse impact on our business, liquidity, results of operations, financial position and cash flows in the period in which the ruling occurs. The potential impact from legal proceedings on our business, liquidity, results of operations, financial position and cash flows could change in the future.

Critical Accounting Policies

Our critical accounting policies are disclosed in our Annual Report on Form 10-K for the year ended December 31, 2012. During the three months ended September 30, 2013, there have been no significant changes in our critical accounting policies as reported in our 2012 Annual Report on Form 10-K.

New Accounting Pronouncements

For information regarding recent accounting pronouncements, we refer you to Note 2 to our Consolidated Financial Statements in Part I, Item 1 of this Quarterly Report.

Cash Flows

Net cash provided by (used in) operating, investing and financing activities for the nine months ended September 30, 2013 and 2012, were as follows:

	For the Nine Months Ended September 30,	
	2013	2012
	(In thousands)	
Operating activities	\$375,245	\$284,436
Investing activities	(476,908)	(361,450)
Financing activities	277,931	192,234

Operating activities: Our cash flow provided by operating activities for the nine months ended September 30, 2013, increased by \$90.8 million compared to the nine months ended September 30, 2012. Operating income for the nine months ended September 30, 2013, adjusted for depreciation and amortization, other operating activities and non-cash items, increased by \$64.4 million compared to the nine months ended September 30, 2012. The increase is primarily attributable to increased gross profit and the related increase in operating income.

Changes in assets and liabilities increased operating cash flow by \$4.2 million for the nine months ended September 30, 2013, primarily as a result of an increase in accrued expenses offset by an increase in accounts receivable. For the

nine months ended September 30, 2012, changes in assets and liabilities decreased operating cash flows by \$22.8 million as a result of an increase in accounts receivable due to increased demand, offset by an increase in accounts payable and accrued expenses.

- 35-

Table of Contents

Investing activities: Our cash flows used in investing activities for the nine months ended September 30, 2013, increased by \$115.5 million compared to the nine months ended September 30, 2012. The increase in the nine months ended September 30, 2013, was primarily due to payments for an investment in J-Devices of \$67.4 million and for our newly acquired power discrete business in Malaysia of \$42.4 million.

Financing activities: Our cash flows provided by financing activities for the nine months ended September 30, 2013, increased by \$85.7 million compared to the nine months ended September 30, 2012. The net cash provided by financing activities for the nine months ended September 30, 2013 resulted from the issuance of the Additional 2022 Notes for \$225.0 million and borrowings of \$68.0 million in accordance with the loan agreements at our subsidiary in Korea.

The net cash provided by financing activities for the nine months ended September 30, 2012, primarily resulted from the issuance of \$300.0 million of our 6.375% Senior Notes due 2022 (the “2022 Notes”) and foreign borrowings of \$292.5 million offset by foreign debt repayments of \$313.0 million, the repurchase of \$80.9 million of common stock under our authorized stock repurchase program and payment of \$6.0 million in debt issuance costs associated with the amendment and restatement of our first lien senior secured revolving credit facility and the issuance of the 2022 Notes.

We provide the following supplemental data to assist our investors and analysts in understanding our liquidity and capital resources. We define free cash flow as net cash provided by operating activities less purchases of property, plant and equipment. Free cash flow is not defined by U.S. GAAP. We believe free cash flow to be relevant and useful information to our investors because it provides them with additional information in assessing our liquidity, capital resources and financial operating results. Our management uses free cash flow in evaluating our liquidity, our ability to service debt and our ability to fund capital additions. However, free cash flow has certain limitations, including that it does not represent the residual cash flow available for discretionary expenditures since other, non-discretionary expenditures, such as mandatory debt service, are not deducted from the measure. The amount of mandatory versus discretionary expenditures can vary significantly between periods. This measure should be considered in addition to, and not as a substitute for, or superior to, other measures of liquidity or financial performance prepared in accordance with U.S. GAAP, such as net cash provided by operating activities. Furthermore, our definition of free cash flow may not be comparable to similarly titled measures reported by other companies. We experienced negative free cash flow of \$26.8 million for the nine months ended September 30, 2013, primarily due to our capital purchases to support customer demand for packaging and test services related to mobile communications.

	For the Nine Months Ended September 30,	
	2013	2012
	(In thousands)	
Net cash provided by operating activities	\$375,245	\$284,436
Purchases of property, plant and equipment	(402,004)	(380,344)
Free cash flow	\$(26,759)	\$(95,908)

Item 3. Quantitative and Qualitative Disclosures about Market Risk

Market Risk Sensitivity

We are exposed to market risks, primarily related to foreign currency and interest rate fluctuations. In the normal course of business, we employ established policies and procedures to manage the exposure to fluctuations in foreign currency values and changes in interest rates. Our use of derivative instruments, including forward exchange contracts, has been historically insignificant; however, we continue to evaluate the use of hedging instruments to manage

currency and other risks.

- 36-

Table of Contents

Foreign Currency Risk

In order to reduce our exposure to foreign currency gains and losses, we generally use natural hedging techniques to reduce foreign currency rate risk.

The U.S. dollar is our reporting currency and the functional currency for the majority of our foreign subsidiaries including our largest subsidiaries in Korea and the Philippines and also our subsidiaries in China, Malaysia, Singapore and Taiwan. For our subsidiaries and J-Devices in Japan, the local currency is the functional currency.

We have foreign currency exchange rate risk associated with the remeasurement of monetary assets and liabilities on our Consolidated Balance Sheets that are denominated in currencies other than the functional currency. We performed a sensitivity analysis of our foreign currency exposure as of September 30, 2013, to assess the potential impact of fluctuations in exchange rates for all foreign denominated assets and liabilities. Assuming a 10% adverse movement for all currencies against the U.S. dollar as of September 30, 2013, our income before income taxes would have been approximately \$18 million lower.

In addition, we have foreign currency exchange rate exposure on our results of operations. For the nine months ended September 30, 2013, approximately 93% of our net sales were denominated in U.S. dollars. Our remaining net sales were principally denominated in Japanese yen and Korean won for local country sales. For the nine months ended September 30, 2013, approximately 62% of our cost of sales and operating expenses were denominated in U.S. dollars and were largely for raw materials and factory supplies. The remaining portion of our cost of sales and operating expenses was principally denominated in the Asian currency where our production facilities are located and largely consisted of labor and utilities. To the extent that the U.S. dollar weakens against these Asian-based currencies, similar foreign currency denominated transactions in the future will result in higher sales, higher cost of sales and operating expenses, with cost of sales and operating expenses having the greater impact on our financial results. Similarly, our sales, cost of sales and operating expenses will decrease if the U.S. dollar strengthens against these foreign currencies. We performed a sensitivity analysis of our foreign currency exposure as of September 30, 2013, to assess the potential impact of fluctuations in exchange rates for all foreign denominated sales and expenses. Assuming a 10% adverse movement from the nine months ended September 30, 2013, exchange rates of the U.S. dollar compared to all of these Asian-based currencies as of September 30, 2013, our operating income would have been approximately \$67 million lower.

There are inherent limitations in the sensitivity analysis presented, primarily due to the assumption that foreign exchange rate movements across multiple jurisdictions are similar and would be linear and instantaneous. As a result, the analysis is unable to reflect the potential effects of more complex market or other changes that could arise which may positively or negatively affect our results of operations.

We have foreign currency exchange rate exposure on our stockholders' equity as a result of the translation of our subsidiaries and J-Devices in Japan where the local currency is the functional currency. To the extent the U.S. dollar strengthens against the local currency, the translation of these foreign currency denominated balances will result in reduced sales, operating expenses, assets and liabilities. Similarly, our sales, operating expenses, assets and liabilities will increase if the U.S. dollar weakens against the local currencies. The effect of foreign exchange rate translation on our Consolidated Balance Sheets for the nine months ended September 30, 2013 and 2012, was a net foreign translation loss of \$8.8 million and a gain of \$0.1 million, respectively, and was recognized as an adjustment to equity through other comprehensive (loss) income.

During the nine months ended September 30, 2013, we entered into foreign currency forward contracts to serve as an economic hedge for the payments related to the agreement to purchase land in Korea (Note 9 and Note 16). We performed a sensitivity analysis of our foreign currency forward contracts to assess the potential impact of fluctuations in exchange rates. Assuming a 10% adverse movement in the exchange rates as of September 30, 2013, our income before income taxes would have been approximately \$5 million lower.

Interest Rate Risk

We have interest rate risk with respect to our long-term debt. As of September 30, 2013, we had a total of \$1,644.4 million of debt of which 80.7% was fixed rate debt and 19.3% was variable rate debt. The fixed rate debt consists of senior notes and senior subordinated notes. Our variable rate debt principally relates to our foreign borrowings and revolving lines of

Table of Contents

credit and any amounts outstanding under our \$150.0 million senior secured revolving credit facility, of which no amounts were drawn as of September 30, 2013. As of December 31, 2012, we had a total of \$1,545.0 million of debt of which 83.8% was fixed rate debt and 16.2% was variable rate debt. Changes in interest rates have different impacts on the fixed and variable rate portions of our debt portfolio. A change in interest rates on the fixed portion of the debt portfolio impacts the fair value of the debt instrument but has no impact on interest expense or cash flows. A change in interest rates on the variable portion of the debt portfolio impacts the interest incurred and cash flows but does not generally impact the fair value of the instrument. The fair value of the senior subordinated notes is also impacted by changes in the market price of our common stock.

The table below presents the interest rates, maturities and fair value of our fixed and variable rate debt as of September 30, 2013:

	2013 - Remaining	2014	2015	2016	2017	Thereafter	Total	Fair Value
Long term debt:								
Fixed rate debt (In thousands)	\$—	\$56,350	\$—	\$—	\$—	\$1,270,000	\$1,326,350	\$1,346,263
Average interest rate	— %	6.0	% —	% —	% —	% 6.7	% 6.7	%
Variable rate debt (In thousands)	\$—	\$5,000	\$105,000	\$10,000	\$150,000	\$48,000	\$318,000	\$302,698
Average interest rate	— %	4.0	% 4.4	% 4.1	% 4.2	% 4.0	% 4.2	%

For information regarding the fair value of our long-term debt, see Note 16 to our Consolidated Financial Statements in Part I, Item 1 of this Quarterly Report.

Equity Price Risk

We have convertible notes that are convertible into our common stock. If investors were to decide to convert their notes to common stock, our future earnings would benefit from a reduction in interest expense and our common stock outstanding would be increased. If we paid a premium to induce such conversion, our earnings could include an additional charge.

Further, the trading price of our common stock has been and is likely to continue to be highly volatile and could be subject to wide fluctuations. Such fluctuations could impact our decision or ability to utilize the equity markets as a potential source of our funding needs in the future.

Item 4. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in our periodic reports to the SEC is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms, and that such information is accumulated and communicated to our management, including our Chief Executive Officer and our Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure, based on the definition of "disclosure controls and procedures" in Rule 13a-15(e) and Rule 15d-15(e) under the Securities Exchange Act of 1934, as amended. In designing and evaluating the disclosure

controls and procedures, management recognizes that any disclosure controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and management necessarily is required to apply its judgment in evaluating the cost-benefit relationship of possible disclosure controls and procedures.

We carried out an evaluation, under the supervision and with the participation of management, including our Chief Executive Officer and our Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures as of September 30, 2013 and concluded those disclosure controls and procedures were effective as of that date.

Changes in Internal Control Over Financial Reporting

On July 31, 2013, we completed our acquisition of Toshiba Electronics Malaysia Sdn. Bhd. We have extended our oversight and monitoring processes that support internal control over financial reporting to include the acquired operations. We are continuing to integrate the acquired operations into our overall internal control over financial reporting. There have been

Table of Contents

no other changes in our internal control over financial reporting during the three months ended September 30, 2013, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

As previously reported, we continue to implement an enterprise resource planning system over a multi-year program on a company-wide basis. In addition, we are also implementing a new shop floor system in certain of our factories.

Table of Contents

PART II. OTHER INFORMATION

Item 1. Legal Proceedings

Information about legal proceedings is set forth in Note 17 to our Consolidated Financial Statements in Part I, Item 1 of this Quarterly Report.

Item 1A. Risk Factors

The factors discussed below are cautionary statements that identify important factors and risks that could cause actual results to differ materially from those anticipated by the forward-looking statements contained in this report. For more information regarding the forward-looking statements contained in this report, see the introductory paragraph to Part I, Item 2 of this Quarterly Report. You should carefully consider the risks and uncertainties described below, together with all of the other information included in this report, in considering our business and prospects. The risks and uncertainties described below are not the only ones facing Amkor. Additional risks and uncertainties not presently known to us may also impair our business operations. The occurrence of any of the following risks could affect our business, liquidity, results of operations, financial condition or cash flows.

Dependence on the Highly Cyclical Semiconductor and Electronic Products Industries - We Operate in Volatile Industries and Industry Downturns and Declines in Global Economic and Financial Conditions Could Harm Our Performance.

Our business is impacted by market conditions in the semiconductor industry, which is cyclical by nature and impacted by broad economic factors, such as world-wide gross domestic product and consumer spending. The semiconductor industry has experienced significant and sometimes prolonged downturns in the past. For example, the financial crisis and global recession in 2008 and 2009 resulted in a downturn in the semiconductor industry that adversely affected our business and results of operations during those periods. Although the world economy recovered somewhat in 2010, economic growth slowed in 2011 and 2012 in the U.S. and internationally. In view of this slow growth and the current economic uncertainty worldwide, consumer demand in the U.S. and globally may be adversely impacted which may harm the semiconductor industry and our business.

Since our business is, and will continue to be, dependent on the requirements of semiconductor companies for outsourced packaging and test services, any downturn in the semiconductor industry or any other industry that uses a significant number of semiconductor devices, such as consumer electronic products, telecommunication devices or computing devices, could have a material adverse effect on our business and operating results. It is difficult to predict the timing, strength or duration of any economic slowdown or subsequent economic recovery, which, in turn, makes it more challenging for us to forecast our operating results, make business decisions and identify risks that may affect our business, sources and uses of cash, financial condition and results of operations. Additionally, if industry conditions deteriorate, we could suffer significant losses, as we have in the past, which could materially impact our business, liquidity, results of operations, financial condition and cash flows.

Fluctuations in Operating Results and Cash Flows - Our Operating Results and Cash Flows Have Varied and May Vary Significantly as a Result of Factors That We Cannot Control.

Many factors, including the impact of adverse economic conditions, could have a material adverse effect on our net sales, gross profit, operating results and cash flows, or lead to significant variability of quarterly or annual operating results. Our profitability and ability to generate cash from operations is principally dependent upon demand for semiconductors, the utilization of our capacity, semiconductor package mix, the average selling price of our services,

our ability to manage our capital expenditures in response to market conditions and our ability to control our costs including labor, material, overhead and financing costs. The downturn in demand for semiconductors in late 2008 and in 2009 resulted in significant declines in our operating results and cash flows as capacity utilization declined. Although the world economy recovered somewhat in 2010, the recent slow rate of economic growth in the U.S. and elsewhere and economic uncertainty worldwide, or the negative impact on economic growth resulting from the action or inaction of the U.S. government relating to federal income tax increases, the federal debt ceiling, the federal deficit and government spending restrictions or shutdowns, could adversely affect consumer demand in the U.S. and globally, which may negatively impact our operating results.

Table of Contents

Our net sales, gross profit, operating income and cash flows have historically fluctuated significantly from quarter to quarter as a result of many of the following factors, over which we have little or no control and which we expect to continue to impact our business:

- fluctuation in demand for semiconductors and conditions in the semiconductor industry, such as inventory corrections by our customers impacting demand in key market segments;
- changes in our capacity utilization rates;
- changes in average selling prices;
- changes in the mix of semiconductor packages;
- evolving packaging and test technology;
- absence of backlog and the short-term nature of our customers' commitments and the impact of these factors on the timing and volume of orders relative to our production capacity;
- changes in costs, availability and delivery times of raw materials and components;
- changes in labor costs to perform our services;
- wage and commodity price inflation, including precious metals;
- the timing of expenditures in anticipation of future orders;
- changes in effective tax rates;
- the availability and cost of financing;
- intellectual property transactions and disputes;
- high leverage and restrictive covenants;
- warranty and product liability claims and the impact of quality excursions and customer disputes and returns;
- costs associated with litigation judgments, indemnification claims and settlements;
- international events, political instability, civil disturbances or environmental or natural events, such as earthquakes, that impact our operations;
- pandemic illnesses that may impact our labor force and our ability to travel;
- difficulties integrating acquisitions and the failure of our joint ventures to operate in accordance with business plans;
- our ability to attract and retain qualified employees to support our global operations;
- loss of key personnel or the shortage of available skilled workers;
- fluctuations in foreign exchange rates and the cost of materials used in our packaging services such as gold and copper;
- delay, rescheduling and cancellation of large orders;
- fluctuations in our manufacturing yields and
- dependence on key customers or concentration of customers in certain market segments, such as mobile communications.

Table of Contents

It is often difficult to predict the impact of these factors upon our results for a particular period. The downturn in the global economy and the semiconductor industry increased the risks associated with the foregoing factors as customer forecasts became more volatile, and there was less visibility regarding future demand and significantly increased uncertainty regarding the economy, credit markets and consumer demand. Although the world economy recovered somewhat in 2010, the recent slow rate of economic growth in the U.S. and elsewhere and economic uncertainty worldwide could continue to cause volatility in customer forecasts and reduce our visibility regarding future demand in the semiconductor industry. These factors may have a material and adverse effect on our business, liquidity, results of operations, financial condition and cash flows or lead to significant variability of quarterly or annual operating results. In addition, these factors may adversely affect our credit ratings which could make it more difficult and expensive for us to raise capital and could adversely affect the price of our securities.

High Fixed Costs - Due to Our High Percentage of Fixed Costs, We Will Be Unable to Maintain Our Gross Margin at Past Levels if We Are Unable to Achieve Relatively High Capacity Utilization Rates.

Our operations are characterized by relatively high fixed costs. Our profitability depends in part not only on pricing levels for our packaging and test services, but also on the efficient utilization of our human resources and packaging and test equipment. In particular, increases or decreases in our capacity utilization can significantly affect gross margins since the unit cost of packaging and test services generally decreases as fixed costs are allocated over a larger number of units. In periods of low demand, we experience relatively low capacity utilization in our operations, which leads to reduced margins during that period. For example, we experienced lower than optimum utilization in late 2008 and in 2009 due to a decline in world-wide demand for our packaging and test services which impacted our gross margin. Transitions between different packaging technologies, such as the transition from gold wirebond to flip chip and copper wirebond packages, can also impact our capacity utilization if we do not efficiently redeploy our equipment assets. For example, in 2011 the migration of some customer demand from wirebond to flip chip packages resulted in under-utilized wirebond assets which negatively impacted our capacity utilization and gross margin. We cannot assure you that we will be able to achieve consistently high capacity utilization, and if we fail to do so, our gross margins may decrease. If our gross margins decrease, our business, liquidity, results of operations, financial condition and cash flows could be materially adversely affected.

In addition, our fixed operating costs have increased in recent years in part as a result of our efforts to expand our capacity through significant capital additions. Forecasted customer demand for which we have made capital investments may not materialize, especially if industry conditions deteriorate. As a result, our sales may not adequately cover fixed costs resulting in reduced profit levels or causing significant losses, both of which may adversely impact our business, liquidity, results of operations, financial condition and cash flows.

Guidance - Our Failure to Meet Our Guidance or Analyst Projections Could Adversely Impact the Trading Prices of Our Securities.

We periodically provide guidance to investors with respect to certain financial information for future periods. Securities analysts also periodically publish their own projections with respect to our future operating results. As discussed above under “Fluctuations in Operating Results and Cash Flows - Our Operating Results and Cash Flows Have Varied and May Vary Significantly as a Result of Factors That We Cannot Control,” our operating results and cash flows vary significantly and are difficult to accurately predict. Volatility in customer forecasts and reduced visibility caused by economic uncertainty and fluctuations in global consumer demand make it particularly difficult to predict future results. To the extent we fail to meet or exceed our own guidance or the analyst projections for any reason, the trading prices of our securities may be adversely impacted. Moreover, even if we do meet or exceed that guidance or those projections, if analysts and investors do not react favorably, or if analysts were to discontinue providing coverage of our company, the trading prices of our securities may be adversely impacted.

Declining Average Selling Prices - The Semiconductor Industry Places Downward Pressure on the Prices of Our Packaging and Test Services.

Prices for packaging and test services have generally declined over time. Historically, we have been able to partially offset the effect of price declines by successfully developing and marketing new packages with higher margins, by negotiating lower prices with our material vendors, recovering material cost increases from our customers and by driving engineering and technological changes in our packaging and test processes, which resulted in reduced manufacturing costs. We expect

- 42-

Table of Contents

downward pressure on average selling prices for our packaging and test services to continue in the future. If we are unable to offset a decline in average selling prices by developing and marketing new packages with higher prices, reducing our purchasing costs, recovering more of our material cost increases from our customers and reducing our manufacturing costs, our business, liquidity, results of operations, financial condition and cash flows could be materially adversely affected.

Decisions by Our Integrated Device Manufacturer Customers to Curtail Outsourcing May Adversely Affect Our Business.

Historically, we have been dependent on the trend in outsourcing of packaging and test services by integrated device manufacturers ("IDM"). Our IDM customers continually evaluate the need for outsourced services against their own in-house packaging and test services. As a result, at any time and for a variety of reasons, IDMs may decide to shift some or all of their outsourced packaging and test services to internally sourced capacity.

The reasons IDMs may shift their outsourced business to internal capacity include:

- their desire to realize higher utilization of their existing packaging and test capacity, especially during downturns in the semiconductor industry;
- their unwillingness to disclose proprietary technology;
- their possession of more advanced packaging and test technologies and
- the guaranteed availability of their own packaging and test capacity.

In addition, to the extent we limit capacity commitments for certain customers, these customers may increase their level of in-house packaging and test capabilities, which could make it more difficult for us to regain their business when we have available capacity.

In a downturn in the semiconductor industry, IDMs could respond by shifting some or all outsourced packaging and test services to internally serviced capacity on a short term basis. Also, the IDMs could curtail or reverse the trend of outsourcing packaging and test services. If we experience a significant loss of IDM business, it could have a material adverse effect on our business, liquidity, results of operations, financial condition and cash flows, especially during a prolonged industry downturn.

Our Substantial Indebtedness Could Adversely Affect Our Financial Condition and Prevent Us from Fulfilling Our Obligations.

We have a significant amount of indebtedness. As of September 30, 2013, our total debt balance was \$1,650.9 million, of which \$56.4 million was classified as a current liability. As of September 30, 2013, we had availability of \$149.7 million under our \$150.0 million first lien senior secured revolving credit facility. Additionally, our foreign subsidiaries had \$75.0 million available to be drawn under revolving credit facilities for general corporate purposes, general working capital purposes and capital expenditures and \$332.0 million available to be borrowed under term loans maturing between June 2016 and December 2019 for general working capital purposes, capital expenditures and the repayment of inter-company debt. Despite current debt levels, the terms of the agreements governing our indebtedness allow us and our subsidiaries to incur more debt, subject to certain limitations. We may consider investments in joint ventures, acquisitions or increased capital additions, which may increase our indebtedness. If new debt is added to our consolidated debt level, the related risks that we face could intensify.

Our substantial indebtedness could:

- make it more difficult for us to satisfy our obligations with respect to our indebtedness, including our obligations under our indentures to purchase notes tendered as a result of a change in control of Amkor;
- increase our vulnerability to general adverse economic and industry conditions;

- limit our ability to fund future working capital, capital expenditures, research and development and other business opportunities;
- require us to dedicate a substantial portion of our cash flow from operations to service payments on our debt;

- 43-

Table of Contents

• increase the volatility of the price of our common stock;
• limit our flexibility to react to changes in our business and the industry in which we operate;
• place us at a competitive disadvantage to any of our competitors that have less debt and
• limit, along with the financial and other restrictive covenants in our indebtedness, among other things, our ability to borrow additional funds.

We May Have Difficulty Funding Liquidity Needs.

We assess our liquidity based on our current expectations regarding sales, operating expenses, capital spending and debt service requirements. Our liquidity is affected by, among other things, the performance of our business, our capital expenditure levels and our ability to repay debt out of our operating cash flows or with the proceeds of debt or equity financings.

We operate in a capital intensive industry. Servicing our current and future customers requires that we incur significant operating expenses and continue to make significant capital expenditures, which are generally made in advance of the related revenues and without any firm customer commitments. During the nine months ended September 30, 2013, we had capital additions of \$380.2 million. In 2013, we expect to make capital additions of approximately \$450 million and are also planning an additional \$100 million of spending for the acquisition of land related to our previously announced new factory and research and development center in Korea. Ultimately the actual amount of our capital additions for 2013 and thereafter may vary materially and will depend on several factors. These factors include, among others, the amount, timing and implementation of our capital projects, including those under review and not yet planned, the performance of our business, economic and market conditions, the cash needs and investment opportunities for the business, the need for additional capacity and facilities and the availability of cash flows from operations or financing.

In addition, we have a significant level of debt, with \$1,644.4 million outstanding, excluding an unamortized premium at September 30, 2013, \$56.4 million of which is current. The terms of such debt require significant scheduled principal payments in the coming years, including \$61.4 million due in 2014, \$105.0 million due in 2015, \$10.0 million due in 2016, \$150.0 million due in 2017 and \$1,318.0 million due thereafter. The interest payments required on our debt are also substantial. For example, in 2012, we paid \$86.1 million of interest. The sources funding our operations, including making capital expenditures and servicing principal and interest obligations with respect to our debt, are cash flows from our operations, existing cash and cash equivalents, borrowings under available debt facilities or proceeds from any additional debt or equity financing. As of September 30, 2013, we had cash and cash equivalents of \$591.3 million and availability of \$149.7 million under our \$150.0 million senior secured revolving credit facility which matures in June 2017. Our foreign subsidiaries had \$75.0 million available to be drawn under revolving credit facilities for general corporate purposes, general working capital purposes and capital expenditures and \$332.0 million available to be borrowed in accordance with the loan agreements at our subsidiary in Korea, maturing between June 2016 and December 2019 for general working capital purposes, capital expenditures and the repayment of inter-company debt.

The health of the worldwide banking system and financial markets affects the liquidity in the global economic environment. Volatility in fixed income, credit and equity markets could make it difficult for us to maintain our existing credit facilities or refinance our debt.

In addition, there is a risk that we could fail to generate the necessary net income or operating cash flows to meet the funding needs of our business due to a variety of factors, including the cyclical nature of the semiconductor industry and the other factors discussed in this “Risk Factors” section. If we fail to generate the necessary cash flows or we are unable to access the capital markets when needed, our liquidity may be adversely impacted.

Our Ability To Draw On Our Current Loan Facilities May Be Adversely Affected by Conditions in the U.S. and International Capital Markets.

If financial institutions that have extended credit commitments to us are adversely affected by the conditions of the U.S. and international capital and credit markets, they may be unable to fund borrowings under their credit commitments to us. For example, we have a \$150.0 million senior secured revolving credit facility with three banks in the U.S., in addition to

Table of Contents

availability under facilities with banks in other countries. If any of these banks are adversely affected by capital and credit market conditions and are unable to make loans to us when requested, there could be a corresponding adverse impact on our financial condition and our ability to borrow additional funds, if needed, for working capital, capital expenditures, acquisitions, research and development and other corporate purposes.

Restrictive Covenants in the Indentures and Agreements Governing Our Current and Future Indebtedness Could Restrict Our Operating Flexibility.

The indentures and agreements governing our existing debt, and debt we may incur in the future, contain, or may contain, affirmative and negative covenants that materially limit our ability to take certain actions, including our ability to incur debt, pay dividends and repurchase stock, make certain investments and other payments, enter into certain mergers and consolidations, engage in sale leaseback transactions and encumber and dispose of assets. In addition, our future debt agreements may contain financial covenants and ratios.

The breach of any of these covenants by us or the failure by us to meet any of the financial ratios or conditions could result in a default under any or all of such indebtedness. If a default occurs under any such indebtedness, all of the outstanding obligations thereunder could become immediately due and payable, which could result in a default under our other outstanding debt and could lead to an acceleration of obligations related to other outstanding debt. The existence of such a default or event of default could also preclude us from borrowing funds under our revolving credit facilities. Our ability to comply with the provisions of the indentures, credit facilities and other agreements governing our outstanding debt and indebtedness we may incur in the future can be affected by events beyond our control and a default under any debt instrument, if not cured or waived, could have a material adverse effect on us.

We Have Significant Severance Plan Obligations Associated With Our Manufacturing Operations in Korea Which Could Reduce Our Cash Flow and Negatively Impact Our Financial Condition.

We sponsor an accrued severance plan for our Korean subsidiary, under which we have an accrued liability of \$138.0 million as of September 30, 2013. Existing tax laws in Korea limit our ability to deduct severance expenses associated with the current plan. These limitations are designed to encourage companies to migrate to a defined contribution or defined benefit plan. If we adopt a new plan, we may fund a significant portion of the existing liability, which could have a material adverse effect on our liquidity, financial condition and cash flows. If we do not adopt a new plan, our ability to deduct accrued severance will continue to be limited, and as a result we will have to pay higher taxes, which could adversely affect our liquidity, financial condition and cash flows.

Under the existing Korean plan, to the extent eligible employees are terminated, our Korean subsidiary would be required to make lump-sum severance payments on behalf of these eligible employees based on their length of service, seniority and rate of pay at the time of termination. Since our severance plan obligation is significant, in the event of a significant layoff or other reduction in our labor force in Korea, payments under the plan could have a material adverse effect on our liquidity, financial condition and cash flows. See Note 14 to our Consolidated Financial Statements in Part I, Item 1 to this Quarterly Report on Form 10-Q.

If We Fail to Maintain an Effective System of Internal Controls, We May Not be Able to Accurately Report Financial Results or Prevent Fraud.

Effective internal controls are necessary to provide reliable financial reports and to assist in the effective prevention of fraud. Any inability to provide reliable financial reports or prevent fraud could harm our business. We must annually evaluate our internal procedures to satisfy the requirements of Section 404 of the Sarbanes-Oxley Act of 2002, which requires management and our independent registered public accounting firm to assess the effectiveness of internal

control over financial reporting.

- 45-

Table of Contents

As previously reported, we are implementing a new enterprise resource planning (“ERP”) system in a multi-year program on a world-wide basis. We have recently implemented several significant ERP modules and expect to implement additional ERP modules in the future. In addition, we are implementing a new shop floor system in certain of our factories. The implementation of the ERP and shop floor systems represents a change in our internal control over financial reporting. Although we continue to monitor and assess our internal controls in the new ERP system environment and the shop floor system as changes are made and new modules are implemented, there is a risk that deficiencies may occur that could constitute significant deficiencies or in the aggregate a material weakness.

In addition, on July 31, 2013, we completed our acquisition of Toshiba Electronics Malaysia Sdn. Bhd. We are continuing to integrate the acquired operations into our overall internal control over financial reporting. Although we have extended our oversight and monitoring processes that support internal control over financial reporting to include the acquired operations, there is a risk that deficiencies may occur that could constitute significant deficiencies or in the aggregate a material weakness.

If we fail to remedy any deficiencies or maintain the adequacy of our internal controls, we could be subject to regulatory scrutiny, civil or criminal penalties or shareholder litigation. In addition, failure to maintain adequate internal controls could result in financial statements that do not accurately reflect our operating results or financial condition.

We Face Warranty Claims, Product Return and Liability Risks, the Risk of Economic Damage Claims and the Risk of Negative Publicity if Our Packages Fail.

Our packages are incorporated into a number of end products, and our business is exposed to warranty claims, product return and liability risks, the risk of economic damage claims and the risk of negative publicity if our packages fail.

We receive warranty claims from our customers which occur from time to time in the ordinary course of our business. If we were to experience an unusually high incidence of warranty claims, we could incur significant costs and our business could be adversely affected. In addition, we are exposed to the product and economic liability risks and the risk of negative publicity affecting our customers. Our sales may decline if any of our customers are sued on a product liability claim. We also may suffer a decline in sales from the negative publicity associated with such a lawsuit or with adverse public perceptions in general regarding our customers' products. Further, if our packages are delivered with impurities or defects, we could incur additional development, repair or replacement costs or suffer other economic losses, and our credibility and the market's acceptance of our packages could be harmed.

Absence of Backlog - The Lack of Contractually Committed Customer Demand May Adversely Affect Our Sales.

Our packaging and test business does not typically operate with any material backlog. Our quarterly net sales from packaging and test services are substantially dependent upon our customers' demand in that quarter. None of our customers have committed to purchase any significant amount of packaging or test services or to provide us with binding forecasts of demand for packaging and test services for any future period, in any material amount. In addition, our customers often reduce, cancel or delay their purchases of packaging and test services for a variety of reasons including industry-wide, customer-specific and Amkor-specific reasons. Since a large portion of our costs is fixed and our expense levels are based in part on our expectations of future revenues, we may not be able to adjust costs in a timely manner to compensate for any sales shortfall. If we are unable to adjust costs in a timely manner, our margins, operating results, financial condition and cash flows would be adversely affected.

Risks Associated With International Operations - We Depend on Our Factories and Operations in China, Japan, Korea, Malaysia, the Philippines and Taiwan. Many of Our Customers' and Vendors' Operations Are Also Located

Outside of the U.S.

We provide packaging and test services through our factories and other operations located in China, Japan, Korea, Malaysia, the Philippines and Taiwan. Substantially all of our property, plant and equipment is located outside of the United States. Moreover, many of our customers' and vendors' operations are located outside the U.S. The following are some of the risks we face in doing business internationally:

- changes in consumer demand resulting from deteriorating conditions in local economies;

Table of Contents

regulations imposed by foreign governments, including limitations or taxes imposed on the payment of dividends and other payments by non-U.S. subsidiaries;

fluctuations in currency exchange rates;

political, military, civil unrest and terrorist risks, particularly an increase in tensions between North Korea and South Korea;

disruptions or delays in shipments caused by customs brokers or government agencies;

changes in regulatory requirements, tariffs, customs, duties and other restrictive trade barriers or policies;

difficulties in staffing, retention and employee turnover and managing foreign operations, including foreign labor disruptions;

difficulty in enforcing contractual rights and protecting our intellectual property rights;

potentially adverse tax consequences resulting from changes in tax laws in the foreign jurisdictions in which we operate;

local business and cultural factors that differ from or normal standards and practices, including business practices that we are prohibited from engaging in by the Foreign Corrupt Practices Act (FCPA) and other anti-corruption laws and regulations and

compliance with antitrust, anti-competition and similar laws in the U.S. and in foreign jurisdictions.

Changes in the U.S. Tax Law Regarding Earnings of Our Subsidiaries Located Outside the U.S. Could Materially Affect Our Future Results.

There have been proposals to change U.S. tax laws that would significantly impact how U.S. corporations are taxed on foreign earnings. We earn a substantial portion of our income in foreign countries. Although we cannot predict whether or in what form any of these proposals might be enacted into law, if adopted they could have a material adverse impact on our liquidity, results of operations, financial condition and cash flows.

We Face Risks in Connection with the Continuing Development and Implementation of Changes to, and Maintenance and Security of, Our Management Information Systems.

We depend on our management information systems for many aspects of our business. Some of our key software has been developed by our own programmers, and this software may not be easily integrated with other software and systems. Our systems may be susceptible to damage, disruptions or shutdowns due to failures during the process of upgrading, replacing or maintaining software, databases or components thereof, power outages, hardware failures, computer viruses, attacks by computer hackers, telecommunication failures, user errors, malfeasance or catastrophic events. In addition, security breaches could result in unauthorized disclosure of confidential information. We have made and continue to make significant investments to implement and evolve our management information systems. In addition, we are implementing a new shop floor system in certain of our factories. In July 2013, we acquired a factory in Malaysia, and have begun to integrate its management information systems into our existing systems and processes. We face risks in connection with current and future projects to install or integrate new management information systems or upgrade our existing systems. These risks include:

- we may face delays in the design and implementation of the system;
- the cost of the systems may exceed our plans and expectations and
- disruptions resulting from the implementation or integration of the systems may impact our ability to process transactions and delay shipments to customers, impact our results of operations or financial condition or harm our control environment.

Our business could be materially and adversely affected if our management information systems are disrupted or if we are unable to successfully install new systems or improve, upgrade, integrate or expand upon our existing systems.

Table of Contents

We Face Risks Trying to Attract and Retain Qualified Employees to Support Our Operations.

Our success depends to a significant extent upon the continued service of our key senior management, sales and technical personnel, any of whom may be difficult to replace. Competition for qualified employees is intense, and our business could be adversely affected by the loss of the services of any of our existing key personnel, including senior management, as a result of competition or for any other reason. We do not have employment agreements with our key employees, including senior management or other contracts that would prevent our key employees from working for our competitors in the event they cease working for us. We cannot assure you that we will be successful in our efforts to retain key employees or in hiring and properly training sufficient numbers of qualified personnel and in effectively managing our growth. Our inability to attract, retain, motivate and train qualified new personnel could have a material adverse effect on our business.

Difficulties Consolidating and Integrating Our Operations - We Face Challenges as We Integrate Diverse Operations.

We have experienced, and expect to continue to experience, change in the scope and complexity of our operations resulting primarily from existing and future facility consolidations, strategic acquisitions, joint ventures and other partnering arrangements. Some of the risks from these activities include those associated with the following:

- increasing the scope, geographic diversity and complexity of our operations;
- conforming an acquired company's standards, practices, systems and controls with our operations;
- increasing complexity from combining recent acquisitions of an acquired business;
- unexpected losses of key employees or customers of an acquired business; other difficulties in the assimilation of acquired operations, technologies or products and
- diversion of management and other resources from other parts of our operations and adverse effects on existing business relationships with customers.

In connection with these activities, we may;

- use a significant portion of our available cash;
- issue equity securities, which may dilute the ownership of current stockholders;
- incur substantial debt;
- incur or assume known or unknown contingent liabilities and
- incur large, immediate accounting write offs and face antitrust or other regulatory inquiries or actions.

For example, the businesses we have acquired had, at the time of acquisition, multiple systems for managing their own production, sales, inventory and other operations. Migrating these businesses to our systems typically is a slow, expensive process requiring us to divert significant resources from other parts of our operations. We may continue to face these challenges in the future. For example, on July 31, 2013, we completed the purchase of 100% of the shares of Toshiba Electronics Malaysia Sdn. Bhd. We have also exercised our option to increase our ownership interest in J-Devices from 30% to 60%, which we completed in April 2013, and we have additional options to increase our ownership over time to as much as 80%. We have begun integration of the recently acquired operation in Malaysia, and we anticipate that in the future we will need to integrate J-Devices with our existing operations. In addition, J-Devices will need to integrate with its operations the acquisitions it has recently completed. Furthermore, the governance provisions applicable to J-Devices restrict our ability to cause J-Devices to take certain actions without the consent of the other investors. As a result of the risks discussed above, the anticipated benefits of the increase in our investment in J-Devices or other future acquisitions, consolidations and partnering arrangements may not be fully realized, if at all, and these activities could have a material adverse effect on our business, financial condition and results of operations.

Table of Contents

Dependence on Materials and Equipment Suppliers - Our Business May Suffer If the Cost, Quality or Supply of Materials or Equipment Changes Adversely.

We obtain from various vendors the materials and equipment required for the packaging and test services performed by our factories. We source most of our materials, including critical materials such as leadframes, laminate substrates and gold wire, from a limited group of suppliers. A disruption to the operations of one or more of our suppliers could have a negative impact on our business. For example, the severe earthquake and tsunami in Japan in 2011 had a significant adverse effect on the electronic industry supply chain impacting the supply of specialty chemicals, substrates, silicon wafers, equipment and other supplies to the electronics industry. In addition, we purchase the majority of our materials on a purchase order basis. Our business may be harmed if we cannot obtain materials and other supplies from our vendors in a timely manner, in sufficient quantities, at acceptable quality or at competitive prices. Some of our customers are also dependent on a limited number of suppliers for certain materials and silicon wafers. Shortages or disruptions in our customers' supply channels could have a material adverse effect on our business, financial condition, results of operations and cash flows. For example, the shortage in the supply of 28 nanometer wafers to some of our customers in 2012 delayed or otherwise adversely impacted the demand for certain of our advanced packaging and test services.

Rules adopted by the Securities and Exchange Commission implementing the Dodd-Frank Wall Street Reform and Consumer Protection Act impose diligence and disclosure requirements regarding the use of certain minerals originating from the conflict zones of the Democratic Republic of Congo and adjoining countries in our products. Industry associations and some of our customers are also implementing initiatives to improve transparency and accountability concerning the supply of these materials and, in some cases, requiring us to certify that the covered materials we use in our packages do not come from the conflict areas. We may incur additional costs associated with complying with the new requirements and customer initiatives. These new requirements and customer initiatives could affect the sourcing and availability of metals used in the manufacture of semiconductor devices, and we cannot assure you that we will be able to obtain conflict-free materials in sufficient quantities and at competitive prices or that we will be able to verify the origin of all of the metals we use in our manufacturing process. If we are unable to certify that the metals we use in our packages are conflict-free, it could adversely affect our business as some customers may move their business to other suppliers. Our reputation could also be adversely affected.

We purchase new packaging and test equipment to maintain and expand our operations. From time to time, increased demand for new equipment may cause lead times to extend beyond those normally required by equipment vendors. For example, in the past, increased demand for equipment caused some equipment suppliers to only partially satisfy our equipment orders in the normal time frame or to increase prices during market upturns for the semiconductor industry. The unavailability of equipment or failures to deliver equipment on a timely basis could delay or impair our ability to meet customer orders. If we are unable to meet customer orders, we could lose potential and existing customers. Generally, we acquire our equipment on a purchase order basis and do not enter into long-term equipment agreements. As a result, we could experience adverse changes in pricing, currency risk and potential shortages in equipment in a strong market, which could have a material adverse effect on our results of operations.

We are a large buyer of gold and other commodity materials including substrates and copper. The prices of gold and other commodities used in our business fluctuate. Historically, we have been able to partially offset the effect of commodity price increases through price adjustments to some customers and changes in our product designs that reduce the material content and cost, such as the use of shorter, thinner, gold wire and migration to copper wire. However, we typically do not have long-term contracts that permit us to impose price adjustments, and market conditions may limit our ability to do so. Significant price increases may adversely impact our gross margin in future periods to the extent we are unable to pass along past or future commodity price increases to our customers.

Loss of Customers - The Loss of Certain Customers or Reduced Orders from Existing Customers May Have a Significant Adverse Effect on Our Operations and Financial Results.

The loss of a significant customer, a reduction in orders from a significant customer or disruption in any of our significant strategic partnerships or other commercial arrangements may result in a decline in our sales and profitability. Although we have approximately 200 customers, we have derived and expect to continue to derive a large portion of our revenues from a small group of customers during any particular period due in part to the concentration of market share in the semiconductor industry. Our ten largest customers together accounted for approximately 63.0%, 62.2% and 61.0% of our net sales in the

Table of Contents

nine months ended September 30, 2013, and the years ended December 31, 2012 and 2011, respectively. One customer accounted for more than 10% of our consolidated net sales during the nine months ended September 30, 2013. One customer accounted for more than 10% of our consolidated net sales in 2012, and two customers each accounted for more than 10% of our consolidated net sales in 2011.

The demand for our services from each customer is directly dependent upon that customer's level of business activity, the quality and price of our services, our cycle time and delivery performance, the customer's qualification of additional competitors on products we package or test and a number of other factors. Each of these factors could vary significantly from year to year resulting in the loss or reduction of customer orders. Our business is likely to remain subject to this variability in order levels, and we cannot assure you that our key customers or any other customers will continue to place orders with us in the future at the same levels as in past periods.

From time to time we may acquire or build new facilities, such as our new factory and research and development center in Korea or migrate existing business among our facilities. In connection with these facility changes, our customers require us to re-qualify the new facilities even though we have already qualified to perform the services at our other facilities. We cannot assure that we will successfully re-qualify or that our customers will not qualify our competitors and move the business for such services.

The loss of one or more of our significant customers, or reduced orders by any one of them, and our inability to replace these customers or make up for such orders could reduce our sales and profitability. During the nine months ended September 30, 2013, one customer accounted for 24.4% of our consolidated net sales, representing approximately 23.0% of our packaging net sales and 32.7% of our test net sales. If we were to lose our largest customer, or if it significantly reduced its level of business with us, the loss could have a material adverse effect on our business, liquidity, results of operations, financial condition and cash flows.

Capital Additions - We Make Substantial Investments in Equipment and Facilities To Support the Demand Of Our Customers, Which May Adversely Affect Our Business If the Demand Of Our Customers Does Not Develop As We Expect or Is Adversely Affected.

We make significant investments in equipment and facilities in order to service the demand of our customers. For example, we expect that our 2013 capital additions will be approximately \$450 million, in addition to \$100 million of spending for the acquisition of land relating to our new factory and research and development center in Korea. The amount of our capital additions depends on several factors, including the performance of our business, our assessment of future industry and customer demand, our capacity utilization levels and availability, our liquidity position and the availability of financing. Our ongoing capital addition requirements may strain our cash and short-term asset balances, and, in periods when we are expanding our capital base, we expect that depreciation expense and factory operating expenses associated with our capital additions to increase production capacity will put downward pressure on our gross margin, at least over the near term. From time to time, we also make significant capital additions based on specific business opportunities with one or a few key customers, and the additional equipment purchased may not be readily usable to support other customers. If demand is insufficient to fill our capacity, or we are unable to efficiently redeploy such equipment, our capacity utilization and gross margin could be negatively impacted. Our capital additions may increase as we transition to new packaging and test technologies because, among other things, new equipment used for these technologies is generally more expensive and often our existing equipment cannot be redeployed in whole or part for these technologies.

Furthermore, if we cannot generate or raise additional funds to pay for capital additions, particularly in some of the advanced packaging and bumping areas, as well as research and development activities, our growth and future profitability may be adversely affected. Our ability to obtain external financing in the future is subject to a variety of

uncertainties, including:

- our future financial condition, results of operations and cash flows;
- general market conditions for financing;
- volatility in fixed income, credit and equity markets and
- economic, political and other global conditions.

- 50-

Table of Contents

The lead time needed to order, install and put into service various capital additions is often significant, and, as a result, we often need to commit to capital additions in advance of our receipt of firm orders or advance deposits based on our view of anticipated future demand with only very limited visibility. Although we seek to limit our exposure in this regard, in the past we have from time to time expended significant capital for additional equipment or facilities for which the anticipated demand did not materialize for a variety of reasons, many of which were outside of our control. To the extent this occurs in the future, our business, liquidity, results of operations, financial condition and cash flows could be materially adversely affected.

In addition, during periods where customer demand exceeds our capacity, customers may transfer some or all of their business to other suppliers who are able to support their needs. To the extent this occurs, our business, liquidity, results of operations, financial condition and cash flows could be materially adversely affected.

Impairment Charges - Any Impairment Charges Required Under U.S. GAAP May Have a Material Adverse Effect on Our Net Income.

Under U.S. GAAP, we review our long-lived assets including property, plant and equipment, intellectual property and other intangibles for impairment when events or changes in circumstances indicate the carrying value may not be recoverable. Factors we consider include significant under-performance relative to expected historical or projected future operating results, significant negative industry or economic trends and our market capitalization relative to net book value. We may be required in the future to record a significant charge to earnings in our financial statements during the period in which any impairment of our long-lived assets is determined. Such charges have had and could have a significant adverse impact on our results of operations and our operating flexibility under our debt covenants.

Litigation Incident to Our Business Could Adversely Affect Us.

We have been a party to various legal proceedings, including those described in Note 17 to our Consolidated Financial Statements in Part I, Item 1 of this Quarterly Report, and may be a party to litigation in the future. If an unfavorable ruling or outcome were to occur in these legal proceedings or future litigation, there could be a material adverse impact on our business, liquidity, results of operations, financial condition, cash flows and the trading price of our securities.

For example, the final award pending in the arbitration with Tessera could be more than the amount accrued, and we expect to record our estimate of interest accruing with the passage of time and may record additional charges as information develops or upon the issuance of the final award. Tessera publicly announced its intention to seek an amount in excess of \$150 million. In addition, Tessera recently filed a complaint against Amkor in the U.S. District Court for the District of Delaware. There can be no assurance that the termination of the Tessera license agreement will not have a material impact on our ongoing business and customer relationships, including any supply arrangements with customers formerly benefiting from our rights under the terminated license agreement; that the U.S. District Court complaint filed by Tessera will not result in an unfavorable outcome for our company, including an injunction and significant damage award or that there will not be any further disputes with Tessera or others involving our company's technology or business.

We Could Suffer Adverse Tax and Other Financial Consequences if Taxing Authorities Do Not Agree with Our Interpretation of Applicable Tax Laws, Including Whether We Continue to Qualify for Our Tax Holidays.

Our corporate structure and operations are based, in part, on interpretations of various tax laws, including withholding tax, compliance with tax holiday requirements, application of changes in tax law to our operations and other relevant laws of applicable taxing jurisdictions. From time to time, the taxing authorities of the relevant jurisdictions may

conduct examinations of our income tax returns and other regulatory filings. We cannot assure you that the taxing authorities will agree with our interpretations, including whether we continue to qualify for our tax holidays. To the extent they do not agree, we may seek to enter into settlements with the taxing authorities which require significant payments or otherwise adversely affect our results of operations or financial condition. We may also appeal the taxing authorities' determinations to the appropriate governmental authorities, but we cannot be sure we will prevail. If we do not prevail, we may have to make significant payments or otherwise record charges (or reduce tax assets) that adversely affect our results of operations, financial condition and cash flows. Additionally, certain of our subsidiaries operate under tax holidays, which will expire in whole or in part at various dates in the future. As those tax holidays expire, our tax expenses will increase as income from those jurisdictions become subject to higher statutory income tax rates, thereby reducing our liquidity and cash flow.

Table of Contents

Intellectual Property - Our Business Will Suffer if We Are Not Able to Develop New Proprietary Technology, Protect Our Proprietary Technology and Operate Without Infringing the Proprietary Rights of Others.

The complexity and breadth of semiconductor packaging and test services are rapidly increasing. As a result, we expect that we will need to develop, acquire and implement new manufacturing processes and packaging design technologies and tools in order to respond to competitive industry conditions and customer requirements. Technological advances also typically lead to rapid and significant price erosion and may make our existing packages less competitive or our existing inventories obsolete. If we cannot achieve advances in packaging design or obtain access to advanced packaging designs developed by others, our business could suffer.

The need to develop and maintain advanced packaging capabilities and equipment could require significant research and development, capital expenditures and acquisitions in future years. In addition, converting to new packaging designs or process methodologies could result in delays in producing new package types, which could adversely affect our ability to meet customer orders and adversely impact our business.

The process of seeking patent protection takes a long time and is expensive. There can be no assurance that patents will issue from pending or future applications or that, if patents are issued, the rights granted under the patents will provide us with meaningful protection or any commercial advantage. Any patents we do obtain will eventually expire, may be challenged, invalidated or circumvented and may not provide meaningful protection or other commercial advantage to us.

Some of our technologies are not covered by any patent or patent application. The confidentiality agreements on which we rely to protect these technologies may be breached and may not be adequate to protect our proprietary technologies. There can be no assurance that other countries in which we market our services will protect our intellectual property rights to the same extent as the U.S.

Our competitors may develop, patent or gain access to know-how and technology similar to our own. In addition, many of our patents are subject to cross licenses, several of which are with our competitors. The semiconductor industry is characterized by frequent claims regarding the infringement of patent and other intellectual property rights. If any third party makes an enforceable infringement claim against us or our customers, we could be required to:

- discontinue the use of certain processes;
- cease to provide the services at issue;
- pay substantial damages;
- develop non-infringing technologies or
- acquire licenses to such technology.

We may need to enforce our patents or other intellectual property rights, including our rights under patent and intellectual property licenses with third parties, or defend ourselves against claimed infringement of the rights of others through litigation, which could result in substantial cost and diversion of our resources. Furthermore, if we fail to obtain necessary licenses, our business could suffer. We have been involved in legal proceedings involving the acquisition and license of intellectual property rights, the enforcement of our existing intellectual property rights or the enforcement of the intellectual property rights of others, including the legal proceeding filed by and against Tessera, Inc. and the complaint filed and ongoing proceeding against Carsem (M) Sdn Bhd, Carsem Semiconductor Sdn Bhd, and Carsem Inc., or collectively “Carsem”, which are described in more detail in Note 17 to our Consolidated Financial Statements in Part I, Item 1 of this Quarterly Report. Unfavorable outcomes in any legal proceedings involving intellectual property could result in significant liabilities and could have a material adverse effect on our business, liquidity, results of operations, financial condition and cash flows. The potential impact from the legal proceedings referred to in this Quarterly Report on our results of operations, financial condition and cash flows could change in the future.

Table of Contents

Packaging and Test - Packaging and Test Processes Are Complex and Our Production Yields and Customer Relationships May Suffer from Defects in the Services We Provide.

Semiconductor packaging and test services are complex processes that require significant technological and process expertise. Defective packages primarily result from:

- contaminants in the manufacturing environment;
- human error;
- equipment malfunction;
- changing processes to address environmental requirements;
- defective raw materials or
- defective plating services.

Test is also complex and involves sophisticated equipment and software. Similar to many software programs, these software programs are complex and may contain programming errors or “bugs.” The test equipment is also subject to malfunction. In addition, the test process is subject to operator error.

These and other factors have, from time to time, contributed to lower production yields. They may also do so in the future, particularly as we adjust our capacity or change our processing steps. In addition, we must continue to expand our offering of packages to be competitive. Our production yields on new packages typically are significantly lower than our production yields on our more established packages.

Our failure to maintain high standards or acceptable production yields, if significant and prolonged, could result in loss of customers, increased costs of production, delays, substantial amounts of returned goods and claims by customers relating thereto. Any of these problems could have a material adverse effect on our business, liquidity, results of operations, financial condition and cash flows.

In addition, in line with industry practice, new customers usually require us to pass a lengthy and rigorous qualification process that may take several months. If we fail to qualify packages with potential customers or existing customers, such failure could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Competition - We Compete Against Established Competitors in the Packaging and Test Business as Well as Internal Customer Capabilities and May Face Competition from New Competitors.

The outsourced semiconductor packaging and test market is very competitive. We face substantial competition from established packaging and test service providers primarily located in Asia, including companies with significant processing capacity, financial resources, research and development operations, marketing and other capabilities. These companies also have established relationships with many large semiconductor companies that are our current or potential customers. We also face competition from the internal capabilities and capacity of many of our current and potential IDM customers. In addition, we compete with companies (including semiconductor foundries) that provide wafer bumping and other advanced packaging solutions that compete with our packaging and test services. For example, one of the major semiconductor foundries, which is substantially larger and has greater financial resources than we do, has expanded, and may continue to expand its operations to include packaging and test services.

We cannot assure you that we will be able to compete successfully in the future against our existing or potential competitors or that our customers will not rely on internal sources for packaging and test services, or that our business, liquidity, results of operations, financial condition and cash flows will not be adversely affected by such increased competition.

Table of Contents

Environmental Regulations - Future Environmental Regulations Could Place Additional Burdens on Our Manufacturing Operations.

The semiconductor packaging process uses liquid chemicals, gases and materials. These processes generate by-products that are subject to extensive governmental regulations. For example, at our foreign facilities we produce liquid waste when semiconductor wafers are diced into chips with the aid of diamond saws, then cooled with running water. In addition, semiconductor packages have historically utilized metallic alloys containing lead (Pb) within the interconnect terminals typically referred to as leads, pins or balls. Federal, state and local laws and regulations in the U.S., as well as environmental laws and regulations in foreign jurisdictions, impose various controls on the storage, handling, discharge and disposal of chemicals used in our production processes and on the factories we occupy and are increasingly imposing restrictions on the materials contained in semiconductor products. We may become liable under environmental laws for the cost of cleanup of any disposal or release of hazardous materials arising out of our former or current operations, or otherwise as a result of the existence of hazardous materials on our properties. In such an event, we could be held liable for damages, including fines, penalties and the cost of investigations and remedial actions, and could also be subject to revocation of permits negatively affecting our operations.

Public attention has focused on the environmental impact of semiconductor operations and the risk to neighbors of chemical releases from such operations and to the materials contained in semiconductor products. For example, the European Union's Restriction of Use of Certain Hazardous Substances in Electrical and Electronic Equipment Directive imposes strict restrictions on the use of lead and other hazardous substances in electrical and electronic equipment. In response to this directive, and similar laws and developing legislation in countries like China, Japan and Korea, we have implemented changes in a number of our manufacturing processes in an effort to achieve compliance across all of our package types. Complying with existing and possible future environmental laws and regulations, including laws and regulations relating to climate change, may impose upon us the need for additional capital equipment or other process requirements, restrict our ability to expand our operations, disrupt our operations, increase costs, subject us to liability or cause us to curtail our operations.

Our Business and Financial Condition Could be Adversely Affected by Natural Disasters.

We have significant packaging and test and other operations in locations which are subject to natural disasters such as earthquakes, tsunamis, typhoons, floods and other severe weather and geological events that could disrupt our operations. In addition, our suppliers and customers also have significant operations in such locations. A natural disaster that results in a prolonged disruption to our operations, or the operations of our customers or suppliers, could have a material adverse effect on our business, financial condition, results of operations and cash flows. For example, Japan experienced a severe earthquake and tsunami in 2011 that resulted in significant disruption in the electronics industry supply chain and adversely affected Japan's economy and consumer spending. In addition, in October 2011, Thailand experienced substantial flooding which affected the facilities and operations of customers and suppliers in our industry. As a result, our business, financial condition, results of operations and cash flows could be adversely affected by events such as those in Japan, Thailand or future natural disasters of a similar nature.

Fire, Flood or Other Calamity - With Our Operations Conducted in a Limited Number of Facilities, a Fire, Flood or Other Calamity at one of Our Facilities Could Adversely Affect Us.

We conduct our packaging and test operations at a limited number of facilities. Significant damage or other impediments to any of these facilities, whether as a result of fire, flood, weather, the outbreak of infectious diseases (such as SARs or flu), civil strife, industrial strikes, breakdowns of equipment, difficulties or delays in obtaining materials and equipment, natural disasters, terrorist incidents, industrial accidents or other causes could temporarily disrupt or even shut down our operations, which would have a material adverse effect on our business, financial

condition and results of operations. In the event of such a disruption or shutdown, we may be unable to reallocate production to other facilities in a timely or cost-effective manner (if at all) and we may not have sufficient capacity to service customer demands in our other facilities. For example, our operations in Asia are vulnerable to regional typhoons that can bring with them destructive winds and torrential rains, which could in turn cause plant closures and transportation interruptions. In addition, some of the processes that we utilize in our operations place us at risk of fire and other damage. For example, highly flammable gases are used in the preparation of wafers holding semiconductor devices for flip chip packaging. While we maintain insurance policies for

Table of Contents

various types of property, casualty and other risks, we do not carry insurance for all the above referred risks and with regard to the insurance we do maintain, we cannot assure you that it would be sufficient to cover all of our potential losses.

Continued Control By Existing Stockholders - Mr. James J. Kim and Members of His Family Can Effectively Determine or Substantially Influence The Outcome of All Matters Requiring Stockholder Approval.

As of September 30, 2013, Mr. James J. Kim, our Executive Chairman of the Board of Directors, members of Mr. Kim's immediate family and affiliates owned approximately 137.5 million shares, or approximately 63%, of our outstanding common stock. The Kim family also has options to acquire approximately 0.5 million shares. Pursuant to the 2014 Notes exchange offer, the Kim family exchanged their 2014 Notes into approximately 49.6 million shares of common stock (the "2014 Convert Shares"). If the options are exercised, the Kim family's total ownership would be an aggregate of approximately 138.0 million shares of our outstanding common stock or approximately 63% of our outstanding common stock.

The 2014 Convert Shares and the approximately 13.4 million shares issued upon conversion of the \$100.0 million of our 6.25% Convertible Subordinated Notes due 2013 (the "2013 Convert Shares") are each subject to separate voting agreements. The agreements require the Kim family to vote these respective shares in a "neutral manner" on all matters submitted to our stockholders for a vote, so that such 2013 Convert Shares and 2014 Convert Shares are voted in the same proportion as all of the other outstanding securities (excluding the other shares owned by the Kim family) that are actually voted on a proposal submitted to Amkor's stockholders for approval. The Kim family is not required to vote in a "neutral manner" any 2013 Convert Shares or 2014 Convert Shares that, when aggregated with all other voting shares held by the Kim family, represent 41.6% or less of the total then-outstanding voting shares of our common stock. The voting agreement for the 2013 Convert Shares terminates upon the earliest of (i) December 1, 2013, (ii) at such time as no principal amount of the 2013 Notes or any 2013 Convert Shares remain outstanding, (iii) a change of control transaction (as defined in the voting agreement) or (iv) the mutual agreement of the Kim family and Amkor. The voting agreement for the 2014 Convert Shares terminates upon the earliest of (i) such time as no principal amount of the 2014 Notes remains outstanding and the Kim family no longer beneficially owns any of the 2014 Convert Shares, (ii) consummation of a change of control (as defined in the voting agreement) or (iii) the mutual agreement of the Kim family and Amkor.

Mr. James J. Kim and his family and affiliates, acting together, have the ability to effectively determine or substantially influence matters submitted for approval by our stockholders by voting their shares or otherwise acting by written consent, including the election of our Board of Directors. There is also the potential, through the election of members of our Board of Directors, that the Kim family could substantially influence matters decided upon by our Board of Directors. This concentration of ownership may also have the effect of impeding a merger, consolidation, takeover or other business consolidation involving us, or discouraging a potential acquirer from making a tender offer for our shares, and could also negatively affect our stock's market price or decrease any premium over market price that an acquirer might otherwise pay. Concentration of ownership also reduces the public float of our common stock. There may be less liquidity and higher price volatility for the stock of companies with a smaller public float compared to companies with broader public ownership.

Table of Contents

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

Issuer Repurchase of Equity Securities

The following table provides information regarding repurchases of our common stock during the three months ended September 30, 2013. We refer you to Note 15 to our Consolidated Financial Statements in Part I, Item 1 of this Quarterly Report for further discussion.

Period	Total Number of Shares Purchased (a)	Average Price Paid Per Share (\$)	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs (b)	Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans or Programs (\$) (b)
July 1 - July 31	1,674	\$4.29	—	\$91,586,032
August 1 - August 31	10,905	4.25	—	91,586,032
September 1 - September 30	2,152	4.13	—	91,586,032
Total	14,731	\$4.23	—	

(a) Represents shares of common stock surrendered to us to satisfy tax withholding obligations associated with the vesting of restricted shares issued to employees.

(b) Our Board of Directors previously authorized the repurchase of up to \$300.0 million of our common stock, \$150.0 million in August 2011 and \$150.0 million in February 2012, exclusive of any fees, commissions or other expenses. For the three months ended September 30, 2013, no common stock purchases were made and there is approximately \$91.6 million available pursuant to the stock repurchase program.
