CENTRAL VALLEY COMMUNITY BANCORP
 NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

Note 1. GENERAL

All adjustments (consisting only of normal recurring accruals) which, in the opinion of Management, are necessary for a fair presentation of the Company's consolidated financial position at March 31, 2002 and December 31, 2001; the results of its operations, changes in shareholders' equity and its cash flows for the three month periods ended March 31, 2002 and 2001 have been included. The results of operations and cash flows for the periods presented are not necessarily indicative of the results for a full year.

The accompanying unaudited financial statements have been prepared on a basis consistent with the accounting principles and policies reflected in the Company's annual report for the year ended December 31, 2001.

Note 2. EARNINGS PER SHARE

EARNINGS PER SHARE (Unaudited)	For Quarters Ended March 31,	
	2002	2001
Basic earnings per share	\$ 0.53	\$ 0.55
Diluted earnings per share	\$ 0.50	\$ 0.54

Weighted Average Number of Shares Outstanding

	For Quarter Ended March 31, 2002	For Quarter Ended March 31, 2001
Basic Shares	1,294,634	1,306,158
Diluted Shares	1,357,633	1,323,515

Note 3. CASH EQUIVALENTS AND CASH FLOW REPORTING

The Company considers cash and cash equivalents to include cash, deposits in other banks and Federal funds sold. Generally, Federal funds are purchased and sold for one-day periods.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Management's discussion and analysis should be read in conjunction with the Company's unaudited consolidated financial statements, including the notes, appearing elsewhere in this document.

All statements contained herein that are not historical facts, such as statements regarding the Company's current business strategy and the Company's plans for future development and operations, are based upon current expectations. These statements are forward-looking in nature and involve a number of risks and uncertainties. Such risks and uncertainties include, but are not limited to, those described in Management's Discussion and Analysis of Financial Condition and Results of Operations and include, among other things, (1) significant increases in competitive pressures in the banking industry; (2) changes in the interest rate environment resulting in reduced margins; (3) general economic conditions, either nationally or regionally, are less favorable than expected, resulting in, among other things, a deterioration in credit quality; (4) changes in the regulatory environment; (5) fluctuations in the real estate market; (6) changes in business conditions and inflation; and (7) changes in securities markets. Therefore, the information set forth in such forward-looking statements should be carefully considered when evaluating the business prospects of the Company.

Overview:

Central Valley Community Bancorp (OTC: CVCY) (the Company) reported net income of \$683,000 for the first three months of 2002 compared to \$720,000 in the same period of 2001. The primary contributor to the decrease in net income during the first three months of 2002 was non-recurring income that occurred in the first three months of 2001.

In 2001, the Company realized income from funds received as part of an insurance settlement and gains from sales of investments, which were partially offset by additions to the Bank's provision for credit losses and provision for losses on equipment leased to others. After adjustments to exclude these items, net income for the first three months of 2001 would have been \$452,000. Comparing the two periods after the 2001 adjustment would reflect a \$231,000, or 51%, increase for the first quarter of 2002 compared to same period of 2001.

During the first three months of 2002, the Bank relocated its River Park Branch in Fresno, California. Due to the success of the River Park Branch staff, the branch outgrew its initial 2,000 square foot leased facility and has been relocated to a new 5,000 square foot leased facility in the same area. Costs associated with this new facility are reflected in bank premises and equipment, net, which increased \$939,000 in the periods under review.

The Bank also opened a new full service branch in Sacramento, California in the first quarter of 2002. The new Sacramento Private Banking facility is intended to serve the Sacramento area needs of the Company's existing commercial customers whose needs fall outside the Fresno area but within the Sacramento area, as well as serving the banking needs of new customers.

Average assets for the first quarter of 2002 were \$224,810,000 compared to \$197,124,000 for the same period in 2001. The \$27,686,000, or 14.0%, increase can be mainly attributed to the 14.4% increase in average deposits and other borrowings, which provided partial funding for the 37.8% increase in average loan volume.

Average earning assets for the first three months of 2002 were \$200,607,000 compared to \$174,626,000 for the same period in 2001. The \$25,981,000, or 14.9%, increase can be attributed to the increase in loan volumes mentioned above.

Similar to most of the banking industry, the Company's net interest margin continues to be challenged by the 475 basis point decrease in Federal funds interest rates by the Federal Open Market Committee (FOMC) in 2001. Managing the decrease in loan yields and the effective rates paid on deposits have become increasingly difficult as the deposit rates may have reached near the bottom of consumer tolerance. Refer to Market Risk for further discussion of the Bank's interest rate position.

The Company's net interest margin decreased 35 basis points in the periods under review. The net interest margin for the three-month period ended March 31, 2002 was 5.46% compared to 5.81% for the same period in 2001. The decrease can be partially attributed to the declining rate environment and the fact that assets generally reprice more quickly than liabilities. West Coast prime rate remained constant in the first three months of 2002 compared to a decline of 150 basis points in the first three months of 2001. The effective yield on loans for those same periods was 7.58% and 10.19%, respectively. The effective rate on interest bearing deposits and other borrowings for the first three months of 2002 was 1.76% compared to 3.67% for the same period in 2001.

The Company's market focus for loans continues to concentrate on small to medium businesses offering both commercial and real estate loans, however the Company also offers consumer and agricultural lending. These loans are diversified as to industries and types of businesses, thus limiting material exposure in any industry concentrations. The Company offers both fixed and floating interest rate loans and typically obtains collateral in the form of real estate, business equipment, or accounts receivable, but looks to business cash flow as its primary source of repayment.

The following table indicates outstanding loan balances by type at March 31, 2002 and 2001 respectively, and their percentage to total loans.

Loan Type (Unaudited) (In thousands)	March 31, 2002	% of total loans	March 31, 2001	% of total loans
Commercial & Industrial	57,803	40.0%	46,025	44.2%
Real Estate	34,490	23.8%	33,250	31.9%
Real Estate construction, land development and other land loans	45,840	31.7%	16,051	15.4%
Consumer & Installment	5,084	3.5%	7,644	7.3%
Agricultural	1,432	1.0%	1,259	1.2%
	\$ 144,649	100%	\$ 104,229	100%

The significant increase in real estate construction, land development and other land loans is partially attributable to the purchase of loan participations from other financial institutions and through brokers. These loans are to borrowers located in the Company's general market area and undergo the same loan review process as loans originated by the Company. The Company believes that these loans represent no greater risk factors than loans originated by the Company.

Although management believes the loans within the concentrations reflected in the above table have no more than the normal risk of collectibility, a substantial decline in the performance of the economy in general or a decline in real estate values in the Company's primary market area, in particular, could have an adverse impact on collectibility, increase the level of real estate-related nonperforming loans, or have other adverse effects which alone or in the aggregate could have a material adverse effect on the financial condition of the Company.

Return on average assets (ROA) and return on average equity (ROE) for the periods under review are reflected in the following table.

(Unaudited)	For the Quarter Ended March 31, 2002	For the Quarter Ended March 31, 2001
ROA	1.22%	1.46%
ROE	12.80%	15.08%

The following table sets forth average assets, liabilities and shareholders' equity; interest income earned and interest expense paid; and the average yields earned or rates paid thereon for the quarters ended March 31, 2002 and 2001. The average balances reflect daily averages except non-accrual loans that were computed using quarterly and year-to-date averages.

Net interest income and net interest margin	\$	2,737	5.46%	\$	2,535	5.81%
---	----	-------	-------	----	-------	-------

Results of Operations for the First Quarter of 2002 Compared to the First Quarter of 2001

Net income for the first quarter of 2002 was \$683,000 compared to \$720,000 for the first quarter of 2001, a \$37,000, or 5.1%, decrease. The decrease in net income between the periods resulted from decreases in non-interest income. As stated previously, the Company recognized certain non-recurring income in the first quarter of 2001.

NET INTEREST INCOME

Net interest income is the Company's primary source of revenue. Net interest income is the difference between the interest income received on interest-earning assets and the interest expense paid on interest-bearing liabilities. Net interest income is primarily affected by two factors, the volume and mix of interest-earning assets and interest-bearing liabilities and the interest rates earned on those assets and paid on the liabilities.

Interest income from loans increased 2.2%, or \$57,000, in the periods under review as average total loan volumes increased 37.8% to \$138,284,000 for the first three months of 2002 compared to \$100,357,000 for the first three months of 2001. The \$37,927,000 increase in the average loan volume can be attributed to the continued success of the Company's strategic plan to build its core business with the introduction of new products, seasoned commercial bankers, and strong emphasis on business development and customer retention activities.

The Company's loan to deposit ratio at March 31, 2002 was 72.3% compared to 60.7% at March 31, 2001. No assurance can be given that this level of loan growth will continue.

A significant portion of the Bank's loan portfolio utilizes prime rate as a reference point in pricing loans. West Coast prime averaged 4.75% for the first quarter of 2002 compared to 8.62% for the first quarter of 2001. Average yield on loans (excluding non-accrual loans) was 7.58% for the three-month period ended March 31, 2002 compared to 10.19% in the same period of 2001.

The designation of a loan as non-accrual for financial reporting purposes does not relieve the borrower of its obligation to pay interest. Accordingly, the Company may ultimately recover all or a portion of the interest due on these non-accrual loans. A non-accrual loan returns to accrual status when the loan becomes contractually current and future collectibility of amounts due is reasonably assured.

A summary of non-accrual, restructured and past due loans at March 31, 2002, December 31, 2001 and March 31, 2001 is set forth below. One commercial borrowing relationship makes up the majority of the total non-accrual loans at March 31, 2002 and December 31, 2001. Management can give no assurances that non-performing loans will not increase.

Edgar Filing: CENTRAL VALLEY COMMUNITY BANCORP - Form 10QSB

Loans considered to be impaired	\$	595	\$	1,108	\$ 16
Related allowance for credit losses on impaired loans	\$	102	\$	198	\$ 8

The investment policy of the Company is established by the Board of Directors and implemented by the Company's Strategic Planning Committee. It is designed primarily to provide and maintain liquidity, to enable the Company to meet its pledging requirements for public money and borrowing arrangements, to generate a favorable return on investments without incurring undue interest rate and credit risk, and to complement the Company's lending activities.

Investments typically have yields lower than loans. Interest income from investment securities, Federal funds sold, and interest-bearing deposits in other banks decreased 33.6% in the periods under review. The decrease in these categories of income can be attributed to lower Federal funds rates and lower yields on new investment purchases. The effective rate for investment securities not including Federal funds sold was 5.45% for the first quarter of 2002 compared to 6.56% for the same period in 2001. The effective yield for Federal funds sold was 1.66% for the first quarter of 2002 compared to 5.55% for the first quarter of 2001. As previously stated, FOMC lowered the Federal funds rate 475 basis points in 2001 which created, by the nature of collateralized mortgage obligations (CMOs) and mortgage backed securities (MBS), increased levels of principal prepayments in the periods under review. While a portion of the paydowns provided funding for loans, excess funds were generally reinvested at lower yields than those generated by the original investment.

Management's review of all investments before purchase includes an analysis of how the security will perform under several interest rate scenarios to monitor whether investments are consistent with the Company's investment policy. The policy addresses issues of average life, duration, concentration guidelines, prohibited investments, and prohibited practices.

The Company recognizes the interest rate risk and prepayment risks

associated with MBS and CMOs. In a declining interest rate environment, prepayments from MBS and CMOs would be expected to increase and the expected life of the investments would be expected to shorten. Conversely, if interest rates increase, prepayments would be expected to decline and the average life of the MBS and CMOs would be expected to extend. The Company has purchased certain of these investments which are meant to perform well in an increasing rate environment and others that are meant to perform well in a declining rate environment, with the ultimate goal of a balanced portfolio.

Average investment securities, including interest-bearing deposits in other banks and Federal funds sold, decreased 15.3%, or \$11,423,000, to \$63,002,000 for the first quarter of 2002 compared to \$74,425,000 for the first quarter of 2001. Principal paydowns and increased loan volumes were the major contributors to the decrease in investment volume. Principal paydowns were \$6,335,000 for the first quarter of 2002 compared to \$1,831,000 for the same period of 2001.

The amortized cost and estimated market value of available-for-sale investment securities at March 31, 2002 and March 31, 2001 consisted of the following:

March 31, 2002 (Unaudited) (In thousands)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Market Value
U.S. Government agencies	\$ 8,480	\$ 159	\$ (41)	\$ 8,598
Obligations of states and political subdivisions	12,993	590	(28)	13,555
U.S. Government agencies collateralized by mortgage obligations	36,292	800	(202)	36,890
Corporate bonds	969	50		1,019
Other securities	454			454
	\$ 59,188	\$ 1,599	\$ (271)	\$ 60,516

March 31, 2001 (Unaudited) (in thousands)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Market Value
U.S. Treasury securities	\$ 1,005	\$ 3		\$ 1,008
U.S. Government agencies	9,293	295		9,588
Obligations of states and political subdivisions	12,741	688		13,429
U.S. Government agencies collateralized by mortgage obligations	36,559	851	(37)	37,373
Federal Home Loan Mortgage Corporation non-cumulative preferred stock	1,009		(9)	1,000
Corporate bonds	962	54		1,016

	\$ 63,712	\$ 1,891	\$ (46)	\$ 65,557

The Company offers a variety of deposit accounts having a range of interest rates and terms. The Company's deposits consist of savings, demand deposits, and certificates of deposit accounts. The flow of deposits is influenced significantly by general economic conditions, changes in the money market and prevailing interest rates and competition. The Company's deposits are obtained primarily from the geographic area in which its offices are located. The Company relies primarily on customer service and long-standing relationships with customers to attract and retain these deposits. The Company does not use brokered deposits, and, based on historical experience, management believes it will continue to retain a large portion of its time deposit accounts at maturity.

Interest expense for the first quarter of 2002 was \$676,000 compared to \$1,227,000 for the first quarter of 2001. This \$551,000, or 44.9%, decrease in interest expense can be partially attributed to the 475 basis point decrease in Federal funds interest rates in 2001 compared to the first quarter of 2002. Interest rates on deposits typically lag behind immediate changes in Federal funds rates and then generally reflect only a percentage of the rate changes on deposit accounts. Effective rates for interest bearing liabilities was 1.76% for the first quarter of 2002 compared to 3.67% for the same period of 2001, a 191 basis point decrease. If interest rates were to decline or continue to remain unchanged in the remainder of 2002, the Company could experience restraints on further decreases in the rates paid on deposit products. Additionally, the interest rate risk could increase as depositors are reluctant to accept continued low deposit rates and search for higher yields in investment products other than those offered by the Company. Conversely, if interest rates were to increase, the Company could benefit from the immediate increase in loan rates without comparable increases in deposit rates.

The following table indicates the average balances of interest-bearing deposit products, the percentage of each to total deposits, and the effective rates paid.

(Unaudited)
(Dollars in
Thousands)

	Quarter Ended March 31, 2002			Quarter Ended March 31, 2001		
	Quarterly Avg.Bal.	% of Total Deposits	Effective Rate	Quarterly Avg.Bal.	% of Total Deposits	Effective Rate

Total Deposits	\$ 191,298	100.0%		\$ 174,813	100.0%	

Other interest expense also increased in the periods under review. The Company utilized its Federal Home Loan Bank (FHLB) credit line in the first quarter of 2002 in anticipation of short-term liquidity needs as well as opportunities to lock in low funding rates for increased loan growth. Borrowings from the FHLB were \$13,000,000 at March 31, 2002. There were no balances outstanding at March 31, 2001. The average maturities and weighted average rate of the borrowings at March 31, 2002 was 1.2 years and 2.75%, respectively. The Company will continue to analyze the advantages and disadvantages of borrowing funds versus selling investment securities as part of its ongoing funding analysis.

Net interest income before provision for credit losses for the first quarter of 2002 was \$2,737,000 compared to \$2,535,000 for the first quarter of 2001, an increase of \$202,000, or 8.0%. The increase in net interest income can be mainly attributed to the increase in loan interest income mentioned above.

PROVISION FOR CREDIT LOSSES

The Company provides for possible credit losses by a charge to operating income based upon the composition of the loan portfolio, past delinquency levels, losses and non-performing assets, economic and environmental conditions and other factors which, in management's judgment, deserve recognition in estimating credit losses. Loans are charged off when they are considered uncollectible or of such little value that continuance as an active earning bank asset is not warranted.

The establishment of an adequate credit allowance is based on both an accurate risk rating system and loan portfolio management tools. Management has established initial responsibility for the accuracy of credit risk grades with the individual credit officer. The grading is then submitted to the Chief Credit Officer (CCO), who reviews the grades for accuracy. The risk grading and reserve allocation is analyzed periodically by a third party credit reviewer and by various regulatory agencies.

The CCO sets the specific reserve for all adversely risk-graded credits quarterly. This process includes the utilization of loan delinquency reports, classified asset reports, and portfolio concentration reports to assist in accurately assessing credit risk and establishing appropriate reserves. Reserves are also allocated to credits that are not adversely graded. Use of historical loss experience within the portfolio along with peer bank loss experience determines the level of reserves held.

The allowance for credit losses is reviewed at least quarterly by the Board's Audit Committee and by the Board of Directors. Reserves are allocated to loan portfolio categories using percentages which are based on both historical risk elements such as delinquencies and losses and predictive risk elements such as economic, competitive and environmental factors. The Company has adopted the specific reserve approach to allocate reserves to each adversely graded asset, as well as to each impaired asset for the purpose of estimating potential loss exposure. Although the allowance for credit losses is allocated to various portfolio categories, it is general in nature and available for the loan portfolio in its entirety. Additions may be required based on the results of independent loan portfolio examinations, regulatory agency examinations, or the Company's own internal review process. Additions are also required when, in management's judgment, the allowance does not properly reflect the portfolio's potential loss exposure.

Managing credits identified through the risk evaluation methodology includes developing a business strategy with the customer to mitigate the Company's potential losses. Management continues to monitor these credits with a view to identifying as early as possible when, and to what extent, additional provisions may be necessary.

The Company made no additions to the allowance for credit losses in the first quarter of 2002 due mainly to decreased levels of risk-rated loans which was partially offset by the increase in loan volumes mentioned above. In the first quarter of 2001, \$463,000 was added to the allowance for credit losses. Additionally, the Company's historical charge-off ratio, which reflects charge-offs for the past three (3) years, declined to 0.209 for 2002 compared to 0.243 for 2001 and 2.712 for 1999.

At March 31, 2002, December 31, 2001 and March 31, 2001, the Company's recorded investment in loans that were considered to be impaired totaled \$595,000, \$1,108,000, and \$16,000, respectively. The related allowance for credit losses on these impaired loans was \$102,000, \$198,000 and \$8,000 respectively.

An analysis of the changes in the allowance for credit losses for the three-month periods ended March 31, 2002 and 2001 is as follows:

(Unaudited) (In thousands)	Allowance for Credit Losses For the Three Months Ended March 31,	
	2002	2001
Balance, beginning of the year	\$ 2,474	\$ 2,047
Provision charged to operations	0	463
Losses charged to the allowance	(296)	(295)
Recoveries on loans previously charged off	39	38
Balance, end of period	\$ 2,217	\$ 2,253

The ratio of net credit losses to total average loans outstanding was 0.19% for the first quarter of 2002 compared to net credit losses of 0.26% for the same period in 2001. Net charge offs were \$257,000 for the each of the first quarters of 2002 and 2001. Non-performing loans at March 31, 2002 and 2001 were \$1,306,000 and \$156,000, respectively. The ratio of non-performing loans to the allowance for credit losses at March 31, 2002 was 58.9% compared to 6.9% at March 31, 2001. The increase can be mainly attributable to one commercial borrowing relationship.

Based on information currently available, management believes that the allowance for credit losses will be adequate to absorb potential risks in the portfolio. However, no assurance can be given that the Company may not sustain charge-offs which are in excess of the allowance in any given period.

Net interest income after the provision for credit losses increased \$665,000, or 32.1%, in the periods under review.

NON-INTEREST INCOME

Non-interest income includes service charges, rental income from equipment leased to others, loan placement fees and other income as well as gains on sale of assets and gains on securities transactions.

Non-interest income decreased \$794,000, or 44.2%, to \$1,001,000 in the first quarter of 2002 compared to \$1,795,000 in the first quarter of 2001. The major contributors to the decrease were other income and net realized gain on sales of investment securities.

Service charges increased \$103,000, or 41.4% in the periods under review. Increased deposit accounts and lower earnings credit rates for commercial deposit accounts were the main contributors to the increase. Business related deposit accounts may earn credit for average deposit holdings which may be used to offset service expenses. When the earnings credit is lower, the business will be required to increase deposit holdings or pay additional charges.

The Company earns loan placement fees from the brokerage of single-family residential mortgage loans. Loan placement fees increased \$41,000, or 97.6%, in the periods under review. The 475 basis point reductions in the Federal funds rate by the FOMC in 2001 provided consumers with numerous opportunities for refinancing of single-family homes. As interest rates remain unchanged or begin to increase, the opportunities for continued growth in this area may decline.

Net realized gain on sales of investment securities decreased \$290,000 to \$26,000 for the first three months of 2002 compared to \$316,000 for the same period in 2001. Liquidity needs in the first quarter of 2001 provided an opportunity for the Company to invest funds in higher yielding loans at a time when the loan demand increased and deposit volumes did not keep pace. As stated above, in the routine analysis of liquidity needs, the Company compares the advantages of

borrowing funds or selling securities to meet liquidity needs.

Other income decreased \$649,000 in the periods under review. The majority of the decrease from 2001 can be attributed to the non-recurring earnings in 2001 from an insurance settlement mentioned above.

NON-INTEREST EXPENSES

Non-interest expenses include salaries and employee benefits, occupancy and equipment expenses, depreciation and provision for losses on equipment leased to others and other expenses.

Non-interest expense for the first quarter of 2002 decreased \$62,000, or 2.3%, compared to the same period of 2001. The decrease is mainly due to depreciation and provision for losses on equipment leased to others, which was partially offset by increases to salary and employee benefits.

Salaries and employee benefits increased \$142,000, or 11.3%, in the first quarter of 2002 compared to the same period in 2001. The increase can be mainly attributed to general salary and benefits increases which enable the Company to properly manage recent and projected growth and retain qualified personnel.

Occupancy and equipment expense increased \$23,000 or 10.2% in the periods under review. The Company accelerated depreciation on leasehold improvements for two branches in anticipation of their relocations.

Depreciation and provision for losses on equipment leased to others decreased \$204,000 or 45.2% in the periods under review. The decrease is mainly the result of the Company's decision not to actively pursue new operating lease arrangements. This decision is reflected in the lower volume of equipment leased to others, which was \$970,000 at March 31, 2002 compared to \$1,217,000 at December 31, 2001 and \$2,165,000 at March 31, 2001.

The Company was successful in maintaining its level of other expenses without significant change in the periods under review. Other expenses decreased \$23,000 or 2.8%.

INCOME BEFORE TAXES

Income before income tax expense decreased \$67,000 or 6.0%, to \$1,056,000 for the first quarter of 2002 compared to \$1,123,000 for the first quarter of 2001.

OTHER INFORMATION

The Bank's efficiency ratio is calculated by dividing non-interest expense by the sum of net interest income and non-interest income. The ratio for the first quarter of 2002 was 71.8% compared to 62.2% in the first quarter of 2001.

Excluding the non-recurring income realized in the first quarter of 2001, the ratio for the quarter ended March 31, 2001 was 78.2%, compared to 71.8% for the same period in 2002. This means that for every dollar of income generated, the cost of generating that income was 71.8 cents in the first three months of 2002 and 78.2 cents for the same period of 2001. The lower the ratio, the more efficient the Company's operations. While reducing operating expenses can lower the ratio, the Company's low loan to deposit ratio, which reduces net interest income, also significantly affects this ratio. Although the Company's loan to deposit ratio has significantly increased in the period under review, the ratio remains lower than the Company's peers.

OFF BALANCE SHEET COMMITMENTS:

Off balance sheet commitments are comprised of the unused portions of commitments to make or purchase extensions of credit in the form of loans or participations in loans, lease financing receivables, or similar transactions. Included are loan proceeds that the Company is obligated to advance, such as loan draws, construction progress payments, seasonal or living advances to farmers under prearranged lines of credit, rotating or revolving credit arrangements, including retail credit cards, or similar transactions. Forward agreements and commitments to issue a commitment at some point in the future are also included. The Company holds no off balance sheet derivatives and engages in no hedging activities.

The following table shows the distribution of the Company's undisbursed loan commitments for the quarters ended March 31, 2002 and 2001, respectively.

Loan Type (In thousands)	March 31, 2002	March 31, 2001
Commercial & Industrial	\$ 27,814	\$ 28,052
Real Estate	27,426	17,372
Consumer & Installment	9,384	6,783
Total	\$ 64,624	\$ 52,207

CAPITAL RESOURCES:

Changes in total shareholders' equity are reflected in the table below. The change in accumulated other comprehensive income reflects the effect on equity of unrealized gains or losses on available for sale securities.

(In thousands)	March 31, 2001 (Unaudited)	December 31, 2001 (Audited)	March 31, 2001 (Unaudited)

---------------------------	----	--------	----	--------	----	--------

The Company and the Bank are subject to certain regulatory requirements administered by the Board of Governors of the Federal Reserve System and the Federal Deposit Insurance Corporation (FDIC). Failure to meet these minimum capital requirements can initiate certain mandatory, and possibly additional discretionary, actions by regulators that, if undertaken, could have a direct material effect on the Company's consolidated statements. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, the Bank must meet specific capital guidelines that involve quantitative measures of the Bank's assets, liabilities and certain off-balance-sheet items as calculated under regulatory accounting practices. The Company's and the Bank's capital amounts and classification are also subject to qualitative judgments by the regulators about components, risk weightings and other factors.

Quantitative measures established by regulation to ensure capital adequacy require the Company and the Bank to maintain minimum amounts and ratios of total and Tier 1 capital to risk-weighted assets and of Tier 1 capital to average assets. Each of these components is defined in the regulations. The consolidated quarterly average assets and risk-weighted assets of the Company and the quarterly average assets and risk-weighted assets of the Bank are not materially different at March 31, 2002. Management believes that the Company and the Bank meet all their capital adequacy requirements as of March 31, 2002.

In addition, the most recent notification from the FDIC categorized the Bank as well capitalized under the regulatory framework for prompt corrective action. To be categorized as well capitalized, the Bank must maintain minimum total risk-based, Tier 1 risk-based and Tier 1 leverage ratios as set forth below. There are no conditions or events since that notification that management believes have changed the Bank's category. Tier 1 capital is comprised of common shareholders' equity as modified by certain regulatory adjustments such as intangible assets, deferred taxes, and the effects of other comprehensive income (loss). The Bank continues to maintain capital levels substantially above those required for a well-capitalized bank under current capital adequacy regulations.

On February 13, 2002, the Company declared a \$.10 per share cash dividend to shareholders of record at the close of business on March 5, 2002 which was paid on March 31, 2002.

In February 2002, the Company announced its intent to repurchase up to

\$500,000, or approximately 3%, of its common stock through a stock repurchase plan that became effective March 1, 2002 and expires January 31, 2003. As of March 31, 2002, the Company has repurchased 2,000 shares at a total cost of \$41,000.

In the first quarter of 2001, the Company's Board of Directors approved a stock repurchase program with an expiration date of February 28, 2002. This repurchase program was successful in the repurchase of 25,900 shares of common stock.

Edgar Filing: CENTRAL VALLEY COMMUNITY BANCORP - Form 10QSB

The following table presents the Company's capital ratios as of March 31, 2002 and December 31, 2001.

Total as of March 31, 2002 (Unaudited)	Actual		To Be Well-Capitalized Under Prompt Corrective Action Provisions		Minimum Regulatory Requirements	
	Amount	Ratio	Amount	Ratio	Amount	Ratio
Total Capital (to risk weighted assets)	22,487,000	13.67%	16,445,000	10.0%	\$ 13,156,000	8.0%
Tier 1 Capital (to risk weighted assets)	20,436,000	12.43%	9,867,000	6.0%	6,578,000	4.0%
Tier 1 Capital (to average assets)	20,436,000	9.09%	11,241,000	5.0%	8,992,000	4.0%
Total as of December 31, 2001	Amount	Ratio	Amount	Ratio	Amount	Ratio
Total Capital (to risk weighted assets)	\$ 21,655,000	14.3%	\$ 15,192,000	10.0%	\$ 12,154,000	8.0%
Tier 1 Capital (to risk weighted assets)	\$ 19,755,000	13.1%	\$ 9,115,000	6.0%	\$ 6,077,000	4.0%
Tier 1 Capital (to average assets)	\$ 19,755,000	8.9%	\$ 11,062,000	5.0%	\$ 8,850,000	4.0%

Risk-weighted assets at March 31, 2002 were \$164,442,000 compared to \$151,921,000 at December 31, 2001. Average quarterly assets less regulatory adjustments were \$224,810,000 at March 31, 2002 and \$221,258,000 at December 31, 2001.

LIQUIDITY MANAGEMENT

The object of liquidity management is to maintain cash flow adequate to fund the Company's operations and to meet obligations and other commitments on a timely and cost effective basis. In assessing liquidity, historical information such as seasonal demand, local economic cycles and the economy in general are considered, along with current ratios, management goals, and unique characteristics of the Company. Management accomplishes this objective through the selection of asset and liability maturity mixes that it believes will meet the Company's needs.

Liquidity is provided by the Bank's core deposit base, shareholders' equity, and reductions in assets, which can be immediately converted to cash at minimal cost. Liquid assets, which consist of cash, deposits in other financial institutions, Federal funds sold and available for sale investment securities, averaged \$76,904,000 for the first three months of 2002, or 34.2% of average assets, compared to \$87,059,000, or 44.2% of average assets for the first three months of 2001. The ratio of average liquid assets to average demand deposits was 162.5% for the first three months of 2002 compared to 207.3% for the first three months of 2001. The decrease in liquidity ratios can

be attributed to the increase in loan volumes mentioned above. The Company sold approximately \$9,549,000 in available for sale securities in the first three months of 2001 for the purpose of liquidity compared to the short-term borrowings from the Federal Home Loan Bank (FHLB) which averaged \$9,600,000 for the first three months of 2002. The increase in FHLB borrowings required an increase in FHLB stock held by the Bank. The increase is reflected in the increase in accrued interest receivable and other assets which increased \$815,000 in the periods under review.

The Company has, and may do so in the future, sold securities to obtain needed liquidity. The Company analyzes the advantages and disadvantages of borrowing funds versus selling existing investment securities and their respective rates and yield.

The Bank's loan to deposit ratio at March 31, 2002 was 72.3% compared to 60.7% at March 31, 2001.

Unpledged investment securities may also provide liquidity. At March 31, 2002, \$44,225,000 in unpledged investments were available as collateral for borrowing. Additionally, maturing loans can provide liquidity. At March 31, 2002, approximately \$19,015,000 in loans were scheduled to mature within the next ninety days.

The Bank had unsecured lines of credit with its correspondent banks which, in the aggregate, amounted to \$6,000,000 at March 31, 2002 and December 31, 2001, at interest rates which vary with market conditions. The Bank also had a line of credit with the Federal Reserve Bank of San Francisco at March 31, 2002 and December 31, 2001 which bears interest at the prevailing discount interest rate collateralized by investment securities with amortized costs totaling \$5,287,000 and \$5,402,000 and market values totaling \$5,517,000 and \$5,703,000, respectively. In addition, the Bank had a credit line with the Federal Home Loan Bank at March 31, 2002 and December 31, 2001 which bears interest at the prevailing interest rate collateralized by investment securities with amortized costs totaling \$14,677,000 and \$5,045,000, respectively, and market values totaling \$14,825,000 and \$5,067,000, respectively. The amount of the credit line varies according to the make-up of the Bank's investment and loan portfolio. At March 31, 2002, the Bank had \$13,000,000 outstanding on these credit lines. At December 31, 2001 and March 31, 2001, the Bank had no outstanding borrowings under these credit lines.

Management believes that the Company's current mix of assets and liabilities provide a reasonable level of risk related to significant fluctuations in net interest income or the result of volatility of the Company's earnings base.

Management believes that the Company maintains adequate amounts of liquid assets to meet its liquidity needs. The Company's liquidity might be insufficient if deposits or withdrawals were to exceed anticipated levels. Deposit withdrawals can increase if a company experiences financial difficulties or receives adverse publicity for other reasons, or if its pricing of products or services is not

competitive with those offered by other financial institutions.

MARKET RISK

Market risk is the risk of loss from adverse changes in market prices and rates. The Company's market risk arises primarily from interest rate risk inherent in its loan and deposit functions. Management actively monitors and manages this interest rate risk exposure.

Fluctuations in market interest rates expose the Company to potential gains and losses. The primary objective of asset/liability management is to manage the balance between rate sensitive assets and rate sensitive liabilities being repriced in any given period in order to maximize net interest income during periods of fluctuating interest rates.

Rate sensitive assets are those which contain a provision to adjust the interest rate periodically (for example, a loan in which prime rate determines the basis of the rate charged on outstanding balances). Those assets include certain commercial, real estate mortgage and construction loans and certain investment securities, Federal funds sold and time deposits in other financial institutions. Rate sensitive liabilities are those which provide for periodic changes in interest rate and include interest-bearing transaction accounts, money market accounts, and time certificates of deposit. Analysis has shown that because of time and volume influences, the repricing of assets and liabilities is not tied directly to the timing of changes in market interest rates. If repricing assets exceed repricing liabilities in a time period, the Company would be considered asset sensitive and have a positive gap. Conversely, if repricing liabilities exceed repricing assets in a time period, the Company would be considered liability sensitive and have a negative gap.

Managing interest rate risk is important to the Company as its net interest margin can be affected by the repricing of assets and liabilities. Management uses several different tools to monitor its interest rate risk, including gap analysis. Additionally, the Company utilizes an asset/liability computer model which provides a detailed quarterly analysis of the Company's financial reports, to include a ratio analysis of liquidity, equity, strategic free capital, volatile liability coverage, and maturity of the investment portfolio. In addition, a trend analysis is generated which provides a projection of the Company's asset and liability sensitivity position over a 12 month period. Exposure to interest rate changes is calculated within the program to ascertain interest rate risk in actual dollar exposure resulting from incremental changes in marketing interest rates. The incremental changes are generally referred to as shocks. These shocks measure the effect of sudden and significant rate changes on the Company's net interest income. Assets may not reprice in the same way as liabilities and adjustments are made to the model to reflect these differences. For example, the time between when the Company changes its rate on deposits may lag behind the time the Company changes the rate it charges on loans. Additionally, the interest rate change may not be in the same

proportion for assets and liabilities. Interest rates on deposits may not decrease in the same proportion as a decrease in interest rates charged on loans. Conversely, interest rates on deposits may not be increased in the same proportion as rates charged on loans.

INFLATION

The impact of inflation on a financial institution differs significantly from that exerted on other industries primarily because the assets and liabilities of financial institutions consist largely of monetary items. However, financial institutions are affected by inflation in part through non-interest expenses, such as salaries and occupancy expense, and to some extent by changes in interest rates.

PART II OTHER INFORMATION

ITEM 5 Other information

None

ITEM 6 Exhibits and Reports on Form 8-K
