IMA EXPLORATION INC
Form 6-K
February 20, 2004

SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, DC 20549

FORM 6-K

REPORT OF FOREIGN PRIVATE ISSUER
PURSUANT TO RULE 13a-16 OR 15d-16 UNDER
THE SECURITIES EXCHANGE ACT OF 1934

For the month of FEBRUARY , 2004.

IMA EXPLORATION INC.

(Translation of registrant's name into English)

#709 - 837 West Hastings Street, Vancouver, British Columbia, V6C 3N6, Canada

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F:

Form 20-F X Form 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1): _____

Note: Regulation S-T Rule 101(b)(1) only permits the submission in paper of a Form 6-K if submitted solely to provide an attached annual report to security holders.

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7): _____

Note: Regulation S-T Rule 101(b)(7) only permits the submission in paper of a Form 6-K if submitted to furnish a report or other document that the registrant foreign private issuer must furnish and make public under the laws of the jurisdiction in which the registrant is incorporated, domiciled or legally organized (the registrant's "home country"), or under the rules of the home country exchange on which the registrant's securities are traded, as long as the report or other document is not a press release, is not required to be and has not been distributed to the registrant's security holders, and, if discussing a material event, has already been the subject of a Form 6-K submission or other Commission filing on EDGAR.

Indicate by check mark whether by furnishing the information contained in this Form, the registrant is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Edgar Filing: IMA EXPLORATION INC - Form 6-K

Yes _____ No X _____

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3- 2(b): 82-_____

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf of the undersigned, thereunto duly authorized.

IMA Exploration Inc.

NEWS RELEASE

FEBRUARY 20, 2004

IMA'S DRILLING CONTINUES TO EXPAND SILVER DISCOVERY AT NAVIDAD

IMA Exploration Inc. is pleased to announce results from drill holes 15 to 20 at the Company's 100% owned Navidad silver discovery. Holes 15 to 20 were all drilled in the Galena Hill area of the Navidad Project where drilling is currently testing the zone between Navidad and Galena Hills. Highlights of these holes include 113.5 g/t silver over 69.1m in hole 15 and 100.3 g/t silver over 66.5m in hole 19.

The Company's Geologists are very encouraged by the continuity and grade of the drill results to date, which continues to expand the size of the mineralized body at Navidad. Crews are currently drilling hole 35, 14 holes are in various stages of analysis and results will be announced frequently over the next several weeks. IMA has completed approximately 6,000m of the planned 8,500m program; the results to date pertain to the first 3,340m.

Updated summaries of drill hole locations and results to date are available on IMA's website (www.imaexploration.com), as is a summary of the Company's rigorous quality-control and quality-assurance procedures. Dr. Paul Lhotka is IMA's "Qualified Person" at the Navidad project and has overseen all aspects of the current program.

TECHNICAL SUMMARY

Drill holes NV04-15 and 16 were drilled on section 51,160E, extending the tested width to approximately 450m. NV04-15 extended the mineralization found in holes NV03-03, 04 and 05 approximately 100m towards grid north and returned 69.1m of 113.5 g/t silver and 1.46% lead including 8.5m of 461.7 g/t silver and 6.54% lead. This interval spans the lowermost portions of the mudstone unit and upper portions of the underlying volcanic rocks.

Holes NV04-17, 18, and 19 were drilled on section 51,000E and form a fence which when complete (including holes 14, 21, 22, and 23) will test a total width of approximately 700m. NV04-19 returned the best intersection from these new holes with 66.5m of 100.3 g/t silver and 2.74% lead including 8.4m of 177.4 g/t silver and 4.22% lead.

Drill holes NV04-15 through 20 and previous holes at Galena Hill have all intersected a similar stratigraphic sequence which includes, from lower to uppermost: an unmineralized basal sequence of hematitic volcanoclastic rocks; mineralized brecciated andesitic volcanic rocks; mudstones which often contain strataform silver-lead-zinc mineralization; and thinly bedded limestone which caps the stratigraphic sequence. Although the stratigraphic sequence is very consistent, the thicknesses of individual units are highly variable and suggest an environment of syn-depositional normal faulting. This environment of extensional tectonism and basin formation is typical of syn-volcanic and syn-sedimentary VMS (volcanogenic massive sulphide) deposits.

NV04-20 was drilled on section 50,800E and encountered a dramatically thinner stratigraphic section and topographically higher basement than in previous holes. It is interpreted that this hole was drilled in a restricted area of

Edgar Filing: IMA EXPLORATION INC - Form 6-K

higher basement paleotopography.

Indications are emerging of lateral facies changes in stratigraphy and zoning of mineralization at Galena Hill. The southwestern flank of the hill is characterized by lower silver to lead ratios (holes NV04-12, 16, 17 and 18) likely indication a more distal portion of the hydrothermal system. This

mineralization is a mix of synvolcanic and synsedimentary stratiform and replacement mineralization. Mudstones overlying the mineralized volcanics thicken towards the southwest. Towards the central part of Galena Hill the mineralization is higher grade and has higher silver to lead ratios. Mineralization extends from near surface to depths in excess of 100m and is predominantly synvolcanic replacement style (NV03-04, 05 and NV04-14 and 19). Highest silver grades are associated with increased copper grades and variable lead grades (NV04-13 and 14).

In addition to ongoing drilling, IMA has completed an additional 15.5 line kilometres of pole-dipole IP (induced polarization) geophysics. In general, the pole-dipole IP correlates well with the gradient IP previously completed, however it gives greater detail and allows inverted sections to be produced that have been successfully used to guide drilling to date. Pole-dipole IP shows highly elevated chargeability values (15 to 40 mV/V) in the Galena Hill area and moderately elevated values (7.5 to 15 mV/V) over a much larger area (1.8 x 1.4 km) between Galena and Navidad Hills and in the covered valley to the west. All IP geophysics has been performed by Quantec Geoscience Argentina S.A.
