## **Section 1 Conflict Minerals Disclosure**

### **Item 1.01 Conflict Minerals Disclosure and Report**

#### **Introduction**

The terms Goodyear, Company and we, us or our wherever used herein refer to The Goodyear Tire & Rubber Company together with all of its consolidated U.S. and foreign subsidiary companies, unless the context indicates to the contrary. Terms used herein that are defined in Item 1.01(d) of Form SD are used as defined therein.

We are one of the world's leading manufacturers of tires, engaging in operations in most regions of the world. Together with our U.S. and international subsidiaries, we develop, manufacture, market and distribute tires for most applications. We also manufacture and market rubber-related chemicals for various applications. We manufacture our products in 49 manufacturing facilities in 22 countries, including the United States, and we have marketing operations in almost every country around the world. We are one of the world's largest operators of commercial truck service and tire retreading centers. In addition, we operate approximately 1,100 tire and auto service center outlets where we offer our products for retail sale and provide automotive repair and other services.

#### **Description of Reasonable Country of Origin Inquiry ( RCOI )**

Following a review of the raw materials and components used to manufacture our products, we determined that the following components are necessary to the functionality of certain of our products and contain conflict minerals:

Bead wire, which is used in all tires, allows a tire to be mounted on a rim and includes bronze electroplating to improve wire to rubber adhesion properties (other than radial aircraft tires which use brass electroplating). Bronze is a metal alloy consisting primarily of copper and tin.

Tungsten studs, which are used in certain studded winter replacement tires sold in Europe.

RFID chips, which are incorporated into certain commercial replacement tires sold in Latin America and race tires, contain tin, tungsten and gold.

In 2015, our spending on bead wire constituted approximately 97% of our spending on the components described above, making tin the most significant conflict mineral in our supply chain by a wide margin.

We sent the EICC-GeSI Conflict Minerals Reporting Template (each a Template and collectively the Templates ) to each of the suppliers that directly supply us with any of the components described above in order to collect further information on, among other things, the country of origin of the conflict minerals contained in our products. Once we received a completed Template from a supplier, we evaluated the Template for completeness and accuracy, and made further inquiries of our suppliers in order to clarify or improve the quality of their responses to us. Our objective was to identify each of the smelters that placed conflict minerals into our supply chain, which we believed would facilitate our ability to identify the country of origin of the conflict minerals contained in our products.

In 2015, we had a total of 14 direct suppliers of the components described above. We received Templates that we deemed to be complete, or acceptable representation letters as to country of origin, from all of those suppliers. We deemed a Template to be complete if it identified all of the smelters in a supplier's supply chain. Based on the Templates that we received, we identified 36 total smelters, including 17 tin smelters, 9 tungsten smelters and 10 gold refiners, that provided conflict minerals that were ultimately incorporated into our products.

We are a member of the Conflict-Free Sourcing Initiative ( CFSI ), an industry initiative that audits smelters and refiners' due diligence activities. We used the Reasonable Country of Origin Inquiry report that we received as part of our CFSI membership (the CFSI RCOI Report ) to identify the country of origin for 29 of our smelters.

Based on the CFSI RCOI Report, we identified four tin smelters and one tungsten smelter that supplied conflict minerals to our suppliers and that we had reason to believe may have sourced conflict minerals directly or indirectly from the Democratic Republic of the Congo or an adjoining country (collectively, the Covered Countries ). Based on the CFSI RCOI Report, we also determined that a portion of (1) our conflict minerals did not originate in the Covered Countries (22 smelters) and (2) our conflict minerals were solely from recycled or scrap sources (2 smelters).

With respect to the remaining seven smelters, we reviewed representations made by certain smelters, reviewed our suppliers and the smelters' websites and conducted open-source internet searches for any further information on our suppliers and the smelters regarding the country of origin of the conflict minerals they used. Based on those additional inquiries, we had no reason to believe that our conflict minerals from those smelters may have originated in the Covered Countries.

For information on the due diligence that we performed with respect to the source and chain of custody of the conflict minerals sourced from the smelters whose conflict minerals may have originated in the Covered Countries, see the Conflict Minerals Report attached hereto as Exhibit 1.01.

This Form SD and the related Conflict Minerals Report are available on our Internet website at <http://investor.goodyear.com/sec.cfm>. Please note, however, that information contained on our Internet website is not incorporated by reference into this Form SD or otherwise considered to be a part of this document.

#### **Item 1.02 Exhibit**

The Conflict Minerals Report required by Item 1.01 is attached hereto as Exhibit 1.01. See Item 2.01 below.

**Section 2 Exhibits**

**Item 2.01 Exhibits**

Exhibit 1.01 Conflict Minerals Report

**SIGNATURES**

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

The Goodyear Tire & Rubber Company
