AK STEEL HOLDING CORPORATION
 NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
 (dollars in millions, except per share data, unless otherwise indicated)

NOTE 1 - Basis of Presentation

In the opinion of the management of AK Steel Holding Corporation (“AK Holding”) and its wholly-owned subsidiary, AK Steel Corporation (“AK Steel”, and together with AK Holding, the “Company”), the accompanying condensed consolidated financial statements contain all adjustments, consisting of normal recurring adjustments, necessary to present fairly the financial position of the Company as of June 30, 2013, the results of its operations for the three and six months ended June 30, 2013 and 2012, and its cash flows for the six months ended June 30, 2013 and 2012. The results of operations for the three and six months ended June 30, 2013 are not necessarily indicative of the results to be expected for the full year ending December 31, 2013. These condensed consolidated financial statements should be read in conjunction with the audited consolidated financial statements of the Company for the year ended December 31, 2012, included in the Company’s Form 10-K for the year ended December 31, 2012, and the unaudited condensed consolidated financial statements included in any subsequent Quarterly Reports on Form 10-Q.

NOTE 2 - Inventories

	June 30, 2013	December 31, 2012
Finished and semi-finished	\$745.6	\$728.5
Raw materials	348.0	315.7
Total cost	1,093.6	1,044.2
Adjustment to state inventories at LIFO value	(416.6) (435.0
Inventory, net	\$677.0	\$609.2

NOTE 3 - Investment in Magnetation

AK Steel has a 49.9% equity interest in its Magnetation LLC joint venture (“Magnetation”) with Magnetation, Inc. Magnetation utilizes advanced magnetic separation technology to recover iron ore from existing stockpiles of previously-mined material. The Company accounts for its investment under the equity method of accounting. Included in other income (expense) was the Company’s share of income (loss) related to Magnetation of \$(1.2) and zero for the three months ended June 30, 2013 and 2012, respectively, and \$1.1 and \$(0.4) for the six months ended June 30, 2013 and 2012, respectively. As of June 30, 2013, the Company’s carrying cost of the investment exceeded its share of the underlying equity in net assets of Magnetation, recorded using historical carrying amounts, by \$99.2. This difference is being amortized through equity in earnings and is included in the above amounts.

AK Steel’s investment of capital in Magnetation is structured to occur in two phases. For Phase I, AK Steel contributed a total of \$147.5 for its interest in the joint venture and this phase was completed in late 2012. Phase II will involve the construction and operation of additional concentrate capacity and an iron ore pelletizing plant. For Phase II, AK Steel will contribute a total of \$150.0 following Magnetation’s satisfaction of certain conditions, which were satisfied in the second quarter of 2013. Key environmental permits were obtained in April 2013 and AK Steel made a contribution of \$50.0 in May 2013. The remaining Phase II contributions are anticipated to occur through late 2014 with the timing to be determined based on liquidity needs of Magnetation. AK Steel has no legal or contractual obligation to provide further financing to Magnetation beyond the amounts mentioned above. Through an offtake

agreement, AK Steel will have the right to purchase all of the pellets produced by the pelletizing plant.

NOTE 4 - Income Taxes

Income taxes recorded through June 30, 2013 were estimated using the discrete method, which was based on actual year-to-date pre-tax loss through June 30, 2013, as well as the related change in the valuation allowance on deferred tax assets. The

- 7-

Table of Contents

Company was unable to estimate pre-tax income for the remainder of 2013 with sufficient precision for purposes of the effective tax rate method, which requires consideration of a projection of full-year income and the expected change in the valuation allowance. The estimated annual effective tax rate method was not reliable due to its sensitivity to small changes to forecasted annual pre-tax earnings and the effect of the Company's valuation allowance, which create results with significant variations in the customary relationship between income tax expense and pre-tax income for the interim periods. As a result, the use of the discrete method is more appropriate than the annual effective tax rate method. The Company has estimated the change in valuation allowances required based on the year-to-date pre-tax loss and the change in value of the identified tax-planning strategy, which is determined based on year-to-date LIFO income. Included in the income tax provision are non-cash charges of \$20.7 and \$21.8 for the three and six months ended June 30, 2013, respectively, for the change in the valuation allowance on the Company's deferred tax assets. The Company recorded a non-cash charge of \$736.0 in the three and six months ended June 30, 2012, for an adjustment of the valuation allowance because of the change in judgment about the realizability of the deferred tax assets.

In the first quarter of 2013, SunCoke Energy, Inc. ("SunCoke") completed an initial public offering of an affiliate, SunCoke Energy Partners, L.P., a master limited partnership. As a result of a change in the legal structure of the SunCoke entities that own Middletown Coke Company, LLC ("SunCoke Middletown") made in connection with the offering, income taxes are no longer allocated to net income attributable to SunCoke Middletown beginning in the first quarter of 2013. Thus, effective January 1, 2013 the Company's income tax provision no longer includes the effect of that allocation. However, for the three and six months ended June 30, 2012, the consolidated income tax provision included \$4.1 and \$7.1, respectively, associated with SunCoke Middletown. Neither the former tax allocation nor the January 1, 2013 change eliminating that allocation had any effect on the net income (loss) attributable to AK Steel Holding Corporation in any period.

NOTE 5 - Long-term Debt and Other Financing

The Company's debt balances, including current portions, were as follows:

	June 30, 2013	December 31, 2012
Credit Facility	\$40.0	\$—
8.75% Senior Secured Notes due December 2018	380.0	350.0
5.00% Exchangeable Senior Notes due November 2019 (effective rate of 10.8%)	150.0	150.0
7.625% Senior Notes due May 2020	529.8	550.0
8.375% Senior Notes due April 2022	290.2	300.0
Industrial Revenue Bonds due 2013 through 2030	100.5	100.9
Unamortized debt discount/premium, net	(35.1) (39.0
Total debt	1,455.4	1,411.9
Less:		
Borrowings under Credit Facility classified as short-term	40.0	—
Current portion of long-term debt	0.7	0.7
Total long-term debt	\$1,414.7	\$1,411.2

During the period, the Company was in compliance with all the terms and conditions of its debt agreements.

Credit Facility

AK Steel has a \$1.1 billion asset-backed revolving credit facility (“Credit Facility”) with a group of lenders that expires in April 2016. Availability under the Credit Facility fluctuates monthly based on the varying levels of eligible collateral. At June 30, 2013, the Company’s eligible collateral, after application of applicable advance rates, was \$971.6. As of June 30, 2013, there were outstanding Credit Facility borrowings of \$40.0. Availability as of June 30, 2013 was further reduced by \$73.9 attributable to outstanding letters of credit, resulting in remaining availability of \$857.7.

Senior Unsecured Notes

During the second quarter of 2013, the Company repurchased an aggregate principal amount of \$20.2 and \$9.8 of the 7.625% Senior Notes due May 2020 and the 8.375% Senior Notes due April 2022, respectively, in private, open market transactions.

- 8-

Table of Contents

These repurchases were unsolicited and completed at a discount to the senior unsecured notes' par value. The Company recognized a gain on the repurchases of \$2.9 for the quarter ended June 30, 2013.

Senior Secured Notes

In June 2013, AK Steel issued \$30.0 of aggregate principal amount (the "add-on notes") of its 8.75% Senior Secured Notes due 2018 at an issue price of 106.5%, as an add-on to its outstanding \$350.0 aggregate principal amount of such notes (collectively, the "Secured Notes"). The add-on notes will be treated as a single series with the existing notes and will have the same terms as the existing notes. Net proceeds from this offering of \$30.9 were used for general corporate purposes. In July 2013, the Company filed a registration statement with the Securities and Exchange Commission (the "Commission"), which the Commission subsequently declared effective, offering to exchange the existing, unregistered Secured Notes for new senior secured notes with substantially identical terms that are registered under the Securities Act of 1933, as amended. The exchange offer is ongoing and will expire August 28, 2013, unless otherwise extended by the Company. AK Steel will not receive any additional proceeds from the exchange offer.

NOTE 6 - Pension and Other Postretirement Benefits

The Company provides noncontributory pension and various healthcare and life insurance benefits to most employees and retirees. The pension plan is not fully funded. The Company expects to contribute \$181.5 to the master pension trust during 2013. Of this total, \$71.3 was made in the first half of 2013 and \$68.9 was made in July 2013, leaving \$41.3 to be made during the remainder of 2013. In July 2013, the Company made payments to Voluntary Employees Beneficiary Association ("VEBA") trusts totaling \$30.8 pursuant to settlements of class actions filed on behalf of certain retirees from the Company's Butler Works and Zanesville Works relating to the Company's other postretirement benefit ("OPEB") obligations to such retirees.

Net periodic benefit cost (income) for pension and other postretirement benefits were as follows:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
Pension Benefits				
Service cost	\$0.6	\$0.8	\$1.2	\$1.6
Interest cost	34.7	40.0	69.4	80.1

Other Postretirement Benefits				
Service cost	\$1.2	\$1.1	\$2.4	\$2.2
Interest cost	5.2	7.9	10.5	15.8
Amortization of prior service cost (credit)	(20.0)	(19.3)	(40.0)	(38.6)
Amortization of (gain) loss	0.6	—	1.1	—
Net periodic benefit cost (income)	\$(13.0)	\$(10.3)	\$(26.0)	\$(20.6)

NOTE 7 - Environmental and Legal Contingencies

Environmental Contingencies

AK Steel and its predecessors have been conducting steel manufacturing and related operations since 1900. Although the Company believes its operating practices have been consistent with prevailing industry standards during this time, hazardous materials may have been released in the past at one or more operating sites or third-party sites, including operating sites that the Company no longer owns. To the extent reasonably estimable, the Company has estimated potential remediation expenditures for those sites where future remediation efforts are probable based on identified conditions, regulatory requirements or contractual

- 9-

Table of Contents

obligations arising from the sale of a business or facility. In the case of sites involving governmentally-required investigations, that typically occurs only after the investigation is complete and the nature and scope of the remediation is better understood. In general, the material components of these accruals include the costs associated with investigations, delineations, risk assessments, remedial work, governmental response and oversight costs, site monitoring, and preparation of reports to the appropriate environmental agencies. Liabilities recorded on the Company's Consolidated Balance Sheets for such estimated probable costs relating to environmental matters are presented below:

	June 30, 2013	December 31, 2012
Accrued liabilities	\$16.8	\$19.6
Other non-current liabilities	26.8	27.4

The ultimate costs to the Company with respect to each site cannot be predicted with certainty because of the evolving nature of the investigation and remediation process. Rather, to develop the estimates of the probable costs, the Company must make certain assumptions. The most significant of these assumptions relate to the nature and scope of the work that will be necessary to investigate and remediate a particular site and the cost of that work. Other significant assumptions include the cleanup technology that will be used, whether and to what extent any other parties will participate in paying the investigation and remediation costs, reimbursement of past response and future oversight costs by governmental agencies, and the reaction of the governing environmental agencies to the proposed work plans. Costs of future expenditures are not discounted to their present value. To the extent that the Company has been able to reasonably estimate its future liabilities, the Company does not believe that there is a reasonable possibility that a loss or losses exceeding the amounts accrued will be incurred in connection with the environmental matters discussed below that would, either individually or in the aggregate, have a material adverse effect on the Company's consolidated financial condition, results of operations or cash flows. However, since amounts recognized in the consolidated financial statements in accordance with accounting principles generally accepted in the United States exclude potential losses that are not probable or that may not be currently estimable, the ultimate costs of these environmental proceedings may be higher than those currently recorded in the Company's consolidated financial statements.

Except as expressly noted below, the Company does not currently anticipate any material effect on the Company's consolidated financial position, results of operations or cash flows as a result of its compliance with current environmental regulations. Moreover, because all domestic steel producers operate under the same set of federal environmental regulations, the Company does not believe that it is disadvantaged relative to its domestic competitors by the need to comply with these regulations. Some foreign competitors may benefit from less stringent environmental requirements in the countries in which they produce, resulting in lower compliance costs and providing those foreign competitors with a cost advantage on their products.

Pursuant to the Resource Conservation and Recovery Act ("RCRA"), which governs the treatment, handling and disposal of hazardous waste, the EPA and authorized state environmental agencies may conduct inspections of RCRA-regulated facilities to identify areas where there have been releases of hazardous waste or hazardous constituents into the environment and may order the facilities to take corrective action to remediate such releases. AK Steel's major steelmaking facilities are subject to RCRA inspections by environmental regulators. While the Company cannot predict the future actions of these regulators, it is possible that they may identify conditions in future inspections of these facilities which they believe require corrective action.

Under authority conferred by the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"), the EPA and state environmental authorities have conducted site investigations at certain of AK Steel's facilities and other third-party facilities, portions of which previously may have been used for disposal of materials that are currently subject to regulation. The results of these investigations are still pending, and AK Steel could be

directed to expend funds for remedial activities at the former disposal areas. Because of the uncertain status of these investigations, however, the Company cannot reliably predict whether or when such expenditures might be required, their magnitude or the timeframe during which these potential costs would be incurred.

As previously reported, on July 27, 2001, AK Steel received a Special Notice Letter from the EPA requesting that AK Steel agree to conduct a Remedial Investigation/Feasibility Study ("RI/FS") and enter into an administrative order on consent pursuant to Section 122 of CERCLA regarding the former Hamilton Plant located in New Miami, Ohio. The Hamilton Plant ceased operations in 1990, and all of its former structures have been demolished and removed. Although AK Steel did not believe that a site-wide RI/FS was necessary or appropriate, in April 2002, it entered into a mutually agreed-upon administrative order on consent to perform such an investigation and study of the Hamilton Plant site. The site-wide investigation portion of the RI/FS has been submitted. The study portion is projected to be completed in 2013 pending approval of the investigation results. AK Steel currently has accrued \$0.7 for the remaining cost of the RI/FS. Until the RI/FS is completed, AK Steel cannot reliably

- 10-

Table of Contents

estimate the additional costs, if any, associated with any potentially required remediation of the site or the timeframe during which these potential costs would be incurred.

As previously reported, on September 30, 1998, AK Steel's predecessor, Armco Inc., received an order from the EPA under Section 3013 of RCRA requiring it to develop a plan for investigation of eight areas of Mansfield Works that allegedly could be sources of contamination. A site investigation began in November 2000 and is continuing. AK Steel cannot reliably estimate at this time how long it will take to complete this site investigation. AK Steel currently has accrued approximately \$1.1 for the projected cost of the study at Mansfield Works. Until the site investigation is completed, AK Steel cannot reliably estimate the additional costs, if any, associated with any potentially required remediation of the site or the timeframe during which these potential costs would be incurred.

As previously reported, on July 23, 2007, and on December 9, 2008, the EPA issued Notices of Violation ("NOVs") with respect to the coke plant at AK Steel's Ashland Works (the "Ashland Coke Plant") alleging violations of pushing and combustion stack limits. Additionally, on November 9, 2011, the EPA issued an NOV associated with self-reported deviations from 2008 through 2010. In 2007, the Company began investigating the pushing and combustion stack claims and working with the EPA to attempt to resolve them through the negotiation of a Consent Decree that assumed the Ashland Coke Plant would continue to operate. On June 21, 2011, however, the Company permanently ceased production at the Ashland Coke Plant. The Company has continued to negotiate a Consent Decree with the EPA in an attempt to resolve all of these NOVs, but as a consequence of the shutdown, the nature of the negotiations with the EPA has changed. The principal focus has been on the civil penalty associated with the alleged violations. Counsel for the parties recently agreed to the terms of a Consent Decree resolving the matter and it has been executed on behalf of the Company and the Commonwealth of Kentucky, but it still must be formally approved and executed by the appropriate persons on behalf of the EPA. It then must be lodged with and approved by the Court. The settlement terms include a payment of a civil penalty by AK Steel in the amount of \$1.7 and the agreement by AK Steel to undertake certain supplemental environmental capital projects which are expected to cost approximately \$2.0. The Company has recorded an accrual sufficient to cover both the penalty and the expense portion, if any, of the cost of the supplemental environmental projects.

As previously noted, on September 26, 2012, the EPA issued an order under Section 3013 of RCRA requiring the Company to develop a plan for investigation of four areas at AK Steel's Ashland Works Coke Plant. A site investigation plan was submitted to EPA on October 25, 2012 and revised on March 21, 2013. AK Steel cannot reliably estimate at this time how long it will take to complete this site investigation. AK Steel currently has accrued approximately \$0.4 for the projected cost of the study. Until the site investigation is completed, AK Steel cannot reliably estimate the additional costs, if any, associated with any potentially required remediation of the site or the timeframe during which these potential costs would be incurred.

As previously reported, on August 3, 2011, September 29, 2011, and June 28, 2012, the EPA issued NOVs with respect to the coke plant at AK Steel's Middletown Works alleging violations of pushing and combustion stack limits. The Company is investigating these claims and is working with the EPA to attempt to resolve them. AK Steel believes it will reach a settlement in this matter, but it cannot be certain that a settlement will be reached and cannot reliably estimate at this time how long it will take to reach a settlement or what all of its terms might be. AK Steel will vigorously contest any claims which cannot be resolved through a settlement. Until it has reached a settlement with the EPA or the claims that are the subject of the NOVs are otherwise resolved, AK Steel cannot reliably estimate the costs, if any, associated with any potentially required operational changes at the batteries or the timeframe over which any potential costs would be incurred.

As previously reported, on July 15, 2009, AK Steel and the Pennsylvania Department of Environmental Protection ("PADEP") entered into a Consent Order and Agreement (the "Consent Order") to resolve an alleged unpermitted

discharge of wastewater from the closed Hillside Landfill at the former Ambridge Works. Under the terms of the Consent Order, AK Steel paid a penalty and also agreed to implement various corrective actions, including an investigation of the area where activities were conducted regarding the landfill, submission of a plan to collect and treat surface waters and seep discharges, and upon approval from PADEP, implementation of that plan. The Company has accrued \$2.2 for the current phase of remedial work required under the Consent Order. Additional work will need to be performed after this phase, but the design plan for that work has not yet been developed or approved. Until that design plan is approved, the Company cannot reliably determine the actual cost of the remaining work required under the Consent Decree. The Company currently estimates that the remaining work will be completed in 2014, but that estimated timeframe is subject to the potential for delays, such as delays due to work plan approval and/or permitting delays.

As previously reported, on June 29, 2000, the United States filed a complaint on behalf of the EPA against AK Steel in the U.S. District Court for the Southern District of Ohio (the "Court"), Case No. C-1-00530, for alleged violations of the Clean Air Act, the Clean Water Act and RCRA at the Middletown Works. Subsequently, the State of Ohio, the Sierra Club and the National Resources Defense Council intervened. On May 15, 2006, a Consent Decree in Partial Resolution of Pending Claims (the

Table of Contents

“Consent Decree”) was entered by the Court. Under the Consent Decree, the Company paid a civil penalty and performed a supplemental environmental project to remove ozone-depleting refrigerants from certain equipment. The Company further agreed to undertake a comprehensive RCRA facility investigation at its Middletown Works and, as appropriate, complete a corrective measures study. In accordance with the Consent Decree, the Company also is in the process of implementing certain RCRA corrective action interim measures to address polychlorinated biphenyls (“PCBs”) in sediments and soils relating to Dicks Creek and certain other specified surface waters, adjacent floodplain areas, and other previously identified geographic areas. The Company has completed the remedial activity at Dicks Creek that was planned through 2012, but additional work remains. The design plan for the remaining floodplain work, currently underway, has been unconditionally approved. The Company currently has accrued \$14.4 for the cost of known remedial work required under the Consent Decree, which includes the floodplain work underway in 2013 as well as the RCRA facility investigation.

As previously reported, on October 17, 2012, the EPA issued an NOV and Notice of Intent to File a Civil Administrative Complaint to AK Steel’s Mansfield Works alleging violations of RCRA primarily relating to the Company’s management of electric arc furnace dust at the facility. The Company is investigating these claims and is working with the EPA to attempt to resolve them. The NOV proposed a civil penalty of approximately \$0.3. AK Steel believes it will reach a settlement in this matter, but it cannot be certain that a settlement will be reached and cannot reliably estimate at this time how long it will take to reach a settlement or what all of its terms might be. AK Steel will vigorously contest any claims which cannot be resolved through a settlement.

On January 18, 2013, the Ohio EPA issued Proposed Director’s Final Findings and Orders (“Proposed Findings and Orders”) to AK Steel with respect to the basic oxygen furnaces at AK Steel’s Middletown Works alleging violations of building visible emission limits. The order alleges violations on 13 days spanning from 2010 through 2012. The Company is investigating these claims and is working with the Ohio EPA to attempt to resolve them. The Proposed Findings and Orders proposed a civil penalty of approximately \$0.3. Negotiations to resolve this matter have commenced with the agency and, on May 15, 2013, Ohio EPA lowered its penalty demand to less than \$0.1. The Company is continuing to negotiate in an effort to reduce the penalty further and expects that it will reach a settlement in this matter. The Company cannot be certain, however, that a settlement will be reached and cannot reliably estimate at this time how long it will take to reach a settlement or what all of its terms might be. AK Steel will vigorously contest any claims which cannot be resolved through a settlement.

In addition to the foregoing matters, AK Steel is or may be involved in proceedings with various regulatory authorities that may require AK Steel to pay fines, comply with more rigorous standards or other requirements or incur capital and operating expenses for environmental compliance. The Company believes that the ultimate disposition of the proceedings will not have, individually or in the aggregate, a material adverse effect on its consolidated financial condition, results of operations or cash flows.

Legal Contingencies

As previously reported, since 1990, AK Steel (or its predecessor, Armco Inc.) has been named as a defendant in numerous lawsuits alleging personal injury as a result of exposure to asbestos. The great majority of these lawsuits have been filed on behalf of people who claim to have been exposed to asbestos while visiting the premises of a current or former AK Steel facility. The majority of asbestos cases pending in which AK Steel is a defendant do not include a specific dollar claim for damages. In the cases that do include specific dollar claims for damages, the complaint typically includes a monetary claim for compensatory damages and a separate monetary claim in an equal amount for punitive damages, and does not attempt to allocate the total monetary claim among the various defendants.

Table of Contents

Information on asbestos cases is presented below:

	Asbestos Cases Pending at June 30, 2013
Cases with specific dollar claims for damages:	
Claims up to \$0.2	117
Claims above \$0.2 to \$5.0	6
Claims above \$5.0 to \$15.0	2
Claims above \$15.0 to \$20.0	2
Total claims with specific dollar claims for damages (a)	127
Cases without a specific dollar claim for damages	305
Total asbestos cases pending	432
(a) Involve a total of 2,388 plaintiffs and 17,458 defendants	

In each case, the amount described is per plaintiff against all of the defendants, collectively. Thus, it usually is not possible at the outset of a case to determine the specific dollar amount of a claim against AK Steel. In fact, it usually is not even possible at the outset to determine which of the plaintiffs actually will pursue a claim against AK Steel. Typically, that can only be determined through written interrogatories or other discovery after a case has been filed. Thus, in a case involving multiple plaintiffs and multiple defendants, AK Steel initially only accounts for the lawsuit as one claim against it. After AK Steel has determined through discovery whether a particular plaintiff will pursue a claim against it, it makes an appropriate adjustment to statistically account for that specific claim. It has been AK Steel's experience to date that only a small percentage of asbestos plaintiffs ultimately identify AK Steel as a target defendant from whom they actually seek damages and most of these claims ultimately are either dismissed or settled for a small fraction of the damages initially claimed. Set forth below is a chart showing the number of new claims filed (accounted for as described above), the number of pending claims disposed of (i.e., settled or otherwise dismissed), and the approximate net amount of dollars paid on behalf of AK Steel in settlement of asbestos-related claims.

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
New Claims Filed	13	14	24	28
Pending Claims Disposed Of	5	7	25	14
Total Amount Paid in Settlements	\$0.2	\$0.3	\$0.9	\$0.6

Since the onset of asbestos claims against AK Steel in 1990, five asbestos claims against it have proceeded to trial in four separate cases. All five concluded with a verdict in favor of AK Steel. AK Steel intends to continue to vigorously defend the asbestos claims asserted against it. Based upon its present knowledge, and the factors set forth above, the Company believes it is unlikely that the resolution in the aggregate of the asbestos claims against AK Steel will have a materially adverse effect on the Company's consolidated results of operations, cash flows or financial condition. However, predictions as to the outcome of pending litigation, particularly claims alleging asbestos exposure, are subject to substantial uncertainties. These uncertainties include (1) the significantly variable rate at which new claims may be filed, (2) the effect of bankruptcies of other companies currently or historically defending asbestos claims, (3) the uncertainties surrounding the litigation process from jurisdiction to jurisdiction and from case to case, (4) the type and severity of the disease alleged to be suffered by each claimant, and (5) the potential for enactment of legislation affecting asbestos litigation.

As previously reported, on October 20, 2009, William Schumacher filed a purported class action against the AK Steel Corporation Retirement Accumulation Pension Plan, or AK RAPP, and the AK Steel Corporation Benefit Plans Administrative Committee in the United States District Court for the Southern District of Ohio, Case No. 1:09cv794.

The complaint alleges that the method used under the AK RAPP to determine lump sum distributions does not comply with ERISA and the Internal Revenue Code and resulted in underpayment of benefits to him and the other class members. The plaintiff and the other purportedly similarly situated individuals on whose behalf the plaintiff filed suit were excluded by the Court in 2005 from similar litigation previously reported and now resolved (the class action litigation filed January 2, 2002 by John D. West) based on previous releases of claims they had executed in favor of the Company. There were a total of 92 individuals who were excluded from the prior litigation and the potential additional distributions to them at issue in the litigation total approximately \$3.0, plus potential interest. The defendants filed their answer to the complaint on March 22, 2010. On August 11, 2010, the plaintiff filed his motion for class

- 13-

Table of Contents

certification. On January 24, 2011, that motion was granted. On March 15, 2011, the plaintiff filed a motion for partial summary judgment. After being fully briefed, that motion was granted on June 27, 2011. On October 12, 2011, the court issued an opinion addressing the issue of pre-judgment interest in which it held that pre-judgment interest should be calculated using the statutory rate under 28 U.S.C. Section 1961(a). On December 12, 2011, the Court entered a final judgment in an amount slightly in excess of \$3.0, which includes pre-judgment interest at the statutory rate through that date. The defendants filed an appeal from that final judgment to the United States Court of Appeals for the Sixth Circuit. On March 28, 2013, the Court of Appeals issued an opinion in which it upheld the District Court's decision with respect to liability and reversed and remanded the District Court's decision with respect to pre-judgment interest. On April 11, 2013, the Company filed a motion for rehearing with the Court of Appeals. The Court of Appeals denied that motion on May 6, 2013. On May 29, 2013, Plaintiffs' counsel filed a motion for a determination of the new rate for pre-judgment interest with respect to the final judgment amount of \$3.0. An order deciding that motion was issued by the court on July 29, 2013. Pursuant to that order, the Company estimates that the amount of the final judgment, including interest, now will be approximately \$4.4. Because the final judgment will be paid out of the Company's pension assets, the Company has not recorded an accrual related to this matter.

As previously reported, on October 20, 2005, Judith A. Patrick and another plaintiff filed a purported class action against AK Steel and the AK Steel Corporation Benefit Plans Administrative Committee in the United States District Court for the Southern District of Ohio, Case No. 1:05-cv-681 (the "Patrick Litigation"). Like the complaint in similar litigation previously reported and now resolved in the Company's favor (the action filed May 27, 2009 by Margaret A. Lipker, hereinafter referred to as the "Lipker Litigation"), the complaint in the Patrick Litigation alleges that the defendants incorrectly calculated the amount of surviving spouse benefits due to be paid to the plaintiffs under an applicable pension plan. The parties filed cross-motions for summary judgment on the issue of whether the applicable plan language had been properly interpreted. On September 28, 2007, the United States Magistrate Judge assigned to the case issued a Report and Recommendation in which he recommended that the plaintiffs' motion for partial summary judgment be granted and that the defendants' motion be denied. On March 31, 2008, the court issued an order adopting the Magistrate's recommendation and granting partial summary judgment to the plaintiffs on the issue of plan interpretation. The plaintiffs also filed a motion for class certification and that motion was granted on October 27, 2008. The case proceeded thereafter with respect to discovery on the issue of damages. In November 2011 the plaintiffs submitted an expert report in which their expert contends that the total damages, excluding interest, for the class could total as much as \$28.9. With interest, the amount could have exceeded \$42.0. The defendants believe that the damage calculation in the plaintiffs' expert report is incorrect and have contested that calculation. Trial with respect to damages previously was scheduled to begin January 14, 2013, but that date was vacated at the request of defendants in light of the decision issued in AK Steel's favor in the Lipker Litigation. Defendants filed a Motion for Reconsideration with the District Court in the Patrick Litigation on the ground that the plan interpretation issues in the Lipker Litigation and the Patrick Litigation are materially the same and that the Sixth Circuit decision issued in AK Steel's favor in the Lipker Litigation likewise requires a decision in favor of the defendants in the Patrick Litigation. Plaintiffs opposed AK Steel's Motion for Reconsideration. That motion was fully briefed by the parties and oral argument occurred on February 20, 2013. While the parties were awaiting a decision on that motion, the District Court called a settlement conference and through that process, the parties reached a settlement, subject to court approval. A formal settlement agreement has been executed and on July 1, 2013, the parties filed a Motion for Preliminary Approval of Class Settlement. An order providing such preliminary approval was entered on July 29, 2013. Under the proposed settlement, the named plaintiffs and other participating class members would be paid \$1.7 and \$0.8 would be paid to plaintiffs' attorneys for fees and costs, for a total payment of \$2.5. The payments would be made from the applicable pension plan assets. The proposed settlement is subject to final court approval after notice to the class members and a fairness hearing. That fairness hearing has been scheduled for November 20, 2013. Class members have the option to object to, opt out of, or participate in the settlement. The settlement will become effective only if the District Court approves it following the fairness hearing and certain other requirements are met, including that the number of class members who opt out does not exceed a specified amount. If the settlement is not approved or the

other requirements are not met, the litigation will resume. In that instance, if judgment is entered in favor of defendants pursuant to the Motion for Reconsideration, that would conclude the Patrick Litigation without any liability on the part of defendants, subject to plaintiffs' right of appeal. If judgment is not entered in favor of defendants, it is expected that the District Court will reschedule the damages trial previously scheduled for January 14, 2013, in which case defendants would continue to contest this matter vigorously. Because a final judgment, if any, in favor of the plaintiff class members would be paid out of the Company's pension assets, the Company has not recorded an accrual related to this matter.

As previously reported, in September and October 2008, several companies filed purported class actions in the United States District Court for the Northern District of Illinois, against nine steel manufacturers, including AK Holding. The case numbers

- 14-

Table of Contents

for these actions are 08CV5214, 08CV5371, 08CV5468, 08CV5633, 08CV5700, 08CV5942 and 08CV6197. An additional action, case number 10CV04236, was filed in the same federal district court on July 8, 2010. On December 28, 2010 another action, case number 32,321, was filed in state court in the Circuit Court for Cocke County, Tennessee. The defendants removed the Tennessee case to federal court and filed a motion to transfer the case to the Northern District of Illinois. That motion was granted on March 28, 2012. The plaintiffs in the various pending actions are companies which claim to have purchased steel products, directly or indirectly, from one or more of the defendants and they purport to file the actions on behalf of all persons and entities who purchased steel products for delivery or pickup in the United States from any of the named defendants at any time from at least as early as January 2005. The complaints allege that the defendant steel producers have conspired in violation of antitrust laws to restrict output and to fix, raise, stabilize and maintain artificially high prices with respect to steel products in the United States. Discovery has commenced. On May 24, 2012, the direct purchaser plaintiffs filed a motion for class certification. On February 28, 2013, the defendants filed a memorandum in opposition to the motion for class certification and motions to exclude the opinions of the plaintiffs' experts. The motion for class certification and the motions to exclude the opinions of the plaintiffs' experts remain pending. No trial date has been set. AK Holding intends to contest this matter vigorously. To date, discovery in this action has proceeded only with respect to issues relating to class certification. Accordingly, the Company does not have adequate information available to determine that a loss is probable or to reliably or accurately estimate its potential loss in the event that the plaintiffs were to prevail. Because the Company has been unable to determine that the potential loss in this case is probable or estimable, it has not recorded an accrual related to this matter. In the event that the Company's assumptions used to evaluate whether a loss in this matter is either probable or estimable prove to be incorrect or change in future periods, the Company may be required to record a liability for an adverse outcome.

As previously reported, on June 1, 2009, the Chinese Ministry of Commerce ("MOFCOM") initiated antidumping and countervailing duty investigations of imports of grain-oriented electrical steel ("GOES") from Russia and the United States. China initiated the investigations based on a petition filed by two Chinese steelmakers. These two steelmakers alleged that AK Steel and Allegheny Technologies Inc. of the United States and Novolipetsk Steel of Russia exported GOES to China at less than fair value, and that the production of GOES in the United States has been subsidized by the U.S. government. On December 9, 2009, MOFCOM issued its preliminary determination that GOES producers in the United States and Russia had been dumping in the China market and that GOES producers in the United States had received subsidies from the U.S. government. The Chinese authorities imposed provisional additional duties on future imports of GOES from Russia and/or the United States to China. On or about April 10, 2010, MOFCOM issued a final determination of dumping and subsidization against GOES producers in the United States and Russia. On September 16, 2010, the Office of the United States Trade Representative ("USTR") filed a complaint with the World Trade Organization (the "WTO") against China for violating the WTO's rules by imposing antidumping and countervailing duties against imports of GOES from the United States. After conducting several rounds of hearings, on June 15, 2012, a panel ("the Panel") composed by the WTO to decide the case issued its final decision in the case. In its decision, the Panel concluded that MOFCOM imposed antidumping and countervailing duties on imports of GOES from the United States in a manner that was inconsistent with China's WTO obligations. On July 20, 2012, China filed an appeal of the Panel's decision to the WTO Appellate Body. On October 18, 2012, the Appellate Body upheld the decisions of the Panel. On November 16, 2012, the WTO Dispute Settlement Body adopted the decisions of the Panel. Subsequently, a WTO Arbitrator determined that China should implement the WTO decision by July 31, 2013. In its final determination issued on July 31, 2013, MOFCOM reduced the countervailing duty rate applicable to AK Steel from 11.7 percent to 3.4 percent and determined that the antidumping duty rate applicable to AK Steel will remain at 7.8 percent, for a total of 11.2 percent. AK Steel does not believe that China has remedied the flaws that the WTO identified in MOFCOM's material injury finding. Accordingly, AK Steel will urge USTR to request a WTO dispute settlement panel to determine that China has failed to comply with the WTO decision and to ask the WTO Dispute Settlement Body for permission to impose trade sanctions. AK Steel intends to continue to fully support the USTR in this matter.

As previously reported, on August 26, 2009, Consolidation Coal Company (“Consolidation”) filed an action against AK Steel and Neville Coke LLC (“Neville”) in the Court of Common Pleas of Allegheny County, Pennsylvania, Case No. GD-09-14830. The complaint alleges that Consolidation and Neville entered into a contract whereby Consolidation would supply metallurgical coal for use by Neville in its coke making operations. Consolidation asserts that Neville breached the alleged contract when it refused to purchase coal from Consolidation. The complaint also alleges that AK Steel tortiously interfered with the purported contractual and business relationship between Consolidation and Neville. Consolidation seeks monetary damages from AK Steel in an amount in excess of \$30.0 and monetary damages from Neville in an amount in excess of \$20.0. AK Steel tentatively has agreed to indemnify and defend Neville in this action pursuant to the terms of a contractual agreement between AK Steel and Neville. AK Steel is still investigating the facts underlying this matter, however, and has reserved its right to change its position should facts establish that it does not have an obligation to indemnify or defend Neville. On October 20, 2009, AK Steel filed preliminary objections to plaintiff’s complaint on behalf of itself and Neville, seeking to dismiss the action. In response to the preliminary objections, plaintiff filed an amended complaint on November 12, 2009, adding an additional count under the theory of promissory estoppel. On December 2, 2009, AK Steel and Neville filed preliminary objections to plaintiff’s

- 15-

Table of Contents

amended complaint, again seeking to dismiss the action. The court overruled the preliminary objections, and on March 18, 2010, AK Steel and Neville filed their answers to the complaint. Discovery has commenced but based on the discovery to date, AK Steel has not determined that a loss is probable and it does not yet have adequate information to reliably or accurately estimate its potential loss in the event that the plaintiffs were to prevail. Because the Company has been unable to determine that the potential loss in this case is either probable or estimable, it has not recorded an accrual related to this matter. In the event that the Company's assumptions used to evaluate whether a loss in this matter is either probable or estimable prove to be incorrect or change in future periods, the Company may be required to record a liability for an adverse outcome. The case previously was set for trial commencing on May 9, 2013, but that trial date was vacated so that the parties could explore the possibility of settlement through commercial terms. No new trial date has yet been set. If the parties are unable to reach a settlement, AK Steel intends to continue to contest this matter vigorously.

As previously reported, on December 31, 2009, Heritage Coal Company LLC, Patriot Coal Corporation, and Pine Ridge Coal Company (collectively, "Heritage Coal") filed a third-party complaint against AK Steel in the Circuit Court of Boone County, West Virginia, naming AK Steel as a third-party defendant in 108 separate personal injury actions. Those actions were consolidated for discovery and pretrial proceedings under Civil Action No. 09-C-212. The various plaintiffs in the underlying actions sought damages allegedly caused by groundwater contamination arising out of certain coal mining operations in West Virginia. In its third-party complaint, Heritage Coal seeks a determination of its potential rights of contribution against AK Steel pursuant to a January 20, 1984 Asset Purchase Agreement between Heritage Coal's predecessor-in-interest, Peabody Coal Company, as buyer, and AK Steel's predecessor-in-interest, Armco Inc., as seller, for the sale of certain coal real estate and leasehold interests located in West Virginia, which Heritage alleges included property now the subject of the underlying civil actions. On March 28, 2010, AK Steel entered into a tentative settlement agreement with the plaintiffs and Heritage Coal. The payments made by AK Steel pursuant to this settlement will not be material to the Company's future financial results. The parties are in the process of documenting and obtaining formal court approval of the settlement, which is expected to be completed in the near future. The settlement will resolve all of the claims raised by Heritage Coal in the third-party complaint and will also release AK Steel from any claims by the plaintiffs in the underlying actions.

As previously reported, on April 7, 2011, Ruth Abrams filed a shareholder derivative action against AK Holding, each of the current members of its Board of Directors, and the five officers identified in the AK Holding 2010 Proxy Statement (the "2010 Proxy") as Named Executive Officers. The action was filed in the United States District Court for the District of Delaware, Case No. 1:11-cv-00297-LPS. The complaint alleges that the director defendants and executive defendants breached fiduciary duties of loyalty and care, that the director defendants committed waste, and that the executive defendants were unjustly enriched. More specifically, it alleges that the 2010 Proxy contained false or misleading statements concerning compliance by AK Holding with Section 162(m) of the Internal Revenue Code and the tax deductibility of certain executive compensation paid to the Named Executive Officers. The Complaint seeks an injunction requiring correction of the allegedly false statements and preventing future awards under certain benefit plans to the five Named Executive Officers. It also seeks an equitable accounting, disgorgement in favor of AK Holding for certain alleged losses, and an award of attorneys' fees and expenses. The defendants filed motions to dismiss the Complaint on July 1, 2011. However, prior to completion of the briefing on defendants' motions, Abrams filed an Amended Complaint on September 2, 2011 adding a derivative claim under Section 14(a) of the Securities Exchange Act and adding and deleting certain allegations as to why plaintiff contends certain executive compensation plans did not comply with Section 162(m) of the Internal Revenue Code and the relevant Treasury Regulations. On November 11, 2011, the defendants filed motions to dismiss the Amended Complaint. On August 21, 2012, the court granted the defendants' motions and dismissed the Amended Complaint without prejudice. On September 4, 2012, Abrams filed a Second Amended Complaint, adding a new direct claim for coercion and adding and deleting certain factual allegations. On October 2, 2012, the defendants filed motions to dismiss the second amended complaint. Briefing on those motions is completed and the parties are awaiting the court's decision. The defendants intend to

continue to contest this matter vigorously. Discovery has not commenced and no trial date has been set.

On January 20, 2010, ArcelorMittal France and ArcelorMittal Atlantique et Lorraine (collectively "ArcelorMittal") filed an action against AK Steel (and two other steel manufacturers) in the United States District Court for the District of Delaware, Case No. 10-050-SLR. The complaint alleges that AK Steel is infringing the claims of U.S. Patent No. 6,296,805 (the "Patent") in making pre-coated cold-rolled boron steel sheet and seeks injunctive relief and unspecified compensatory damages. On March 4, 2010, AK Steel filed an answer in which it denied ArcelorMittal's claims and raised various affirmative defenses. On that date, AK Steel also filed counterclaims against ArcelorMittal for a declaratory judgment that AK Steel is not infringing the Patent and that the Patent is invalid. Subsequently, the trial court bifurcated the issues of liability and damages. Limited discovery was taken and the case proceeded with a trial to a jury on the issue of liability during the week of January 15, 2011. The jury returned a verdict that AK Steel did not infringe the Patent and that the Patent was invalid. Judgment subsequently was entered in favor of AK Steel and ArcelorMittal filed an appeal with the United States Court of Appeals for the Federal Circuit. On November 30, 2012, the Court of Appeals issued a decision confirming that AK Steel had prevailed on the key claim related to

- 16-

Table of Contents

patent infringement and affirming the basis for the jury finding of no infringement. The Court of Appeals reversed, however, certain findings related to the validity of the Patent and remanded the case to the trial court for further proceedings. On January 30, 2013, ArcelorMittal filed a motion for rehearing with the Court of Appeals. On March 20, 2013, the Court of Appeals denied ArcelorMittal's motion for rehearing. The case now has been remanded to the trial court for further proceedings, which will include a new consideration of AK Steel's counterclaim that the Patent is invalid either through a new trial or motion practice. On April 16, 2013, pursuant to a petition previously filed by ArcelorMittal and ArcelorMittal USA LLC, the U.S. Patent and Trademark Office reissued the Patent as U.S. Reissue Patent RE44,153 (the "Reissued Patent"). Also on April 16, 2013, ArcelorMittal filed a second action against AK Steel in the United States District Court for the District of Delaware, Case No. 1:13-cv-00685 (the "Second Action"). The complaint filed in the Second Action alleges that AK Steel is infringing the claims of the Reissued Patent and seeks injunctive relief and unspecified compensatory damages. On April 23, 2013, AK Steel filed a motion to dismiss key elements of the complaint filed in the Second Action. Briefing on that motion has recently concluded. In addition, the parties have briefed related non-infringement and claims construction issues in the original action. ArcelorMittal has also filed a motion for leave to file an amended complaint in the original action to assert additional infringement claims concerning the Reissued Patent and to add ArcelorMittal USA as an additional party. AK Steel has opposed that motion. A hearing on these matters is scheduled for August 7, 2013. Discovery has not yet commenced in the Second Action. No trial date has been set in either action. AK Steel intends to continue to contest this matter vigorously. At this time, the Company has not made a determination that a loss is probable and it does not have adequate information to reliably or accurately estimate its potential loss in the event that ArcelorMittal were to prevail in this dispute. Because the Company has been unable to determine that the potential loss in this case is probable or estimable, it has not recorded an accrual related to this matter. In the event that the Company's assumptions used to evaluate whether a loss in this matter is either probable or estimable prove to be incorrect or change in future periods, the Company may be required to record a liability for an adverse outcome.

Other Contingencies

In addition to the matters discussed above, there are various pending and potential claims against AK Steel and its subsidiaries involving product liability, commercial, employee benefits and other matters arising in the ordinary course of business. Because of the considerable uncertainties which exist with respect to any claim, it is difficult to reliably or accurately estimate what would be the amount of a loss in the event that a claimant(s) were to prevail. In the event that material assumptions or factual understandings relied upon by the Company to evaluate its exposure with respect to these contingencies prove to be inaccurate or otherwise change in the future, the Company may be required to record a liability for an adverse outcome. To the extent, however, that the Company has been able to reasonably evaluate its potential future liabilities with respect to all of these contingencies, including those described more specifically above, it is the Company's opinion, unless otherwise noted, that the ultimate liability resulting from these contingencies, individually and in the aggregate, should not have a material effect on the Company's consolidated financial position, results of operations or cash flows.

NOTE 8 - Share-based Compensation

AK Holding's Stock Incentive Plan permits the granting of nonqualified stock option, restricted stock, performance share and restricted stock unit awards to Directors, officers and other employees of the Company. The following table summarizes information about share-based compensation expense, which the Company has estimated will be \$9.4 for 2013:

	Three Months Ended		Six Months Ended June	
	June 30,		30,	
	2013	2012	2013	2012
Share-based Compensation Expense				

Edgar Filing: AK STEEL HOLDING CORP - Form 10-Q

Stock options	\$0.2	\$0.2	\$1.1	\$2.1
Restricted stock	0.5	0.6	2.2	4.1
Restricted stock units issued to Directors	0.2	0.2	0.4	0.4
Performance shares	0.9	1.6	2.0	3.1
Total share-based compensation expense	\$1.8	\$2.6	\$5.7	\$9.7

The Company granted stock options on 498,700 shares during the six months ended June 30, 2013, at a weighted-average fair value of \$2.44 per share of stock option. There have been no options exercised in 2013.

The Company granted restricted stock awards of 502,581 shares during the six months ended June 30, 2013, at a weighted-average fair value of \$4.53 per share. The total intrinsic value of restricted stock awards that vested (i.e., restrictions lapsed) during the six months ended June 30, 2013 was \$2.0.

The Company granted performance share awards of 580,800 shares during the six months ended June 30, 2013, at a weighted-average fair value of \$4.69 per share.

(a) Amounts are included in net sales on the Condensed Consolidated Statements of Operations.

(b) Amounts are included in cost of products sold on the Condensed Consolidated Statements of Operations.

(c) Amounts are included in pension and OPEB expense (income) on the Condensed Consolidated Statements of Operations.

(d) Amounts are included in income tax provision (benefit) on the Condensed Consolidated Statements of Operations.

Table of Contents

NOTE 10 - Earnings per Share

Earnings per share are calculated using the “two-class” method. Under the “two-class” method, undistributed earnings are allocated to both common shares and participating securities. The sum of distributed earnings to common stockholders and undistributed earnings allocated to common stockholders is divided by the weighted-average number of common shares outstanding during the period. The restricted stock granted by AK Holding is entitled to non-forfeitable dividends, if declared, and meets the criteria of a participating security.

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
Net income (loss) attributable to AK Steel Holding Corporation	\$(40.4)	\$(724.2)	\$(50.3)	\$(736.0)
Less: distributed earnings to common stockholders and holders of certain stock compensation awards	—	5.5	—	11.0
Undistributed earnings (loss)	\$(40.4)	\$(729.7)	\$(50.3)	\$(747.0)
Common stockholders earnings—basic and diluted:				
Distributed earnings to common stockholders	\$—	\$5.5	\$—	\$11.0
Undistributed earnings (loss) to common stockholders	(40.3)	(727.2)	(50.1)	(744.2)
Common stockholders earnings (loss)—basic and diluted	\$(40.3)	\$(721.7)	\$(50.1)	\$(733.2)
Common shares outstanding (weighted-average shares in millions):				
Common shares outstanding for basic earnings per share	135.8	110.2	135.8	110.1
Effect of exchangeable debt	—	—	—	—
Effect of dilutive stock-based compensation	—	—	—	—
Common shares outstanding for diluted earnings per share	135.8	110.2	135.8	110.1

Potentially issuable common shares (in millions) excluded from earnings per share calculation due to anti-dilutive effect	2.5	2.0	2.5	2.0

NOTE 11 - Variable Interest Entities

SunCoke Middletown

SunCoke Middletown provides the Company annually with about 550,000 tons of metallurgical-grade coke and approximately 45 megawatts of electrical power under long-term supply agreements. Under those agreements, the Company will purchase all of the coke and electrical power generated from SunCoke Middletown’s plant through at least 2031. SunCoke Middletown is deemed to be a variable interest entity because the Company has committed to purchase all of the expected production from the facility and the Company has been determined to be the primary beneficiary. Thus, the financial results of SunCoke Middletown are required to be consolidated with the results of the

Company with recognition of a noncontrolling interest, even though the Company has no ownership interest in SunCoke Middletown. Included in consolidated income (loss) before taxes was income before taxes related to SunCoke Middletown of \$15.0 and \$10.6 for the three months ended June 30, 2013 and 2012, respectively, and \$31.9 and \$18.5 for the six months ended June 30, 2013 and 2012, respectively.

Vicksmetal/Armco Associates

The Company owns a 50% interest in Vicksmetal/Armco Associates (“VAA”), a joint venture with Vicksmetal Company, which is owned by Sumitomo Corporation. VAA slits electrical steel primarily for AK Steel, though also for third parties. AK Steel

- 19-

Table of Contents

has determined that VAA meets the definition of a variable interest entity and the financial results of VAA are consolidated with the results of the Company, as the primary beneficiary.

NOTE 12 - Fair Value Measurements

The Company measures certain assets and liabilities at fair value. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability (i.e., the “exit price”) in an orderly transaction between market participants at the measurement date. In determining fair value, the Company uses various valuation approaches. The hierarchy of those valuation approaches is broken down into three levels based on the reliability of inputs as follows:

Level 1 inputs are quoted prices in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date.

Level 2 inputs are inputs, other than quoted prices, that are directly or indirectly observable for the asset or liability. Level 2 inputs include model-generated values that rely on inputs either directly observed or readily-derived from available market data sources, such as Bloomberg or other news and data vendors. They include quoted prices for similar assets or liabilities in active markets, inputs other than quoted prices that are observable for the asset or liability (e.g., interest rates and yield curves observable at commonly quoted intervals or current market) and contractual prices for the underlying financial instrument, as well as other relevant economic factors. Fair values of the Company’s derivative commodity contracts and foreign currency forward contracts are generated using forward prices that are derived from observable futures prices relating to the respective commodity or currency from sources such as the New York Mercantile Exchange (NYMEX) or the London Metal Exchange (LME). In cases where the derivative is an option contract (including caps, floors and collars), the Company’s valuations reflect adjustments made to valuations generated by the derivative’s counterparty. After validating that the counterparty’s assumptions relating to implied volatilities are in line with an independent source for these implied volatilities, the Company discounts these model-generated future values with discount factors designed to reflect the credit quality of the party obligated to pay under the derivative contract. Differing discount rates are applied to different contracts as a function of differing maturities and different counterparties. As of June 30, 2013, a spread over benchmark interest rates of 0.6% or less was used for derivative contracts valued as liabilities, while a spread over benchmark rates of 0.5% or less was used for derivatives valued as assets. The Company has estimated the fair value of long-term debt based upon quoted market prices for the same or similar issues or on the current interest rates available to the Company for debt of similar terms and maturities.

Level 3 inputs are unobservable inputs for the asset or liability. Unobservable inputs are used to measure fair value to the extent that observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. This level of categorization is not applicable to the Company’s valuations on a normal recurring basis other than for an immaterial portion of its pension assets.

Table of Contents

The following table presents information about the Company's assets and liabilities measured at fair value on a recurring basis:

	June 30, 2013			December 31, 2012		
	Level 1	Level 2	Total	Level 1	Level 2	Total
Assets measured at fair value						
Cash and cash equivalents	\$58.4	\$—	\$58.4	\$227.0	\$—	\$227.0
Other non-current assets:						
Available for sale investments—marketable securities	22.9	—	22.9	26.3	—	26.3
Commodity hedge contracts	—	0.1	0.1	—	—	—
Other current assets:

Liabilities measured at other than fair value						
Long-term debt, including current portions:						
Fair value	\$—	\$(1,369.9)	\$(1,369.9)	\$—	\$(1,379.3)	\$(1,379.3)
Carrying amount	—	(1,455.4)	(1,455.4)	—	(1,411.9)	(1,411.9)

NOTE 13 - Disclosures About Derivative Instruments and Hedging Activities

The Company is subject to fluctuations of exchange rates on a portion of intercompany receivables that are denominated in foreign currencies and uses forward currency contracts to manage exposures to certain of these currency price fluctuations. These contracts have not been designated as hedges for accounting purposes and gains or losses are reported in earnings on a current basis in other income (expense).

The Company is exposed to fluctuations in market prices of raw materials and energy sources, as well as to the effect of market prices on the sale of certain commodity steel (hot roll carbon steel coils). The Company may use cash-settled commodity price swaps and options (including collars) to hedge the market risk associated with the purchase of certain of its raw materials and energy requirements and the sale of hot roll carbon steel coils. These derivatives are routinely used with respect to a portion of the Company's natural gas and nickel requirements and are sometimes used with respect to its iron ore, aluminum, zinc and electricity requirements. The Company's hedging strategy is designed to mitigate the effect on earnings from the price volatility of these various commodity exposures. Independent of any hedging activities, price changes in any of these commodity markets could negatively affect operating costs or selling prices.

All commodity derivatives are marked to market and recognized as an asset or liability at fair value. The effective gains and losses for commodity derivatives designated as cash flow hedges of forecasted purchases of raw materials

and energy sources are recorded in accumulated other comprehensive income (loss) on the Consolidated Balance Sheets and reclassified into cost of products sold in the same period as the earnings recognition of the associated underlying transaction. Gains and losses on these designated derivatives arising from either hedge ineffectiveness or related to components excluded from the assessment of effectiveness are recognized in current earnings under cost of products sold or net sales, as appropriate. All gains or losses from derivatives for which hedge accounting treatment has not been elected are also reported in earnings on a current basis in net sales or cost of products sold.

Table of Contents

The Company had the following outstanding commodity price swaps and options and forward foreign exchange contracts:

Commodity	June 30, 2013	December 31, 2012
Nickel (in lbs)	730,100	420,100
Natural gas (in MMBTUs)	6,000,000	9,000,000
Zinc (in lbs)	12,000,000	—
Iron ore (in metric tons)	664,500	1,140,000
Hot roll carbon steel coils (in short tons)	18,900	30,000
Foreign exchange contracts (in euros)	€22,460,100	€15,950,000

The following table presents the fair value of derivative instruments in the Condensed Consolidated Balance Sheets:

Asset (liability)	June 30, 2013	December 31, 2012
Derivatives designated as hedging instruments:		
Other current assets—commodity contracts	\$4.3	\$25.5
Other noncurrent assets—commodity contracts	0.1	—
Accrued liabilities—commodity contracts	—	(1.2)
Derivatives not designated as hedging instruments:		
Other current assets:		
Foreign exchange contracts	0.1	—
Commodity contracts	0.4	—
Accrued liabilities:		
Foreign exchange contracts	—	(0.2)
Commodity contracts	(0.5)	(0.1)
Other non-current liabilities—commodity contracts	(0.4)	—

The following table presents gains (losses) on derivative instruments included in the Condensed Consolidated Statements of Operations:

	Three Months Ended		Six Months Ended June	
Gain (loss)	June 30, 2013	2012	30, 2013	2012
Derivatives in cash flow hedging relationships—				
Commodity contracts:				
Reclassified from accumulated other comprehensive income (loss) into net sales (effective portion)	\$—	\$—	\$0.4	\$—
Reclassified from accumulated other comprehensive income (loss) into cost of products sold (effective portion)	10.7	(12.8)	\$14.2	\$(20.6)
Recognized in cost of products sold (ineffective portion and amount excluded from effectiveness testing)	0.6	(2.9)	6.4	—
Derivatives not designated as hedging instruments:				
Foreign exchange contracts—recognized in other income (expense)	(0.1)	0.5	0.5	(0.7)
Commodity contracts:				
Recognized in net sales	(0.3)	—	0.2	—
Recognized in cost of products sold	(0.2)	(0.5)	(0.2)	(0.9)

Table of Contents

The following table lists the amount of gains (losses) expected to be reclassified into cost of products sold within the next twelve months for the Company's existing commodity contracts that qualify for hedge accounting, as well as the period of time over which the Company is hedging its exposure to the variability in future cash flows:

Commodity Hedge	Settlement Dates	Gains (losses)
Natural gas	July 2013 to December 2013	\$0.7
Zinc	January 2014 to December 2014	—
Iron ore	July 2013 to December 2013	(0.8)

NOTE 14 - Supplemental Cash Flow Information

The following table presents the net cash paid (received) during the period for interest, net of capitalized interest, and income taxes:

	Six Months Ended June 30,	
	2013	2012
Net cash paid (received) during the period for:		
Interest, net of capitalized interest	\$57.8	\$27.8
Income taxes	1.0	0.1

Included in net cash flows from operations was cash provided by SunCoke Middletown of \$39.8 and \$30.4 for the six months ended June 30, 2013 and 2012, respectively. Consolidated cash and cash equivalents at June 30, 2013, includes \$10.8 of cash and cash equivalents of SunCoke Middletown. There are no compensating balance arrangements or legal restrictions on the cash and cash equivalents of SunCoke Middletown, however, it is not available for the Company's use.

The Company had non-cash capital investments during the six months ended June 30, 2013 and 2012, that had not been paid as of the end of the respective period. These amounts are included in accounts payable and accrued liabilities and have been excluded from the Condensed Consolidated Statements of Cash Flows. The Company also granted restricted stock to certain employees and restricted stock units to directors under the Stock Incentive Plan. The amounts of non-cash investing and financing activities were as follows:

	Six Months Ended June 30,	
	2013	2012
Capital investments	\$5.6	\$8.8
Issuance of restricted stock and restricted stock units	2.5	5.0

NOTE 15 - Supplemental Guarantor Information

AK Steel's 8.75% Senior Secured Notes due December 2018, 7.625% Senior Notes due May 2020, 8.375% Senior Notes due April 2022 and 5.00% Exchangeable Senior Notes due November 2019 (collectively, the "Senior Notes") are governed by indentures entered into by AK Holding and its 100% owned subsidiary, AK Steel. Under the terms of the indentures, AK Holding fully and unconditionally, jointly and severally, guarantees the payment of interest, principal and premium, if any, on each of the notes comprising the Senior Notes. AK Holding is the sole guarantor of the Senior Notes.

The presentation of the supplemental guarantor information reflects all investments in subsidiaries under the equity method of accounting. Net income (loss) of the subsidiaries accounted for under the equity method is therefore

reflected in their parents' investment accounts. The principal elimination entries eliminate investments in subsidiaries and inter-company balances and transactions. The following supplemental condensed consolidating financial statements present information about AK Holding, AK Steel and the other non-guarantor subsidiaries.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.
(dollars in millions, except per share and per ton data or as otherwise specifically noted)

Results of Operations

The Company's operations consist primarily of nine steelmaking and finishing plants and tubular production facilities located in Indiana, Kentucky, Ohio and Pennsylvania. The Company's operations produce flat-rolled value-added carbon steels, including premium-quality coated, cold-rolled and hot-rolled carbon steel products, and specialty stainless and electrical steels that are sold in sheet and strip form, as well as carbon and stainless steel that is finished into welded steel tubing. These products are sold to the automotive, infrastructure and manufacturing, and distributors and converters markets. The Company sells its carbon products principally to domestic customers. The Company's electrical and stainless steel products are sold both domestically and internationally. The Company also produces carbon and stainless steel that is finished into welded steel tubing used in the automotive, large truck, industrial and construction markets. The Company's operations include European trading companies that buy and sell steel and steel products and other materials, AK Coal Resources, Inc. ("AK Coal"), which controls and is developing metallurgical coal reserves in Pennsylvania, and a 49.9% equity interest in Magnetation LLC ("Magnetation"), a joint venture that produces iron ore concentrate from previously-mined ore reserves.

Overview

The challenging domestic and global economic conditions that the Company and much of the steel industry have faced in recent years continued in the second quarter of 2013. These conditions included a slow economic recovery in the United States and in other parts of the world, continued weakness and uncertainty with regard to the economies of Western Europe and China, excess global steelmaking capacity, particularly in China, and continued strong competition in the United States from imports and from domestic producers with new or expanded facilities or under-utilized existing facilities. The aggregate effect of these conditions resulted in a significant oversupply of steel relative to demand, which had the effect of suppressing pricing for most of the Company's steel products. Despite this suppressed pricing for finished steel products, input costs remained disproportionately high for certain raw materials due to strong demand from China. Toward the end of the second quarter, the Company began to see some increases in carbon steel spot market pricing. However, the Company experienced a decline in electrical steel spot market pricing during the quarter, particularly with regard to international sales as a result of the weak global economic conditions.

The Company's second quarter results were also affected by planned and unplanned outages at its Middletown Works blast furnace. In April, the Middletown blast furnace underwent a planned seven-day maintenance outage. This was the first major maintenance outage to the blast furnace since the furnace was relined in 2009. The Company recorded expenses of \$21.6 during the second quarter of 2013 in connection with planned maintenance outages. The Company also experienced an unplanned outage of its Middletown Works blast furnace due to a mechanical failure in the charging apparatus internal to the furnace on June 22, 2013. The Company immediately executed its contingency plan, including taking the blast furnace off-line to prevent any damage to the furnace and to position it for start-up once the repairs were completed. The Company completed repairs and started up the blast furnace on July 12, 2013 and began to ramp it up to full production. The furnace has now returned to full production. As a result of the outage, the Company increased production of carbon steel at its Butler Works electric arc furnace, continued to use its Ashland Works blast furnace and purchased some carbon slabs to help service its customers. The Company maintains property damage and business interruption insurance, and it currently expects that the retained portion of the losses will be between approximately \$18.0 and \$23.0 before taxes. Approximately \$6.2 of this loss affected the second quarter of 2013 financial results. The balance is expected to be recognized in the second half of 2013. The extent and timing of the impact on the second half financial results will depend on whether an agreement with the insurance underwriters on the insured portion of the loss is reached and, if so, when such an agreement is reached.

As a result, in the second quarter of 2013, the Company reported a net loss of \$40.4, or \$0.30 per diluted share of common stock. Compared to the second quarter of 2012, revenue declined by approximately 9%. This was principally attributable to a decline in average selling prices compared to the second quarter of 2012, combined with a decline in shipments due in part to the unplanned outage of the Middletown Works blast furnace. The Company's average selling price for the second quarter of 2013 was \$1,061 per ton, a decrease of approximately 8% from the Company's average selling price of \$1,152 per ton for the second quarter of 2012, principally due to lower spot market prices for carbon steel products, reduced raw material surcharges and lower selling prices for electrical steel products globally. As noted above, the Company recorded expenses of \$21.6 during the second quarter of 2013 for planned maintenance outages, compared to planned maintenance outage costs of \$1.0 in each of the second quarter of 2012 and the first quarter of 2013. Also as noted above, the 2013 second quarter results include expenses of \$6.2 for costs related to the unplanned Middletown blast furnace outage. On the positive side, the Company benefited from lower raw

- 32-

Table of Contents

material costs compared to the second quarter of 2012, primarily for carbon scrap and iron ore. The Company recorded a LIFO credit of \$12.4 for the second quarter of 2013, compared to a LIFO credit of \$18.3 for the second quarter of 2012.

There were significant accomplishments during the second quarter with respect to the Company's strategic vertical integration investments in iron ore and coal. In May 2013, Magnetation entered into a \$50.0 revolving credit facility and completed a private offering of \$325.0 of senior secured debt, the net proceeds of which will be used primarily for capital expenditures related to the construction of its iron ore pellet plant in Reynolds, Indiana and additional concentrate capacity in northern Minnesota. This followed Magnetation's receipt in April 2013 of the key environmental permits required for the construction and operation of the pellet plant and additional concentrate capacity. Construction of the pellet plant is progressing at an accelerated pace and the Company continues to anticipate that it could commence production by late 2014. There were also major accomplishments at AK Coal during the quarter. In June 2013, AK Coal received its permit to mine from the Pennsylvania Department of Environmental Protection. AK Coal subsequently commenced mining operations at its initial underground mine in Somerset County, Pennsylvania and has begun shipping coal to be coked for use in AK Steel's blast furnaces.

Steel Shipments

Total shipments were 1,323,700 tons and 1,335,800 tons for the three months ended June 30, 2013 and 2012, respectively. Total shipments were 2,613,500 tons and 2,661,700 tons for the six months ended June 30, 2013 and 2012, respectively. The decrease in total shipments in the second quarter of 2013 compared to the prior year was attributable principally to lower carbon spot market and stainless/electrical steel shipments, partially offset by increased automotive shipments. The unplanned outage of the Middletown Works blast furnace also contributed to the decline in shipments in the second quarter of 2013. For the three months ended June 30, 2013, value-added products comprised 86.7% of total shipments, compared to 85.2% of total shipments in the three months ended June 30, 2012. For the six months ended June 30, 2013, value-added products comprised 85.6% of total shipments, compared to 84.9% of total shipments for the six months ended June 30, 2012. The Company continued to focus on maximizing profitability through product mix adjustments based on current and projected market demands—both domestically and internationally. The following table presents net shipments by product line:

	Three Months Ended June 30,				Six Months Ended June 30,			
	2013		2012		2013		2012	
	(tons in thousands)				(tons in thousands)

Subtotal non value-added shipments	175.9	13.3	% 197.6	14.8	% 375.3	14.4	% 403.1	15.1
Total shipments	1,323.7	100.0	% 1,335.8	100.0	% 2,613.5	100.0	% 2,661.7	100.0

Sales

For the three months ended June 30, 2013, net sales were \$1,404.5, a 9% decrease from net sales of \$1,538.4 for the three months ended June 30, 2012. For the six months ended June 30, 2013, net sales were \$2,774.3, a 9% decrease

from net sales of \$3,047.1 for the six months ended June 30, 2012. The Company's average selling price for the second quarter of 2013 was \$1,061 per ton, a decrease of approximately 8% from the Company's average selling price of \$1,152 per ton for the second quarter of 2012. The Company's average selling price for the six months ended June 30, 2013 was \$1,061 per ton, a decrease of approximately 7% from the Company's average selling price of \$1,145 per ton for the six months ended June 30, 2012. The lower average selling price for the second quarter of 2013 compared to the second quarter of 2012 was driven principally by lower selling prices for spot market carbon sales, lower selling prices for sales of electrical steel, particularly to the international market, and reduced raw material surcharges as a result of lower raw material costs. Net sales to customers outside the United States for the three and six months ended June 30, 2013 totaled \$182.3 and \$368.9, respectively, compared to \$224.4 and \$449.5 for the three and six months ended June 30, 2012, respectively. These declines were primarily the result of continued weak global economic conditions, which have primarily affected the Company's international sales of electrical steel.

Table of Contents

Cost of Products Sold

For the three months ended June 30, 2013, the Company experienced lower steelmaking costs, primarily as a result of lower costs for iron ore, carbon scrap, coal and coke, partially offset by higher outage costs associated with the Middletown Works blast furnace, compared to the three months ended June 30, 2012. For the six months ended June 30, 2013, the Company experienced lower steelmaking costs, primarily as a result of lower costs for iron ore, carbon scrap, coal and coke, partially offset by higher outage and operating costs associated with the Middletown Works blast furnace, compared to the same period in 2012. LIFO credits of \$12.4 and \$18.4 were recorded for the three and six months ended June 30, 2013, compared to LIFO credits of \$18.3 and \$30.7 for the three and six months ended June 30, 2012. The Company had planned maintenance outage costs of \$21.6 and \$22.6 in the three and six months ended June 30, 2013, respectively, while it incurred \$1.0 and \$1.6 of such costs in the corresponding periods of 2012. As noted above, the results for the three and six months ended June 30, 2013, also include expenses of \$6.2 for costs related to the unplanned Middletown blast furnace outage.

Selling and Administrative Expenses

Selling and administrative expenses for the three and six months ended June 30, 2013 were \$50.2 and \$101.8, respectively, compared to \$50.8 and \$106.6 for the three and six months ended June 30, 2012, respectively. The decrease was primarily the result of lower stock compensation costs for the six months ended June 30, 2013.

Depreciation

Depreciation expense for the three and six months ended June 30, 2013 was \$47.9 and \$96.5, respectively, compared to \$48.4 and \$96.7 for the corresponding periods in 2012.

Pension and Other Postretirement Employee Benefit (“OPEB”) Expense (Income)

The Company recorded pension and OPEB income of \$16.5 and \$32.4 for the three and six months ended June 30, 2013, respectively. Pension and OPEB income was \$9.9 and \$18.4 for the corresponding periods in 2012. The increase in income for the three and six months ended June 30, 2013 compared to the prior year was largely a result of a decrease in the interest cost on the Company’s pension and OPEB obligations.

Operating Profit

The Company reported an operating profit of \$13.7 and \$46.9 in the three and six months ended June 30, 2013, respectively, compared to operating profit of \$56.7 and \$60.8 in the three and six months ended June 30, 2012, respectively. For both the three and six months ended June 30, 2013, the Company experienced year-over-year decreases in average selling prices, lower sales volumes and higher costs for planned maintenance outages, partially offset by lower costs for iron ore, carbon scrap, coal and coke compared to the same periods in 2012. Included in operating profit was operating profit related to SunCoke Middletown of \$15.0 and \$31.9 for the three and six months ended June 30, 2013, respectively, compared to \$10.6 and \$18.5 for the corresponding periods in 2012.

Interest Expense

Interest expense for the three and six months ended June 30, 2013 was \$32.0 and \$63.0, respectively, compared to \$21.8 and \$38.0 for the same periods in 2012. The increases over 2012 were primarily related to the late 2012 issuance of indebtedness with interest rates higher than the revolver borrowings outstanding during the first half of 2012.

Other Income (Expense)

Other income (expense) was \$2.5 and \$4.3 for the three and six months ended June 30, 2013, respectively, compared to other income (expense) of \$(4.7) and \$(3.8) for the three and six months ended June 30, 2012, respectively. Other income (expense) is primarily related to foreign exchange gains and losses and the Company's share of income related to Magnetation. Included in other income (expense) was the Company's share of income (loss) related to Magnetation of \$(1.2) and \$1.1 for the three and six months ended June 30, 2013, respectively, and zero and \$(0.4) for the corresponding periods in 2012.

Table of Contents

Income Taxes

Income taxes recorded through June 30, 2013, were estimated using the discrete method, which was based on actual year-to-date pre-tax loss through June 30, 2013, as well as the related change in the valuation allowance on deferred tax assets. The Company was unable to estimate pre-tax income for the remainder of 2013 with sufficient precision for purposes of the effective tax rate method, which requires consideration of a projection of full-year income and the expected change in the valuation allowance. The estimated annual effective tax rate method was not reliable due to its sensitivity to small changes to forecasted annual pre-tax earnings and the effect of the Company's valuation allowance, which create results with significant variations in the customary relationship between income tax expense and pre-tax income for the interim periods. As a result, the use of the discrete method is more appropriate than the annual effective tax rate method. The Company has estimated the change in valuation allowances required based on the year-to-date pre-tax loss and the change in value of the identified tax-planning strategy, which is determined based on year-to-date LIFO income. Included in income tax provision are non-cash charges of \$20.7 and \$21.8 in the three and six months ended June 30, 2013, for changes in the valuation allowance on the Company's deferred tax assets. The Company recorded a non-cash charge of \$736.0 in the three and six months ended June 30, 2012, for an adjustment of the valuation allowance because of the change in judgment about the realizability of the deferred tax assets.

In the first quarter of 2013, SunCoke completed an initial public offering of an affiliate, SunCoke Energy Partners, L.P., a master limited partnership. As a result of a change in the legal structure of the SunCoke entities that own SunCoke Middletown made in connection with the offering, income taxes are no longer allocated to net income attributable to SunCoke Middletown beginning in the first quarter of 2013. Thus, effective January 1, 2013 the Company's income tax provision no longer includes the effect of that allocation. However, for the three and six months ended June 30, 2012, the consolidated income tax provision included \$4.1 and \$7.1, respectively, associated with SunCoke Middletown. Neither the former tax allocation nor the January 1, 2013 change eliminating that allocation had any effect on the net income (loss) attributable to AK Holding in any period.

Net Income (Loss)

As a result of the various factors and conditions described above, the Company reported a net loss attributable to AK Holding in the three months ended June 30, 2013, of \$40.4, or \$0.30 per diluted share, compared to a net loss of \$724.2, or \$6.55 per diluted share, in the three months ended June 30, 2012.

For the six months ended June 30, 2013, net loss attributable to AK Holding was \$50.3, or \$0.37 per diluted share, compared to a net loss of \$736.0, or \$6.66 per diluted share, in the six months ended June 30, 2012.

Adjusted EBITDA

Adjusted EBITDA (as defined below under Non-GAAP Financial Measures) was \$47.5, or \$36 per ton, and \$88.3, or \$66 per ton, for the second quarter of 2013 and 2012, respectively.

Adjusted EBITDA was \$114.3, or \$44 per ton, and \$137.2, or \$52 per ton, for the six months ended June 30, 2013 and 2012, respectively.

Non-GAAP Financial Measures

EBITDA is an acronym for earnings before interest, taxes, depreciation and amortization. It is a metric that is sometimes used to compare the results of different companies by removing the effects of different factors that might otherwise make comparisons inaccurate or inappropriate. For purposes of this report, the Company has made an

adjustment to EBITDA in order to exclude the effect of noncontrolling interests. The adjusted results, although not financial measures under U.S. generally accepted accounting principles (“GAAP”) and not identically applied by other companies, facilitate the ability to analyze the Company’s financial results in relation to those of its competitors and to the Company’s prior financial performance by excluding items that otherwise would distort the comparison. Adjusted EBITDA is not, however, intended as an alternative measure of operating results or cash flow from operations as determined in accordance with GAAP and is not necessarily comparable to similarly titled measures used by other companies.

Neither current shareholders nor potential investors in the Company’s securities should rely on adjusted EBITDA as a substitute for any GAAP financial measure and the Company encourages investors and potential investors to review the following reconciliation of net income (loss) attributable to AK Holding to adjusted EBITDA.

- 35-

Table of Contents

	Three Months Ended		Six Months Ended	
	June 30,		June 30,	
	2013	2012	2013	2012
Net income (loss) attributable to AK Holding	\$(40.4) \$(724.2) \$(50.3) \$(736.0
Net income attributable to noncontrolling interests	14.9	6.6	31.6	11.5
Income tax provision (benefit)	9.7	747.8	6.9	743.5
Interest expense	32.0	21.8	63.0	38.0
Interest income	(0.2) (0.1) (0.9) (0.2
Depreciation	47.9	48.4	96.5	96.7
Amortization	2.0	2.3	6.1	9.2
EBITDA	65.9	102.6	152.9	162.7
Less: EBITDA of noncontrolling interests (a)	18.4	14.3	38.6	25.5
Adjusted EBITDA	\$47.5	\$88.3	\$114.3	\$137.2

(a) The reconciliation of EBITDA of noncontrolling interests to net income attributable to noncontrolling interests is as follows:

	Three Months Ended		Six Months Ended	
	June 30,		June 30,	
	2013	2012	2013	2012
Net income attributable to noncontrolling interests	\$14.9	\$6.6	\$31.6	\$11.5
Income tax provision	—	4.1	—	7.1
Depreciation	3.5	3.6	7.0	6.9
EBITDA of noncontrolling interests	\$18.4	\$14.3	\$38.6	\$25.5

Outlook

Consistent with its current practice, AK Steel expects to provide detailed guidance for the Company's third quarter results in September. The Company notes, however, that it expects that its third quarter financial results will be affected by losses related to its unplanned blast furnace outage. Those losses, after insurance recovery, are expected to be between \$12.0 and \$17.0 in the second half of 2013. The extent of the impact on the third quarter could be greater, however, if agreement with the insurance underwriters on the insured portion of the loss is not reached during the third quarter.

Liquidity and Capital Resources

At June 30, 2013, the Company had total liquidity of \$905.3, consisting of \$47.6 of cash and cash equivalents of the Company and \$857.7 of availability under the Company's \$1.1 billion asset-backed revolving credit facility ("Credit Facility"). Availability under the Credit Facility fluctuates monthly based on the varying levels of eligible collateral. As of June 30, 2013, the Company's eligible collateral, after application of applicable advance rates, was \$971.6. The Credit Facility is secured by the Company's inventory and accounts receivable. At June 30, 2013, there were outstanding borrowings of \$40.0 under the Credit Facility, and availability was further reduced by \$73.9 due to outstanding letters of credit. During the six-month period ended June 30, 2013, utilization of the Credit Facility ranged from zero to \$75.0, with outstanding borrowings averaging \$9.3 per day. The Company anticipates utilizing the Credit Facility as it deems necessary to fund requirements for working capital, capital investments and other general corporate purposes. Consolidated cash and cash equivalents of \$58.4 at June 30, 2013, includes \$10.8 of cash and cash equivalents of SunCoke Middletown, which is not available for the Company's use.

In June 2013, AK Steel issued \$30.0 of aggregate principal amount of its 8.75% Senior Secured Notes due 2018 at an issue price of 106.5%, as an add-on to its outstanding \$350.0 aggregate principal amount of such notes (collectively, the "Secured Notes"). Net proceeds from this offering of \$30.9 were used for general corporate purposes. In July, 2013, the Company filed a registration statement with the Securities and Exchange Commission the "Commission"), which the Commission subsequently declared effective, offering to exchange the existing, unregistered Secured Notes for new senior secured notes with substantially identical terms that are registered under the Securities Act of 1933, as amended. The exchange offer is ongoing and will expire August 28, 2013, unless otherwise extended by the Company. AK Steel will not receive any additional proceeds from the exchange offer. Also during the second quarter of 2013, the Company repurchased an aggregate principal amount of \$30.0 of its senior unsecured notes in private, open market transactions. The repurchases were comprised of \$20.2 and \$9.8 of the Company's 7.625% Senior Notes due May 2020 and the 8.375% Senior Notes due April 2022, respectively. These repurchases were unsolicited and completed at a discount to the senior unsecured notes' par value. The Company recognized a gain on the repurchases of \$2.9 for the quarter ended June 30, 2013.

Cash used by operations totaled \$104.5 for the six months ended June 30, 2013. This total included cash generated by SunCoke Middletown of \$39.8, which can only be used by SunCoke Middletown for its operations or distributed to SunCoke. Primary uses of cash were \$71.3 for pension contributions, \$32.5 for OPEB payments and an increase in working capital of \$62.7, partially offset by cash generated from normal business activities. The increase in working capital resulted primarily from an increase in accounts receivable and inventory quantities based on seasonal trends. An increase in accounts payable due to higher inventory levels partially offset this use of cash.

The Company believes that its current sources of liquidity will be adequate to meet its obligations for the foreseeable future. Future liquidity requirements for employee benefit plan contributions, scheduled debt maturities, debt redemptions and capital investments are expected to be funded by internally-generated cash and other financing sources. To the extent, if at all, that the Company would need to fund any of its working capital or planned capital investments other than through internally-generated cash, the Company has available its Credit Facility. The Company also could seek to access the capital markets if and when it perceives conditions are favorable. The Credit Facility expires in April 2016 and any amounts outstanding under it at that time would need to be repaid or refinanced. Otherwise, the Company has no significant scheduled debt maturities until December 2018, when its \$380.0 of Senior Secured Notes are due. The Company's forward-looking statements on liquidity are based on currently available information and expectations and, to the extent the information or expectations are inaccurate or conditions deteriorate, there could be a material adverse effect on the Company's liquidity.

Pension- and Retiree Healthcare Benefit-related Matters

The Company expects to contribute \$181.5 to the master pension trust during 2013. Of this total, \$71.3 was made in the first half of 2013 and \$68.9 was made in July 2013, leaving \$41.3 to be made during the remainder of 2013. In July 2013, The Company made payments to Voluntary Employees Beneficiary Association ("VEBA") trusts of \$30.8 pursuant to settlements of class actions filed on behalf of certain retirees from the Company's Butler Works and Zanesville Works relating to the Company's OPEB obligations to such retirees. Based on current actuarial valuations, the Company estimates that its required annual pension contributions will be approximately \$210.0 in 2014 and \$125.0 in 2015.

Investing and Financing Activities

During the six months ended June 30, 2013, net cash used by investing activities totaled \$77.6, primarily for capital investments of \$32.4 and a contribution to Magnetation of \$50.0.

For 2013, the Company anticipates making capital investments of approximately \$60.0 in its steelmaking and finishing operations. AK Steel also expects to make capital investments during 2013 of approximately \$20.0 in AK Coal and the development of its coal reserves. In addition, additional strategic investments in Magnetation may be

required during the remainder of 2013 based on Magnetation's liquidity requirements, as discussed in the Strategic Investments—Magnetation section below, but are not currently expected. In the near-term, the Company expects to fund these investments from cash generated from operations or from borrowings under its Credit Facility.

During the six months ended June 30, 2013, cash generated by financing activities totaled \$13.5. This consisted primarily of gross proceeds of \$31.9 received from the add-on issuance of Secured Notes and \$40.0 of borrowings under the Credit Facility, partially offset by \$27.0 to repurchase long-term debt and \$27.6 of distributions from SunCoke Middletown to its noncontrolling interest owners.

Dividends

The Company's Credit Facility contains certain restrictive covenants with respect to the Company's payment of dividends. Under these covenants, dividends are permitted provided (i) availability under the Credit Facility exceeds \$247.5 or (ii) availability exceeds \$192.5 and the Company meets a fixed charge coverage ratio of one to one as of the most recently ended fiscal quarter. If the Company cannot meet either of these thresholds, dividends would be limited to \$12.0 annually. At June 30, 2013, the availability under the Credit Facility significantly exceeded \$247.5. Accordingly, although the Company has elected to suspend its dividend program, there currently are no covenants that would restrict the Company's ability to declare and pay a dividend to its stockholders.

Table of Contents

Restrictions under Debt Agreements

The Credit Facility and indentures governing the Company's senior indebtedness and tax-exempt fixed-rate Industrial Revenue Bonds (collectively, the "Notes") contain restrictions and covenants that may limit the Company's operating flexibility.

The indentures governing the Notes, other than the 5.00% Exchangeable Senior Notes due November 2019 (the "Exchangeable Notes"), include customary restrictions on (a) the incurrence of additional debt by certain AK Steel subsidiaries, (b) the incurrence of liens by AK Steel and AK Holding's other subsidiaries, (c) the amount of sale/leaseback transactions, and (d) the ability of AK Steel and AK Holding to merge or consolidate with other entities or to sell, lease or transfer all or substantially all of the assets of AK Steel and AK Holding to another entity. They also contain customary events of default. In addition, the indenture governing the Secured Notes includes covenants with customary restrictions on the use of proceeds from the sale of collateral. The indenture governing the Exchangeable Notes does not contain any financial or operating covenants or restrictions on the payments of dividends, the incurrence of indebtedness or the issuance or repurchase of securities by the Company or its subsidiaries.

The Credit Facility contains restrictions, including limitations on, among other things, distributions and dividends, acquisitions and investments, indebtedness, liens and affiliate transactions. In addition, the Credit Facility requires maintenance of a minimum fixed charge coverage ratio of one to one if availability under the Credit Facility is less than \$137.5. The Company does not expect any of these restrictions to affect or limit its ability to conduct its business in the ordinary course.

During the period, the Company was in compliance with all the terms and conditions of its debt agreements.

Strategic Investments

AK Coal

During the second quarter of 2013, AK Coal, a wholly-owned subsidiary of AK Steel that controls (through ownership or lease) significant reserves of low-volatile metallurgical coal, was issued a permit to mine from the Pennsylvania Department of Environmental Protection. AK Coal began mining activities soon after the permit was issued, and expects to steadily increase its output of coal to be shipped to facilities to be coked for use in AK Steel's blast furnaces. AK Coal also continues to develop and refine its mine development plan, which will provide its planned approach to mining coal in the area for years to come.

AK Steel continues to anticipate that its investment in AK Coal will total approximately \$96.0. Of this total, the Company has expended approximately \$53.0 through June 30, 2013. The Company expects to invest approximately \$12.0 in the remainder of 2013. The timing of the remaining capital expenditures will be driven principally by the Company's decisions as to how quickly to open up additional mines to increase coal production. Those decisions will be driven by a variety of factors, including the Company's capital deployment decisions and the then-market prices at which the Company may purchase third-party coal.

Magnetation

Phase I of the joint venture involved the development and operation of Magnetation's two existing iron ore concentrate plants, which together are able to produce a total of approximately 1.2 million short tons of iron ore concentrate annually. Magnetation loads iron ore concentrate onto railcars at its wholly-owned loadout facility, which enables it to

ship its iron ore concentrate in a controlled and cost-effective manner. These concentrate operations effectively already provide AK Steel with a partial hedge to the global price of iron ore, as the Company will recognize its share of net income from the joint venture's sale of its iron ore concentrate to third parties at pricing based on iron ore market prices. If the global price of iron ore increases, AK Steel will benefit from the higher Magnetation net income caused by that price increase thereby partially offsetting AK Steel's own higher raw material costs resulting from the higher iron ore prices. Even absent future iron ore price increases, Magnetation's ability to produce iron ore concentrate at a relatively low cost is expected to permit it to generate net income on sales. Indeed, AK Steel anticipates benefiting from Phase I even if current global iron ore prices continue to fall from current market prices, as Magnetation is expected to generate net income on the sale of such concentrate even at lower prices. The Company's proportionate share of the net income is included in other income (expense) on the Condensed Consolidated Statements of Operations.

Phase II of the joint venture entails the construction and operation of additional concentrate capacity and an iron ore pelletizing plant. In April 2013, the Indiana Department of Environmental Protection issued to Magnetation the environmental permits required for Magnetation to construct and operate its iron ore pelletizing plant in Reynolds, Indiana. That same month, Magnetation received the key environmental permit necessary to construct and operate additional iron ore concentrate capacity

Table of Contents

in northern Minnesota to produce more feedstock for the pellet plant. These developments represent the commencement of Phase II of the joint venture.

Upon commencement of operation of these new facilities, Phase II of the joint venture will be completed. At that point, Magnetation is expected to have a pellet plant with an annual capacity of approximately 3.3 million short tons to be fed by Magnetation's concentrate plants. The pellet plant is expected to consume the majority of the joint venture's concentrate production, with the balance going to third party customers. When Phase II is completed, the Company expects that the iron ore pellet production from Magnetation eventually will satisfy about 50% of AK Steel's current iron ore pellet requirements, at a net cost to AK Steel substantially below the current world market price.

The Company estimates that Magnetation's capital investment required to complete Phase II will total approximately \$470.0. Of this total, the pellet plant itself is expected to require approximately \$350.0, with the additional concentrate capacity requiring the remaining estimated \$120.0. Factors that may affect the cost of the pellet plant include, among other things, costs related to accelerating the construction of the facility, such as premiums for rush delivery of equipment and greater overtime by construction contractors. Other companies' pellet plant facility investment costs have in some cases been substantially higher than those expected for the Magnetation plant. The lower costs expected for the Magnetation plant are due chiefly to the proprietary process used by Magnetation's concentrate plants to produce refined feedstock for its pellet plant at a low capital intensity. This process will enable Magnetation to avoid some of the other processes (and forego the related capital costs) that a traditional integrated mining and pellet plant facility typically requires, such as stripping, drilling, blasting, primary crushing, secondary crushing, tertiary crushing and primary grinding. Instead, Magnetation will only need to construct a pelletizing furnace facility and some limited related infrastructure to support the plant's operations. As such, AK Steel anticipates that Magnetation's capital costs to construct its pellet plant will be substantially lower than the costs of constructing a traditional end-to-end iron ore mining, crushing, grinding, concentrating and pelletizing facility. Construction of the pellet plant is expected to be completed, and it is expected to commence operations, by the fourth quarter of 2014. This estimate is subject to change, however, because the timing will be driven by a number of variables, such as achieving construction deadlines and timely deliveries of key equipment.

In May 2013, Magnetation completed a private offering of \$325.0 aggregate principal amount of 11.00% Senior Secured Notes due 2018 (the "Magnetation Secured Notes"). Magnetation will use the net proceeds of the offering principally for capital expenditures related to the construction of its proposed iron ore pellet plant in Reynolds, Indiana and additional concentrate capacity in northern Minnesota, working capital and general corporate purposes. Concurrently with the closing of the Magnetation Secured Notes offering, Magnetation entered into a \$50.0 senior secured revolving credit facility with a group of lenders (the "Magnetation Credit Facility"). Both the Magnetation Secured Notes and the Magnetation Credit Facility are non-recourse to AK Steel.

In conjunction with these financing transactions by Magnetation, AK Steel contributed \$50.0 of its remaining \$150.0 capital commitment to Magnetation. With respect to AK Steel's remaining \$100.0 capital commitment, pursuant to an agreement between AK Steel and Magnetation, Inc., the other equity owner in the joint venture, Magnetation may obtain a capital contribution from AK Steel in an amount up to \$35.0 following any month in which Magnetation's unrestricted cash balance is less than \$50.0. AK Steel does not anticipate making any additional capital contributions to Magnetation in 2013 and expects to contribute the remaining \$100.0 in 2014, prior to the commencement of operations at the pellet plant.

Automotive Market

The Company sells a significant portion of its flat-rolled carbon steel products and stainless steel products to automotive manufacturers and to distributors, service centers and converters who in some cases will resell the

products to the automotive industry.

Because the automotive market is an important element of the Company's business, North American light vehicle production affects the Company's total sales and shipments. During the first half of 2013, improvements in the automotive market had a positive impact on the Company's sales and shipments. The automotive market grew to 50% of the Company's first-half revenues, compared to 45% for the year 2012. In fact, following a strong first quarter of shipments to the automotive market, in the second quarter of 2013 the Company experienced its highest level of shipments to that market since the third quarter of 2007. Further increases in light vehicle production volumes are projected for the remainder of 2013 and AK Steel intends to continue its efforts to increase automotive market share.

Table of Contents

Electrical Steel Market

The Company sells its electrical steel products, which are iron-silicon alloys with unique magnetic properties, primarily to manufacturers of power transmission and distribution transformers and electrical motors and generators in the infrastructure and manufacturing markets. The Company sells its electrical steel products both domestically and internationally.

As a result of the major global recession which started in late 2008, the Company has experienced a significant decrease in both its domestic and international sales of grain-oriented electrical steel (“GOES”) products. The domestic GOES market was negatively impacted by reduced maintenance and capital spending by utilities and the decline in the United States housing and construction markets, which principally drive the domestic need for new electrical transformers. Internationally, this reduction was caused principally by a decline in spending for new electric power transmission and distribution transformers in developing countries. To a lesser extent, the Company’s international electrical steel sales also were negatively impacted by the determination in a China trade case to impose duties on GOES imported from the United States. See the discussion of the GOES trade case in Note 7 to the condensed consolidated financial statements.

Although overall pricing for GOES continues to be well below pre-recession levels, GOES shipments in the NAFTA market have improved in the last couple of years as power generation and distribution activities picked up. However, weakness in the United States housing and construction markets over the last several years has hampered the Company’s efforts to return its domestic GOES shipments to the same volume it had prior to the global recession. The domestic housing and construction industry was significantly affected by the recession which began in 2008 and has struggled to make any noticeable improvement since then. Housing starts in the United States in 2012 remained near historically low levels for the fourth consecutive year, though they showed improvement during 2012 and have continued to improve in 2013. To the extent that domestic housing starts, especially single family housing starts, remain at a low level, it is likely that the Company’s electrical steel sales and shipments will continue to be negatively affected.

In addition, the Company’s GOES shipment volume has been affected by changes in mix and by changes in production requirements to meet evolving quality requirements, principally for sales to the international market. Under current market conditions, the Company’s GOES production capacity is approximately 285,000 tons. As demand improves, the Company anticipates that it will be able to adjust its market mix and make other changes to increase its current capacity.

On February 1, 2012, the United States Department of Energy (“DOE”) proposed revised energy efficiency standards for certain types of electrical distribution transformers, which potentially could affect the use of GOES in certain types of distribution transformers. On April 9, 2013, the DOE issued the final rule and the new standards are scheduled to become effective in January 2016. Many of the manufacturers of the transformers subject to the proposed new standards are customers of the Company. The new efficiency standards are not expected to have a major impact on the competitiveness of GOES for use in the distribution transformers covered by the new standards. Moreover, with respect to some types of distribution transformers, the proposed new standards have the potential for increasing the market for GOES. The Company will work diligently to engage in research and development to enhance the available market for its GOES products under the new efficiency standards.

Forward-Looking Statements

Certain statements made or incorporated by reference in this Form 10-Q, or made in other documents furnished to or filed with the Securities Exchange Commission, as well as in press releases or in presentations made by Company

employees, reflect management's estimates and beliefs and are intended to be, and are hereby identified as "forward-looking statements" for purposes of the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Words such as "expects," "anticipates," "believes," "intends," "plans," "estimates" and other similar references to future periods typically identify such forward-looking statements. These forward-looking statements reflect the current belief and judgment of the Company's management, but are not guarantees of future performance or outcomes. They are based on a number of assumptions and estimates that are inherently subject to economic, competitive, regulatory, and operational risks, uncertainties and contingencies that are beyond the Company's control, and upon assumptions with respect to future business decisions and conditions that are subject to change. In particular, these include, but are not limited to, statements in the Outlook and Liquidity and Capital Resources sections and Item 7A, Quantitative and Qualitative Disclosure about Market Risk.

The Company cautions readers that such forward-looking statements involve risks and uncertainties that could cause actual results to differ materially from those currently expected by management. See Item 1A, Risk Factors in Part II of this report and Part I, Item 1A of the Company's Form 10-K for the year ended December 31, 2012 for more information on certain of these risks and uncertainties.

Table of Contents

Any forward-looking statement made by the Company in this document speaks only as of the date on which it is made. The Company undertakes no obligation to publicly update any forward-looking statement, whether as a result of new information, future developments or otherwise, except as may be required by law.

Item 3. Quantitative and Qualitative Disclosures about Market Risk.

The Company's primary areas of market risk include changes in (a) interest rates, (b) the prices of raw materials and energy sources, and (c) foreign currency exchange rates. The Company manages interest rate risk by issuing variable- and fixed-rate debt, and had total long-term indebtedness (excluding unamortized debt discount and premium) of \$1,450.5 and \$1,450.9 at June 30, 2013 and December 31, 2012, respectively. The amount at June 30, 2013, consisted of \$1,424.5 of fixed-rate debt and \$26.0 of variable-rate Industrial Revenue Bonds. In addition, at June 30, 2013, the Company had \$40.0 of short-term borrowings under its Credit Facility that bears interest at variable interest rates. No borrowings were outstanding under the Company's Credit Facility at December 31, 2012. An increase in prevailing interest rates would increase interest expense and interest paid for the variable-rate debt, including any outstanding borrowings under the Credit Facility. For example, a 1% increase in interest rates would result in an increase in annual interest expense of approximately \$0.7 on the Company's outstanding debt at June 30, 2013.

With regard to raw materials and energy sources, the cost of iron ore, in particular, and the cost of scrap have been volatile over the course of the last several years. In addition, natural gas prices have been highly volatile at times. To address such cost volatility, where competitively possible, the Company attempts to increase the price of steel it sells to the spot market and to negotiate a variable-pricing mechanism with its contract customers that allows the Company to adjust selling prices in response to changes in the cost of certain raw materials and energy. In addition, in the case of stainless steel, increased costs for nickel, chrome and molybdenum can usually be recovered through established price surcharges. Therefore, fluctuations in the price of energy (particularly natural gas and electricity), raw materials (such as scrap, purchased slabs, coal, iron ore, zinc and nickel) or other commodities will be, in part, passed on to the Company's customers rather than absorbed solely by the Company.

In addition, in order to further minimize its exposure to fluctuations in raw material costs, and to secure an adequate supply of raw materials, the Company has entered into multi-year purchase agreements for certain raw materials that provide for fixed prices or only a limited variable-price mechanism. While enabling the Company to reduce its exposure to fluctuations in raw material costs, this also exposes the Company to an element of market risk relative to its sales contracts. After new contracts are negotiated with the Company's customers, the average sales prices could increase or decrease. If that average sales price decreases, the Company may not be able to reduce its raw material costs to a corresponding degree due to the multi-year term and fixed-price nature of some of its raw material purchase contracts. In addition, some of the Company's existing multi-year supply contracts, particularly with respect to iron ore and coke, have required minimum purchase quantities. Under adverse economic conditions, those minimums may exceed the Company's needs. Subject to exceptions for force majeure and other circumstances affecting the legal enforceability of the contracts, such minimum purchase requirements could require the Company to purchase quantities of raw materials, particularly iron ore and coke, that significantly exceed its anticipated needs. Under such circumstances, the Company would attempt to negotiate agreements for new purchase quantities. There is a risk, however, that in one or more instances the Company would not be successful in securing lower purchase quantities, either through negotiation or litigation. In that event, the Company would likely be required to purchase more of a particular raw material in a particular year than it needs, negatively affecting its results of operations and cash flows.

The Company uses cash-settled commodity price swaps and options (including collars) to hedge the market risk associated with the purchase of certain of its raw materials and energy requirements. Such hedges routinely are used with respect to a portion of the Company's natural gas and nickel requirements and are sometimes used with respect to its aluminum, zinc, electricity and iron ore requirements. The Company's hedging strategy is designed to protect

against excessive pricing volatility. However, abnormal price increases in any of these commodity markets might still negatively affect operating costs, as the Company does not typically hedge 100% of its exposure.

For derivatives designated in cash flow hedging relationships, the effective portion of the gains and losses from the use of these instruments for natural gas, electricity, iron ore, zinc and hot roll carbon steel coils are recorded in accumulated other comprehensive income (loss) on the Consolidated Balance Sheets and recognized into net sales or cost of products sold in the same period as the earnings recognition of the associated underlying transaction. At June 30, 2013, accumulated other comprehensive income (loss) included \$7.4 in unrealized after-tax gains for these derivative instruments. All other commodity price swaps and options are marked to market and recognized into net sales or cost of products sold with the offset recognized as an asset or accrued liability. At June 30, 2013, other current assets of \$4.7, other non-current assets of \$0.1, accrued liabilities of \$0.5 and other noncurrent liabilities of \$0.4 were included on the Consolidated Balance Sheets for the fair value of commodity

- 40-

Table of Contents

derivatives. At December 31, 2012, other current assets of \$25.5 and accrued liabilities of \$1.3 were included on the Consolidated Balance Sheets for the fair value of commodity derivatives.

The following table presents the negative effect on pre-tax income of a hypothetical change in the fair value of derivative instruments outstanding at June 30, 2013, due to an assumed 10% and 25% decrease in the market price of each of the indicated commodities.

Commodity Derivative	Negative Effect on Pre-tax Income	
	10% Decrease	25% Decrease
Natural gas	\$0.2	\$1.5
Nickel	0.5	1.2
Zinc	1.1	2.6
Iron ore	7.7	19.3
Hot roll carbon steel coils	(1.2) (3.0

Because these instruments are structured and used as hedges, these hypothetical losses would be offset by the benefit of lower prices paid for the physical commodity used in the normal production cycle or lower prices received from the sale of hot roll coils. The Company does not enter into swap or option contracts for trading purposes.

The Company also is subject to risks of exchange rate fluctuations on a portion of intercompany receivables that are denominated in foreign currencies. The Company uses forward currency contracts to manage exposures to certain of these currency price fluctuations. At June 30, 2013 and December 31, 2012, the Company had outstanding forward currency contracts with a total contract value of \$29.2 and \$21.0, respectively, for the sale of euros. At June 30, 2013, other current assets of \$0.1 were included on the Consolidated Balance Sheets for the fair value of these contracts. At December 31, 2012, accrued liabilities of \$0.2 were included on the Consolidated Balance Sheets for the fair value of these contracts. Based on the contracts outstanding at June 30, 2013, a 10% change in the dollar to euro exchange rate would result in an approximate \$2.9 pretax effect on the value of these contracts on a mark-to-market basis, which would offset the effect of a change in the exchange rate on the underlying receivable.

Item 4. Controls and Procedures.

The Company maintains a system of disclosure controls and procedures that is designed to provide reasonable assurance that information is disclosed and accumulated and communicated to management in a timely fashion. An evaluation of the effectiveness of the design and operation of its disclosure controls and procedures (as defined in Rule 13a-15(e) of the Securities Exchange Act of 1934, as amended (the "Exchange Act")) was performed as of the end of the period covered by this report. This evaluation was performed under the supervision and with the participation of management, including the Chief Executive Officer and Chief Financial Officer. Based upon that evaluation, the Chief Executive Officer and Chief Financial Officer concluded that the Company's disclosure controls and procedures are effective to provide reasonable assurance that information required to be disclosed by the Company in the reports that it files or submits under the Exchange Act is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure and are effective to provide reasonable assurance that such information is recorded, processed, summarized and reported within the time periods specified by the Securities and Exchange Commission's rules and forms.

There has been no change in the Company's internal control over financial reporting during the quarter covered by this report that has materially affected, or is reasonably likely to materially affect, its internal control over financial reporting.

PART II. OTHER INFORMATION

(dollars in millions, except per share data)

Item 1. Legal Proceedings.

The information called for by this item is incorporated herein by reference to Note 7 of the condensed consolidated financial statements included in Part I, Item 1.

Item 1A. Risk Factors.

The Company cautions readers that its business activities involve risks and uncertainties that could cause actual results to differ materially from those currently expected by management. The Company described the principal risk factors that could impact its results in its Annual Report on Form 10-K for the year ended December 31, 2012.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

There were no unregistered sales of equity securities in the quarter ended June 30, 2013.

ISSUER PURCHASES OF EQUITY SECURITIES

Period	Total Number of Shares Purchased (a)	Average Price Paid Per Share (a)	Total Number of Shares (or Units) Purchased as Part of Publicly Announced Plans or Programs (b)	Approximate Dollar Value of Shares that May Yet be Purchased Under the Plans or Programs (b)
April 2013	—	\$—	—	
May 2013	20,392	3.53	—	
June 2013	1,793	3.48	—	
Total	22,185	3.53	—	\$125.6

During the quarter, the Company repurchased common stock owned by participants in its restricted stock awards program under the terms of the AK Steel Holding Corporation Stock Incentive Plan. In order to satisfy the requirement that an amount be withheld that is sufficient to pay federal, state and local taxes due upon the vesting (a) of the restricted stock, employees are permitted to have the Company withhold shares having a fair market value equal to the minimum statutory withholding rate that could be imposed on the transaction. The Company repurchases the withheld shares at the quoted average of the reported high and low sales prices on the day the shares are withheld.

On October 21, 2008, the Company announced that its Board of Directors had authorized the Company to (b) repurchase, from time to time, up to \$150.0 of its outstanding equity securities. There is no expiration date specified in the Board of Directors' authorization.

Item 4. Mine Safety Disclosures.

The operation of AK Coal's North Fork mine and Coal Innovations, LLC coal washing plant (collectively, the "AK Coal Operations") are subject to regulation by the Mine Safety and Health Administration ("MSHA") under the Federal Mine Safety and Health Act of 1977, as amended ("Mine Act"). MSHA inspects mining and processing operations, such as the AK Coal Operations, on a regular basis and issues various citations and orders when it believes a violation has occurred under the Mine Act. Exhibit 95.1 to this Quarterly Report sets forth citations and orders from MSHA and other regulatory matters required to be disclosed by Section 1503(a) of the Dodd-Frank Wall Street Reform and

Consumer Protection Act or otherwise under this Item 4.
