I. Company Overview

Marlton Technologies Overview

Marlton Technologies, Inc. (AMEX: MTY)

2828 Charter Road, Philadelphia, PA 19154

Phone: 215.676.6900; Fax: 215.664.6900

www.sparksonline.com

Business Description:

Marlton Technologies, Inc. engages in the design, production, and sale of exhibits and environments for trade shows, museums, theme parks, themed interiors, arenas, corporate lobbies, and retail stores primarily in the United States. The company manages custom trade show projects from concept through final construction, employing graphics and exhibit designers. It provides trade show exhibit services, including coordination, refurbishing, shipping, storage, and marketing literature distribution. Marlton Technologies also provides a range of computerized designs and graphics; produces themed exhibits for educational and entertainment venues, such as museums and theme parks; and supplies custom store fixtures, showcases, and point of purchase displays for retailers. In addition, the company maintains an inventory of exhibits that it rents to customers; represents domestic clients who desire to exhibit at international trade shows; and designs, markets, and produces point of purchase displays. It offers its products and services to clients in industry, government, entertainment, and commercial establishments.

Industry: Trade Show Booth Designers and Builders/Graphic Design

Current Stock Price: \$1.39

52-week High/Low: \$0.58-\$1.48

Shares Outstanding: 12.94mm

Average Trading Volume (90-day): 8,295

3

Trade Show Designers and Builders Industry

North American conventions and events market was valued at \$16 billion in 2003, with the market for exhibit design and production being equal to approximately \$1.5 billion in 2002.

Industry traditionally has had a slow growth rate, which makes it difficult for such businesses to grow unless they resort to mergers and acquisitions to grow and remain competitive.

The industry is highly correlated with the economic condition in the U.S., as the number of trade shows and exhibitions decrease with an economic slowdown. The industry was significantly affected by the economic recession in 2001, but its revenues have improved as the economy has picked up.

The industry's growth rate and business forecasts are usually very difficult to predict, as majority of the customers budget for tradeshow and exhibits on a short-term basis.

Exhibit design and production industry are highly seasonal.

There is a very limited number of public comparables in the industry, which makes it difficult to value such businesses, using comparable public company multiples.

11

II. Proposal Review

Marlton Technologies Reverse Stock Split Proposal

Marlton Technologies, Inc. (Marlton or the Company) will undertake a reverse stock split transaction to reduce its number of record shareholders below 300 and thereby cease to be subject to SEC reporting requirements

Reverse Split of 1-for-5,000 existing shares held by a shareholder, with odd lot shares (whether from shareholders holding less than 5,000 shares or holding an uneven multiple of 5,000 shares) being redeemed by Marlton

Based on recent shareholder of record and a non-objecting beneficial owner lists, approximately 1,250,000 shares would be redeemed, consisting of 1,050,000 shares from shareholders holding less than 5,000 shares, and 200,000 shares from odd-lots held by shareholders with more than 5,000 shares

13

Marlton Technologies Reverse Stock Split Proposal

Such a transaction would reduce Marlton s total record and beneficial shareholders from approximately 1,700 to approximately 125-150

A price of \$1.15 to \$1.30 per share is proposed by the Company

Subject to Marlton s election to proceed and review of the detailed terms of the transaction, Bank of America has indicated its preliminary approval to allow this transaction to be funded through its revolving credit facility, to the extent Marlton has availability under its borrowing formula. Currently, Marlton has approximately \$7,000,000 of such availability, and believes it will have at least \$3,000,000 of such availability at year end. To the extent of any deficit between such Bank of America availability and the required share redemption amount, Jeffrey Harrow and Scott Tarte have agreed to loan Marlton an amount equal to such deficit, at the same interest rate charged by Bank of America and repayable at such time as Marlton has availability under the Bank of America facility

(continued)

14

Cost of Being Public for Marlton Technologies

The primary purpose of the transaction is to eliminate the ever increasing expenses associated with being public

Company estimates the annual costs of complying with the disclosure and reporting requirements under the Exchange Act and the new requirements of the Sarbanes-Oxley Act of 2002 to be equal to approximately \$353,000, plus the one-time cost of \$150,000 for SOX

compliance

The Company expects to eliminate most of these costs as a result of the reverse stock split transaction

The transaction expenses are estimated to be equal to \$321,000, not including the amount to be paid for fractional and odd lot shares. This means the payback is less than one year.

III. Analyses and Valuation

Historical Premiums for Publicly-Traded Business Services Companies

Premiums Analysis

Premiums paid for business services companies (compared to market prices) have generally declined over the last five years, in part due to the rise in overall valuations and decreased survival risk

One-month premiums in YTD 2005 (so far) are the lowest of the decade, at 25.0% over the month-prior price, but one-week premiums are slightly higher than 2004 at 22.9%

Larger transactions represent an increasing portion of all transactions, with only 19% of software transactions this year are under \$100 million in valuation, compared to 50%+ in 2001-2002

When applying premiums to MTY's share prices, we looked at both recent trading prices as well as the company's 3-month VWAP

Premiums for reverse-split transactions in the last six months are similar, with a median (see detail on next page)

Historical EBITDA Multiples for Publicly-Traded Business Services Companies

Business Services Multiples Analysis

M&A valuations have trended upward in recent years, with a median of 12.4x EV/EBITDA to date in 2005 compared to 10.6x in 2004 and 7.8x in 2003

Micro-cap companies tend to have multiples 1.5-2.0x below market medians

20

Comparable Company Analysis

We identified certain publicly-traded companies whose businesses we determined were comparable with that of Marlton

Based on the uniqueness of the Company, we found that the number of such companies was fairly limited

In addition, few of these companies had published estimates of operating results, which would have been helpful when analyzing multiples based on future performance of Marlton

We focused our analysis on multiples of enterprise value to EBITDA

Revenue multiples did not apply given the different mix of Marlton's business

EPS estimates did not apply given several companies were not profitable

We determined that Viad Corp. was the most comparable of the companies, and we looked at Viad's EBITDA multiples in addition to looking at median multiples for the group
