VINTAGE PETROLEUM, INC. AND SUBSIDIARIES

NOTES TO UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS

March 31, 2001 and 2000

1. GENERAL

The accompanying financial statements are unaudited. The consolidated financial statements include the accounts of Vintage Petroleum, Inc. and its wholly- and majority-owned subsidiaries and its proportionately consolidated general partner interests in various joint ventures (collectively, the "Company"). Management believes that all material adjustments (consisting of only normal recurring adjustments) necessary for a fair presentation have been made. Certain 2000 amounts have been reclassified to conform with the 2001 presentation. These reclassifications have no impact on net income. All significant intercompany accounts and transactions have been eliminated in consolidation.

The preparation of financial statements in conformity with accounting principles generally accepted in the United States ("GAAP") requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities, if any, at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. These financial statements and notes should be read in conjunction with the 2000 audited financial statements and related notes included in the Company's 2000 Annual Report on Form 10-K, Item 8, Financial Statements and Supplementary Data.

2. SIGNIFICANT ACCOUNTING POLICIES

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

Oil and Gas Properties

Under the successful efforts method of accounting, the Company capitalizes all costs related to property acquisitions and successful exploratory wells, all development costs and the costs of support equipment and facilities. All costs related to unsuccessful exploratory wells are expensed when such wells are determined to be non-productive; other exploration costs, including geological and geophysical costs, are expensed as incurred. The Company recognizes gain or loss on the sale of properties on a field basis.

Unproved leasehold costs are capitalized and are reviewed periodically for impairment. Costs related to impaired prospects are charged to expense. If oil and gas prices decline in the future, some of these unproved prospects may not be economic to develop, which could lead to increased impairment expense.

Costs of development dry holes and proved leaseholds are amortized on the unit-of-production method based on proved reserves on a field basis. The depreciation of capitalized production equipment and drilling costs is based on the unit-of-production method using proved developed reserves on a field basis. Estimated abandonment costs, net of salvage value, are included in the depreciation and depletion calculation.

-8-

The Company reviews its proved oil and gas properties for impairment on a field basis. For each field, an impairment provision is recorded whenever events or circumstances indicate that the carrying value of those properties may not be recoverable. The impairment provision is based on the excess of carrying value over fair value. Fair value is defined as the present value of the estimated future net revenues from production of total proved and risk-adjusted probable and possible oil and gas reserves over the economic life of the reserves, based on the Company's expectations of future oil and gas prices and costs, consistent with the method used for acquisition evaluations. Prior to 2001, the Company considered only proved oil and gas reserves in determining fair value. The change to total risk-adjusted reserves had no material effect on the Company's financial statements for the period ended March 31, 2001. In estimating the future net revenues, the Company assumed that the current oil and gas price environment would decrease to more historical levels over a short period of time and thereafter, escalate annually. The Company assumed operating costs would escalate annually beginning at current levels. Due to the volatility of oil and gas prices, it is possible that the Company's assumptions regarding oil and gas prices may change in the future and may result in future impairment provisions. No impairment provision related to proved oil and gas properties was required for the first three months of either 2001 or 2000.

Hedging

The Company periodically uses hedges (swap agreements) to reduce the impact of oil and natural gas price fluctuations. Gains or losses on swap agreements are recognized as an adjustment to sales revenue when the related transactions being hedged are finalized. Gains or losses from swap agreements that do not qualify for accounting treatment as hedges are recognized currently as other income or expense. The cash flows from such agreements are included in operating activities in the consolidated statements of cash flows.

In June 1998, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 133, Accounting for Derivative Instruments and Hedging Activities, as amended in June 1999 by Statement No. 137, Accounting for Derivative Instruments and Hedging Activities - Deferral of the Effective Date of FASB Statement No. 133 and in June 2000 by Statement No. 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities - an amendment

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

of FASB Statement No. 133 ("SFAS No. 133"). SFAS No. 133 establishes accounting and reporting standards requiring that every derivative instrument (including certain derivative instruments embedded in other contracts) be recorded in the balance sheet as either an asset or liability measured at its fair value. SFAS No. 133 requires that changes in the derivative's fair value be recognized currently in earnings unless specific hedge accounting criteria are met. Special accounting for qualifying hedges allows a derivative's gains and losses to offset related results on the hedged item in the income statement. Companies must formally document, designate and assess the effectiveness of transactions that receive hedge accounting.

Upon adoption of SFAS No. 133 on January 1, 2001, the Company recorded a transition asset of approximately \$18.5 million related to cash flow hedges in place that are used to reduce the volatility in commodity prices for portions of the Company's forecasted oil production. Additionally, the Company recorded, net of tax, an adjustment to accumulated other comprehensive income (Stockholders' Equity section of the balance sheet) of approximately \$14.9 million. The amount recorded to accumulated other comprehensive income will be relieved over time and taken to the income statement as the physical transactions being hedged are finalized. A significant portion of the Company's cash flow hedges in place at January 1, 2001, had settled as of March 31, 2001, with the actual cash flow impact recorded in "Oil and gas sales" on the Company's income statement.

-9-

Statements of Cash Flows

During the three months ended March 31, 2001 and 2000, the Company made cash payments for interest totaling approximately \$6.3 million, and \$8.9 million, respectively. Cash payments made during the first three months of 2001 and 2000 for U.S. Federal and state income taxes were approximately \$41,000 and \$425,000, respectively. The Company made cash payments of approximately \$2.3 million and \$1.3 million during the first three months of 2001 and 2000, respectively, for foreign income taxes, primarily in Argentina.

Earnings Per Share

The Company applies Financial Accounting Standards Board Statement No. 128, Earnings Per Share. Basic earnings per common share were computed by dividing net income by the weighted average number of shares outstanding during the period. Diluted earnings per common share for the first quarters of 2001 and 2000 were computed assuming the exercise of all dilutive options, as determined by applying the treasury stock method. In addition, for the three months ended March 31, 2001 and 2000, the Company had outstanding stock options for 638,000 and 1,584,000 additional shares of the Company's common stock, respectively, with average exercise prices of \$21.82 and \$17.82, respectively, which were antidilutive.

Lease Operating Expense

For the three months ended March 31, 2001, the Company recorded in lease operating expenses gross production taxes and transportation and storage expenses of approximately \$5.1 million and \$2.8 million, respectively. For the three months ended March 31, 2000, the Company recorded in lease operating expenses gross production taxes and transportation and storage expenses of approximately \$3.4 million and \$1.8 million, respectively.

Foreign Currency

Foreign currency transactions and financial statements are translated in accordance with Statement of Financial Accounting Standards No. 52, Foreign

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

Currency Translation. The Company uses the U.S. dollar as its functional currency, except for the Canadian subsidiary, which uses the Canadian dollar. Adjustments arising from translation of the Canadian subsidiary's financial statements are reflected in accumulated other comprehensive income. Transaction gains and losses that arise from exchange rate fluctuations applicable to transactions denominated in a currency other than the Company's functional currency are included in the results of operations as incurred.

Cumulative Effect of Change in Accounting Principle

The Company adopted Securities and Exchange Commission Staff Accounting Bulletin No. 101, Revenue Recognition ("SAB No. 101"), in the fourth quarter of 2000, effective January 1, 2000. SAB No. 101 requires oil inventories held in storage facilities to be valued at cost. Cost is defined as lifting costs plus depreciation, depletion and amortization. The Company previously followed industry practice by valuing oil inventories at market. The cumulative effect reduced net income by \$1.4 million, net of income tax effects of approximately \$0.6 million. The first three months of 2000 have been restated to give effect to this change in accounting principle. Additional volatility in quarterly and annually reported earnings may occur in the future as a result of fluctuations in oil inventory levels.

-10-

Transportation and Storage Costs

The Company adopted Emerging Issues Task Force Issue 00-10, Accounting for Shipping and Handling Fees and Costs ("EITF 00-10") in the fourth quarter of 2000. EITF 00-10 requires that transportation and storage costs be shown as an expense in the statement of operations and not deducted from revenues. The Company previously followed industry practice by deducting transportation and storage costs from revenues. The Company now records transportation and storage costs as lease operating costs. The first three months of 2000 have been restated to reflect the adoption of EITF 00-10. The adoption of EITF 00-10 did not impact net income.

Comprehensive Income

The Company applies the provisions of Statement of Financial Accounting Standards No. 130, Reporting Comprehensive Income ("SFAS No. 130"). The Company had no non-owner changes in equity other than net income during the three months ended March 31, 2000. The Company had negative foreign currency translation adjustments of approximately \$2.4 million for the three months ended March 31, 2001, which it has included in accumulated other comprehensive income in the Stockholders' Equity section of the accompanying balance sheet. The Company also recorded under SFAS No. 133 a change in unrealized derivative gains of approximately \$12.1 million, related to oil swaps, reducing the unrealized gains, net of tax, to \$2.8 million at March 31, 2001.

3. SEGMENT INFORMATION

The Company's reportable business segments have been identified based on the differences in products or services provided. Revenues for the exploration and production segment are derived from the production and sale of natural gas and crude oil. Revenues for the gathering/plant segment arise from the transportation, processing and sale of natural gas, crude oil and plant products. The gas marketing segment generates revenue by earning fees through the marketing of Company produced gas volumes and the purchase and resale of third party produced gas volumes. The Company evaluates the performance of its operating segments based on operating income before corporate general and administrative costs and interest costs.

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

-11-

Operations in the gathering/plant and gas marketing segments are in the United States. The Company operates in the oil and gas exploration and production segment in the United States, Canada, South America and Yemen. Summarized financial information for the Company's reportable segments for the first quarters of 2001 and 2000 is shown in the following table:

	Exploration and Production

Intersegment sales are priced in accordance with terms of existing contracts and current market conditions. Capital investments include expensed exploratory costs. Corporate general and administrative costs and interest costs are not allocated to the operating income (loss) of the segments.

-12-

4. COMMITMENTS AND CONTINGENCIES

Through its December 2000 acquisition of Cometra Energy (Canada) Ltd. ("Cometra"), the Company assumed the drilling obligations of Cometra's wholly-owned subsidiary, Cometra Trinidad Limited. These obligations require the acquisition of 15 line kilometers of 2-D seismic, 40 square kilometers of 3-D seismic and drilling of three exploratory wells. As of March 31, 2001, all seismic obligations have been fulfilled and site preparation for the first two exploratory wells had begun with spudding of both wells scheduled for the second quarter of 2001.

The Company had approximately \$8.7 million in letters of credit outstanding at March 31, 2001. These letters of credit relate primarily to various obligations for acquisition and exploration activities in South America and bonding requirements of various state regulatory agencies for U.S. oil and gas operations. The Company's availability under its revolving credit facility is reduced by the outstanding letters of credit.

The Company is a defendant in various lawsuits and is a party to governmental proceedings from time to time arising in the ordinary course of business. In the opinion of management, none of the various pending lawsuits and proceedings should have a material adverse impact on the Company's financial position or results of operations.

5. SUBSEQUENT EVENT

On May 2, 2001, the Company completed the acquisition of Canadian-based Genesis Exploration Ltd. ("Genesis") for total consideration of \$593 million, including transaction costs and the assumption of the estimated net indebtedness of Genesis at closing (the "Genesis Acquisition"). The cash portion of the acquisition price was paid through advances under the Company's revolving credit facility and cash on hand. The Genesis Acquisition will be accounted for using purchase accounting.

The Company estimates that it acquired 62.2 million barrels of oil equivalent (BOE) of proved reserves in the transaction with Genesis consisting of approximately 27.7 million barrels of oil and 207.2 Bcf of gas. Current net daily production, after estimated royalties, from Genesis properties is about 17,800 BOE, composed of approximately 71 MMcf of gas and 6,060 barrels of oil. The reserves acquired in the Genesis transaction are located primarily in the provinces of Alberta and Saskatchewan with a significant exploration exposure in the Northwest Territories.

In addition to reserves, the Company acquired over one million net undeveloped acres principally located in the areas of Alberta and Saskatchewan

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

with a significant portion, aggregating to 440,000 net acres, in the Northwest Territories. Also, the Genesis Acquisition brings with it over 600 square miles of 3-D seismic and over 15,000 miles of 2-D seismic. Capital of \$58 million has been budgeted for the work activity planned for the remaining eight months of 2001.

-13-

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS

OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Results of Operations

The Company's results of operations have been significantly affected by its success in acquiring oil and gas properties and its ability to maintain or increase production through its exploitation and exploration activities. Fluctuations in oil and gas prices have also significantly affected the Company's results. The following table reflects the Company's oil and gas production and its average oil and gas sales prices for the periods presented:

	Three Months Ended March 31,	
	2001	2000
Production:		
Oil (MBbls) -		
U.S.	2,185	2,223
Argentina	2,476 (a)	1,921 (b)
Ecuador	337 (a)	329 (b)

-
- (a) Total production for the three months ended March 31, 2001, before the impact of changes in inventories was 5,163 MBbls (Argentina - 2,544 MBbls, Ecuador - 350 MBbls, Bolivia - 25 MBbls).
 - (b) Total production for the three months ended March 31, 2000, before the impact of changes in inventories was 4,765 MBbls (Argentina - 2,218 MBbls, Ecuador - 305 MBbls, Bolivia - 19 MBbls).
 - (c) Reflects the impact of oil hedges which increased the Company's first quarter 2001 U.S., Argentina and total average oil prices per Bbl by \$0.62, \$1.88 and \$1.19, respectively.
 - (d) Reflects the impact of oil hedges which decreased the Company's first quarter 2000 U.S. and total average oil prices per Bbl by \$1.18 and \$0.58, respectively.

-14-

Average U.S. and Canada oil prices received by the Company fluctuate generally with changes in the NYMEX reference price for oil. The Company's Argentina oil production is sold at West Texas Intermediate spot prices as quoted on the Platt's Crude Oil Marketwire (approximately equal to the NYMEX reference price) less a specified differential. The Company's Ecuador production is sold to various third party purchasers at West Texas Intermediate spot prices less a specified differential. The Company experienced a one percent decrease in its average oil price, including the impact of hedging activities (seven percent decrease excluding hedging impact), during the first quarter of 2001 as compared to the same period of 2000. The Company's realized average oil price for the first three months of 2001 (before hedges) was approximately 84 percent of the NYMEX reference price compared to 89 percent for the same period of 2000.

The Company participated in oil hedges covering 2.16 MMBbls and 1.31 MMBbls during the first three months of 2001 and 2000, respectively. The impact of the 2001 hedges increased the Company's U.S. average oil price for the first three months of 2001 by 62 cents to \$25.68 per Bbl, its Argentina average oil price by \$1.88 to \$26.05 per Bbl and its overall average oil price by \$1.19 to \$25.38 per Bbl. The impact of the 2000 hedges reduced the Company's U.S. average oil price for the first three months of 2000 by \$1.18 to \$24.32 per Bbl, and its overall average oil price by 58 cents to \$25.55 per Bbl.

Average U.S. gas prices received by the Company fluctuate generally with changes in spot market prices, which may vary significantly by region as evidenced by the significantly higher gas prices in California during the first quarter 2001 due to the localized power shortage. The Company's Bolivia average gas price is tied to a long-term contract under which the base price is adjusted for changes in specified fuel oil indexes. In Argentina, the Company's average gas price is primarily determined by the realized price of oil from its El Huemul concession; however, this contract expires at the end of 2001. The Company anticipates securing long-term contracts for this gas during 2001 and it expects future gas prices to be at lower levels than the current contract. The Company's Canada gas is generally sold at spot market prices as reflected by the AECO gas price index. The Company's total average gas price for the first three months of 2001 was 166 percent higher than the same period of 2000.

The Company has previously engaged in oil and gas hedging activities and intends to continue to consider various hedging arrangements to realize commodity prices which it considers favorable. The Company has entered into various oil hedges (swap agreements) for a total of 1.375 MMBbls of oil at a

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

weighted average price of \$29.61 per Bbl (NYMEX reference price) for the last three quarters of 2001. The Company continues to monitor oil and gas prices and may enter into additional oil and gas hedges or swaps in the future. The following table reflects the barrels currently hedged and the corresponding weighted average NYMEX reference prices by quarter for the remainder of 2001:

Quarter Ending	Barrels	NYMEX Reference Price Price Per Bbl
-----	-----	-----
June 30, 2001	455,000	\$30.66
September 30, 2001	460,000	29.61
December 31, 2001	460,000	28.58

-15-

Relatively modest changes in either oil or gas prices significantly impact the Company's results of operations and cash flow. However, the impact of changes in the market prices for oil and gas on the Company's average realized prices may be reduced from time to time based on the level of the Company's hedging activities. Based on first quarter 2001 oil production, a change in the average oil price realized, before hedges, by the Company of \$1.00 per Bbl would result in a change in net income and cash flow before income taxes on an annual basis of approximately \$3.2 million and \$5.0 million, respectively. A 10 cent per Mcf change in the average price realized, before hedges, by the Company for gas would result in a change in net income and cash flow before income taxes on an annual basis of approximately \$3.3 million and \$5.3 million, respectively, based on first quarter 2001 gas production.

Period to Period Comparison

Three Months ended March 31, 2001, Compared to Three Months ended March 31, 2000

The Company reported net income of \$70.7 million for the three months ended March 31, 2001, compared to net income of \$38.3 million for the same period in 2000. A 166 percent increase in average gas prices received by the Company and a 15 percent increase in production on a BOE basis were primarily responsible for the significant increase in its net income.

Oil and gas sales increased \$67.4 million (48 percent), to \$206.9 million for the first three months of 2001 from \$139.5 million for the same period of 2000. A 166 percent increase in average gas prices, coupled with an 18 percent increase in gas production, accounted for an increase of \$53.2 million. A 13 percent increase in oil production, partially offset by a one percent decrease in average oil prices, accounted for an additional increase of \$14.2 million. The Company had a 13 percent increase in oil production primarily as a result of 2000 and 2001 exploitation activities in Argentina and volumes associated with its Argentina Cuyo basin properties acquired in September 2000. The Company's gas production rose by 18 percent due primarily to the gas production from the Canadian properties acquired through the purchase of 100 percent of the outstanding common stock of Cometra Energy (Canada) Ltd. (the "Cometra Acquisition") in December 2000, increased production in Bolivia as a result of increased takes into the Bolivia-to-Brazil pipeline and increased gas production in the Company's Argentina concessions.

Lease operating expenses, including production taxes, increased \$12.3 million (35 percent), to \$47.9 million for the first three months of 2001 from

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

\$35.6 million for the same period of 2000. The increase in lease operating expenses is due primarily to increased production as a result of the Company's 2000 drilling programs, an increase in production taxes due to higher product prices, increased lease power and field services costs, certain one-time repair costs and costs associated with properties acquired through the Cometra Acquisition. Lease operating expenses per equivalent barrel produced increased to \$6.56 in the first quarter of 2001 from \$5.59 for the same period in 2000. As the result of a Securities and Exchange Commission mandate, transportation and storage costs billed to the Company have been reclassified to lease operating expenses for all periods shown. These costs had been previously reported as a reduction of oil and gas revenues consistent with oil and gas industry practice. This reclassification added 38 cents and 28 cents to the reported lease operating expense per BOE for the first three months of 2001 and 2000, respectively.

-16-

Exploration costs decreased \$0.1 million (4 percent), to \$2.2 million for the first quarter of 2001 from \$2.3 million for the same period of 2000. During the first quarter of 2001, the Company's exploration costs included \$1.5 million for unsuccessful exploratory drilling and leasehold impairments, and \$0.7 million for seismic and other geological and geophysical costs. Exploration expenses for the first quarter of 2000 consisted of \$2.1 million for unsuccessful exploratory drilling and \$0.2 million for lease impairments.

General and administrative expenses increased \$3.0 million (33 percent), to \$12.0 million for 2001 from \$9.0 million for the same period of 2000, due primarily to personnel additions and consulting costs in conjunction with the Company's higher level of capital expenditures, bonuses paid to the Company's international employees in February 2001 and costs associated with the Company's new Canadian operations acquired in December 2000. The Company's G&A per BOE for the first quarter of 2001 was \$1.64 compared to \$1.41 for the same period of 2000.

Depreciation, depletion and amortization increased \$6.0 million (28 percent), to \$27.6 million for the first quarter of 2001 from \$21.6 million for the same period of 2000, primarily due to a 15 percent increase in total production. The Company's average oil and gas DD&A rate per equivalent barrel produced increased from \$3.25 in the first quarter of 2000 to \$3.65 in the first quarter of 2001.

Interest expense decreased \$2.5 million (19 percent), to \$10.9 million for the first quarter of 2001 from \$13.4 million for the same period of 2000, primarily as a result of a 23 percent decrease in the Company's total average outstanding debt due to the Company's significant repayment of outstanding debt from its significantly increased cash flow in excess of capital expenditures. The Company's average interest rate for its outstanding debt for the first quarter of 2001 was 9.10 percent compared to 8.59 percent in the same period of 2000 reflecting the impact of the smaller amount of floating rate long-term debt outstanding quarter over quarter. The Company had \$9.3 million and \$5.0 million of accrued interest payable at March 31, 2001, and December 31, 2000, respectively, included in other payables and accrued liabilities.

Capital Expenditures

During the first quarter of 2001, the Company's total oil and gas capital expenditures were \$30.4 million. In North America, the Company's non-acquisition oil and gas capital expenditures totaled \$12.4 million. Exploration activities accounted for \$5.6 million of the North America capital expenditures with exploitation activities contributing \$6.8 million. During the first quarter of 2001, the Company's international non-acquisition oil and gas capital

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

expenditures totaled \$17.0 million, including \$14.1 million in Argentina on exploitation activities and \$2.1 million in Ecuador, principally on exploitation. The Company also spent a combined \$0.5 million in Bolivia and Yemen during the first quarter of 2001. This sizeable decrease from 2000 spending in these two countries is the result of the completion of the Bolivia drilling program in 2000 and the Company's current evaluation stage of the 2000 Yemen drilling program results.

As of March 31, 2001, the Company had total unevaluated oil and gas property costs of approximately \$47.5 million consisting of undeveloped leasehold costs of \$30.8 million and exploratory drilling in progress of \$16.7 million. Approximately \$20.8 million of the unevaluated costs are associated with the Company's Yemen drilling program. Future exploration expense and earnings may be impacted to the extent any of the exploratory drilling is determined to be unsuccessful.

-17-

On May 2, 2001, the Company completed the Genesis Acquisition for total consideration of \$593 million, including transaction costs and the assumption of the estimated net indebtedness of Genesis at closing. The cash portion of the acquisition price was paid through advances under the Company's revolving credit facility and cash on hand.

The timing of most of the Company's capital expenditures is discretionary with no material long-term capital expenditure commitments. Consequently, the Company has a significant degree of flexibility to adjust the level of such expenditures as circumstances warrant. The Company uses internally-generated cash flow to fund capital expenditures other than significant acquisitions. The Company's non-acquisition capital expenditure budget for 2001 is currently set at \$278 million, including \$58 million for expenditures on the newly acquired Genesis properties. The Company does not have a specific acquisition budget since the timing and size of acquisitions are difficult to forecast. The Company is actively pursuing additional acquisitions of oil and gas properties. In addition to internally-generated cash flow and advances under its revolving credit facility, the Company may seek additional sources of capital to fund any future significant acquisitions (see "Liquidity"), however, no assurance can be given that sufficient funds will be available to fund the Company's desired acquisitions.

Liquidity

Internally generated cash flow and the borrowing capacity under its revolving credit facility are the Company's major sources of liquidity. In addition, the Company may use other sources of capital, including the issuance of additional debt securities or equity securities, to fund any major acquisitions it might secure in the future and to maintain its financial flexibility.

In the past, the Company has accessed the public markets to finance significant acquisitions and provide liquidity for its future activities. Since 1990, in conjunction with the purchase of substantial oil and gas assets, the Company completed five public equity offerings as well as three public debt offerings, which provided the Company with aggregate net proceeds of approximately \$643 million.

Under the Second Amended and Restated Credit Agreement dated November 30, 2000 (the "Bank Facility"), certain banks have provided to the Company a \$625 million unsecured revolving credit facility. The Bank Facility establishes a borrowing base determined by the banks' evaluation of the Company's oil and gas reserves. The amount available to be borrowed under the Bank Facility is limited

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

to the lesser of the facility size or the borrowing base, which are both currently set at \$625 million. The Company's current borrowing base of \$625 million is before consideration of the Genesis properties. As a result of the Genesis Acquisition, the Company expects its borrowing base to be increased, but cannot predict at this time by how much.

Outstanding advances under the Bank Facility bear interest payable quarterly at a floating rate based on Bank of Montreal's alternate base rate (as defined) or, at the Company's option, at a fixed rate for up to six months based on the Eurodollar market rate ("LIBOR"). The Company's interest rate increments above the alternate base rate and LIBOR vary based on the level of outstanding senior debt to the borrowing base. As of March 31, 2001, the Company had no borrowings outstanding under its Bank Facility, excluding outstanding letters of credit of approximately \$8.7 million. Subsequent to the closing of the Genesis Acquisition, the Company had outstanding borrowings of \$562 million, excluding letters of credit. The Company must pay a commitment fee ranging from 0.325 to 0.50 percent per annum on the unused portion of the banks' commitment.

-18-

On a semiannual basis, the Company's borrowing base is redetermined by the banks based upon their review of the Company's oil and gas reserves. If the sum of outstanding senior debt exceeds the borrowing base, as redetermined, the Company must repay such excess. Final maturity of the Bank Facility is November 30, 2005.

Subsequent to the closing of the Genesis Acquisition, the unused portion of the Bank Facility, before consideration of the positive impact of the Genesis Acquisition on the Company's borrowing base, was approximately \$54 million. The unused portion of the Bank Facility and the Company's internally generated cash flow provide liquidity which may be used to finance future capital expenditures, including acquisitions. As additional acquisitions are made and such properties are added to the borrowing base, the banks' determination of the borrowing base and their commitments may be increased.

The Company's internally generated cash flow, results of operations and financing for its operations are dependent on oil and gas prices. For the first quarter of 2001, approximately 70 percent of the Company's production was oil. Realized oil prices for the period decreased by one percent as compared to the same period of 2000 and total production on a BOE basis increased by 15 percent. As a result, the Company's earnings and cash flows materially increased compared to the first quarter of 2000. To the extent oil prices decline, the Company's earnings and cash flow from operations may be adversely impacted. However, the Company believes that its cash flows and unused availability under the Bank Facility are sufficient to fund its planned capital expenditures for the foreseeable future.

Inflation

In recent years inflation has not had a significant impact on the Company's operations or financial condition.

Income Taxes

The Company incurred a current provision for income taxes of approximately \$22.2 million and \$14.2 million for the first three months of 2001 and 2000, respectively. The total provision for U.S. income taxes is based on the Federal corporate statutory income tax rate plus an estimated average rate for state income taxes. Earnings of the Company's foreign subsidiaries are subject to foreign income taxes. No U.S. deferred tax liability will be recognized related to the unremitted earnings of these foreign subsidiaries as it is the Company's

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

intention, generally, to reinvest such earnings permanently.

Change in Accounting Principles

The Company adopted Securities and Exchange Commission Staff Accounting Bulletin No. 101, Revenue Recognition ("SAB No. 101"), in the fourth quarter of 2000, effective January 1, 2000. SAB No. 101 requires oil inventories held in storage facilities to be valued at cost. Cost is defined as lifting costs plus depreciation, depletion and amortization. The Company previously followed industry practice by valuing oil inventories at market. The cumulative effect reduced net income by \$1.4 million, net of income tax effects of \$0.6 million. The first three months of 2000 have been restated to give effect to this change in accounting principle. Additional volatility in quarterly and annually reported earnings may occur in the future as a result of the required adoption of SAB No. 101 and fluctuations in oil inventory levels.

-19-

In June 1998, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 133, Accounting for Derivative Instruments and Hedging Activities, as amended in June 1999 by Statement No. 137, Accounting for Derivative Instruments and Hedging Activities - Deferral of the Effective Date of FASB Statement No. 133 and in June 2000 by Statement No. 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities - an amendment of FASB Statement No. 133 ("SFAS No. 133"). SFAS No. 133 establishes accounting and reporting standards requiring that every derivative instrument (including certain derivative instruments embedded in other contracts) be recorded in the balance sheet as either an asset or liability measured at its fair value. SFAS No. 133 requires that changes in the derivative's fair value be recognized currently in earnings unless specific hedge accounting criteria are met. Special accounting for qualifying hedges allows a derivative's gains and losses to offset related results on the hedged item in the income statement. Companies must formally document, designate and assess the effectiveness of transactions that receive hedge accounting.

Upon adoption of SFAS No. 133 on January 1, 2001, the Company recorded a transition asset of \$18.5 million related to cash flow hedges in place that are used to reduce the volatility in commodity prices for portions of the Company's forecasted oil production. Additionally, the Company recorded, net of tax, an adjustment to accumulated other comprehensive income (Stockholders' Equity section of the balance sheet) of \$14.9 million. The amount recorded to accumulated other comprehensive income will be relieved over time and taken to the income statement as the physical transactions being hedged are finalized.

Foreign Operations

For information on the Company's foreign operations, see "Foreign Currency and Operations Risk" under Item 3 of this Form 10-Q.

Forward-Looking Statements

This Form 10-Q includes certain statements that may be deemed to be "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. All statements in this Form 10-Q, other than statements of historical facts, that address activities, events or developments that the Company expects, believes or anticipates will or may occur in the future, including production, operating costs and product price realization targets, future capital expenditures (including the amount and nature thereof), the drilling of wells, reserve estimates, future production of oil and gas, future cash flows, future reserve activity and other such matters are forward-looking statements. Although the Company believes the expectations expressed in

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

such forward-looking statements are based on reasonable assumptions within the bounds of its knowledge of its business, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking statements.

Factors that could cause actual results to differ materially from those in forward-looking statements include: oil and gas prices; exploitation and exploration successes; continued availability of capital and financing; general economic, market or business conditions; acquisition opportunities (or lack thereof); changes in laws or regulations; risk factors listed from time to time in the Company's reports and other documents filed with the Securities and Exchange Commission; and other factors. The Company assumes no obligation to publicly update any forward-looking statements, whether as a result of new information, future events or otherwise.

-20-

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The Company's operations are exposed to market risks primarily as a result of changes in commodity prices, interest rates and foreign currency exchange rates. The Company does not use derivative financial instruments for speculative or trading purposes.

Commodity Price Risk

The Company produces, purchases and sells crude oil, natural gas, condensate, natural gas liquids and sulfur. As a result, the Company's financial results can be significantly impacted as these commodity prices fluctuate widely in response to changing market forces. The Company has previously engaged in oil and gas hedging activities and intends to continue to consider various hedging arrangements to realize commodity prices which it considers favorable. During 2000, the Company entered into various oil hedges (swap agreements) for a total of 3.5 MMBbls of oil at a weighted average NYMEX reference price of \$30.76 per Bbl for the calendar year 2001. The fair value of commodity swap agreements is the amount at which they could be settled, based on quoted market prices. At March 31, 2001, the Company would have received approximately \$4.6 million to terminate its oil swap agreements then in place for the last three quarters of 2001 covering a total 1.375 MMBbls of oil at an average NYMEX reference price of \$29.61 per Bbl. The Company continues to monitor oil and gas prices and may enter into additional oil and gas hedges or swaps in the future.

Interest Rate Risk

The Company's interest rate risk exposure results primarily from short-term rates, mainly LIBOR based borrowings from its commercial banks. To reduce the impact of fluctuations in interest rates, the Company maintains a portion of its total debt portfolio in fixed rate debt. At March 31, 2001, the amount of the Company's fixed rate debt was 100 percent of its total long-term debt. In the past, the Company has not entered into financial instruments such as interest rate swaps or interest rate lock agreements. However, it may consider these instruments to manage the impact of changes in interest rates based on management's assessment of future interest rates, volatility of the yield curve and the Company's ability to access the capital markets in a timely manner.

The following table provides information about the Company's long-term debt principal payments and weighted-average interest rates by expected maturity dates:

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

	2001	2002	2003	2004	2005	There- after	Total	Fair Value at 03/31

Average interest rate.....	-	-	-	-	-	-	-	

-21-

Foreign Currency and Operations Risk

International investments represent, and are expected to continue to represent, a significant portion of the Company's total assets. The Company has international operations in Argentina, Bolivia, Ecuador, Canada and Yemen. For the first quarter of 2001, the Company's exploration and production operations in Argentina accounted for approximately 24 percent of the Company's revenues, 33 percent of the Company's operating income and 33 percent of its total assets. During the first quarter of 2001, the Company's operations in Argentina represented its only foreign operations accounting for more than 10 percent of its revenues or operating income or total assets. The Company continues to identify and evaluate international opportunities, but currently has no binding agreements or commitments to make any material international investment. As a result of such significant foreign operations, the Company's financial results could be affected by factors such as changes in foreign currency exchange rates, weak economic conditions or changes in the political climate in these foreign countries.

Since 1999, Argentina's economy has been in recession. In an effort to regain control of the economy, President Fernando de la Rúa recently appointed Domingo Cavallo as Minister of Economy. Mr. Cavallo was then granted emergency powers by Congress to introduce reforms to achieve an economic reactivation by restoring growth and competitiveness and avoiding a debt restructuring with the IMF. Mr. Cavallo's immediate measures rely upon a cyclical improvement in tax revenue, clamping down on tax evasion, lowering tariffs on imported capital goods to lower the costs of investment and a tax on financial transactions. The new Economy Minister has also proposed for the peso to shift from fixed parity with the U.S. dollar to a link with a basket of currencies including the euro and its main trading partners.

All of the Company's Argentine revenues are U.S. dollar based, while a large portion of its costs are denominated in Argentine pesos. The Argentina Central Bank is obligated by law to sell dollars at a rate of one Argentine peso to one U.S. dollar and has sought to prevent appreciation of the peso by buying dollars at rates of not less than 0.998 peso to one U.S. dollar. As a result, the Company believes that should any devaluation of the Argentine peso occur, its revenues would be unaffected and its operating costs would not be significantly increased. At the present time, there are no foreign exchange controls preventing or restricting the conversion of Argentine pesos into dollars.

Since the mid-1980's, Bolivia has been undergoing major economic reform, including the establishment of a free-market economy and the encouragement of foreign private investment. Economic activities that had been reserved for government corporations were opened to foreign and domestic private investments.

Edgar Filing: VINTAGE PETROLEUM INC - Form 10-Q

Barriers to international trade have been reduced and tariffs lowered. A new investment law and revised codes for mining and the petroleum industry, intended to attract foreign investment, have been introduced.

On February 1, 1987, a new currency, the Boliviano ("Bs"), replaced the peso at the rate of one million pesos to one Boliviano. The exchange rate is set daily by the Government's exchange house, the Bolsin, which is under the supervision of the Bolivian Central Bank. Foreign exchange transactions are not subject to any controls. The US\$:Bs exchange rate at March 31, 2001, was US\$1:Bs6.49. The Company believes that any currency risk associated with its Bolivian operations would not have a material impact on the Company's financial position or results of operations.

-22-

In Ecuador, President Gustavo Naboja and Congress continue policy debates on the broad-based program of economic reform to stem the decline in economic activity and to strengthen economic growth. The legal basis for many of the reforms is the Ley Fundamental para la Transformacion Economica del Ecuador (the "economic transformation law") enacted in March 2000, which mandated dollarization of the economy. As a result of this reform, all of the Company's Ecuadorian revenues and costs are U.S. dollar based. The second phase of the economic transformation law (known as Trole II), which was intended to bring significant tax and labor reform and a defined privatization program to increase inflows of foreign direct investment, was recently rejected by Congress. The government is planning alternative methods to reduce the projected fiscal deficit and increase investment. Although the current political environment has slowed decisive policymaking, fixed investment, driven by construction of the new heavy oil pipeline (the O.C.P.), should see a significant increase in 2001.

With the Cometra Acquisition in December 2000 and the Genesis Acquisition in May 2001, the Company now has significant producing operations in Canada. The Company views the operating environment in Canada as stable and the economic stability as good. A majority of the Company's Canadian revenues and costs are denominated in Canadian dollars, and while the value of the Canadian dollar does fluctuate in relation to the U.S. dollar, the Company believes that any currency risk associated with its Canadian operations would not have a material impact on the Company's financial position or results of operations. The US\$:C\$ exchange rate at March 31, 2001, was US\$1:C\$1.5784 as compared to US\$1:C\$1.4995 at December 31, 2000.

-23-

PART II

OTHER INFORMATION

-24-

Item 1. Legal Proceedings

For information regarding legal proceedings, see the Company's Form 10-K for the year ended December 31, 2000.

Item 2. Changes in Securities and Use of Proceeds
