Cameco Resumes UF₆ Production at Port Hope Conversion Facility

Cameco Corporation (TSX: CCO; NYSE: CCJ) announced today that it has resumed production of uranium hexafluoride (UF₆) at its Port Hope, Ontario conversion facility.

Production of UF_6 at the facility has been suspended since December 2008 as the company could not obtain a supply of hydrofluoric acid (HF) on acceptable terms. In May 2009, Cameco announced that it had signed a contract with its historic supplier of HF under terms that are mutually beneficial to both parties. HF is a primary feed material for the production of UF_6 .

Cameco continues to make progress in negotiations with other suppliers to broaden and diversify its supply base. Restart of UF_6 production in Port Hope does not alter Cameco s 2009 fuel services production forecast of 8 to 12 million kilograms uranium.

Cameco, with its head office in Saskatoon, Saskatchewan, is one of the world s largest uranium producers. The company s uranium products are used to generate electricity in nuclear energy plants around the world, providing one of the cleanest sources of energy available today. Cameco s shares trade on the Toronto and New York stock exchanges.
