**ULTRA CLEAN HOLDINGS, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)**

1. Organization, Basis of Presentation and Significant Accounting Policies

Organization Ultra Clean Holdings, Inc. (the Company) is a developer and supplier of critical delivery subsystems, primarily for the semiconductor capital equipment industry, producing primarily gas delivery systems, chemical mechanical planarization (CMP) subsystems, chemical delivery modules, frame and top plate assemblies and process modules. The Company also leverages the specialized skill sets required to support semiconductor capital equipment to serve the technologically similar markets in the flat panel, solar and medical device industries. The Company's products improve efficiency and reduce the costs of our customers' design and manufacturing processes. The Company's customers are primarily original equipment manufacturers (OEMs) of semiconductor capital equipment.

Basis of Presentation The unaudited condensed consolidated financial statements included in this quarterly report on Form 10-Q include the accounts of the Company and its wholly-owned subsidiaries and have been prepared in accordance with generally accepted accounting principles in the United States of America (GAAP). This financial information reflects all adjustments which are, in the opinion of the Company, normal, recurring and necessary to present fairly the statements of financial position, results of operations and cash flows for the dates and periods presented. The Company's January 2, 2009 balance sheet data were derived from audited financial statements as of that date. All significant intercompany transactions and balances have been eliminated from the information provided.

The unaudited condensed consolidated financial statements should be read in conjunction with the Company's consolidated financial statements for the fiscal year ended January 2, 2009, included in its Annual Report on Form 10-K filed with the Securities and Exchange Commission on March 19, 2009. The Company's results of operations for the three months ended April 3, 2009 are not necessarily indicative of the results to be expected for any future periods.

Use of Accounting Estimates The presentation of financial statements in conformity with generally accepted accounting principles in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, and disclosures of contingent liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. The Company bases its estimates and judgments on historical experience and on various other assumptions that it believes are reasonable under the circumstances. However, future events are subject to change and the best estimates and judgments routinely require adjustment. Actual amounts may differ from those estimates.

Certain Significant Risks and Uncertainties The Company operates in a dynamic industry and, accordingly, can be affected by a variety of factors. For example, any of the following areas could have a negative effect on the Company in terms of its future financial position, results of operations or cash flows: the general state of the U.S. and world economies, the highly cyclical nature of the industries the company serves; the loss of any of a small number of customers; ability to obtain additional financing; pursuing acquisition opportunities; regulatory changes; fundamental changes in the technology underlying semiconductor, flat panel, solar and medical device manufacturing processes or manufacturing equipment; the hiring, training and retention of key employees; successful and timely completion of product design efforts; and new product design introductions by competitors.

Concentration of Credit Risk Financial instruments which subject the Company to concentrations of credit risk consist principally of cash and cash equivalents and accounts receivable. The Company sells its products primarily to semiconductor capital equipment manufacturers in the United States. The Company performs credit evaluations of its customers' financial condition and generally requires no collateral.

The Company had significant sales to four customers: Applied Materials, Inc., Intuitive Surgical, Inc., Lam Research Corporation and Novellus Systems, Inc., two of which accounted for 10% or more of sales for the three months ended April 3, 2009. Sales to each of these customers as a percentage of total sales were as follows:

Table of Contents

	Three months ended	
	April	
	3,	March
	2009	28, 2008
Customer A	8.3%	27.5%
Customer B	4.2%	11.7%
Customer C	24.8%	7.2%
Customer D	47.9%	44.3%
Total	85.3%	90.7%

These four significant customers represented a combined total of 80.5% of accounts receivable at April 3, 2009, 74.9% of whose individual accounts receivable balances were greater than 10%.

Fair Value of Financial Instruments The Company's financial instruments consist of cash and cash equivalents, accounts receivable, accounts payable and bank borrowings. The carrying value of these instruments approximates their fair value because of their short-term nature.

Fiscal Year The Company uses a 52-53 week fiscal year ending on the Friday nearest December 31. All references to quarters refer to fiscal quarters and all references to years refer to fiscal years.

Income Taxes Income taxes are reported under Statement of Financial Accounting Standards No. 109, *Accounting for Income Taxes* (SFAS 109) and, accordingly, deferred taxes are recognized using the asset and liability method, whereby deferred tax assets and liabilities are recognized for the future tax consequence attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax base, and operating loss and tax credit carry-forwards. Valuation allowances are provided if it is more likely than not that some or all of the deferred tax assets will not be recognized.

The calculation of the Company's tax liabilities involves dealing with uncertainties in the application of complex tax regulations. The Company records liabilities for anticipated tax audit issues based on its estimate of whether, and the extent to which, additional taxes may be due. Actual tax liabilities may be different than the recorded estimates and could result in an additional charge or benefit to the tax provision in the period when the ultimate tax assessment is determined.

Product Warranty The Company provides a warranty on its products for a period of up to two years and provides for warranty costs at the time of sale based on historical activity. The determination of such provisions requires the Company to make estimates of product return rates and expected costs to repair or replace the products under warranty. If actual return rates and/or repair and replacement costs differ significantly from these estimates, adjustments to cost of sales may be required in future periods. Components of the reserve for warranty costs consisted of the following (in thousands):

	Three months ended	
	April	
	3,	March 28,
	2009	2008
Beginning balance	\$ 164	\$ 220
Additions related to sales	(28)	8
Warranty claims	(44)	(38)
Ending balance	\$ 92	\$ 190

Revenue Recognition Product revenue is generally recorded upon shipment. In arrangements which specify title transfer upon delivery, revenue is not recognized until the product is delivered. The Company recognizes revenue when persuasive evidence of an arrangement exists, shipment has occurred, price is fixed or determinable and

collectability is reasonably assured. If the Company has not substantially completed a product or fulfilled the terms of a sales agreement at the time of shipment, revenue recognition is deferred until completion. The Company's standard arrangement for our customers includes a signed purchase order or contract, no right of return of delivered products and no customer acceptance provisions.

The Company assesses collectability based on the credit worthiness of the customer and past transaction history. The Company performs on-going credit evaluations of customers and does not require collateral from customers.

Research and Development Costs Research and development costs are expensed as incurred.

Net Income (loss) per Share Basic net income (loss) per share is computed by dividing net income (loss) by the weighted average number of shares outstanding for the period. Diluted net income (loss) per share is calculated by dividing net income (loss) by the weighted average number of common shares outstanding and common equivalent shares from dilutive stock options and restricted stock using the treasury stock method, except when such shares are anti-dilutive.

Table of Contents

Comprehensive Income In accordance with SFAS No. 130, *Reporting Comprehensive Income*, the Company reports by major components, and as a single total, the change in its net assets during the period from non-owner sources. Comprehensive income (loss) for all periods presented was the same as net income (loss).

SFAS 131, *Disclosure about Segments in an Enterprise and Related Information* (SFAS 131), establishes standards for the reporting by public business enterprises of information about reportable segments, products and services, geographic areas, and major customers. The method for determining what information to report is based on the manner in which management organizes the reportable segments within the Company for making operational decisions and assessments of financial performance. The Company's chief operating decision-maker is considered to be the Chief Executive Officer. The Company operates in one reporting segment.

Stock-Based Compensation and Deferred Stock-Based compensation The Company maintains stock-based compensation plans which allow for the issuance of equity-based awards to executives and certain employees. These equity-based awards include stock options, restricted stock awards and restricted stock units. The Company also maintains an employee stock purchase plan (ESPP) that provides for the issuance of shares to all eligible employees of the Company at a discounted price.

The Company applies the fair value recognition provisions of SFAS 123(R). The exercise price of each stock option equals the market price of the Company's stock on the date of grant. The weighted average estimated fair value of employee stock option grants for the three months ended April 3, 2009, and March 28, 2008, was \$0.51 and \$4.71, respectively. The estimated fair value of the Company's equity-based awards, less expected forfeitures, is amortized over the awards' vesting periods on a straight-line basis over a weighted average period of four years and will be adjusted for subsequent changes in estimated forfeitures and future option grants. Most options are scheduled to vest over four years and expire no later than ten years from the grant date. The fair value of each option grant is estimated on the date of grant using the Black-Scholes option pricing model. The determination of the fair value of share-based payment awards on the date of grant using an option-pricing model is affected by the Company's stock price as well as assumptions regarding a number of complex and subjective variables. These variables include the expected term of the awards; the Company's expected stock price volatility over the term of the awards, actual and projected employee stock option exercise behaviors, risk-free interest rate and expected dividends. The Company estimates the expected term of share-based awards granted based, in part, on the Company's historical option term experience. The Company estimates the volatility of its common stock based upon the Company's historical stock price volatility over the length of the expected term of the options. The Company bases the risk-free interest rate that it uses in the option valuation model on U.S. Treasury zero-coupon issues with remaining maturities similar to the expected term of the options. The Company does not anticipate paying any cash dividends in the foreseeable future and therefore uses an expected dividend yield of zero in the option valuation model. The Company is required to estimate forfeitures at the time of grant and revise those estimates in subsequent periods if actual forfeitures differ from those estimates. The Company uses historical data to estimate pre-vesting option forfeitures and records share-based compensation expense only for those awards that are expected to vest. The Company also considers, each quarter, whether there have been any significant changes in facts and circumstances that would affect its forfeiture rate.

The weighted average assumptions used in the model are outlined in the following table:

Table of Contents

	Three months ended	
	April 3, 2009	March 28, 2008
Dividend yield	0.0%	0.0%
Expected volatility	50.0%	50.0%
Risk-free interest rate	2.0%	2.9%
Expected life (in years)	5.0	5.0

Stock-based compensation expense from stock options and the related income tax benefit from the expense recognized under SFAS 123(R) were \$0.8 million and \$0.3 million, respectively, for the quarter ended April 3, 2009, and \$1.1 million and \$0.3 million, respectively, for the quarter ended March 28, 2008.

The following table shows the Company's stock-based compensation expense included in the condensed consolidated statements of operations (in thousands):

	Three months ended	
	April 3, 2009	March 28, 2008
Cost of sales	\$ 208	\$ 255
Research and development	(11)	64
Sales and marketing	67	35
General and administrative	525	775
	789	1,129
Income tax benefit	(252)	(329)
Total stock-based compensation expense	\$ 537	\$ 800

The following table summarizes information with respect to options outstanding at April 3, 2009:

	Number of Shares
Options outstanding at January 2, 2009	2,145,882
Granted	1,041,500
Exercised	
Canceled	(24,301)
Options outstanding at April 3, 2009	3,163,081

The total unamortized expense of the Company's unvested options as of April 3, 2009, is \$2.8 million.

Employee Stock Purchase Plan

The Company also maintains an employee stock purchase plan (ESPP) that provides for the issuance of shares to all eligible employees of the Company at a discounted price. Under the ESPP, substantially all employees may purchase the Company's common stock through payroll deductions at a price equal to 95 percent of the fair market value of the Company's stock at the end of each applicable purchase period.

Restricted Stock Units and Restricted Stock Awards

During the first quarter of fiscal 2008, the Company began granting Restricted Stock Units (RSU s) to employees as part of the Company's long term equity compensation plan. These RSU s are granted to employees with a per share or unit purchase price of zero dollars and either have time based or performance based vesting. RSU s typically vest over three years, subject to the employee's continued service with the Company. For purposes of determining compensation

expense related to these RSU s, the fair value is determined based on the closing market price of the Company s common stock on the date of award. The expected cost of the grant is reflected over the service period, and is reduced for estimated forfeitures. No RSU s were granted during the first quarter ended April 3, 2009. As of April 3, 2009, \$1.5 million of unrecognized stock-based compensation cost related to RSU s remains to be amortized and is expected to be recognized over an estimated period of three years.

On May 31, 2008, the Company issued 37,500 shares of restricted stock awards to its outside directors. The fair value of the shares was determined using the Company s closing market price on the date of grant. These shares fully vest on the one year anniversary of

Table of Contents

the date of grant. The total unamortized expense of the Company's unvested restricted stock awards as of April 3, 2009, is \$0.1 million.

The following table summarizes the Company's restricted stock unit and restricted stock award activity for the three months ended April 3, 2009 (in thousands):

	Number of Shares
Unvested restricted stock units and restricted stock awards at January 2, 2009	448
Granted	
Vested	(65)
Forfeited	(67)
Unvested restricted stock units and restricted stock awards at April 3, 2009	316

Impairment of Other Long-lived Assets Purchased intangibles consist of tradenames acquired as part of a purchase business combination. Critical estimates in valuing certain intangible assets include, but are not limited to: future expected cash flows from customer contracts; acquired developed technologies and patents; expected costs to develop the in-process research and development into commercially viable products and estimated cash flows from the projects when completed; the market position of the acquired products; and assumptions about the period of time the tradename will continue to be used in the Company's product portfolio. Based upon these estimates, the tradename asset was assigned an indefinite life and is not being amortized.

Recently Issued Accounting Standards In May 2008, the FASB issued SFAS No. 162, *The Hierarchy of Generally Accepted Accounting Principles*, (SFAS No. 162). SFAS No. 162 identifies the sources of accounting principles and the framework for selecting the principles to be used in the preparation of financial statements of nongovernmental entities that are presented in conformity with generally accepted accounting principles in the United States of America. SFAS No. 162 is effective sixty days following the SEC's approval of the Public Company Accounting Oversight Board amendments to AU Section 411, *The Meaning of Present fairly in conformity with generally accepted accounting principles* . The Company is currently evaluating the potential impact, if any, of the adoption of SFAS No. 162 on its consolidated financial statements, results of operations and cash flows.

In April 2008, the FASB issued FASB Staff Position (FSP) No. 142-3, *Determination of the Useful Life of Intangible Assets* . FSP 142-3 amends the factors an entity should consider in developing renewal or extension assumptions used in determining the useful life of recognized intangible assets under FASB Statement No. 142,

Goodwill and Other Intangible Assets. This new guidance applies prospectively to intangible assets that are acquired individually or with a group of other assets in business combinations and asset acquisitions. FSP 142-3 is effective for the Company for fiscal years beginning January 1, 2009. The adoption of FSP 142-3 did not have a material impact on its consolidated financial position, results of operations and cash flows.

In December 2007, the FASB issued SFAS No. 141 (revised 2007), *Business Combinations* (SFAS 141R and SFAS No. 160, *Non-controlling Interests in Consolidated Financial Statements* an amendment of ARB No. 51 (SFAS 160). SFAS 141R changes the accounting for business combinations, including the measurement of acquirer shares issued in consideration for a business combination, the recognition of contingent consideration, the accounting for pre-acquisition gain and loss contingencies, the recognition of capitalized in-process research and development, the accounting for acquisition-related restructuring cost accruals, the treatment of acquisition related transaction costs, and the recognition of changes in the acquirer's income tax valuation allowance. SFAS 160 will change the accounting and reporting for minority interests, reporting them as equity separate from the parent entity's equity, as well as requiring expanded disclosures. The provisions of SFAS 141R and SFAS 160 are effective for the Company for fiscal years beginning January 1, 2009. The adoption of SFAS No. 141R did not have a material impact on the Company's consolidated financial position, results of operations and cash flows.

In February 2008, the FASB issued FASB Staff Position 157-1, *Application of FASB Statement No. 157 to FASB Statement No. 13 and Other Accounting Pronouncements That Address Fair Value Measurements for Purposes of*

Lease Classification or Measurement under Statement 13 (FSP 157-1) and FSP157-2, Effective Date of FASB Statement No. 157 (FSP 157-2). FSP 157-1 amends SFAS No. 157 to remove certain leasing transactions from its scope, and was effective upon initial adoption of SFAS No. 157. FSP 157-2 delays the effective date of SFAS 157 for all non-financial assets and non-financial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually), until the beginning of the first quarter of fiscal 2009. The provisions of FSP 157-1 and FSP 157-2 are effective for the Company for fiscal years beginning January 1, 2009. The adoption of FSP 157-1 and FSP 157-2 did not have a material impact on the Company's consolidated financial position, results of operations and cash flows.

Table of Contents**2. Balance Sheet Information** (in thousands)

Inventory consisted of the following (in thousands):

	April 3, 2009	January 2, 2009
Raw materials	\$ 34,558	\$ 32,464
Work in process	6,830	10,008
Finished goods	1,620	1,672

Accumulated depreciation and amortization	(12,835)	(13,590)
Total	\$ 8,393	\$ 8,954

3. Borrowing Arrangements

In the second quarter of 2006, we entered into a borrowing arrangement and a term loan (Loan Agreement). The Loan Agreement provided senior secured credit facilities in an aggregate principal amount of up to \$32.5 million, consisting of a \$25.0 million Revolving Line of Credit and a \$7.5 million term loan (Original Term Loan). The outstanding balance of the Revolving Line of Credit as of April 3, 2009 was approximately \$11.5 million. The balance of our Original Term Loan as of April 3, 2009 was \$0.6 million and will expire on June 29, 2009.

Interest rates on outstanding loans under the credit facilities ranged from 3.5% to 4.25% per annum during the quarter ended April 3, 2009 and were 4.25% per annum as of April 3, 2009.

The Company also has a \$5.0 million equipment loan that is secured by certain of its equipment and expires May 2011. The interest rate and outstanding balance on the equipment loan was 7.6% and \$2.2 million, respectively, as of April 3, 2009.

The combined balance outstanding on the Loan Agreement and equipment loan at April 3, 2009 was \$17.3 million.

On February 4, 2009, the Company amended its Loan Agreement consisting of a reduction of the revolving credit facility from \$25.0 million to \$20.0 million while extending its maturity to January 29, 2012, and a new \$3.0 million three-year term loan, as amended, also maturing on January 29, 2012. The aggregate amount of the revolving credit facility is subject to a borrowing base equal to 80% of eligible accounts receivable and 45% of eligible inventory (total eligible inventory not to exceed \$2.5 million) and is secured by substantially all of our assets. The revolving credit facility bears interest per annum at a variable rate equal to the greater of the bank's stated prime rate or 4% plus a margin of 25 basis points. The new term loan, as amended, bears interest per annum at a variable rate equal to the greater of the bank's stated prime rate or 4% plus a margin of 75 basis points. The revolving credit facility contains

certain reporting and financial covenants, including minimum tangible net worth and liquidity ratios, that must be met on a monthly basis in order for the Company to remain in compliance. We are currently in compliance with all covenants in our loan agreement. In February 2009, we were not in compliance with a particular financial covenant, however we received a waiver from our bank.

4. Restructuring

During the current quarter of 2009, the Company recorded restructuring charges related to consolidation of its Portland, Oregon facilities under the provisions of SFAS No. 146, *Accounting for Costs Associated with Exit or Disposal Activities*. Restructuring charges were recorded as general and administrative expense of \$215,000 based on the estimated fair value of the non-cancelable lease costs, less estimated future sublease income, which will be paid over the estimated vacancy periods through fiscal 2010. The Company's estimated costs to exit these facilities are based on available commercial data. The actual loss incurred in exiting these facilities could be different from the Company's estimates.

5. Income Tax

Table of Contents

The Company's income tax provision (benefit) for the three months ended April 3, 2009 and March 28, 2008 was (\$3,314,000) and \$779,000, respectively.

The following table summarizes the activity related to the Company's unrecognized tax benefits (in thousands):

	Three months ended	
	April 3, 2009	March 28, 2008
Balance as of the beginning of period	\$ 428	\$ 750
Increases related to current year tax positions		
Expiration of the statute of limitations for the assessment of taxes		
Balance as of the end of period	\$ 428	\$ 750

The Company's 2005 state income tax return is currently under examination by the California Franchise Tax Board (CFTB) and the Company's 2006 tax return is currently under examination by the CFTB and the Internal Revenue Service. The Company is currently open to audit under the statute of limitations by the Internal Revenue Service for fiscal years 2007 and 2008 and the Company's state income tax returns are open to audit under the statute of limitations for the fiscal years 2005 through 2008.

The Company's ability to realize deferred tax assets depends on its ability to generate sufficient taxable income of the same character within the carryback or carryforward periods. In assessing future GAAP taxable income, the Company has considered all sources of taxable income available to realize its deferred tax asset, including the future reversal of existing temporary differences, future taxable income exclusive of reversing temporary differences and carryforwards, taxable income in carryback years and tax-planning strategies. If changes occur in the assumptions underlying the Company's tax planning strategies or in the scheduling of the reversal of the Company's deferred tax liabilities, the valuation allowance may need to be adjusted in the future.

6. Net Income (Loss) Per Share

Basic net income (loss) per share excludes dilution and is computed by dividing net income (loss) by the weighted average number of common shares outstanding for the period. Diluted net income (loss) per share reflects the potential dilution that would occur if outstanding securities or other contracts to issue common stock were exercised or converted into common stock.

The following is a reconciliation of the numerators and denominators used in computing basic and diluted net income (loss) per share (in thousands, except per share data):

	Three months ended	
	April 3, 2009	March 28, 2008
Numerator:		
Net income (loss)	\$ (7,042)	\$ 1,889
Denominator:		
Shares used in computation - basic:		
Weighted average common shares outstanding	21,332	21,589
Weighted average common shares outstanding subject to repurchase	(31)	(25)
Shares used in computing basic Net income (loss) per share	21,301	21,564
Shares used in computation - diluted:		
Shares used in computing basic Net income (loss) per share	21,301	21,564
Dilutive effect of common shares outstanding subject to repurchase		25
Dilutive effect of options outstanding		478

Edgar Filing: ULTRA CLEAN HOLDINGS INC - Form 10-Q

Shares used in computing diluted Net income (loss) per share	21,301	22,067
Net income (loss) per share basic	\$ (0.33)	\$ 0.09
Net income per share (loss) diluted	\$ (0.33)	\$ 0.09

12

Table of Contents

The Company had securities outstanding which could potentially dilute basic earnings per share in the future; however, the incremental shares from the assumed exercise of these securities were excluded in the computation of diluted net income (loss) per share, as their effect would have been anti-dilutive. 2.1 million and 0.9 million shares as of April 3, 2009 and March 28, 2008, respectively, have been excluded from the computation of diluted net loss per share because their inclusion would be anti-dilutive.

7. Related Party Transactions

The Company leases a facility from an entity controlled by one of the Company's board members. The Company incurred rent expense resulting from the lease of this facility of \$67,000 and \$65,000 for the three months ended April 3, 2009 and March 28, 2008, respectively.

The spouse of one of the Company's executives is the sole owner of the Company's primary travel agency. The Company incurred fees for travel-related services, including the cost of airplane tickets, of \$54,000 and \$84,000 for the three months ended April 3, 2009 and March 28, 2008, respectively.

8. Commitments and Contingencies

The Company had commitments to purchase inventory totaling approximately \$2.9 million at April 3, 2009.

In September 2007, the Company entered into a facility lease agreement for approximately 104,000 square feet of office space in Hayward, California and began moving into the new facility towards the latter part of the second quarter of 2008. In lieu of a cash security deposit, the Company established an irrevocable standby letter of credit in the amount of \$156,000 naming the landlord of the new facility as the beneficiary. Pursuant to the lease agreement, the Company received approximately \$4.1 million in tenant improvement allowances and will receive incentives of approximately \$1.2 million in rent abatements over the first two years of the lease. The Company has received approximately \$1.0 million in incentives as of April 3, 2009. The operating lease term for the new facility commenced on April 1, 2008, and will continue through April 1, 2015, with minimum monthly lease payments beginning at \$119,000 and escalating annually after the first two years. The Company's total future minimum lease payments over the term of the lease will be approximately \$10.2 million.

From time to time, we are subject to various legal proceedings and claims, either asserted or unasserted, that arise in the ordinary course of business. Although the outcome of the various legal proceedings and claims cannot be predicted with certainty, the Company has not had a history of outcomes to date that have been material to the statement of operations and does not believe that any of these proceedings or other claims will have a material adverse effect on its consolidated financial condition or results of operations.

ITEM 2. Management's Discussion And Analysis of Financial Condition And Results Of Operations

This section and other parts of this quarterly report on Form 10-Q contain forward-looking statements regarding future events and our future results. Forward-looking statements can also be identified by words such as "anticipates," "expects," "believes," "plans," "predicts," and similar terms. Forward-looking statements are not guarantees of future performance and the Company's actual results may differ significantly from the result discussed in the forward-looking statements. Factors that might cause such differences include, but are not limited to, those discussed in "Item 1A Risk Factors" below. The following discussion should be read in conjunction with the consolidated financial statement and notes thereto included in Item 1 of this report. The Company assumes no obligation to revise or update any forward-looking statements for any reason, except as required by law.

Overview

We are a leading developer and supplier of critical subsystems, primarily for the semiconductor capital equipment industry. We also leverage the specialized skill sets required to support semiconductor capital equipment to serve the technologically similar markets in the flat panel, solar and medical device industries, collectively referred to as "Other Addressed Industries." We develop, design, prototype, engineer, manufacture and test subsystems which are highly specialized and tailored to specific steps in the semiconductor manufacturing process as well as the manufacturing process in Other Addressed Industries. Our revenue is derived primarily from the sale of gas delivery systems, CMP subsystems, chemical delivery modules, top-plate assemblies, frame assemblies, process modules and other high level assemblies.

The recent weakening global economy, severe tightening of the credit markets and turmoil in the financial markets are contributing to slowdowns in the markets we serve. Uncertainty regarding future growth in economies throughout

the world have caused companies to reduce capital investment, the impact of which has been particularly severe in the semiconductor capital

Table of Contents

equipment industry. This economic uncertainty has led our customers to push out, cancel, or refrain from placing orders with us, which in turn has reduced our sales and negatively impacted our cash flow. Our sales were \$22.4 million in the first quarter of fiscal 2009 compared to \$92.4 million in the same period of the previous year. Four customers: Applied Materials, Inc., Intuitive Surgical, Inc., Lam Research Corporation and Novellus Systems, Inc., accounted for 85% the first quarter of fiscal 2009 and 88% of our sales for all of fiscal year 2008. We incurred a net loss of \$7.0 million in the first quarter of fiscal 2009 and \$52.4 million for the year ended January 2, 2009, which included a charge for impairment of goodwill and other long-lived assets of \$55.1 million, and we expect to incur additional losses in the future.

Table of Contents*Financial Highlights*

Our operating results for the three ended April 3, 2009, compared to the same period in the prior year reflects a decrease in demand of our products as a result of an overall slowdown in the worldwide economy and semiconductor capital equipment market. Sales for the three months ended April 3, 2009 were \$22.4 million, a decrease of \$70.0 million, or 75.7%, from the same quarter of 2008. Gross profit (loss) in the first quarter of 2009 decreased \$14.9 million, or 123.8%, to \$(2.9) million, or (12.8)% of sales, from \$12.1 million, or 13.1% of sales, in the first quarter of 2008. Total operating expenses in the first quarter of 2009 decreased to \$7.3 million, or 32.5% of sales, from \$9.0 million, or 9.8% of sales, compared to the first quarter of 2008. We incurred a net loss during the first quarter of 2009 of \$7.0 million compared to net income of \$1.9 million for the same period in 2008 as a result of decreased sales and gross profits earned during the current quarter.

Results of Operations

For the periods indicated, the following table sets forth certain costs and expenses and other income items as a percentage of sales. The table and subsequent discussion should be read in conjunction with our condensed consolidated financial statements and notes thereto included elsewhere in our quarterly report.

	Three months ended	
	April 3, 2009	March 28, 2008
Sales	100.0%	100.0%
Cost of goods sold	112.8%	86.9%
Gross profit (loss)	(12.8)%	13.1%
Operating expenses:		
Research and development	4.1%	0.8%
Sales and marketing	4.6%	1.8%
General and administrative	23.8%	7.2%
Total operating expenses	32.5%	9.8%
Income (loss) from operations	(45.3)%	3.3%
Interest and other income (expense), net	(.9)%	(0.4)%
Income before provision (benefit) for income taxes	(46.2)%	2.9%
Income tax provision (benefit)	(14.8)%	0.8%
Net income (loss)	(31.4)%	2.0%

Table of Contents*Sales*

Sales in the first quarter of 2009 decreased \$70.0 million, or 75.7%, to \$22.4 million from \$92.4 million in the first quarter of 2008. The decrease in sales for the three month period reflects a decrease in semi-conductor equipment demand as a result of the overall slowdown in the industry. We expect sales to be relatively flat in the second quarter of 2009.

Gross Profit

Cost of goods sold consists primarily of purchased materials, labor and overhead, including depreciation related to certain capital assets associated with the design and manufacture of products sold. Gross profit (loss) for the three months ended April 3, 2009 decreased to (\$2.9) million, or (12.8)% of sales, from a gross profit of \$12.1 million, or 13.1% of sales, for the same period in 2008.

Our gross margin for the three months ended April 3, 2009 decreased from the comparable period in 2008 due primarily to declining unit volume manufactured due to declining sales during the first quarter of fiscal 2009, lower factory utilization and employee severance charges resulting from a series of decreases in headcount.

Research and Development Expense

Research and development expense consists primarily of activities related to new component testing and evaluation, test equipment and fixture development, product design, and other product development activities. Research and development expense for the first quarter of 2009 increased \$0.1 million, or 16.7%, to \$0.9 million, or 4.1% of sales, compared to \$0.8 million, or 0.8% of sales in the same quarter in 2008. The increase in expense is primarily due to the reassignment of existing resources to new product development activities.

Sales and Marketing Expense

Sales and marketing expense consists primarily of salaries and commissions paid to our sales and service employees, salaries paid to our engineers who work with the sales and service employees to help determine the components and configuration requirements for new products and other costs related to the sales of our products. Sales and marketing expense for the first quarter of 2009 was \$1.0 million, or 4.6% of sales, compared to \$1.6 million, or 1.8% of sales, in the same quarter of 2008. The increase in percent of sales is due to a decrease in sales during the first quarter of 2009. The decrease in dollars is due to primarily to reduced payroll and related benefit costs due to a series of decreases in headcount as well as a decrease in depreciation expense associated with the impairment of long-term assets the Company took in the fourth quarter of fiscal 2008.

General and Administrative Expense

General and administrative expense consists primarily of salaries and overhead associated with our administrative staff and professional fees. General and administrative expense decreased approximately \$1.3 million, or 19.4% in the first quarter of 2009 to \$5.3 million, or 23.9% of sales, compared with \$6.6 million, or 7.2% of sales, in the same quarter of 2008. The decrease in dollars is due to primarily to reduced payroll and related benefit costs due to a series of decreases in headcount as well as a decrease in depreciation expense associated with the impairment of long-term assets the Company took in the fourth quarter of fiscal 2008. The increase in percent of sales in the first quarter of fiscal 2009 is due to a decrease in sales compared to the same period of fiscal 2008.

Interest and Other Income (Expense), net

Interest and other income (expense), net for the first quarter of 2009 was \$(0.2) million compared to \$(0.3) million in the first quarter of 2008. The decrease in net expense for the three months ended April 3, 2009 is primarily attributable to a lower debt balance and lower interest rates in the first quarter of 2009 compared to the same period in 2008.

Income Tax Provision

Our effective tax rate for the quarters ended April 3, 2009 and March 28, 2008 was 32.0% and 29.2%, respectively. The change in respective rates reflects, primarily, a change in the geographic mix of worldwide earnings and financial results for first quarter of 2009 compared to the same period in 2008.

The Company's ability to realize deferred tax assets depends on its ability to generate sufficient taxable income of the same character within the carryback or carryforward periods. In assessing future GAAP taxable income, the Company has considered all sources of taxable income available to realize its deferred tax asset, including the future reversal of existing temporary differences,

Table of Contents

future taxable income exclusive of reversing temporary differences and carryforwards, taxable income in carryback years and tax-planning strategies. If changes occur in the assumptions underlying the Company's tax planning strategies or in the scheduling of the reversal of the Company's deferred tax liabilities, the valuation allowance may need to be adjusted in the future.

Liquidity and Capital Resources

We have funded our operations through financing activities and operations and we require capital principally to fund our working capital needs, satisfy our debt obligations, maintain our equipment and purchase new capital equipment. As of April 3, 2009, we had cash of \$29.8 million compared to \$29.6 million as of January 2, 2009.

For the quarter ended April 3, 2009 we generated cash from operating activities of \$1.6 million compared to \$4.5 million of cash used in operating activities for the same period in the prior year. Operating cash flows were favorably impacted by net non-cash activity of \$1.6 million, including depreciation and amortization of \$0.7 million and stock-based compensation of \$0.8 million, decreases in accounts receivable, inventory and prepaids and other of \$3.3 million, \$1.9 million and \$3.6 million, respectively, and were unfavorably impacted by an decrease in accrued compensation and related benefits of \$1.4 million.

Cash flows from investing activities increased \$3.5 million when comparing the first quarter of fiscal 2009 to the same period in fiscal 2008 due primarily to a reduction in capital spending.

Net cash used in financing activities for the first quarter of fiscal 2009 increased \$1.0 million to \$1.3 million from \$0.4 million in the same quarter of the prior year. Our use of cash in financing activities was primarily due to payments on short-term and long-term debt of \$0.1 million and \$4.1 million, respectively, offset by proceeds from bank borrowings of \$3.0 million.

During fiscal 2008 and into the first quarter of fiscal 2009, we took steps to reduce our operating costs in line with our declining revenues in the form of factory shutdowns, reductions in headcount and other cost-cutting measures. We will continue to monitor the state of the current economic crisis and its impact on our business and will make additional cost reductions as deemed necessary to align revenues and expenses and ensure we maintain sufficient funds to effectively run the business. We anticipate that our existing cash balances and operating cash flow, together with available borrowings under our credit facility as amended on February 4, 2009 (see *Borrowing Arrangements* below) will be sufficient to meet our working capital requirements and technology development projects for at least the next twelve months. The adequacy of these resources to meet our liquidity needs beyond that period will depend on our growth, the state of the worldwide economy, the cyclical expansion or contraction of the semiconductor capital equipment industry and the other industries we serve and capital expenditures required to meet possible increased demand for our products.

Contractual Obligations and Contingent Liabilities and Commitments

Other than operating leases for certain equipment and facilities, we have no significant off-balance sheet transactions, unconditional purchase obligations or similar instruments and, other than with respect to the revolving credit facility described above, are not a guarantor of any other entities' debt or other financial obligations.

The following table summarizes our future minimum lease payments and principal payments under debt obligations, in thousands, as of April 3, 2009. Of the \$12.7 million in operating leases, \$236,000, which is net of estimated sublease income of \$147,000, is included in other accrued liabilities, as of April 3, 2009.

	2009	2010	2011	2012	2013	Thereafter	Total
Capital lease	\$ 6	\$	\$	\$	\$	\$	\$ 6
Operating lease (1)	2,326	2,405	1,929	1,813	1,920	2,333	12,726
Borrowing arrangements	2,159	2,008	1,443	11,677			17,287
Total (2)	\$ 4,491	\$ 4,413	\$ 3,372	\$ 13,490	\$ 1,920	\$ 2,333	\$ 30,019

(1)

Operating lease expense reflects (a) the lease for our headquarters facility in Hayward, California; (b) the lease for a manufacturing facility in Portland, Oregon that expires on October 31, 2010 net of estimated sublease rental income; (c) the leases for manufacturing facilities in South San Francisco that expire in 2009 and 2010; (d) the leases for manufacturing facilities in Austin, Texas that expire in 2010 and 2011. We have options to renew certain of the leases in South San Francisco, which we expect to exercise.

- (2) We adopted the provisions of FASB Interpretation No. 48, *Accounting for Uncertainty in Income Taxes* (FIN 48), on December 30, 2006. As a

result of the implementation of FIN 48, we have recorded an additional tax liability of \$428,000 to offset the recognition of previously recorded excess tax benefits.

Because of the uncertainty surrounding the future payment of these liabilities, the amounts have been excluded from the table above.

Table of Contents

Critical Accounting Policies, Significant Judgments and Estimates

Our condensed consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States, which requires management to make estimates and judgments that affect the reported amounts of assets, liabilities, revenue and expenses and related disclosure at the date of our financial statements. Estimates and judgments are reviewed on an on-going basis, including those related to sales, inventories, intangible assets, stock compensation and income taxes. The estimates and judgments are based on historical experience and on various other factors that we believe to be reasonable under the circumstances, the results of which form the basis of the judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates. We consider certain accounting policies related to the purchase accounting, revenue recognition, inventory valuation, accounting for income taxes, valuation of intangible assets and goodwill and equity incentives to employees to be critical policies due to the estimates and judgments involved in each.

Revenue Recognition

Revenue Recognition Our revenue is concentrated in a few OEM customers in the semiconductor capital equipment and flat panel display industry. Our standard arrangement for our customers includes a signed purchase order or contract, no right of return of delivered products and no customer acceptance provisions. Revenue from sales of products is recognized when:

we enter into a legally binding arrangement with a customer;

we ship the products;

price is deemed fixed or determinable;

product delivery is deemed free of contingencies or significant uncertainties; and

collection is reasonably assured.

Revenue is generally recognized upon shipment of the product. In arrangements which specify title transfer upon delivery, revenue is not recognized until the product is delivered. In addition, if we have not substantially completed a product or fulfilled the terms of the agreement at the time of shipment, revenue recognition is deferred until completion. Determination of criteria in the fourth and fifth bullet points above is based on our judgment regarding products we may deliver with contingencies or significant uncertainties and the collectability of those amounts. We defer revenue for product that we may deliver to a customer that is missing a critical component or requires customer testing.

We assess collectability based on the credit worthiness of the customer and past transaction history. We perform on-going credit evaluations of customers and do not require collateral from our customers. We have not experienced significant collection losses in the past. A significant change in the liquidity or financial position of any one customer could make it more difficult for us to assess collectability.

Inventory Valuation

We value our inventories at the lesser of standard cost, determined on a first-in, first-out basis, or market. We assess the valuation of all inventories, including raw materials, work-in-process, finished goods and spare parts on a periodic basis. Obsolete inventory or inventory in excess of our estimated usage is written-down to its estimated market value less costs to sell, if less than its cost. The inventory write-downs are recorded as an inventory valuation allowance established on the basis of obsolete inventory or specific identified inventory in excess of established usage. Inherent in our estimates of market value in determining inventory valuation are estimates related to economic trends, future demand for our products and technological obsolescence of our products. If actual market conditions are less favorable than our projections, additional inventory write-downs may be required. If the inventory value is written down to its net realizable value, and subsequently there is an increased demand for the inventory at a higher value, the increased value of the inventory is not realized until the inventory is sold either as a component of a subsystem or as separate inventory. For the year ended January 2, 2009 we wrote off \$0.7 million in inventory determined to be

obsolete.

Table of Contents**Accounting for Income Taxes**

The determination of our tax provision is subject to judgments and estimates. FAS No.109, *Accounting for Income Taxes* (FAS 109) states that a deferred tax asset should be reduced by a valuation allowance if, based on the weight of all available evidence, it is more likely than not that some portion or all of the deferred tax asset will not be realized. The valuation allowance should be sufficient to reduce the deferred tax asset to the amount that is more likely than not to be realized. In determining whether the Company's deferred tax asset is realizable, the Company weighed all available evidence, including both positive and negative evidence. The realization of deferred tax assets depends upon the existence of sufficient taxable income of the same character during the carryback or carryforward period. The Company has considered all sources of taxable income available to realize the deferred tax asset, including the future reversal of existing temporary differences, future taxable income exclusive of reversing temporary differences and carry forwards, taxable income in carry back years and tax-planning strategies. We have not recorded any valuation allowance related to our deferred tax assets since it is more likely than not we will utilize our deferred income taxes in the future. If we do not generate sufficient future income, the realization of these deferred tax assets may be impaired, resulting in an additional income tax expense.

FAS 109 indicates that a tax planning strategy is an action that management ordinarily might not take but would take, if necessary, to realize a tax benefit before it expires. These are actions that are prudent and feasible and would result in the realization of deferred tax assets. Examples include, but are not limited to, changing the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss or accelerating taxable amounts. While no commitments to implement any strategy have been made, prudent and feasible strategies could generate taxable income in the foreseeable future and were considered in the assessment of the realization of the Company's deferred tax assets.

In determining the appropriate valuation allowance, if any, certain judgments are made by management relating to recoverability of deferred tax assets, use of tax loss and tax credit carryforwards, levels of expected future taxable income and available tax planning strategies. The assumptions in making these judgments are updated periodically by management based on current business conditions that affect the Company and overall economic conditions. These management judgments are therefore subject to change based on factors that include, but are not limited to, changes in expected capital gain income in the foreseeable future and the ability of the Company to successfully execute its tax planning strategies.

The Company's 2005 state income tax return is currently under examination by the California Franchise Tax Board (CFTB) and the Company's 2006 tax return is currently under examination by the CFTB and the Internal Revenue Service. The Company is currently open to audit under the statute of limitations by the Internal Revenue Service for fiscal years 2007 and 2008 and the Company's state income tax returns are open to audit under the statute of limitations for the fiscal years 2005 through 2008.

Business Combinations

In accordance with business combination accounting, we allocate the purchase price of acquired companies to the tangible and intangible assets acquired and liabilities assumed based on their estimated fair values. The Company's management estimates the fair value and may consult with a third-party specialist to assist management in determining the fair values of acquired intangible assets such as trade name and customer relationships. Such valuations require management to make significant estimates and assumptions. Management makes estimates of fair value based upon assumptions believed to be reasonable. These estimates are based on historical experience and information obtained from the management of the acquired companies and are inherently uncertain.

Valuation of Intangible Assets

We evaluate our intangible assets in accordance with Statement of Financial Accounting Standards No. 142 (SFAS No. 142), *Goodwill and Other Intangible Assets*, at least annually, for indications of impairment whenever events or changes in circumstances indicate that the carrying value may not be recoverable, such as an adverse change in our business climate or a decline in the overall industry, that would more likely than not reduce the fair value of a reporting unit below its carrying amount. The Company has one intangible, indefinite-life asset: Tradename. Factors we consider important that could trigger an impairment review include significant under-performance relative to historical or projected future operating results, significant changes in the manner of our use of the acquired assets or

the strategy for our overall business, or significant negative industry or economic trends. The provisions of SFAS No. 142 require an impairment test annually or more frequently if impairment indicators arise. In testing for a potential impairment of other intangible assets, the provisions of SFAS No. 142 require the application of a fair value based test at the reporting unit level. We operate in one reportable segment and have one reporting unit. Therefore, the entire intangible asset value is considered on an enterprise basis and the first step of the impairment test prescribed by SFAS No. 142 requires a comparison of our fair value to our book value. If the estimated fair value is less than the book value, SFAS No. 142 requires an estimate of the fair value of all identifiable assets and liabilities of the business, in a manner similar to a purchase price allocation for an acquired business. Potential intangible asset impairment is measured based upon this two-step process.

In accordance with SFAS No. 144, *Accounting for the Impairment or Disposal of Long-lived Assets* (SFAS No. 144), the Company tests its other long-lived assets, including property, equipment and leasehold improvements for recoverability whenever

Table of Contents

events or changes in circumstances indicate that the carrying value of those assets may not be recoverable. The Company assesses the recoverability of an asset group by determining if the carrying value of the asset group exceeds the sum of the projected undiscounted cash flows expected to result from the use and eventual disposition of the assets over the remaining economic life of the primary asset in the asset group. If the recoverability test indicates that the carrying value of the asset group is not recoverable, the Company will estimate the fair value of the asset group using the income approach, which is the present value technique used to measure the fair value of future cash flow produced by each asset group, and compare it to its carrying value. The excess of the carrying value over the fair value is allocated pro rata to derive the adjusted carrying value. The adjusted carrying value of each asset in the asset group is not reduced below its fair value.

The process of evaluating the potential impairment of long-lived assets is subjective and requires significant judgment on matters such as, but not limited to, the reporting unit at which long-lived assets should be measured for impairment and the asset group to be tested for recoverability. The Company is also required to make estimates that may significantly impact the outcome of the analyses. Such estimates include, but are not limited to, future operating performance and cash flows, cost of capital, terminal values, control premiums and remaining economic lives of assets.

Equity Incentives to Employees

We have accounted for stock-based compensation under Statement of Financial Accounting Standards (SFAS) 123R (revised 2004) *Share-Based Payment* (SFAS 123R) and SEC Staff Accounting Bulletin (SAB) 107 which requires the use of option pricing models that were not developed for use in valuing employee stock options. The Black-Scholes option-pricing model that we use was developed for use in estimating the fair value of short-lived exchange traded options that have no vesting restrictions and are fully transferable. In addition, option-pricing models require the input of highly subjective assumptions, including the option s expected life and the price volatility of underlying stock. Our expect stock price volatility assumption was determined using the historical volatility of our common stock. We determined that historical volatility reflects market conditions and is a good indicator of future volatility. Our expected term represents the period that our stock-based awards are expected to be outstanding and was determined based on our historical experience with similar awards, giving consideration to the contractual terms of the stock-based awards and vesting schedules.

Recently Issued Accounting Standards

See *Recently Issued Accounting Standards* in Note 1 of Notes to Condensed Consolidated Financial Statements.

ITEM 3. Quantitative and Qualitative Disclosures About Market Risk

Market risk represents the risk of changes in value of financial instruments caused by fluctuations in interest rates and foreign exchange rates.

Foreign Exchange Rates

Currently, a significant majority of our sales and arrangements with third-party suppliers provide for pricing and payment in US dollars, and, therefore, are not subject to material exchange rate fluctuations. Therefore, we do not expect foreign currency exchange rate fluctuations to have a material effect on our results of operations. Increases in the value of the United States dollar relative to other currencies would make our products more expensive, which could negatively impact our ability to compete. Conversely, decreases in the value of the US dollar relative to other currencies could result in our suppliers raising their prices in order to continue doing business with us.

Interest Rates

Our interest rate risk relates primarily to our third party debt which totals \$17.3 million as of April 3, 2009, and carries interest rates pegged to the LIBOR and PRIME rates. An immediate increase in interest rates of 100 basis points would increase our interest expense by approximately \$43,000 per quarter. This would be partially offset by increased interest income on our invested cash. Conversely, an immediate decline of 100 basis points in interest rates would decrease our interest expense by approximately \$43,000 per quarter. This would be partially offset by decreased interest income on our invested cash.

ITEM 4. Controls and Procedures

As required by Rule 13a-15(b) under the Securities Exchange Act of 1934 (the Exchange Act), management, including the Chief Executive Officer and Principal Financial Officer, conducted an evaluation as of the end of the

period covered by this report, of the effectiveness of our disclosure controls and procedures as defined in Exchange Act Rule 13a-15(e). Based on that evaluation, the Chief Executive Officer and Principal Financial Officer concluded that due to the material weakness described below, we did not have

Table of Contents

effective disclosure controls and procedures as of the end of the period covered by this quarterly report on Form 10-Q. The following material weakness has been identified:

The Company did not maintain sufficient and qualified resources with the proper training and experience related to year-end physical inventory count procedures at our new centralized manufacturing facility in Hayward, California and in the computation of inventory reserves with respect to the Company's accounting policies and procedures in accordance with accounting principles generally accepted in the United States of America.

This material weakness was previously reported in our 2008 Form 10-K filed with the SEC on March 19, 2009. We are in the process of determining the steps required to remediate this material weakness, however, we can not estimate the time required to complete these remediation steps.

As required by Rule 13a-15(d), management, including the Chief Executive Officer and Principal Financial Officer, also conducted an evaluation of our internal control over financial reporting to determine whether any changes occurred during the fiscal quarter that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting. In response to the material weakness described above, during the period covered by this quarterly report on Form 10-Q, we made the following change to our internal controls over financial reporting that is reasonably likely to materially effect our internal control over financial reporting:

We hired a new Director of Materials in our Hayward location to oversee all areas of our inventory operations, including cycle counting and physical inventory count procedures.

It should be noted that any system of controls, however well designed and operated, can provide only reasonable, and not absolute, assurance that the objectives of the system will be met. In addition, the design of any control system is based in part upon certain assumptions about the likelihood of future events.

PART II. OTHER INFORMATION

ITEM 1. Legal Proceedings

From time to time, we are subject to various legal proceedings and claims, either asserted or unasserted, that arise in the ordinary course of business.

ITEM 1A. Risk Factors

We are exposed to risks associated with the ongoing financial crisis and weakening global economy.

The recent weakening global economy, severe tightening of the credit markets and turmoil in the financial markets are contributing to slowdowns in the industries in which we operate. Such slowdowns are expected to worsen if these economic conditions are prolonged or deteriorate further. Reduced growth and uncertainty regarding future growth in economies throughout the world have caused companies to reduce capital investment and may in the future cause further reduction of such investments. These reductions have often been particularly severe in the semiconductor capital equipment industry. Economic uncertainty has led to historically low consumer confidence levels and has caused and may in the future cause our customers to push out, cancel, or refrain from placing orders with us, which in turn would further reduce our sales and negatively impact our cash flow. Our sales were \$22.4 million in the first quarter of 2009 and \$266.9 million for fiscal year 2008 compared to \$92.4 million in the first quarter of fiscal 2008 and \$403.8 million for fiscal year 2007, and we can not predict when our business will improve. We incurred a net loss of \$7.0 million during the first quarter of fiscal 2009 and \$52.4 million, which included a charge for impairment of goodwill and other long-lived assets of \$55.1 million, for the year ended January 2, 2009, and we expect to incur additional losses in the future. While there can be no assurance as to when the current economic slowdown will end, a period of recovery may nonetheless result in significant fluctuations in customer orders. In the recent period of declining demand, there is a greater risk that we acquire inventory in excess of levels demanded by our customers, which could cause us to incur excess or obsolete inventory charges. Also, as a result of the weakening global economy, certain of our suppliers may be forced out of business, which would require us to either procure products from high-cost suppliers, or if no additional suppliers exist, to reconfigure the design and manufacture of our products, and we may be unable to fulfill some customer orders. Furthermore, the tightening of credit in financial markets may delay or prevent our customers from securing funding adequate to operate their businesses and purchase our products.

Furthermore, the equity and credit markets have been experiencing extreme volatility and disruption at unprecedented levels. In many cases, the markets have limited capacity for issuers, and lenders have requested shorter

terms. The market for new equity and debt financing is extremely limited and in some cases not available at all. In addition, the markets have increased the uncertainty that

Table of Contents

lenders will be able to comply with their previous commitments. If current levels of market disruption and volatility continue or worsen, we may not be able to draw upon our revolving credit facility, incur additional debt or raise new equity in the event we need to do so.

These conditions and uncertainty about future economic conditions make it challenging for us to forecast our operating results, make business decisions, and identify the risks that may affect our business, financial condition and results of operations. We expect business conditions to remain difficult, and we have implemented cost reduction programs aimed at aligning our ongoing operating costs with our currently expected revenues over the near term. These cost management initiatives include reductions to headcount and reduced spending. If we are not able to timely and appropriately adapt to changes resulting from the difficult macroeconomic environment, our business, financial condition and results of operations could be adversely affected.

The highly volatile nature of the industries we serve could harm our operating results.

Our business and operating results depend in significant part upon capital expenditures by manufacturers of semiconductors, flat panel displays, solar and medical devices, which in turn depend upon the current and anticipated market demand for such products. Historically, the industries we serve (in particular the semiconductor industry) have been highly cyclical, with recurring periods of over-supply of products that have had a severe negative effect on the demand for capital equipment used to manufacture such products. We have experienced and anticipate that we will continue to experience significant fluctuations in customer orders for our products through such cycles. Slowdowns in the industries we serve have had, and future slowdowns may also have, a material adverse effect on our operating results. During periods of decreasing demand for our products, we must be able to appropriately align our cost structure with prevailing market conditions, effectively manage our supply chain and motivate and retain employees. During periods of increasing demand, we must increase manufacturing capacity and inventory to meet customer demands, effectively manage our supply chain and attract, retain and motivate a sufficient number of qualified employees. If we are not able to timely and appropriately adapt to the changes in our business environment, our results of operations will be harmed. Also, the cyclical and volatile nature of the industries we serve make future revenues, results of operations and net cash flows difficult to estimate.

We rely on a small number of customers for a significant portion of our sales, and any impairment of our relationships with these customers would adversely affect our business.

A relatively small number of OEM customers have historically accounted for a significant portion of our sales, and we expect this trend to continue. Collectively, Applied Materials, Inc., Intuitive Surgical, Inc., Lam Research Corporation and Novellus Systems, Inc., have accounted for 88% of our sales in each of our fiscal years 2008, 2007 and 2006, respectively. Because of the small number of OEMs in the markets we serve, most of which are already our customers, it would be difficult to replace lost revenue resulting from the loss of, or the reduction, cancellation or delay in purchase orders by any one of these customers. Our customer contracts generally do not require them to place any orders with us. Consolidation among our customers, or a decision by any one or more of our customers to outsource all or most manufacturing and assembly work to a single equipment manufacturer, may further concentrate our business in a limited number of customers and expose us to increased risks relating to dependence on an even smaller number of customers.

In addition, by virtue of our customers' size and the significant portion of revenue that we derive from them, they are able to exert significant influence and pricing pressure in the negotiation of our commercial agreements and the conduct of our business with them. We may also be asked to accommodate customer requests that extend beyond the express terms of our agreements in order to maintain our relationships with our customers. If we are unable to retain and expand our business with these customers on favorable terms, our business and operating results will be adversely affected.

We have had to qualify, and are required to maintain our status, as a supplier for each of our customers. This is a lengthy process that involves the inspection and approval by a customer of our engineering, documentation, manufacturing and quality control procedures before that customer will place volume orders. Our ability to lessen the adverse effect of any loss of, or reduction in sales to, an existing customer through the rapid addition of one or more new customers is minimal because of these qualification requirements. Consequently, our business, operating results and financial condition would be adversely affected by the loss of, or any reduction in orders by, any of our significant

customers.

Our quarterly revenue and operating results fluctuate significantly from period to period, and this may cause volatility in our common stock price.

Our quarterly revenue and operating results have fluctuated significantly in the past, and we expect them to continue to fluctuate in the future for a variety of reasons which may include:

demand for and market acceptance of our products as a result of the cyclical nature of the industries we serve or otherwise, often resulting in reduced sales during industry downturns and increased sales during periods of industry recovery;

Overall economic conditions;

changes in the timing and size of orders by our customers;

22

Table of Contents

cancellations and postponements of previously placed orders;

pricing pressure from either our competitors or our customers, resulting in the reduction of our product prices;

disruptions or delays in the manufacturing of our products or in the supply of components or raw materials that are incorporated into or used to manufacture our products, thereby causing us to delay the shipment of products;

decreased margins for several or more quarters following the introduction of new products, especially as we introduce new subsystems;

delays in ramp-up in production, low yields or other problems experienced at our manufacturing facilities in China;

changes in design-to-delivery cycle times;

inability to reduce our costs quickly in step with reductions in our prices or in response to decreased demand for our products;

changes in our mix of products sold;

write-offs of excess or obsolete inventory;

one-time expenses or charges associated with failed acquisition negotiations or completed acquisitions;

announcements by our competitors of new products, services or technological innovations, which may, among other things, render our products less competitive; and

geographic mix of worldwide earnings.

As a result of the foregoing, we believe that quarter-to-quarter comparisons of our revenue and operating results may not be meaningful and that these comparisons may not be an accurate indicator of our future performance. Changes in the timing or terms of a small number of transactions could disproportionately affect our operating results in any particular quarter. Moreover, our operating results in one or more future quarters may fail to meet the expectations of securities analysts or investors. If this occurs, we would expect to experience an immediate and significant decline in the trading price of our common stock.

We have established, and as markets will allow, intend to expand our operations in China, which exposes us to risks associated with operating in a foreign country.

We intend to expand, as markets will allow, our operations in China. Our total assets in China at April 3, 2009 were \$18.7 million.

We are exposed to political, economic, legal and other risks associated with operating in China, including:
foreign currency exchange fluctuations;

political, civil and economic instability;

tariffs and other barriers;

timing and availability of export licenses;

disruptions to our and our customers' operations due to the outbreak of communicable diseases, such as SARS and avian flu;

disruptions in operations due to the weakness of China's domestic infrastructure, including transportation and energy;

difficulties in developing relationships with local suppliers;

difficulties in attracting new international customers;

Table of Contents

difficulties in accounts receivable collections;

difficulties in staffing and managing a distant international subsidiary and branch operations;

the burden of complying with foreign and international laws and treaties;

difficulty in transferring funds to other geographic locations; and

potentially adverse tax consequences.

Our operations in China also subject us to U.S. laws governing the export of equipment. These laws are complex and require us to obtain clearances for the export to China of certain equipment. We may fail to comply with these laws and regulations, which could require us to cease use of certain equipment and expose us to fines or penalties.

Over the past several years the Chinese government has pursued economic reform policies, including the encouragement of private economic activity and greater economic decentralization. The Chinese government may not continue these policies or may significantly alter them to our detriment from time to time without notice. Changes in laws and regulations or their interpretation, the imposition of confiscatory taxation policies, new restrictions on currency conversion or limitations on sources of supply could materially and adversely affect our Chinese operations, which could result in the partial or total loss of our investment in that country and materially and adversely affect our future operating results.

Third parties have claimed and may in the future claim we are infringing their intellectual property, which could subject us to litigation or licensing expenses, and we may be prevented from selling our products if any such claims prove successful.

We have in the past and may in the future receive claims that our products, processes or technologies infringe the patents or other proprietary rights of third parties. For example, in 2007 we completed our defense of an infringement action brought against us by Celerity, Inc. Our defense was successful only in part. We incurred a total of approximately \$130,000 in damages and court costs related to the Celerity infringement. In addition, we may be unaware of intellectual property rights of others that may be applicable to our products. Any litigation regarding our patents or other intellectual property could be costly and time-consuming and divert our management and key personnel from our business operations, any of which could have a material adverse effect on our business and results of operations. The complexity of the technology involved in our products and the uncertainty of intellectual property litigation increase these risks. Claims of intellectual property infringement may also require us to enter into costly license agreements. However, we may not be able to obtain licenses on terms acceptable to us, or at all. We also may be subject to significant damages or injunctions against the development, manufacture and sale of certain of our products if any such claims prove successful.

We are subject to order and shipment uncertainties and any significant reductions, cancellations or delays in customer orders could cause our revenue to decline and our operating results to suffer.

Our revenue is difficult to forecast because we generally do not have a material backlog of unfilled orders and because of the short time frame within which we are often required to design, produce and deliver products to our customers. Most of our revenue in any quarter depends on customer orders for our products that we receive and fulfill in the same quarter. We do not have long-term purchase orders or contracts that contain minimum purchase commitments from our customers. Instead, we receive non-binding forecasts of the future volume of orders from our customers. Occasionally, we order and build component inventory in advance of the receipt of actual customer orders. Customers may cancel order forecasts, change production quantities from forecasted volumes or delay production for reasons beyond our control. Furthermore, reductions, cancellations or delays in customer order forecasts usually occur without penalty to, or compensation from, the customer. Reductions, cancellations or delays in forecasted orders could cause us to hold inventory longer than anticipated, which could reduce our gross profit, restrict our ability to fund our operations and cause us to incur unanticipated reductions or delays in revenue. If we do not obtain orders as we anticipate, we could have excess component inventory for a specific product that we would not be able to sell to another customer, likely resulting in inventory write-offs, which could have a material adverse effect on our business,

financial condition and operating results. In addition, because many of our costs are fixed in the short term, we could experience deterioration in our gross profit when our production volumes decline.

The manufacturing of our products is highly complex, and if we are not able to manage our manufacturing and procurement process effectively, our business and operating results will suffer.

The manufacturing of our products is a highly complex process that involves the integration of multiple components and requires effective management of our supply chain while meeting our customers' design-to-delivery cycle time requirements. Through the course of the manufacturing process, our customers may modify design and system configurations in response to changes in their own customers' requirements. In order to rapidly respond to these modifications and deliver our products to our customers in a timely manner, we must effectively manage our manufacturing and procurement process. If we fail to manage this process effectively, we risk losing customers and damaging our reputation. In addition, if we acquire inventory in excess of demand or that does not meet customer specifications, we could incur excess or obsolete inventory charges. These risks are even greater during an economic downturn as we are currently experiencing and as we continue to expand our business beyond gas delivery systems into new subsystems. In this economic downturn, certain of our suppliers may be forced out of business, which would require us to either

Table of Contents

procure product from higher-cost suppliers or, if no additional suppliers exist, reconfigure the design and manufacture of our products. This could limit our growth and have a material adverse effect on our business, financial condition and operating results.

OEMs may not continue to outsource other critical subsystems, which would adversely impact our operating results.

The success of our business depends on OEMs continuing to outsource the manufacturing of critical subsystems. Most of the largest OEMs have already outsourced production of a significant portion of their critical subsystems. If OEMs do not continue to outsource critical subsystems for their capital equipment, our revenue would be significantly reduced, which would have a material adverse effect on our business, financial condition and operating results. In addition, if we are unable to obtain additional business from OEMs, even if they continue to outsource their production of critical subsystems, our business, financial condition and operating results could be adversely affected.

If our new products are not accepted by OEMs or if we are unable to maintain historical margins on our new products, our operating results would be adversely impacted.

We design, develop and market critical subsystems to OEMs. Sales of new products are expected to make up an increasing part of our total revenue. The introduction of new products is inherently risky because it is difficult to foresee the adoption of new standards, coordinate our technical personnel and strategic relationships and win acceptance of new products by OEMs. We may not be able to recoup design and development expenditures if our new products are not accepted by OEMs. Newly introduced products typically carry lower gross margins for several or more quarters following their introduction. If any of our new subsystems is not successful in the market, or if we are unable to obtain gross margins on new products that are similar to the gross margins we have historically achieved, our business, operating results and financial condition could be adversely affected.

We may not be able to integrate efficiently the operations of past and future acquired businesses.

We have made, and may in the future consider making, additional acquisitions of, or significant investments in, businesses that offer complementary products, services, technologies or market access. For example, we acquired Sieger Engineering, Inc. in June 2006. If we are to realize the anticipated benefits of past and future acquisitions or investments, the operations of these companies must be integrated and combined efficiently with our own. The process of integrating supply and distribution channels, computer and accounting systems, and other aspects of operations, while managing a larger entity, have and will present a significant challenge to our management. In addition, it is not certain that we will be able to incorporate different financial and reporting controls, processes, systems and technologies into our existing business environment. The difficulties of integration may increase because of the necessity of combining personnel with varied business backgrounds and combining different corporate cultures and objectives. We may assume substantial debt and incur substantial costs associated with these activities and we may suffer other material adverse effects from these integration efforts which could materially reduce our earnings, even over the long-term. We may not succeed with the integration process and we may not fully realize the anticipated benefits of the business combinations. The dedication of management resources to such integration or divestitures may detract attention from the day-to-day business, and we may need to hire additional management personnel to manage our acquisitions successfully.

In addition, we frequently evaluate acquisitions of, or significant investments in, complementary companies, assets, businesses and technologies. Even if an acquisition or other investment is not completed, we may incur significant management time and effort and financial cost in evaluating such acquisition or investment, which has in the past had, and could in the future have, an adverse effect on our results of operations. Furthermore, due to the limited liquidity in the credit market, the financing of any such acquisition may be difficult to obtain, and the terms of such financing may be less favorable.

Our business is largely dependent on the know-how of our employees, and we generally do not have a protected intellectual property position.

Our business is largely dependent upon our design, engineering, manufacturing and testing know-how. We rely on a combination of trade secrets and contractual confidentiality provisions and, to a much lesser extent, patents, copyrights and trademarks to protect our proprietary rights. Accordingly, our intellectual property position is more vulnerable than it would be if it were protected by patents. If we fail to protect our proprietary rights successfully, our

competitive position could suffer, which could harm our operating results. We may be required to spend significant resources to monitor and protect our proprietary rights, and, in the event we do not detect infringement of our proprietary rights, we may lose our competitive position in the market if any such infringement occurs. In addition, competitors may design around our technology or develop competing technologies and know-how.

If we do not keep pace with developments in the industries we serve and with technological innovation generally, our products may not be competitive.

Rapid technological innovation in semiconductor, flat panel displays, solar and medical device manufacturing requires capital equipment providers to anticipate and respond quickly to evolving customer requirements and could render our current product offerings and technology obsolete. Technological innovations are inherently complex. We must devote resources to technology development in order to keep pace with such rapidly evolving technologies. We believe that our future success will depend upon our ability to design, engineer and manufacture products that meet the changing needs of our customers. This requires that we successfully anticipate and respond to technological changes in design, engineering and manufacturing processes in a cost-effective and timely manner. If we are unable to integrate new technical specifications into competitive product designs, develop the technical capabilities

Table of Contents

necessary to manufacture new products or make necessary modifications or enhancements to existing products, our business prospects could be harmed.

The timely development of new or enhanced products is a complex and uncertain process which requires that we: design innovative and performance-enhancing features that differentiate our products from those of our competitors;

identify emerging technological trends in the industries we serve, including new standards for our products;

accurately identify and design new products to meet market needs;

collaborate with OEMs to design and develop products on a timely and cost-effective basis;

ramp-up production of new products, especially new subsystems, in a timely manner and with acceptable yields;

successfully manage development production cycles; and

respond effectively to technological changes or product announcements by others.

The industries in which we participate are highly competitive and rapidly evolving, and if we are unable to compete effectively, our operating results would be harmed.

Although we have not faced competition in the past from the largest subsystem and component manufacturers in the industries we serve, these suppliers could compete with us in the future. Increased competition has in the past resulted, and could in the future result, in price reductions, reduced gross margins or loss of market share, any of which would harm our operating results. We are subject to pricing pressure as we attempt to increase market share with our existing customers. Competitors may introduce new products for the markets currently served by our products. These products may have better performance, lower prices and achieve broader market acceptance than our products. Further, OEMs typically own the design rights to their products and may provide these designs to other subsystem manufacturers. If our competitors obtain proprietary rights to these designs such that we are unable to obtain the designs necessary to manufacture products for our OEM customers, our business, financial condition and operating results could be adversely affected.

Our competitors may have greater financial, technical, manufacturing and marketing resources than we do. As a result, they may be able to respond more quickly to new or emerging technologies and changes in customer requirements, devote greater resources to the development, promotion, sale and support of their products, and reduce prices to increase market share. Moreover, there may be merger and acquisition activity among our competitors and potential competitors that may provide our competitors and potential competitors an advantage over us by enabling them to expand their product offerings and service capabilities to meet a broader range of customer needs. Further, if one of our customers develops or acquires the internal capability to develop and produce critical subsystems that we produce, the loss of that customer could have a material adverse effect on our business, financial condition and operating results. The introduction of new technologies and new market entrants may also increase competitive pressures.

We must achieve design wins to retain our existing customers and to obtain new customers.

New capital equipment typically has a lifespan of several years, and OEMs frequently specify which systems, subsystems, components and instruments are to be used in their equipment. Once a specific system, subsystem, component or instrument is incorporated into a piece of capital equipment, it will likely continue to be incorporated into that piece of equipment for at least several months before the OEM switches to the product of another supplier.

Accordingly, it is important that our products are designed into the new semiconductor, solar, flat panel and medical device capital equipment of OEMs, which we refer to as a design win, in order to retain our competitive position with existing customers and to obtain new customers.

We incur technology development and sales expenses with no assurance that our products will ultimately be designed into an OEM's capital equipment. Further, developing new customer relationships, as well as increasing our market share at existing customers, requires a substantial investment of our sales, engineering and management resources without any assurance from prospective customers that they will place significant orders. We believe that OEMs often select their suppliers and place orders based on long-term relationships. Accordingly, we may have difficulty achieving design wins from OEMs that are not currently our customers. Our operating results and potential growth could be adversely affected if we fail to achieve design wins with leading OEMs.

We may not be able to respond quickly enough to increases in demand for our products.

Demand shifts in the industries we serve are rapid and difficult to predict, and we may not be able to respond quickly enough to an increase in demand. Our ability to increase sales of our products depends, in part, upon our ability to:

Table of Contents

mobilize our supply chain in order to maintain component and raw material supply;

optimize the use of our design, engineering and manufacturing capacity in a timely manner;

deliver our products to our customers in a timely fashion;

expand, if necessary, our manufacturing capacity; and

maintain our product quality as we increase production.

If we are unable to respond to rapid increases in demand for our products on a timely basis or to manage any corresponding expansion of our manufacturing capacity effectively, our customers could increase their purchases from our competitors, which would adversely affect our business.

Our dependence on our suppliers may prevent us from delivering an acceptable product on a timely basis.

We rely on both single-source and sole-source suppliers, some of whom are relatively small, for many of the components we use in our products. In addition, our customers often specify components of particular suppliers that we must incorporate into our products. Our suppliers are under no obligation to provide us with components. As a result, the loss of or failure to perform by any of these providers could adversely affect our business and operating results. The risk of such a loss is particularly high as a result of the current economic downturn, as many of our suppliers have announced poor operating results and have limited access to capital. In addition, the manufacturing of certain components and subsystems is an extremely complex process. Therefore, if a supplier were unable to provide the volume of components we require on a timely basis and at acceptable prices, we would have to identify and qualify replacements from alternative sources of supply. The process of qualifying new suppliers for these complex components is lengthy and could delay our production, which would adversely affect our business, operating results and financial condition. We may also experience difficulty in obtaining sufficient supplies of components and raw materials in times of significant growth in our business. For example, we have in the past experienced shortages in supplies of various components, such as mass flow controllers, valves and regulators, and certain prefabricated parts, such as sheet metal enclosures, used in the manufacture of our products. In addition, one of our competitors manufactures mass flow controllers that may be specified by one or more of our customers. If we are unable to obtain these particular mass flow controllers from our competitor or convince a customer to select alternative mass flow controllers, we may be unable to meet that customer's requirements, which could result in a loss of market share.

Defects in our products could damage our reputation, decrease market acceptance of our products, cause the unintended release of hazardous materials and result in potentially costly litigation.

A number of factors, including design flaws, material and component failures, contamination in the manufacturing environment, impurities in the materials used and unknown sensitivities to process conditions, such as temperature and humidity, as well as equipment failures, may cause our products to contain undetected errors or defects. Problems with our products may:

cause delays in product introductions and shipments;

result in increased costs and diversion of development resources;

cause us to incur increased charges due to unusable inventory;

require design modifications;

decrease market acceptance of, or customer satisfaction with, our products, which could result in decreased sales and product returns; or

result in lower yields for semiconductor manufacturers.

If any of our products contain defects or have reliability, quality or compatibility problems, our reputation might be damaged and customers might be reluctant to buy our products. We may also face a higher rate of product defects as we increase our production levels. Product defects could result in the loss of existing customers or impair our ability to attract new customers. In addition, we may not find defects or failures in our products until after they are installed in a manufacturer's fabrication facility. We may have to invest significant capital and other resources to correct these problems. Our current or potential customers also might seek to recover from us any losses resulting from defects or failures in our products. Hazardous materials flow through and are controlled by our products and an unintended release of these materials could result in serious injury or death. Liability claims could require us to spend significant time and money in litigation or pay significant damages.

We have outstanding indebtedness; the restrictive covenants under our debt agreements may limit our ability to expand or pursue our business strategy; if we are forced to prepay some or all of this indebtedness our financial position would be severely and adversely affected.

Table of Contents

We have outstanding indebtedness. At the end of our first quarter of fiscal 2009, our long-term debt was \$2.7 million and our short-term debt was \$14.6 million, for an aggregate total of \$17.3 million. Our loan agreement, as amended on February 4, 2009, requires compliance with certain financial covenants, including maintenance of a minimum monthly tangible net worth and a minimum monthly liquidity coverage ratio. The covenants contained in our line of credit with the bank also restrict our ability to take certain actions, including our ability to:

incur additional indebtedness;

pay dividends and make distributions in respect of our capital stock;

redeem capital stock;

make investments or other restricted payments outside the ordinary course of business;

engage in transactions with stockholders and affiliates;

create liens;

sell or otherwise dispose of assets;

make payments on our other debt, other than in the ordinary course; and

engage in certain mergers and acquisitions.

We are currently in compliance with the financial and reporting covenants in our loan agreement. In February 2009, we were out of compliance with a particular financial covenant; however, we received a waiver from our bank. We cannot assure you that we will meet these financial covenants in subsequent periods. If we are unable to meet any covenants, we cannot assure you that the bank will grant waivers or amend the covenants, or that the bank will not terminate the agreement, preclude further borrowings or require us to immediately repay any outstanding borrowings. As long as our indebtedness remains outstanding, the restrictive covenants could impair our ability to expand or pursue our business strategies or obtain additional funding. Forced prepayment of some or all of our indebtedness would reduce our available cash balances and have an adverse impact on our operating and financial performance.

We may not be able to fund our future capital requirements from our operations, and financing from other sources may not be available on favorable terms or at all.

We made capital expenditures of \$9.4 million during fiscal 2008, of which \$7.7 million related to improvements to our new manufacturing facility in Hayward, California and \$1.7 million related to the development of our manufacturing facilities in China. The amount of our future capital requirements will depend on many factors, including:

general worldwide financial market conditions;

the cost required to ensure access to adequate manufacturing capacity;

the timing and extent of spending to support product development efforts;

the timing of introductions of new products and enhancements to existing products;

changing manufacturing capabilities to meet new customer requirements; and

market acceptance of our products.

Although we amended our loan agreement and extended the maturity of our credit facility through January 29, 2012, we may need to raise additional funds through public or private equity or debt financing if our current cash and cash flow from operations are insufficient to fund our future activities. Due to very limited liquidity in the credit market, we may not be able to obtain additional debt financing when and if necessary in a timely manner. In addition, banks have sometimes been unable or unwilling to satisfy their obligations under existing credit arrangements. Access to capital markets has recently been unavailable to most companies such as ours and there can be no assurance as to when the capital markets will recover. Equity financing, when and if available, could be dilutive to holders of our common stock, and debt financings would likely involve covenants that restrict our business operations. If we cannot raise funds on acceptable terms, if and when needed, we may not be able to develop or enhance our products, take advantage of future opportunities, grow our business or respond to competitive pressures or unanticipated requirements, any of which could adversely affect our business, operating results and financial condition.

The technology labor market is very competitive, and our business will suffer if we are unable to hire and retain key personnel.

Our future success depends in part on the continued service of our key executive officers, as well as our research, engineering, sales, manufacturing and administrative personnel, most of whom are not subject to employment or non-competition agreements. In

Table of Contents

addition, competition for qualified personnel in the technology industry is intense, and we operate in geographic locations in which labor markets are particularly competitive. Our business is particularly dependent on expertise which only a very limited number of engineers possess. The loss of any of our key employees and officers, including our Chief Executive Officer, Chief Operating Officer or any of our Senior Vice Presidents, or the failure to attract and retain new qualified employees, would adversely affect our business, operating results and financial condition.

Fluctuations in currency exchange rates may adversely affect our financial condition and results of operations.

Our international sales are denominated primarily, though not entirely, in U.S. dollars. Many of the costs and expenses associated with our Chinese subsidiaries are paid in Chinese Renminbi, and we expect our exposure to Chinese Renminbi to increase as we ramp up production in those facilities. In addition, purchases of some of our components are denominated in Japanese Yen. Changes in exchange rates among other currencies in which our revenue or costs are denominated and the U.S. dollar may affect our revenue, cost of sales and operating margins. While fluctuations in the value of our revenue, cost of sales and operating margins as measured in U.S. dollars have not materially affected our results of operations historically, we do not currently hedge our exchange exposure, and exchange rate fluctuations could have an adverse effect on our financial condition and results of operations in the future.

If environmental contamination were to occur in one of our manufacturing facilities, we could be subject to substantial liabilities.

We use substances regulated under various foreign, domestic, federal, state and local environmental laws in our manufacturing facilities. Our failure or inability to comply with existing or future environmental laws could result in significant remediation liabilities, the imposition of fines or the suspension or termination of the production of our products. In addition, we may not be aware of all environmental laws or regulations that could subject us to liability.

If our facilities were to experience catastrophic loss due to natural disasters, our operations would be seriously harmed.

Our facilities could be subject to a catastrophic loss caused by natural disasters, including fires and earthquakes. We have facilities in areas with above average seismic activity, such as our manufacturing facility in South San Francisco, California and our new manufacturing and headquarters facilities in Hayward, California. If any of our facilities were to experience a catastrophic loss, it could disrupt our operations, delay production and shipments, reduce revenue and result in large expenses to repair or replace the facility. In addition, we have in the past experienced, and may in the future experience, extended power outages at our facilities. We do not carry insurance policies that cover potential losses caused by earthquakes or other natural disasters or power loss.

We must maintain effective controls, and our auditors will report on them.

The Sarbanes-Oxley Act of 2002 requires, among other things, that we maintain effective disclosure controls and procedures and internal control over financial reporting. In order to maintain and improve the effectiveness of our disclosure controls and procedures and internal control over financial reporting, significant resources and management oversight are required. As a result, our management's attention might be diverted from other business concerns, which could have a material adverse effect on our business, financial condition and operating results.

During the audit of our financial statements for fiscal 2008 and during the third quarter of 2008, material weaknesses in our internal control over financial reporting were identified and, in the future, we may identify additional material weaknesses in our internal control over financial reporting. The material weakness identified as of January 2, 2009 related to year-end physical inventory count procedures and computation of inventory reserves. The material weakness identified in the third quarter of fiscal 2008 related to misclassification of debt between current and non current liabilities in our balance sheet as of September 26, 2008. We have remediated the material weakness related to misclassification of debt and are in the process of determining the steps required to remediate the material weakness related to year-end physical inventory count procedures and computation of inventory reserves, however we cannot estimate the time required to complete these remediation steps. Any failure by us to maintain adequate controls or to adequately implement new controls could harm our operating results or cause us to fail to meet our reporting obligations. Inferior internal controls could also cause investors to lose confidence in our reported financial information, which could adversely affect the trading price of our common stock. In addition, we might need to hire additional accounting and financial staff with appropriate public company experience and technical accounting

knowledge, and we might not be able to do so in a timely fashion.

The market for our stock is subject to significant fluctuation.

The size of our public market capitalization is relatively small, and the volume of our shares that are traded is low. The market price of our common stock could be subject to significant fluctuations. Among the factors that could affect our stock price are:

quarterly variations in our operating results;

our ability to successfully introduce new products and manage new product transitions;

changes in revenue or earnings estimates or publication of research reports by analysts;

speculation in the press or investment community;

strategic actions by us or our competitors, such as acquisitions or restructurings;

Table of Contents

announcements relating to any of our key customers, significant suppliers or the semiconductor manufacturing and capital equipment industry generally;

general market conditions;

the effects of war and terrorist attacks; and

domestic and international economic factors unrelated to our performance.

The stock markets in general, and the markets for technology stocks in particular, have experienced extreme volatility that has often been unrelated to the operating performance of particular companies. These broad market fluctuations may adversely affect the trading price of our common stock.

ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds

None.

ITEM 3. Defaults Upon Senior Securities

None.

ITEM 4. Submission of Matters to a Vote of Security Holders

None.

ITEM 5. Other Information

None.

ITEM 6. Exhibits

(a) Exhibits

The following exhibits are filed with this current Report on Form 10-Q for the quarter ended April 3, 2009:

Exhibit Number	Description
31.1	Certification of Chief Executive Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
31.2	Certification of Principal Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
32.1	Certification of the Chief Executive Officer and the Principal Financial Officer pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.
