

ELECTRIC CITY CORP
Form 10-K
March 31, 2005

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Form 10-K

☒ ANNUAL REPORT UNDER SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended: December 31, 2004

☐ TRANSITION REPORT UNDER SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

Commission file number 000-2791

ELECTRIC CITY CORP.

(Name of small business issuer in its charter)

Delaware

(State or other jurisdiction of incorporation or organization)

36-4197337

(I.R.S. Employer Identification No.)

1280 Landmeier Road, Elk Grove Village, IL

(Address of principal executive offices)

60007-2410

(Zip Code)

Issuer's telephone number (847) 437-1666

Securities registered under Section 12(b) of the Exchange Act:

<u>Title of each class</u>	<u>Name of each exchange on which registered</u>
<u>Common Stock \$0.0001 par value</u>	<u>American Stock Exchange</u>

Securities registered under Section 12(g) of the Exchange Act:

None

(Title of class)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Edgar Filing: ELECTRIC CITY CORP - Form 10-K

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. ☐

Indicate by checkmark whether the registrant is an accelerated filer (as defined in Rule 12b-2 of the Act). Yes ☐ No ☒

The aggregate market value of the registrant's common stock held by non-affiliates was \$51,917,332 based on the reported last sale price of common stock on June 30, 2004, which was the last business day of the registrant's most recently completed second fiscal quarter. For purposes of this computation, all executive officers, directors and 10% stockholders were deemed affiliates. Such a determination should not be construed as an admission that such executive officers, directors or 10% stockholders are affiliates.

As of March 25, 2005, there were 41,828,310 shares of common stock, \$0.0001 par value, of the Company issued and outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

DOCUMENT DESCRIPTION

10-K PART

Portions of the Registrant's notice of annual meeting of shareowners and proxy statement to be filed pursuant to Regulation 14A within 120 days after Registrant's fiscal year end of December 31, 2004 are incorporated by reference into Part II, Item 5 and Part III of this Report.	II, ITEM 5 III

PART I

Item 1. Description of Business

Included in this report, exhibits and associated documents are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, as well as historical information. Although we believe that the expectations reflected in such forward-looking statements are reasonable, we can give no assurances that such expectations reflected in such forward-looking statements will prove to be correct. Our actual results could differ materially from those anticipated in forward-looking statements as a result of certain factors, including matters described in the section titled

Management's Discussion and Analysis of Financial Condition and Results of Operations. Forward-looking statements include those that use forward-looking terminology, such as the words anticipate, believe, estimate, expect, intend, may, project, plan, will, shall, should, and similar expressions, including when used in the negative. Although we believe that the expectations reflected in these forward-looking statements are reasonable and achievable, such statements involve risks and uncertainties and no assurance can be given that the actual results will be consistent with these forward-looking statements.

Unless the context otherwise requires, Electric City, the Company, we, our, us and similar expressions refers to Electric City Corp. and its subsidiaries.

Overview/History

We are a developer, manufacturer and integrator of energy saving technologies and building automation controls as well as an independent developer of scalable, negative power systems. Our premier energy saving product is the EnergySaver system, which reduces energy consumed by lighting, typically by 20% to 30%, with minimal lighting level reduction. This technology has applications in commercial buildings, factories and office structures, as well as street lighting and parking lot lighting. Our GlobalCommander integrates with the EnergySaver allowing us to link multiple EnergySaver units together and to provide remote communications, measurement and verification of energy savings. The combined technology of the EnergySaver and GlobalCommander led to the development of our Virtual Negawatt Power Plan (VNPP), which is essentially a negative power system which we market primarily to utilities as a demand response system. In addition to our EnergySaver system, we also provide, through our subsidiary, Great Lakes Controlled Energy Corporation (Great Lakes), integrated building and environmental control solutions for commercial and industrial facilities. Until June 1, 2003, we also manufactured custom electrical switchgear through Switchboard Apparatus Inc. (Switchboard), a wholly owned subsidiary located in Broadview Illinois. In an effort to refocus our resources and shed the continuing losses from the switchgear business, we sold the operating assets of Switchboard to a group of investors that included the President of Switchboard, effective as of May 31, 2003.

On December 5, 1997, we were initially formed as Electric City LLC, a Delaware limited liability company. On June 5, 1998, we changed from a limited liability company into a corporation by merging Electric City LLC into Electric City Corp., a Delaware corporation.

On June 10, 1998, Electric City issued 1,200,272 shares of our common stock with a fair market value of \$1,200,272, representing approximately six (6%) percent of Electric City's then issued and outstanding common stock, to the approximately 330 shareholders of Pice Products Corporation (Pice), an inactive, unaffiliated company with minimal assets, pursuant to a merger agreement under which Pice was merged with and into Electric City. The purpose of the merger was to substantially increase the number of our shareholders to facilitate the establishment of a public trading market for our common stock. Trading in our common stock commenced on August 14, 1998 through the OTC Bulletin Board under the trading symbol ECCC .

In May 1999, we purchased most of the assets of Marino Electric, Inc., an entity engaged in the business of designing and manufacturing custom electrical switchgear and distribution panels.

On August 31, 2000, pursuant to an Agreement and Plan of Merger among us, Switchboard Apparatus, Inc. and Switchboard Apparatus's stockholders, we acquired Switchboard Apparatus. In connection with the acquisition, Switchboard Apparatus was merged into our wholly owned subsidiary, with our subsidiary continuing as the surviving corporation under the name Switchboard Apparatus, Inc.

On June 7, 2001, pursuant to an Agreement and Plan of Merger by and among us, Electric City Great Lakes Acquisition Corporation, Great Lakes Controlled Energy Corporation (Great Lakes) and Great Lakes stockholders, we acquired Great Lakes. Great Lakes is an independent systems integrator and facilities support specialist and focuses on building automation controls for lighting and HVAC systems for commercial applications. Great Lakes is also a national representative and distributor of select energy metering and control systems. In connection with the acquisition, Great Lakes was merged into our wholly-owned subsidiary Electric City Great Lakes Acquisition Corporation, with our subsidiary continuing as the surviving corporation under the name Great Lakes Controlled Energy Corporation.

On June 3, 2003, the Company entered into an asset purchase agreement with Hoppensteadt Acquisition Corp., whereby Hoppensteadt acquired all of the assets, except for certain receivables and cash, and assumed all of the liabilities, except for bank debt, of Switchboard Apparatus, the Company's Power Management segment, as of May 31, 2003.

Products And Services

The Company currently manufactures products or provides services under two distinct business segments. The energy technology segment includes the EnergySaver and GlobalCommander product lines manufactured and sold by Electric City Corp. In addition, this segment markets the Virtual Negawatt Power Plan (VNPP), which is essentially a negative power system which is designed for utilities as a demand response system. The building control and automation business segment is served by our subsidiary, Great Lakes Controlled Energy Corporation, which specializes in the installation and maintenance of building control and automation systems. See note 19 to the consolidated financial statements for additional information regarding the segments of our business.

EnergySaver

The EnergySaver system is a state-of-the-art lighting control system that reduces energy consumption in indoor and outdoor commercial, institutional and industrial ballasted lighting systems, while maintaining appropriate lighting levels. The EnergySaver is a freestanding enclosure that contains control panels with electrical parts and is connected between the incoming power line and the building's electrical lighting circuits. The EnergySaver also contains a microprocessor with software that allows the customer to control the amount of energy savings desired which, depending on the application, can be as high as 50%, and provides self-diagnosis and self-correction. The customer can access the EnergySaver's microprocessor directly or remotely via modem, network or two-way radio.

The EnergySaver is manufactured to varying sizes and capacities to address differing lighting situations. We can interface our EnergySaver products with new and existing lighting panels, ballasts and lamps without modification. In addition, the EnergySaver system reduces the power consumed by lamps, resulting in a reduction of heat generated within the lighting system, which enhances ballast and lamp life and reduces the amount of air conditioning necessary to cool the building.

GlobalCommander

The GlobalCommander system is an advanced lighting controller capable of providing large-scale demand side management and savings measurement and verification without turning off the user's lights. The GlobalCommander bundles the EnergySaver technology with an area-wide communication package to allow for maximum energy reductions across entire systems in response to the guidelines of a customer's facility manager. In addition, the GlobalCommander has the ability to measure and store information about the actual savings generated from the use of the EnergySaver. This information, which can be viewed in a tabular or graphical format and can be downloaded to a user's computer, is often required for a customer to qualify for utility incentives for energy savings and curtailment. The GlobalCommander also allows customers to control their facilities' loads and lighting requirements from a single control point. This single-point control is available for a virtually unlimited number of remote facilities and can be accessed through the Internet, intranet or over standard telephone lines through dial-up modems.

Virtual Negawatt Power Plan

The combined technology of the EnergySaver and GlobalCommander led to the development of our Virtual Negawatt Power Plan (VNPP), which is essentially a negative power system which we market primarily to utilities as a demand response system. The VNPP allows a utility to remotely control commercial, industrial and government lighting systems over a managed and secure Internet protocol (IP) network. Through the use of the EnergySaver/GlobalCommander system, the utility is able to reduce electric demand requirements during periods of peak demand, providing instantaneous control, measurement and verification of load reduction. The demand reduction can be specifically placed across a utility grid targeting potential hot spots such as particular substations. The Electric City VNPP is the first demand response system to provide this level of control to a utility without requiring active customer participation and without impacting a customer's operations or ability to do business. For additional information on the VNPP program please see Item 7 Management's Discussion and Analysis or Plan of Operations.

Building Control and Automation

Through our wholly owned subsidiary, Great Lakes Controlled Energy Corporation, we provide integration of building and automation control systems for commercial and industrial customers. Great Lakes has been providing building automation services for over 20 years and is an authorized distributor for Teletrol Systems Inc., WattStopper Inc. and Power Measurement Ltd., and is a dealer for Novar Controls Corporation and ABB Drives and Motors.

Marketing, Sales and Distribution

We have established relationships with distributors (also referred to as State Representatives) to market and distribute our EnergySaver products to end-users. As of December 31, 2004, we had eight distributor/state representative agreements covering Arizona, California, Illinois, Indiana, Nevada, New Jersey, Pennsylvania, and Texas. Each distributor is responsible for developing and managing a sales network within its respective territory. Typically the distributor does this by establishing direct relationships with end-users or through dealerships within the territory and overseeing the sales, installation and maintenance of our products by those dealerships. If a distributor sells any of our products outside its territory, such distributor operates as a dealer, meaning it manages end-user sales only. The distributor earns a commission on any sale of our products in its territory whether initiated by the distributor itself, a dealer, or by us.

Our standard distribution agreement gives the distributor certain exclusive rights of distribution in a particular territory, includes sales quotas that increase periodically throughout the term of the agreement, and requires the distributor to make payment to us within 30 to 60 days of product shipment. The agreement contains penalties for failure to meet quotas or make payments, including the loss of certain exclusive rights of distribution. Currently, a number of our distributors have violated the terms of their agreements for failing to meet their quotas and are delinquent in payments due Electric City. We are working with our distributors to address these issues. In addition, the standard distribution agreement has a term of 10 years after which it is renewable at our discretion. The standard distribution agreement can be terminated at our discretion if the distributor fails to meet the terms of the distribution agreement.

National accounts (such as chain stores, and large multi-site corporations), municipalities and other large campus customers are managed by our corporate sales engineering group. This group concentrates its sales efforts on the energy engineering staffs of these types of entities, which analyze and recommend the purchase of products like ours for their multiple sites. The sales force also supports, coordinates and manages multiple sales channels.

Our Utility Development area is responsible for marketing the VNPP to utilities. Once a utility signs a VNPP agreement we work jointly with the utility to sign up energy users to participate in the curtailment program by agreeing to the installation of the EnergySaver in their facilities at no cost to the user.

Great Lakes sells its building automation control systems either directly to end-users (typically commercial or industrial building owners) or by bidding on contracts let by general contractors for new construction or building renovation projects.

Customers

During 2004, sales to two customers accounted for approximately 57% of our total consolidated revenue. Our largest customers for 2004 were Hill Mechanical Group and Public Energy Solutions. Hill Mechanical Group is a customer of our building automation controls business, while Public Energy Solutions is an EnergySaver dealer. During 2003, four customers accounted for approximately 63% of our total consolidated revenue. The top four customers during 2003 were Electric City of Pennsylvania, Hill Mechanical Group, Jacobsen Power and M&A Railroad and Electric Supply. Hill Mechanical Group and Jacobsen Power were both customers of our building automation controls business, while Electric City of Pennsylvania and M&A Railroad and Electric Supply were EnergySaver dealers. During 2002, sales to our top four customers accounted for 59% of total consolidated revenue. The top customers for 2002 included Jacobsen Power, M&A Railroad Supply, PSEG Energy Technologies (which subsequently became Public Energy Solutions) and Teschky, Inc. Jacobsen Power and Teschky Inc. were both customers of our building automation controls business, while M&A Railroad and Electric Supply and PSEG Energy Technologies were EnergySaver dealers.

During 2004, we have expended a significant amount of effort on our VNPP concept which focuses on obtaining utility companies as customers. The Company contracts with utility companies to install Energy Saver units at participating host locations. The utility companies will pay the Company for the availability of this demand reduction and the Company will recognize revenue under these contracts over the period for which demand reduction is provided. No revenue has been recognized under such contracts for the years ended December 31, 2004, 2003 or 2002. During 2004, the Company focused on recruiting host locations for a VNPP contract with Commonwealth Edison. The cost of EnergySaver units currently at host locations under this VNPP program of approximately \$900,000 is included in fixed assets and will be depreciated over the 10 year term of this contract. Revenue related to this program will be recognized over 10 years, beginning in 2005 as service revenue related to this equipment.

Competition

There are a number of products on the market that directly or indirectly compete with the EnergySaver products. These competing products can be categorized into three general types:

those that convert AC to DC at a central location,

those that pulsate the power to the lighting system; and

other control products similar to the EnergySaver system.

Products that fall into the first category convert AC to DC at a central location and do so more efficiently than it is done by the standard electronic ballast in each light fixture. The main drawback to this technology is that the transmission of DC power over any distance is generally less efficient and more dangerous than transmitting AC power. This technology also requires the rewiring of every light fixture on the circuit.

Products that pulsate the power in the lighting system turn the power off and on so quickly (120 times/second) that the lights remain on. This process, which is generally known as wave chopping, distorts the AC waveform and thereby produces harmonics in a building's electrical system that can damage other electrical components such as electric motors and electronic devices. The process also contributes to the reduction of life of lamps and ballasts in lighting fixtures.

Control products control power consumption at the lights, at the lighting circuit or at the control panel. Products that control the power at the lights or at the lighting circuit must be wired to each fixture or to each circuit, resulting in high installation cost, which makes these products less competitive from an economic perspective. The EnergySaver controls power consumption at the lighting panel, making it much simpler and less expensive to install and maintain. There are other products on the market that also control power consumption at the lighting panel, but the EnergySaver is the only product that we are aware of that offers total real-time variability of savings levels, remote communications and savings measurement and verification capabilities. We also believe that the EnergySaver has the largest installed base of any lighting control power reduction system of its type.

Great Lakes Controlled Energy competes against both large national controls companies and smaller regional distributors of building controls. Two of the large national controls companies that Great Lakes competes with are Siemens and Johnson Controls, both of whom have significantly greater financial and operating resources than Great Lakes. Great Lakes sells its products and services based on system capabilities, experience, service and price.

Manufacturing

Our EnergySaver product line is manufactured at our facilities in Elk Grove Village, Illinois, with manufacturing and assembly scaled to order demand. Rather than adding significantly to our manufacturing overhead to meet anticipated increases in demand, we plan to outsource the manufacturing to contract manufacturers. One potential source of contract manufacturing services we may utilize is GE Industrial, with whom we have a non-binding agreement to provide system components, joint product development, VNPP participation and additional joint efforts.

The primary components for the EnergySaver are sourced from multiple manufacturers. We are in continuous discussion with additional parts suppliers, seeking to ensure lowest cost pricing and reliability of supply.

During 2004, approximately 52% of our consolidated material purchases were made from three suppliers. Purchases from any one supplier will vary year-to-year depending on sales and inventory

levels. None of these three largest suppliers sell the Company proprietary products that we could not purchase from other vendors.

Compliance With Environmental Laws

Neither the Company's production nor sales of its products in any material way generate activities or materials that require compliance with federal, state or local environmental laws.

Research and Development

The Company, through the day-to-day use of the EnergySaver and its components and its use at various testing sites around the country, develops modifications and improvements to its products. Total research and development costs charged to operations were approximately \$150,000, \$70,000 and \$65,000 for the years ended December 31, 2004, 2003 and 2002, respectively.

Intellectual Property

Certain technologies underlying the EnergySaver products have been patented in the U.S. and Italy by Giorgio Reverberi. A U.S. patent application was filed by Mr. Reverberi in November 1997, and a patent was issued in June 2000.

Since January 1, 1998, we, along with Mr. Reverberi and Mr. Joseph Marino, have entered into a number of agreements relating to the license of the EnergySaver technology, which grant us the exclusive license rights of Mr. Reverberi's patent of the EnergySaver technology in all of North America, Central America, South America (excluding the countries of Argentina, Brazil, Chile, Paraguay and Uruguay) and the Caribbean (except Cuba), as well as Africa (excluding the countries of Algeria, Libya, Morocco and Tunisia). Our license expires upon the expiration of Mr. Reverberi's last expiring patent, which we expect to be on or around November 2017. If either party materially breaches the license and fails to cure the breach within 180 days after notice by the other party of the breach, the other party can terminate the license. We pay Mr. Reverberi a royalty of \$200 and Mr. Marino a royalty of \$100 for each EnergySaver product we make or sell in territories in which Mr. Reverberi holds a valid patent.

We have applied for several patents on improvements we have made to the core technology developed by Mr. Reverberi. On April 6, 2004 we received a 20-year patent on the core technology utilized by the GlobalCommander. We have other patents that are pending before the U.S. Patent and Trademark Office, as well as foreign patent offices.

We have applied for registration of the name EnergySaver pursuant to a U.S. trademark application filed September 15, 2000. In addition, we filed with the U.S. Patent and Trademark Office an intent-to-use trademark application for each of GlobalCommander, Virtual Negawatt Power Plant and VNPP on November 13, 2000. During January 2002, we were notified that the application for the name GlobalCommander and VNPP had been approved. We abandoned efforts to register the name Virtual Negawatt Power Plant because of existing trademarks that included similar terms. The registration of the name EnergySaver is still pending with the U.S. Patent and Trademark Office.

Employees

As of March 25, 2005, we had 27 full time employees, of which five were management and corporate staff, five were engineers, five were engaged in sales and marketing, six were engaged in field service and six were engaged in manufacturing. Of those employees engaged in manufacturing, five are covered by collective bargaining agreements between Electric City and the International Brotherhood of Electrical Workers (IBEW), which is affiliated with the

American Federation of Labor and Congress of

Industrial Organizations (AFL-CIO). In May of 2002 we renewed the collective bargaining agreement covering all union employees. The new agreement will expire on May 31, 2005.

Risk Factors

We caution you that the following risk factors may not be exhaustive. We operate in a continually changing business environment and may as a result enter into new businesses and product lines. We cannot predict new risk factors that may arise in the future, and we cannot assess the impact, if any, of these new risk factors on our businesses or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those projected in any forward-looking statements. Accordingly, you should not rely on forward-looking statements as a prediction of actual results. In addition, our estimates of future operating results are based on our current complement of businesses, which is constantly subject to change as we continue to assess and refine our business strategy. If any of the following risks actually occur, our business, results of operations, and financial condition could be adversely affected in a material manner.

Risks Related to Our Business

We have a limited operating history upon which to evaluate our potential for future success.

We were formed in December 1997. To date, we have generated limited revenues from the sale of our products and do not expect to generate significant revenues until we sell a significantly larger number of our products. Accordingly, we have only a limited operating history upon which you can base an evaluation of our business and prospects. The likelihood of our success must be considered in light of the risks and uncertainties frequently encountered by early stage companies like ours in an evolving market. If we are unsuccessful in addressing these risks and uncertainties, our business will be materially harmed.

We have incurred significant operating losses since inception and may not achieve or sustain profitability in the future.

We have incurred substantial net losses in each year since we commenced operations in December 1997. We must overcome significant manufacturing and marketing hurdles to sell large quantities of our products. In addition, we may be required to reduce the prices of our products in order to increase sales. If we reduce product prices, we may not be able to reduce product costs sufficiently to achieve acceptable profit margins. As we strive to grow our business, we expect to spend significant funds (1) for general corporate purposes, including working capital, marketing, recruiting and hiring additional personnel; and (2) for research and development. To the extent that our revenues do not increase as quickly as these costs and expenditures, our results of operations and liquidity will be materially adversely affected. If we experience slower than anticipated revenue growth or if our operating expenses exceed our expectations, we may not achieve profitability. Even if we achieve profitability in the future, we may not be able to sustain it.

Our auditors have modified their opinion to our audited financial statements for the year ended December 31, 2004 to include an emphasis paragraph, stating that our continuing losses and negative cash flow from operations raise substantial doubt about our ability to continue as a going concern. Our management has developed a plan that includes among other things, raising additional capital to fund operations until our sales and internally generated cash flow can support our ongoing operations. If we are unsuccessful in raising additional capital our ability to continue to operate as a going concern could be in doubt.

A decrease in electric retail rates could lessen demand for our EnergySaver products.

Our principal products, our EnergySaver products, have the greatest profit potential in areas where commercial electric rates are relatively high. However, retail electric rates for commercial establishments in the United States may not remain at their current levels. Due to a potential overbuilding of power generating stations throughout certain regions of the United States, wholesale power prices may decrease in the future. Because the price of commercial retail electric power is largely attributed to the wholesale cost of power, it is reasonable to expect that commercial retail rates may decrease as well. In addition, much of the wholesale cost of power is directly related to the price of certain fuels, such as natural gas, oil and coal. If the prices of those fuels decrease, the prices of the wholesale cost of power

may also decrease. This could result in lower electric retail rates and reduced demand for energy saving devices such as our EnergySaver products.

We have a license under certain patents and our ability to sell our products may be adversely impacted if the license expires or is terminated.

We have entered into a license agreement with Messrs. Giorgio Reverberi and Joseph Marino. Mr. Reverberi holds a U.S. patent and has applied for several patents in other countries. Pursuant to the terms of the license, we have been granted the exclusive right to manufacture and sell products containing the load reduction technology claimed under Mr. Reverberi's U.S. patent or any other related patent held by him in the U.S., the remainder of North America, parts of South America and parts of Africa. However, the exclusive rights that we received may not have any value in territories where Mr. Reverberi does not have or does not obtain protectable rights. The term of the license expires when the last of these patents expires. We expect that these patents will expire or around November 2017. The license agreement may be terminated if we materially breach its terms and fail to cure the breach within 180 days after we are notified of the breach. If our license is terminated it could impact our ability to manufacture, sell or otherwise commercialize products in those countries where Mr. Reverberi holds valid patents relating to our products, including the United States.

If we are not able to protect our intellectual property rights against infringement or others obtain intellectual property rights relating to energy management technology, we could lose our competitive advantage in the energy management market.

We regard our intellectual property rights, such as patents, licenses of patents, trademarks, copyrights and trade secrets, as important to our success. Although we entered into confidentiality and rights to inventions agreements with our non-union employees and consultants during March 2001 (and non-union employees hired since March 2001 have also signed these agreements), the steps we have taken to protect our intellectual property rights may not be adequate. Third parties may infringe or misappropriate our intellectual property rights or we may not be able to detect unauthorized use and take appropriate steps to enforce our rights. Failure to take appropriate protective steps could materially adversely affect our competitive advantage in the energy management market. Furthermore, our license to use Mr. Reverberi's patents may have little or no value to us if Mr. Reverberi's patents are not valid. In addition, patents held by third parties may limit our ability to manufacture, sell or otherwise commercialize products and could result in the assertion of claims of patent infringement against us. If that were to happen, we could try to modify our products to be non-infringing, but we might not be successful or such modifications might not avoid infringing on the intellectual property rights of third parties.

Claims of patent infringement against us, regardless of merit, could result in the expenditure of significant financial and managerial resources by us. We may be forced to seek to enter license agreements with third parties (other than Mr. Reverberi) to resolve claims of infringement by our products of the intellectual property rights of third parties. These licenses may not be available on acceptable terms or at all. The failure to obtain such licenses on acceptable terms could have a negative effect on our business.

The loss of key personnel may harm our ability to obtain and retain customers, manage our growth and compete effectively.

Our future success will depend significantly upon the continued contributions of certain members of our senior management, including John P. Mitola, our Chief Executive Officer, because we believe he is critical to obtaining and retaining customers, managing our growth and the future development of our VNPP concept. Our future success will also depend upon our ability to attract and retain highly qualified

technical, operating and marketing personnel. We believe that there is intense competition for qualified personnel in the energy management industry. If we cannot hire, train and retain qualified personnel or if a significant number of our current employees depart, we may be unable to successfully manufacture and market our products.

If we are unable to manage our growth, it will adversely affect our business, the quality of our products and our ability to attract and retain key personnel.

We are subject to the risks inherent in the expansion and growth of a business enterprise. Growth in our business will place a strain on our operational and administrative resources and increase the level of responsibility for our existing and new management personnel. To manage our growth effectively, we will need to:

further develop and improve our operating, information, accounting, financial and other internal systems and controls on a timely basis;

improve our business development, marketing and sales capabilities; and

expand, train, motivate and manage our employee base.

Our current senior management has limited experience managing a publicly traded company. Our systems currently in place may not be adequate if we continue to grow and may need to be modified and enhanced. The skills of management currently in place may not be adequate if we experience significant growth.

If our management fails to properly identify companies to acquire and to effectively negotiate the terms of these acquisition transactions, our growth may be impaired.

As part of our growth strategy we intend to seek to acquire companies with complementary technologies, products and/or services. Our management, including our Board of Directors, will have discretion in identifying and selecting companies to be acquired by us and in structuring and negotiating these acquisitions. In general, our common stockholders may not have the opportunity to approve these acquisitions (The holders of Series E Convertible Preferred Stock have certain rights to approve acquisitions). In addition, in making acquisition decisions, we will rely, in part, on financial projections developed by our management and the management of potential target companies. These projections will be based on assumptions and subjective judgments. The actual operating results of any acquired company or the combination of us and an acquired company may fall significantly short of projections.

We may be unable to acquire companies that we identify for various reasons, including:

§ our inability to interest such companies in a proposed transaction;

§ our inability to agree on the terms of an acquisition;

§ incompatibility between our management and management of a target company; and

§ our inability to obtain required approvals of the holders of the Series E Convertible Preferred Stock.

If we cannot consummate acquisitions on a timely basis or agree on terms at all, or if we cannot continue to acquire companies with complementary technologies, products and/or services on terms acceptable to us, our future growth may be impaired.

Our growth may be impaired and our current business may suffer if we do not successfully address risks associated with acquisitions.

During our limited operating history, we have acquired two companies; Switchboard Apparatus and Great Lakes Controlled Energy, one of which (Switchboard Apparatus) we have subsequently sold. Our future growth may depend, in part, upon our ability to successfully acquire and operate other

complementary businesses. We may encounter problems associated with such acquisitions, including the following:

- § difficulties in integrating acquired operations and products with our existing operations and products;
- § difficulties in meeting operating expectations for acquired businesses;
- § diversion of management's attention from other business concerns;
- § adverse impact on earnings of amortization or write-offs of goodwill and other intangible assets relating to acquisitions; and

- § issuances of equity securities that may be dilutive to existing stockholders to pay for acquisitions.

If our EnergySaver products do not achieve or sustain market acceptance, our ability to compete will be adversely affected.

To date, we have not sold our EnergySaver product line in very large quantities and a sufficient market may not develop for it. Significant marketing will be required in order to establish a sufficient market for the EnergySaver products. The technology underlying these products may not become a preferred technology to address the energy management needs of our customers and potential customers. Failure to successfully develop, manufacture and commercialize products on a timely and cost-effective basis will have a material adverse effect on our ability to compete in the energy management market.

Failure to meet customers' expectations or deliver expected technical performance could result in losses and negative publicity.

Customer engagements involve the installation of energy management equipment that we design to help our clients reduce energy/power consumption. We rely on outside contractors to install our EnergySaver products. Any defects in this equipment and/or its installation or any other failure to meet our customers' expectations could result in:

delayed or lost revenues due to adverse customer reaction;

requirements to provide additional products and/or services to a customer at no charge;

negative publicity regarding us and our products, which could adversely affect our ability to attract or retain customers; and

claims for substantial damages against us, regardless of our responsibility for such failure.

If sufficient additional funding is not available to us, the commercialization of our products and our ability to grow may be hindered.

Our operations have not generated positive cash flow since the inception of the Company in 1997. We have funded our operations through the issuance of common and preferred stock and secured debt. Our ability to continue to operate until our cash flow turns positive may depend on our ability to continue to raise funds through the issuance of equity or debt. If we are not successful in raising additional funds, we might have to significantly scale back or delay our growth plans, or possibly cease operations altogether. Any reduction or delay in our growth plans could materially adversely affect our ability to compete in the marketplace, take advantage of business opportunities and develop or enhance our products.

Raising additional capital or consummation of additional acquisitions through the issuance of equity or equity-linked securities could dilute your ownership interest in us.

It is likely that we will need to obtain additional funds in the future to grow our product development, manufacturing, marketing and sales activities at the pace that we intend, to continue to fund

operating losses until our cash flow turns positive, or to fund acquisitions. If we determine that we do need to raise additional capital in the future and we are not successful in doing so, we might have to significantly scale back or delay our growth plans, reduce staff and delay planned expenditures on research and development and capital expenditures in order to continue as a going concern. Any reduction or delay in our growth plans could materially adversely affect our ability to compete in the marketplace, take advantage of business opportunities and develop or enhance our products.

If we receive additional funds through the issuance of equity securities or convertible debt securities, our existing stockholders will likely experience dilution of their present equity ownership position and voting rights. Depending on the number of shares issued and the terms and conditions of the issuance, new equity securities could have rights, preferences, or privileges senior to those of our common stock.

Failure to effectively market our energy management products could impair our ability to sell significant quantities of these products.

One of the challenges we face in commercializing our energy management products is demonstrating the advantages of our products over more traditional products and competitive products. To do this, we will need to further develop our marketing and sales force. In addition to our internal sales force, we rely on third parties to market and sell our products. We currently maintain a number of relationships and have a number of agreements with third parties regarding the marketing and distribution of our EnergySaver products and depend to some degree upon the efforts of these third parties in marketing and selling these products. Maintenance of these relationships is based primarily on an ongoing mutual business opportunity and a good overall working relationship. The current contracts associated with certain of these relationships allow the distributors to terminate the relationship upon 30 days' written notice. Without these relationships, our ability to market and sell our EnergySaver products could be harmed and we may need to divert even more resources to increasing our internal sales force. If we are unable to expand our internal sales force and maintain our third party marketing relationships, our ability to generate significant revenues may be harmed.

The distribution rights we have granted to third parties in specified geographic territories may make it difficult for us to grow our business in such territories if those distributors do not successfully market and support our products in those territories. We have in the past been and may in the future be, involved in disputes with distributors that have distribution rights in specified geographic territories, but are not achieving our goals. During 2000, we repurchased for cash and stock consideration the distribution rights from three distributors that were not meeting our sales goals. We recently settled a dispute with a former distributor to avoid the cost of further litigation. We may have to expend additional funds, incur debt or issue additional securities in the future to repurchase other distribution rights or pursue legal action to enforce our rights under distributor agreements that we have granted or may grant in the future.

If our Virtual Negawatt Power Plan concept is unsuccessful, distribution of our EnergySaver product line may be impaired and our growth could suffer.

During 2001, we announced our Virtual Negawatt Power Plan concept. The VNPP is intended to allow a utility to remotely control commercial, industrial and government lighting systems over a managed and secure IP network. It is envisioned that through the use of the EnergySaver/ GlobalCommander system, a utility will be able to reduce electric demand requirements during periods of peak demand, providing nearly instantaneous control, measurement and verification of load reduction. The successful implementation of the VNPP concept could significantly increase the sales and profitability of our EnergySaver product line. In 2003, we announced an agreement with Commonwealth Edison to implement a 50-Megawatt VNPP system in northern Illinois. A VNPP agreement was executed

with ComEd during the third quarter of 2003 and we began installing product under the program in late 2003, but we have not yet recognized any revenue under this agreement.

While we have made progress in implementing this program with ComEd, we still have a number of hurdles to clear related to this program. Also, if we fail to recruit enough customers to participate in the program we may not be able to deliver 50MW of demand curtailment, which would result in less revenue from the program than we expect. If our attempts to advance the VNPP concept are unsuccessful, our plans to significantly increase the distribution of our EnergySaver product line may not develop and our growth may be impaired.

If we do not successfully compete with others in the very competitive energy management market, we may not achieve profitability.

In the energy management market, we compete with other manufacturers of traditional energy management products that are currently used by our potential customers. Many of these companies have substantially greater financial resources, larger research and development staffs and greater manufacturing and marketing capabilities than us. Our competitors may provide energy management products at lower prices and/or with superior performance. If we are unable to successfully compete with conventional and new technologies our business may be materially harmed.

Product liability claims could result in losses and could divert our management's time and resources.

The manufacture and sale of our products creates a risk of product liability claims. Any product liability claims, with or without merit, could result in costly litigation and reduced sales, cause us to incur significant expenses and divert our management's time, attention and resources. We do have product liability insurance coverage; however, there is no assurance that such insurance is adequate to cover all potential claims. The successful assertion of any such claim against us could materially harm our liquidity and operating results.

Our current internal manufacturing capacity is limited and if demand for our products increases significantly and we are unable to increase our capacity quickly and efficiently our business could suffer.

Our EnergySaver products are manufactured at our facilities. To be financially successful, we must manufacture our products, including our EnergySaver products, in substantial quantities, at acceptable costs and on a timely basis. While we have produced approximately 1,200 EnergySaver units over the past six years, we have never approached what we believe is our production capacity. To produce larger quantities of our EnergySaver products at competitive prices and on a timely basis, we will have to further develop our processing, production control, assembly, testing and quality assurance capabilities. We also intend to hire contract manufacturers and outsource the manufacturing of some or all of our products. We have had discussions with several potential contract manufacturers and they have produced units on a trial basis, but their ability to deliver significant quantities of product in a timely manner is still unproven. We may be unable to manufacture our EnergySaver products in sufficient volume and may incur substantial costs and expenses in connection with manufacturing larger quantities of our EnergySaver products. If we are unable to make the transition to large-scale commercial production successfully, our business will be negatively affected. We could encounter substantial difficulties if we decide to outsource the manufacturing of our products, including delays in manufacturing and poor production quality.

Risks Related to Our Common Stock

Due to the current market price of our common stock, in conjunction with the fact that we are a relatively small company with a history of operating losses, the future trading market for our stock may not be active on a consistent basis, which may make it difficult for you to sell your shares.

The trading volume of our stock in the future will depend in part on our ability to increase our revenue and reduce or eliminate our operating losses, which should increase the attractiveness of our stock as an investment, thereby leading to a more liquid market for our stock on a consistent basis. If an active and liquid trading market does not exist for our common stock, you may have difficulty selling your shares.

The need to raise additional capital will most likely be dilutive to our current stockholders and could result in new investors receiving rights that are superior to those of existing stockholders.

Since September 2001, we have issued shares of our preferred stock that are currently convertible into 22,475,200 shares of our common stock (including shares issued as dividends). These shares of preferred stock are currently accruing dividends at the rate of 6% per year, though prior to March 22, 2004 they were accruing at the rate of 10% per year. To date we have issued shares of convertible preferred stock in satisfaction of accrued dividends convertible into 7,016,510 shares of Common Stock. The preferred stockholders all have rights that are superior to the rights of our common stockholders, including:

- § a liquidation preference of \$200 per share (under our Series E Preferred which was issued on March 22, 2004 in a 1 for 10 exchange for the outstanding Series A, C and D Preferred shares. See Liquidity and Capital Resources.);
- § special approval rights in respect of certain actions by the Company, including any issuance of shares of capital stock by the Company that would have the right to receive dividends or the right to participate in any distribution upon liquidation which was senior to or equal to the rights of the Series E Preferred (other than to pay dividends on the preferred and under certain other limited exceptions such as conversion of outstanding convertible securities) and any acquisition, sale, merger, joint venture, consolidation or reorganization involving the Company or any of its subsidiaries;
- § a conversion price that may be below the market price of our common stock;
- § the right to elect up to four directors;
- § the right to vote with the holders of common stock on an as converted basis on all matters on which holders of our common stock are entitled to vote, except with respect to the election of directors or as otherwise provided by law;
- § a right of first offer on the sale of equity by the Company in a private transaction; and
- § anti-dilution protection that would adjust the conversion price on their preferred shares and the exercise price on their warrants in the event we issue equity at a price which is less than the conversion price or exercise price of their securities.

These rights associated with our preferred stock are substantially different than the rights of our common stockholders and may materially decrease the value of our common stock.

Due to the concentration of holdings of our stock, three investors may be able to control matters requiring stockholder approval or could cause our stock price to decline through future sales because they beneficially own a large percentage of our common stock.

There are 41,828,310 shares of our common stock outstanding as of March 25, 2005, of which Joseph C. Marino beneficially owns approximately 18%, Richard Kiphart beneficially owns approximately 19% and Security Benefit beneficially owns approximately 18% (each of the aforementioned percentages includes stock options and warrants that are currently exercisable and in the case of Mr. Kiphart include stock issuable upon conversion of Series E Convertible Preferred Stock). As a result of their significant ownership, Mr. Marino, Mr. Kiphart and Security Benefit may have the ability to exercise a controlling influence over our business and corporate actions requiring stockholder approval, including the election of our directors (other than those directors to be chosen by the holders of our preferred stock), a sale of substantially all of our assets, a merger between us and another entity or an amendment to our certificate of incorporation. This concentration of ownership could delay, defer or prevent a change of control and could adversely affect the price investors might be willing to pay in the future for shares of our common stock. Also, in the event of a sale of our business, Mr. Marino and Mr. Kiphart and Security Benefit could elect to receive a control premium to the exclusion of other stockholders.

A significant percentage of the outstanding shares of our common stock, including the shares beneficially owned by Mr. Marino, Mr. Kiphart or Security Benefit, can be sold in the public market from time to time, subject to limitations imposed by Federal securities laws and, in the case of Mr. Kiphart, by trading agreements entered into with us. The market price of our common stock could decline as a result of sales of a large number of our presently outstanding shares of common stock by Mr. Marino, Mr. Kiphart, Security Benefit or other stockholders in the public market or due to the perception that these sales could occur. This could also make it more difficult for us to raise funds through future offerings of our equity securities.

Provisions of our charter and by-laws, in particular our blank check preferred stock, could discourage an acquisition of our company that would benefit our stockholders.

Provisions of our charter and by-laws may make it more difficult for a third party to acquire control of our company, even if a change in control would benefit our stockholders. In particular, shares of our preferred stock have been issued and may be issued in the future without further stockholder approval and upon those terms and conditions, and having those rights, privileges and preferences, as our Board of Directors may determine. The rights of the holders of our common stock will be subject to, and may be adversely affected by, the rights of the holders of any of our preferred stock which is currently outstanding or which may be issued in the future. The issuance of our preferred stock, while providing desirable flexibility in pursuing possible additional equity financings and other corporate purposes, could have the effect of making it more difficult for a third party to acquire control of us. This could limit the price that certain investors might be willing to pay in the future for shares of our common stock and discourage these investors from acquiring a majority of our common stock. In addition, the price that future investors may be willing to pay for our common stock may be lower due to the conversion price and exercise price granted to investors in any such private financing.

Item 2. Description of Property

Our headquarters and the EnergySaver system production facility are located at 1280 Landmeier Road in Elk Grove Village, Illinois. This facility is approximately 13,000 square feet and houses the corporate headquarters, manufacturing operations and warehouse. We acquired this facility in August 1998 with a combination of stock and cash. The cash portion of the purchase price was financed through a mortgage on the building. The mortgage was refinanced in December 2004, bears interest at the rate of prime plus 0.5%, and is payable in monthly installments of \$3,000 plus interest, until a final balloon payment which is due on February 2006. There is no penalty for prepayment of the mortgage. As of January 31, 2005, the outstanding principal amount of the mortgage was \$595,000.

On June 7, 2001, we acquired Great Lakes Controlled Energy Corporation (Great Lakes). Great Lakes currently operates its business from a facility located in Elk Grove Village, Illinois, which is approximately 10,000 square feet. In connection with our acquisition of Great Lakes, we entered into a three-year building lease beginning on the date of the acquisition. Effective June 7, 2004, the lease was extended through December 2005. The building is owned by the former shareholders of Great Lakes, Eugene Borucki and Denis Enberg, both of whom are currently employed by the Company.

We believe that the space and location of our current facilities in combination with the planned outsourcing of a portion of our manufacturing will be sufficient to reach a level of production projected for the current year.

Item 3. Legal Proceedings

American Life Insurance Company v. Electric City Corp.; The Stockpage and John Does, is a lawsuit filed on April 29, 2004 in the Circuit Court of Cook County, Illinois, County Department Chancery Division. The suit accuses the defendants of sending out unsolicited advertisement to telephone facsimile machines in violation of the Telephone Consumer Act, 47 U.S.C. §227 (TCPA), the Illinois Consumer Fraud Act, 815 ILCS 505/2, and Illinois common law. The complaint seeks class certification and statutory damages of \$500 to \$1,500 each on behalf of a class that would include all residents of Illinois who received an unsolicited facsimile advertisement from us, plus attorney's fees, litigation expenses and costs of the suit. On November 22, 2004 we filed a motion for summary judgment seeking to have the suit dismissed because we did not send out the facsimiles in question, nor did we authorize the distribution of unsolicited facsimiles. The Court has not yet ruled on our motion. Insurance has covered the costs of defending this suit, and while the insurer has reserved its rights with respect to this matter, we believe that should the plaintiff ultimately prevail any judgments against us would be covered by insurance. The Company intends to defend the lawsuit. Based upon information presently available, and in light of legal and other defenses available to the Company, management does not consider the liability from this or any threatened or pending litigation to be material to the Company.

Item 4. Submission of Matters to a Vote of Security Holders

There were no matters submitted to a vote of security holders during the three months ended December 31, 2004.

PART II**Item 5. Market for Common Equity and Related Stockholder Matters**

Our common stock has traded since December 12, 2000 on the American Stock Exchange under the symbol ELC.

The following table sets forth the quarterly high and low closing prices for our common stock as reported on The American Stock Exchange since January 1, 2003.

	Common Stock	
	High	Low
Fiscal Year Ended December 31, 2003:		
Fiscal Quarter Ended March 31, 2003	\$ 1.50	\$ 0.70
Fiscal Quarter Ended June 30, 2003	\$ 1.66	\$ 0.90
Fiscal Quarter Ended September 30, 2003	\$ 2.21	\$ 0.92
Fiscal Quarter Ended December 31, 2003	\$ 2.70	\$ 2.03
Fiscal Year Ended December 31, 2004:		
Fiscal Quarter Ended March 31, 2004	\$ 2.40	\$ 1.83
Fiscal Quarter Ended June 30, 2004	\$ 2.07	\$ 1.62
Fiscal Quarter Ended September 30, 2004	\$ 1.93	\$ 1.35
Fiscal Quarter Ended December 31, 2004	\$ 1.38	\$ 1.10

Holders

As of March 24, 2005, we had approximately 5,600 holders of record of our common stock and 41,828,310 shares of common stock outstanding.

Dividends

For the three months ended December 31, 2004, we declared and paid the following dividends on our Convertible Preferred Stock:

On December 1, 2004, the Board of Directors authorized payment of dividends payable on our Series E Convertible Preferred Stock for the calendar quarter ending December 31, 2004 to shareholders of record of our Series E Convertible Preferred Stock as of December 31, 2004. The dividends were paid with 3,280 additional shares of Series E Convertible Preferred Stock. Each share of Series E Convertible Preferred Stock is convertible into 100 shares of our common stock. The Company recorded a non-cash deemed dividend of \$78,720 related to the issuance of these dividend shares due to the fact that the conversion price on the dividend shares was lower than the market price of the Company's common stock on the date of issue.

For a further discussion regarding preferred stock dividends, see Item 7 Management's Discussion and Analysis or Plan of Operations Preferred Stock Dividends.

We have never declared or paid any cash dividends on our common stock and we do not anticipate paying any cash dividends in the foreseeable future. We may not pay cash dividends on any of our capital stock) without the consent of at least 66-2/3% of the Series E Convertible Preferred Stock, and the consent of our secured lender. See Item 7 - Management's Discussion and Analysis of Results of Operations and Financial Condition Liquidity and Capital Resources.

Recent Sales of Unregistered Securities

During the twelve months ended December 31, 2004, we issued the securities listed below (in addition to those securities listed under the preceding Dividends and to those issuances which we have reported on Form 10-Q during the past year):

During the fourth quarter of 2004, the holders of warrants to purchase 2,906 shares of Series E Convertible Stock exercised their warrants at a cost of \$100 per share. The proceeds of \$290,600 received from the exercise of these warrants was used for general corporate purposes.

The sales and issuances of common stock, debt instruments and warrants to purchase common stock in private placements listed above were made by us in reliance upon the exemptions from registration provided under Sections 4(2) and 4(6) of the Securities Act of 1933, as amended, and Rule 506 of Regulation D, promulgated by the SEC under federal securities laws and comparable exemptions for sales to accredited investors under state securities laws. The offers and sales were made to accredited investors as defined in Rule 501(a) under the Securities Act and no general solicitation was made by us or any person acting on our behalf; the securities sold were subject to transfer restrictions, and the certificates for those shares contained an appropriate legend stating that they had not been registered under the Securities Act and may not be offered or sold absent registration unless sale is pursuant to an exemption therefrom.

Item 6. Selected Financial Data

The information set forth below is not necessarily indicative of results of future operations, and should be read in conjunction with Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, and the Consolidated Financial Statements and notes thereto included in Item 8, Financial Statements and Supplementary Data, of this Form 10-K, which are incorporated herein by reference, in order to understand further the factors that may affect the comparability of the financial data presented below.

ELECTRIC CITY CORP. AND SUBSIDIARIES
Selected Financial Data

	Year ended December 31,				
	2004	2003	2002 (1)	2001 (2)	2000 (2)(3)
Statement of Operations Data:					
Revenue	\$ 2,412,635	\$ 4,631,833	\$ 5,534,522	\$ 2,167,660	\$ 4,342,926
Cost of sales	2,302,104	4,441,687	5,339,352	1,943,895	4,293,764
Selling, general and administrative	4,643,203	4,290,078	6,043,585	8,170,351	8,683,275
Impairment loss			108,000		
Repurchase of distributor territories and legal settlement					1,680,394
Operating loss	(4,532,672)	(4,099,932)	(5,956,415)	(7,946,586)	(10,314,507)
Other income (expense)	(626,690)	(355,359)	(33,615)	(3,401,494)	(21,664)
Loss from continuing operations	(5,159,362)	(4,455,291)	(5,990,030)	(11,348,080)	(10,336,171)
Income (loss) from discontinued operations		(1,026,651)	(1,017,897)	(1,622,997)	89,495
Cumulative effect of accounting change			(4,103,872)		
Net loss	(5,159,362)	(5,481,942)	(11,111,799)	(12,971,077)	(10,246,676)
Basic and diluted loss per common share from continuing operations	\$ (0.25)	\$ (0.27)	\$ (0.33)	\$ (1.05)	\$ (0.43)
Basic and diluted loss per common share	(0.25)	(0.30)	(0.49)	(1.10)	(0.43)
Weighted average common shares outstanding	39,901,387	33,761,489	31,213,165	30,048,043	28,505,175

Balance Sheet Data:

Edgar Filing: ELECTRIC CITY CORP - Form 10-K

Cash and cash equivalents	\$ 1,789,808	\$ 2,467,023	\$ 1,555,904	\$ 5,486,073	\$ 629,436
Working capital (deficiency)	263,304	2,050,157	3,546,270	7,470,046	(1,170,893)
Total assets	6,479,320	7,353,627	8,908,551	16,435,863	12,134,116
Long-term debt, including current portion	1,230,353	1,348,645	1,089,791	1,434,018	1,926,294
Total stockholders' equity	1,780,271	3,040,932	4,284,291	12,456,833	3,649,046

- (1) In the year ended December 31, 2002, we adopted FAS 142 "Goodwill and Other Intangible Assets", which required us to test our intangible assets for possible impairment. As a result of this testing we determined the goodwill associated with the Power Management segment was impaired and recorded a write-down of the asset in the amount of \$4,103,872, which was reported as a cumulative effect of accounting change in 2002. For a further discussion of these items please refer to "Management's Discussion and Analysis or Plan of Operation."
- (2) On January 1, 2002, the Company adopted Statement of Financial Accounting Standards (SFAS) No. 142, which among other things provides that good will no longer be amortized, as a result the Company has not record any goodwill amortization beginning in 2002, whereas it recorded approximately \$555,000 and \$397,000 in 2001 and 2000, respectively.
- (3) This selected financial data for the year ended December 31, 2000 has been revised from the original presentation in the audited financial statements to reflect the Company's Power Management segment as a discontinued operation (consistent with the years ended December 31, 2001, 2002, and 2003).

Item 7. Management's Discussion and Analysis or Plan of Operation

The following discussion should be read in conjunction with the consolidated financial statements and related notes which appear elsewhere in this report on Form 10-K. The discussion contains forward-looking statements within the meaning of the Private Securities Litigation Act of 1995. Such statements consist of any statement other than a recitation of historical fact and can be identified by the use of forward-looking terminology such as may, expect, anticipate, estimate or continue or the negative of such terms or other variations of such terms or comparable terminology. You are cautioned that all forward-looking statements are necessarily speculative and there are certain risks and uncertainties that could cause actual events or results to differ materially from those referred to in such forward-looking statements. We do not have a policy of updating or revising forward-looking statements and, therefore, you should not assume that our silence over time means that actual events are bearing out as estimated in such forward-looking statements.

We have a limited operating history. All risks inherent in an inexperienced enterprise are inherent in our business.

Critical Accounting Policies and Estimates

The discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amount of assets and liabilities, revenues and expenses, and related disclosure of contingent assets and liabilities at the date of our financial statements. Actual results may differ from these estimates under different assumptions or conditions. Critical accounting policies are defined as those that are reflective of significant judgments and uncertainties, and potentially result in materially different results under different assumptions and conditions. We believe that our critical accounting policies are limited to those described below. For a detailed discussion on the application of these and other accounting policies, see Note 3 in the notes to the consolidated financial statements.

Use of Estimates

Preparation of the consolidated financial statements in accordance with accounting principles generally accepted in the United States requires management to make estimates and assumptions affecting the reported amounts of assets, liabilities, revenues and expenses and related contingent liabilities. On an on-going basis, the Company evaluates its estimates, including those related to revenues, bad debts, warranty accrual, income taxes and contingencies and litigation. The Company bases its estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances. Actual results may differ from these estimates under different assumptions or conditions.

Revenue Recognition

We recognize revenue when all four of the following criteria are met: (i) persuasive evidence has been received that an arrangement exists; (ii) delivery of the products and/or services has occurred; (iii) the selling price is fixed or determinable; and (iv) collectibility is reasonably assured. In addition, we follow the provisions of the Securities and Exchange Commission's Staff Accounting Bulletin No. 104, Revenue Recognition, which sets forth guidelines in the timing of revenue recognition based upon factors such as passage of title, installation, payments and customer acceptance. Any amounts received or

invoiced prior to satisfying the our revenue recognition criteria is recorded as deferred revenue in the accompanying balance sheet. Our most common source of deferred revenue is building automation projects in which the customer is billed in advance for some portion of the work to be performed. We also record the purchase price for certain distributor territories as deferred revenue, recognizing the purchase price as revenue over the term of the underlying distribution agreement.

We have also entered into agreements in which we have contracted with utilities to establish a Virtual Negawatt Power Plan (VNPP). Under these contracts, we install Energy Saver units at participating host locations. The participating host locations receive the benefit of reduced utility costs through the operation of the units. We are able to reduce electric demand requirements during periods of peak demand, providing nearly instantaneous control, measurement and verification of load reduction. The utility companies typically pay us for the availability of this demand reduction and we recognize revenue under these contracts over the period for which the demand reduction is provided. No revenue has been recognized under such contracts for the years ended December 31, 2004, 2003 or 2002. The cost of the energy saver units currently at host locations under such VNPP programs is included in fixed assets and depreciated over the term of the contract.

Profit Recognition on Long-Term Contracts

We account for long-term contracts under the percentage of completion method. Effective January 1, 2003, due to our limited experience in estimating the profitability on long-term building automation control contracts, we elected to begin to defer profit on all long-term building automation control contracts until completion of the job, at which time actual profit on the job will be known and recognized. Any anticipated losses on contracts are charged to operations as soon as they are determinable.

Allowance for Doubtful Accounts

We maintain an allowance for doubtful accounts for estimated losses resulting from the inability of our customers to make required payments. The allowance is largely based upon specific knowledge of customers from whom collection is determined to be doubtful and our historical collection experience with such customers. If the financial condition of our customers or the economic environment in which they operate were to deteriorate, resulting in an inability to make payments, or if our estimates of certain customer's ability to pay are incorrect, additional allowances may be required. During 2004, we increased our allowance by \$21,000, wrote-off \$133,000 and recovered \$16,000 on receivables that it had previously reserved for as doubtful. As of December 31, 2004 our allowance for doubtful accounts was approximately \$199,000, or 15.7% of the outstanding accounts receivable.

Impairment of Long-Lived Assets.

We record impairment losses on long-lived assets used in operations when events and circumstances indicate that the assets might be impaired and the undiscounted cash flows estimated to be generated by those assets are less than the carrying amount of those items. Our cash flow estimates are based on historical results adjusted to reflect our best estimate of future market and operating conditions. The net carrying value of assets not recoverable is reduced to fair value. Our estimates of fair value represent our best estimate based on industry trends and reference to market rates and transactions.

Goodwill

The Company has made acquisitions in the past that included a significant amount of goodwill and other intangible assets. Under generally accepted accounting principles in effect through December 31, 2001, these assets were amortized over their estimated useful lives, and were tested periodically to

determine if they were recoverable from operating earnings on an undiscounted basis over their useful lives. Effective in 2002, goodwill is no longer amortized but is subject to an annual (or under certain circumstances more frequent) impairment test based on its estimated fair value. Estimated fair value is less than value based on undiscounted operating earnings because fair value estimates include a discount factor in valuing future cash flows. There are many assumptions and estimates underlying the determination of an impairment loss, including economic and competitive conditions, operating costs and efficiencies. Another estimate using different, but still reasonable, assumptions could produce a significantly different result. During the year ended December 31, 2002, the Company determined that the estimated fair value of goodwill associated with its power management business exceeded the carrying value and as a result recognized an impairment loss of \$4,103,872, which was recorded as a cumulative effect of a change in an accounting principle. As part of our 2002 year-end assessment of the fair value of our goodwill we determined that the carrying value of the goodwill associated with the building automation and control business exceeded the fair value by \$108,000. This difference between the carrying value and the estimated fair value of the goodwill was recorded as an impairment loss in 2002. As part of our 2003 and 2004 year-end assessment, we updated our long-term projections for the building automation and controls business and estimated the fair value based on the discounted current value of the expected future cash flows. We then compared the implied fair value of the goodwill to its carrying value and determined that the value of the goodwill was not impaired. It is possible that upon completion of future impairment tests, as the result of changes in facts or circumstances, we may have to take additional charges in future periods to recognize a further write-down of the value of the goodwill attributed to our acquisitions to their estimated fair values.

Results of Operations

During the twelve-month period ended December 31, 2004, we incurred a net loss of \$5.16 million and used \$4.04 million of cash for operating activities. Primarily as a result of our continuing losses and lack of liquidity our independent registered public accounting firm modified their opinion on our December 31, 2004 Consolidated Financial Statement to contain a paragraph wherein they expressed a substantial doubt about our ability to continue as a going concern. We have taken steps to improve our current liquidity and provide the growth capital necessary to fund our plan for future growth. Our efforts to raise additional capital are discussed below.

Our revenues reflect the sale of our products and services, net of allowances for returns and other adjustments. Electric City's sales are generated from the sale of products and services, primarily in the U.S. Two customers individually accounted for more than 10% of our consolidated sales during the year ended December 31, 2004, and four customers individually accounted for more than 10% of our consolidated sales during the year ended December 31, 2003. One of these customers individually accounted for more than 10% of our consolidated sales in both years.

Our cost of goods sold consists primarily of materials and labor. Also included in our cost of goods sold are freight, the costs of operating our manufacturing facility, charges from outside contractors used to install our product in our customers' facilities, depreciation, charges for potential future warranty claims and royalty costs related to EnergySaver sales.

Sales and gross profits depend in part on the volume and mix of products sold during any given period. Generally, products that we manufacture have a higher gross profit margin than products and services that we purchase and resell.

A portion of our operating expense is relatively fixed, such as the cost of our facilities. Accordingly, an increase in the volume of sales will generally result in an increase to our gross margins since these fixed expenses do not increase proportionately with sales. We have never fully utilized the manufacturing capacity of our facilities and, therefore, believe that the fixed nature of some of our

expenses would contribute to an increase in our gross margin in future periods if sales volumes increase. In particular we believe that our facility in Elk Grove Village can support a sales level of EnergySavers of approximately \$15 million to \$20 million without a significant investment in fixed assets. It is our intent to outsource manufacturing to third party contract manufacturers once we approach the capacity of our current facility.

Selling, general and administrative (SG&A) expenses include the following components:

- § direct labor and commission costs related to our employee sales force;
- § expenses related to our non-manufacturing management, supervisory and staff salaries and employee benefits;
- § commission costs related to our independent sales representatives and our distributors;
- § costs related to insurance, travel and entertainment and office supplies and the cost of non-manufacturing utilities;
- § costs related to marketing and advertising our products;
- § legal expenses;
- § research and development expenses;
- § costs related to administrative functions that serve to support the existing businesses of the Company, as well as to provide the infrastructure for future growth.

Interest expense for continuing operations includes the costs and expenses associated with working capital indebtedness, the mortgage on our headquarters building, a convertible term loan, and various auto loans, all as reflected on our current and prior financial statements. Also included in interest expense is amortization of debt discount and deferred financing costs. Debt discount includes the fair value of the warrants issued to Laurus Master Fund in 2003, as well as the value of beneficial conversion feature attributed to the Convertible Term Loan which was borrowed in 2003.

Audited Twelve-Month Period Ended December 31, 2004 Compared With the Audited Twelve-Month Period Ended December 31, 2003

Revenue. Our revenue declined \$2,219,198 or 47.9% to \$2,412,635 during the year ended December 31, 2004 from \$4,631,833 during the year earlier period. Revenue from the sale of EnergySaver related products and services declined \$1,330,467 or 64.5% to \$733,630 from \$2,064,097 in 2003. Energy Saver unit sales declined 48.4% from 217 units in 2003 to 112 units during 2004 (excluding units shipped under the ComEd VNPP program). The decline in EnergySaver related revenue is directly attributable to our decision to focus on utility programs such as the ComEd, Xcel and PacifiCorp VNPP programs, rather than on commercial sales as we have in past years. We anticipate that as a result of this shift in focus service revenue related to long-term contracts will represent a larger portion of our future revenue. December 31, 2004, we had shipped 89 EnergySavers to 52 customer hosts under the ComEd program, but we have not recognized revenue related to this program pending completion of an amendment to the existing agreement with ComEd.

The ComEd VNPP is currently structured as a service agreement with a 13 year term in which Electric City will provide up to 50 MWs of curtailment capacity to ComEd at a fixed price per kilowatt of installed capacity, payable quarterly in arrears whether the capacity is used or not as the capacity is installed. As currently structured, we will recognize revenue under the ComEd program over the life of the program. During the fourth quarter of 2004 we

signed a memorandum of understanding with ComEd, which, among other things, contemplates, subject to certain conditions, a doubling of the size of the program to 100 megawatts and modification of pricing in a manner which we believe should be favorable for the Company. A prerequisite to increasing the size of the program and modifying the pricing is finalization of regulatory changes necessary for ComEd to include the costs of the program in its rate base so that it can recover the cost of the program from its customers. A plan that would permit this was submitted to the Illinois Commerce Commission in February 2005. The Illinois Commerce Commission

has historically encouraged demand response programs such as our VNPP, and thus far has not indicated that it will oppose the proposed changes sought by ComEd. If the rules are not adopted by the end of 2006, ComEd will have the option to cap the size of the system at 10 MWs and will also have the option to purchase the equipment outright. We hope that the amendment to our agreement with ComEd will be executed in definitive form in the first half of 2005 and that the necessary regulatory approvals will be obtained sometime thereafter.

We had not shipped any product under the Xcel or PacifiCorp programs as of December 31, 2004. We began shipping product under the Xcel program during the first quarter of 2005 and anticipate the first shipments under the PacifiCorp program will occur during the second quarter of 2005. The structure of the Xcel program, which provides upfront incentives to offset a portion of the cost of the equipment, will allow us to recognize revenue upon customer acceptance of the installed units. Product must be shipped, installed and accepted prior to June 30, 2005 in order to be eligible for incentives under the current Xcel program. The PacifiCorp program is similar to the existing ComEd program, as a result revenue and expenses will be recognized over the 10-year term of the contract.

Revenue at our building automation and controls segment declined 34.9% to \$1,705,341 in 2004 from \$2,618,486 in 2003. Revenue in this segment is recognized as work is completed and material is delivered to the job site, thus will vary based on the level of activity during a particular period. This segment completed two of the five long-term projects it was working on during the fourth quarter of 2003, one during the first quarter of 2004 and another during the fourth quarter of 2004. The last of the five long term projects should be completed during the first quarter of 2005. We are currently bidding on a couple of potentially significant new long term projects. If we are selected for any of these projects we expect to begin work during the first half of 2005. In the interim, this segment is working on various short term retro-fit projects. We expect the revenue for this segment to remain largely unchanged in future periods from the level realized during 2004.

Gross Profit. Our consolidated gross profit declined \$79,615 or 41.9% to \$110,531 during 2004, as compared to \$190,146 earned during 2003, while our gross margin during 2004 increased to 4.6% from 4.1% in 2003. The EnergySaver related business generated a loss at the gross profit line of approximately \$130,000 during 2004 as compared to earning a gross profit of approximately \$296,000 during 2003. The decline in profitability was due primarily to the decline in revenue and the shift in focus to our utility programs. The building automation controls business recognized a gross profit of approximately \$240,000 during 2004, as compared to a loss of approximately \$106,000 in 2003. The improvement in the gross profit in 2004 was the result of recognition of profit on long term jobs that were completed during the year.

SG&A Expenses. Selling, general and administrative expenses increased \$353,125 or 8.2% to \$4,643,203 in 2004 from \$4,290,078 in 2003. The increase in SG&A expense was primarily due to legal costs related to arbitration we were involved in with a dealer. If it were not for this legal expense our SG&A would have declined year over year as a result of reductions in labor costs, sales commissions to third party dealers and distributors and travel and entertainment expenses. The dealer arbitration was settled in February 2005, thus our legal expenses are expected to decline significantly in 2005. Overall SG&A expense is expected to remain unchanged or increase slightly during 2005 as we add additional resources to assist in the execution of the ComEd, Pacificorp and Xcel programs.

Other Non-Operating Income (Expense). Other non-operating expense is comprised of interest expense and interest income. Interest expense increased \$283,507 to \$649,195 during 2004 from \$365,688 in 2003. Almost all of the increase in interest expense during 2004 was due to a \$268,815 increase in amortization of deferred issuance costs and the original issue discount. Interest expense included amortization expense totaling \$574,437 for 2004 as compared to \$305,622 for 2003. Interest

income increased \$12,176 or 117.9% to \$22,505 for 2004 as compared to \$10,329 for 2003. The increase in interest income is the result of higher interest rates earned on invested balances and higher average invested balances.

Discontinued Operations. During 2003 we agreed to sell substantially all of the assets and to transfer most of the liabilities of our Power Management segment to a group of investors that included members of the segment's management. The sale closed on June 3, 2003, effective as of May 31, 2003. As required by SFAS 144 we have presented the operating results as well as the loss on disposal for this segment as discontinued operations. During the twelve-month period ended December 31, 2003 the Power Management segment's operating loss was \$262,503 and in addition, we recognized a \$764,148 loss on the disposal of the segment during 2003.

Preferred Stock Dividends. The dividend expense recognized during 2004 and 2003 was comprised of the following:

<i>Year ended December 31,</i>	2004	2003
Accrual of dividend on Series A Convertible Preferred	\$ 540,705	\$ 2,253,978
Accrual of Series C Preferred dividend	53,206	219,712
Accrual of Series D Preferred dividend	35,932	77,689
Accrual of Series E Preferred dividend	1,006,937	
Deemed dividend associated with beneficial conversion price on shares issuable in satisfaction of preferred dividends	1,127,021	1,879,554
Deemed dividend associated with beneficial conversion feature of Series D Preferred stock		386,984
Deemed dividend associated with the redemption and exchange of outstanding preferred stock	1,860,458	
Deemed dividend associated with change in the expiration date of warrants to purchase shares of preferred stock	15,000	
Total	\$ 4,639,259	\$ 4,817,917

Our dividend expense for 2004 declined \$178,658 or 3.7% to \$4,639,259 from \$4,817,917 for 2003. We accrued dividends of \$1,636,780 and \$2,551,379 on our Convertible Preferred Stock during 2004 and 2003, respectively. This decline in accrued dividends was the result of the reduction in the number of preferred shares outstanding and a reduction in the dividend rate that resulted from the redemption and exchange effected in March 2004. Also contributing to the decline was a reduction in the number of preferred shares outstanding resulting from the voluntary conversion of shares of preferred stock into 1,956,700 shares of common stock. The dividends accrued during 2004 and 2003 were satisfied through the issuance of 16,368 shares of preferred stock (convertible into 1,636,800 shares of common stock) and 255,138 shares of preferred stock (convertible into 2,551,380 shares of common stock), respectively. As part of the redemption and exchange completed in March 2004, shares of old preferred stock were exchanged for shares of the new Series E preferred stock at the rate of 10 shares of old preferred for each share of new Series E preferred stock. Additionally, each share of old preferred stock was convertible into 10 shares of common stock, whereas each share of new Series E preferred stock is convertible into 100 shares of common stock. We were required to recognize non-cash deemed dividends of \$1,127,021 and \$1,879,554 during 2004 and 2003, respectively, due to the fact that the conversion price on these dividend shares was lower than the market price of our common stock on the date of issue. The decline in this deemed dividend is primarily the result of the reduction in the difference between the market price of our common stock and the conversion price of the dividend shares on the date of issuance of these dividend shares. In addition, despite the fact that we believe the redemption and exchange transaction was favorable for the Company and its common stockholders (see note 15(p) to the financial statements), we were required to record a non-cash deemed dividend on the transaction of \$1,860,458. For accounting purposes the transaction was viewed as a redemption for cash and shares of Series E Preferred stock. The non-cash deemed dividend was determined by comparing the fair value of the consideration given (the cash and the market value of the Series E Preferred) to the carrying value of the preferred stock that was redeemed. The fair value of the consideration given exceeded the carrying value of the existing preferred primarily due to the fact that the market price of our common stock was higher on the day the redemption and exchange transaction closed than it was when the shares of the old preferred stock were originally issued. We also incurred a \$15,000 deemed dividend during 2004 when we agreed to extend the expiration date on warrants to purchase shares of our Series E Convertible Preferred stock from September 30, 2004 to December 31, 2004. We agreed to extend these warrants to permit holders who participated in the redemption and exchange more time to exercise their warrants so that if they chose to exercise they could do so without violating the short swing trading rules of section 16(b) of the Securities Act of 1934 or our insider trading policy which prohibits the trading of our securities during certain blackout periods prior to the filing of our financial statements. Dividend expenses for 2003 also included \$386,984 of non-cash deemed dividends associated with the issuance of the Series D Convertible Preferred stock. Again this was due to the fact that the conversion price on the Series D was lower than the market price when the shares of Series D were issued.

As is more fully described in Note 15(p) to our financial statements, we completed a redemption and exchange offering on March 22, 2004 in which we redeemed 538,462 shares of our outstanding Series A, Series C and Series D Convertible Preferred Stock (the Existing Preferred), and exchanged the remaining 2,104,509 shares of Existing Preferred into 210,451 shares of a new Series E Convertible Preferred Stock at the rate of 10 shares of Series E Convertible Preferred Stock for each share of Existing Preferred. The Existing Preferred Stock carried a dividend rate of 10% payable at the Company's election in cash or in additional shares of preferred stock during the first three years following issuance. After the third anniversary of issuance we were required to pay all dividends in cash and the dividend rate was to increase by 1/2 % every six months until it reached 15%, where it would remain until the shares were converted or redeemed. The Series E Preferred carries a 6% dividend that is payable at the Company's election in cash or additional shares of Series E Preferred for as long as the shares remain outstanding. The reduction in the number of outstanding shares of preferred stock, in combination with the reduction in the dividend rate, significantly reduces the dilutive effect of the payment-in-kind dividend on the preferred stock in periods after March 22, 2004.

Audited Twelve-Month Period Ended December 31, 2003 Compared With the Audited Twelve-Month Period Ended December 31, 2002

Revenue. Our revenue declined \$902,689 or 16.3% to \$4,631,833 during the twelve months ended December 31, 2003 from \$5,534,522 for the year earlier period. EnergySaver related revenue decreased 33% or \$1,025,908, to \$2,064,097 in 2003 from \$3,090,005 in 2002. EnergySaver unit sales decreased 34% from 327 units in 2002 to 217 units in 2003. We believe the decline in EnergySaver revenue was the result of (1) our customers' continued deferral of discretionary expenditures until economic conditions improve, and (2) to management's decision to shift resources to focus on the Company's new utility initiative, and in particular the Commonwealth Edison (ComEd) VNPP.

Revenue from our building controls and automation segment decreased \$306,898 or 10.5%, to \$2,618,486 in 2003 from \$2,925,384 million in 2002. Revenue in this segment is recognized as work is completed and material is delivered to the job site and thus will vary based on the level of activity during a particular period. 2003 revenue was derived primarily from five major building automation projects, two of which were begun during 2002 and completed in 2003. One of the projects begun in 2002 and completed in 2003 was the expansion of the Discover Card headquarters in Riverwoods, Illinois. The majority of this project was completed during 2002, contributing to the decline in total revenue for 2003.

Gross Profit. Our consolidated gross profit decreased \$5,024, or 2.6%, to \$190,146 for 2003 compared to \$195,170 for 2002. Our gross profit as a percentage of sales increased to 4.1% during 2003 compared to 3.5% during 2002. The gross margin earned on EnergySaver sales, including ancillary products and service, increased from 10.8% in 2002 to 14.3% in 2003. The improvement in the EnergySaver margin was primarily the result of increased labor efficiency and a shift in the mix of products sold.

Our building automation and controls business reported a loss at the gross profit line during 2003 and 2002 of approximately \$106,000 and \$115,000, respectively. We account for long-term building automation control contracts under the percentage of completion method. Effective January 1, 2003, due to our limited experience in estimating the profitability on long-term contracts, we elected to begin to defer profit on all long-term contracts until completion of the job, at which time the actual profit on the job will be known and recognized. Only two long-term jobs were completed during 2003, the most significant of which was the expansion of the Discover Card headquarters. The Discover Card project was completed at a loss, but was a strategically important contract for Great Lakes because we believe the building automation system installed by Great Lakes is one of the most sophisticated systems ever completed anywhere. The success of this project has resulted in Great Lakes receiving opportunities to bid on other projects of similar size, but with better profit margins. The combination of the policy to defer profits until project completion and the loss on the Discover Card project contributed to the loss reported in 2003. The 2002 loss was due primarily to aggressive bidding on projects as we attempted to gain market share for Great Lakes in a new market.

SG&A Expenses. SG&A expense declined 29.0% or \$1,753,507 to \$4,290,078 for the year ended December 31, 2003 from \$6,043,585 during the year ended December 31, 2002. Labor expense was reduced by \$837,000, or 30% as a result of the annualization of layoffs implemented in 2002 and further reductions in labor during 2003. Bad debt expense declined \$357,000 during 2003 and sales commissions declined \$271,000, the result of fewer sales by third party dealers and reduced sales into territories owned by state distributors.

Impairment Loss. The Company reported an impairment loss of \$108,000 during 2002 related to the reduction in the carrying value of the goodwill associated with the acquisition of Great Lakes Controlled Energy to its estimated fair value. Under SFAS 142 we are required to assess our goodwill for impairment at least annually. We used a discounted cash flow valuation to determine the estimated fair value of the goodwill utilizing assumptions based on known facts and circumstances and estimates of future revenues and profits for the business. As a result of the losses incurred by the building automation and controls segment of our business during 2002, we adjusted our estimates for future profitability, which led to the reduction in the estimated fair value of the goodwill.

Other Non-Operating Income (Expense). Other non-operating expense is comprised of interest expense and interest income. Interest expense increased \$308,798 to \$365,688 during 2003 as compared to \$56,890 for the year ended December 31, 2002. As is more fully explained in note 10 to the consolidated financial statements, included in the 2003 interest expense is amortization of the deferred issuance costs and debt discount related to the Laurus convertible term loan totaling \$305,621. The other components of 2003 interest expense included \$32,000 on our mortgage, \$18,000 on our convertible term loan and \$9,500 on our revolving line of credit. Interest expense for 2002 included interest of \$48,000 on our mortgage, \$3,000 on our revolving line of credit and \$5,500 on a note payable to the sellers of Marino Electric.

Interest income earned during the year ended December 31, 2003 decreased \$12,946 or 56% to \$10,329 from \$23,275 earned during the same period in 2002. The decline in interest income was the result of lower average cash balances during 2003 as compared to 2002 and lower interest rates paid on invested balances.

Discontinued Operations. During 2003 we agreed to sell substantially all of the assets and to transfer most of the liabilities of our Power Management segment to a group of investors that included members of the segment's management. The sale closed on June 3, 2003, effective as of May 31, 2003. As required by SFAS 144 we have presented the operating results as well as the loss on disposal for this segment as discontinued operations. During the twelve-month period ended December 31, 2003 the Power Management segment's operating loss was \$262,503 as compared to an operating loss of \$1,017,897 for the year earlier period. We also recorded a \$764,148 loss on the disposal of the segment during 2003.

Cumulative Effect of Accounting Change. On January 1, 2002, we adopted Statement of Financial Accounting Standards (SFAS) No. 142, Goodwill and Other Intangible Assets effective for fiscal years beginning after December 15, 2001. In accordance with SFAS No. 142, we completed our transitional impairment testing of intangible assets during the second quarter of fiscal 2002. Subsequent to the first quarter of fiscal 2002, with the assistance of a third-party valuation firm, we finalized the testing of goodwill subject to SFAS 142. The testing resulted in a write-down of recorded goodwill related to our Power Management segment in the amount of \$4,103,872, which was recorded as a cumulative effect of a change in an accounting principle.

Preferred Stock Dividends. The dividend expense recognized during 2003 and 2002 was comprised of the following:

<i>Year ended December 31,</i>	2003	2002
Accrual of Dividend on Series A Convertible Preferred	\$ 2,253,978	\$ 2,041,992
Accrual of Series C Preferred dividend	219,712	116,426
Accrual of Series D Preferred dividend	77,689	
Deemed dividend associated with beneficial conversion price on shares issuable in satisfaction of preferred dividends	1,879,554	507,992
Deemed dividend associated with beneficial conversion feature of Series C Convertible Preferred Stock		1,444,697
Deemed dividend associated with beneficial conversion feature of Series D Convertible Preferred Stock	386,984	
Total	\$ 4,817,917	\$ 4,111,107

There were three series of our convertible preferred stock issued and outstanding at various times during 2002 and 2003, up to March 22, 2004 including: our Series A Convertible Preferred Stock (Series A Preferred Stock), which was first issued during September 2001, our Series C Convertible Preferred Stock (Series C Preferred Stock), which was first issued during June 2002 and our Series D Convertible Preferred Stock (Series D Preferred Stock), which was first issued in June 2003.

The Series A Preferred Stock accrued a dividend at the rate of 10%, which was payable during the first three years following initial issuance at our option in cash or additional shares of Series A Preferred Stock (the dividend rate was scheduled to increase by 1/2% each six months, beginning on October 1, 2004 until the dividend rate equaled 15%). We accrued dividends on the shares of Series A Preferred Stock totaling \$2,041,992 and \$2,253,978 during 2002 and 2003, respectively, which we elected to pay by issuing additional shares of Series A Preferred Stock. We were required to recognize non-cash deemed dividends of \$495,589 and \$1,627,985 during 2002 and 2003, respectively, due to the fact that the conversion price on these dividend shares was lower than the market price of our common stock on the dates of issuance. The increase in this deemed dividend is primarily the result of the increased difference in the market price of our common stock relative to the conversion price of the dividend shares on the dates we issued the dividend shares.

On June 4, 2002 we raised \$2.0 million in gross proceeds through the issuance of a package of securities that included shares of our Series C Convertible Preferred Stock, shares of our common stock,

warrants to purchase additional shares of our Series C Convertible Preferred Stock (which have expired unexercised) and warrants to purchase additional shares of our common stock. For accounting purposes, proceeds from this transaction were allocated to the Series C Convertible Preferred Stock, the common stock and warrants issued as part of the transaction based on their relative fair values. The difference between the value allocated to the Series C Convertible Preferred Stock and the market price of our common stock on the date of issue, in addition to the value of the stock and warrants issued as part of the transaction were deemed to be equivalent to a non-cash preferred stock dividend. We recorded the deemed dividend on the date of issuance by offsetting charges and credits to additional paid-in capital in the amount of \$1,444,697, without any effect on total stockholders equity.

The Series C Preferred Stock accrued a dividend at the rate of 10%, which was payable during the first three years following initial issuance at our option in cash or additional shares of Series C Preferred Stock (the dividend rate was scheduled to increase by 1/2% each six months, beginning on July 1, 2005 until the dividend rate equaled 15%). We accrued dividends on the shares of Series C Preferred Stock totaling \$116,426 and \$219,712 during 2002 and 2003, respectively, which we elected to pay by issuing additional shares of Series C Preferred Stock. We were required to recognize non-cash deemed dividends of \$12,403 and \$158,691 during 2002 and 2003, respectively, due to the fact that the conversion price on these dividend shares was lower than the market price of our common stock on the dates of issuance. The increase in the deemed dividend is related to the fact that the Series C was outstanding for the entire twelve month period during 2003, where as it was only outstanding for slightly more than six months during 2002. Also contributing to the increase in the deemed dividend was the increased difference in the market price of our common stock relative to the conversion price of the dividend shares on the dates we issued the dividend shares.

On June 27, 2003 we raised \$1.5 million in gross proceeds through the issuance of a package of securities that included shares of our Series D Convertible Preferred Stock, shares of our common stock, warrants to purchase additional shares of our Series D Convertible Preferred Stock and warrants to purchase additional shares of our common stock. For accounting purposes, proceeds from this transaction were allocated to the Series D Convertible Preferred Stock, the common stock and warrants issued as part of the transaction based on their relative fair values. The difference between the value allocated to the Series D Convertible Preferred Stock and the market price of our common stock on the date of issue, in addition to the value of the stock and warrants issued as part of the transaction were deemed to be equivalent to a non-cash preferred stock dividend. We recorded the deemed dividend on the date of issuance by offsetting charges and credits to additional paid-in capital in the amount of \$386,984, without any effect on total stockholders equity.

The Series D Preferred Stock accrued a dividend at the rate of 10%, which was payable during the first three years following initial issuance at our option in cash or additional shares of Series D Preferred Stock (the dividend rate was scheduled to increase by 1/2% each six months, beginning on July 1, 2006 until the dividend rate equaled 15%). We accrued dividends on the shares of Series D Preferred Stock totaling \$77,689 during 2003, which we elected to pay by issuing additional shares of Series D Preferred Stock. We were required to recognize non-cash deemed dividends of \$92,878 during 2003, due to the fact that the conversion price on these dividend shares was lower than the market price of our common stock on the dates we issued the dividend shares.

All outstanding shares of Series A, Series C and Series D Preferred stock were redeemed or exchanged for shares of Series E Convertible Preferred stock on March 22, 2004. See Liquidity and Capital Resources below for additional information on this transaction.

Liquidity and Capital Resources

During the twelve-month period ended December 31, 2004, we incurred a net loss of \$5.16 million and used \$4.04 million of cash for operating activities. Primarily as a result of our continuing losses and lack of liquidity our independent registered public accounting firm modified their opinion on our December 31, 2004 Consolidated Financial Statement to contain a paragraph wherein they expressed a substantial doubt about our ability to continue as a going concern. We have taken steps to improve our current liquidity and provide the growth capital necessary to fund our plan for future growth. Our efforts to raise additional capital are discussed below.

As of December 31, 2004, we had cash and cash equivalents of \$1,789,808, compared to cash and cash equivalents of \$2,467,023 on December 31, 2003. Our debt obligations as of December 31, 2004 consisted of a convertible term loan in the amount of \$676,790, a mortgage in the amount of \$598,000 on our facility in Elk Grove Village Illinois, and a vehicle loan of \$5,611.

The Company's principal cash requirements are for operating expenses, including employee costs, the costs related to research and development, advertising costs, the cost of outside services including those providing accounting, legal, engineering and electrical contracting services, and the funding of inventory and accounts receivable, and capital expenditures. The Company has financed its operations since inception primarily through the private placement of its common and preferred stock, as well as through various forms of secured debt.

The following table summarizes, for the periods indicated, selected items in our consolidated statement of cash flows:

	Year ended December 31,		
	2004	2003	2002
Net cash used in operating activities	\$ (4,039,058)	\$ (2,830,117)	\$ (6,880,511)
Net cash provided by (used in) investing activities	(149,603)	896,728	(6,987)
Net cash provided by financing activities	3,511,446	2,844,508	2,957,329
 Net Increase (Decrease) in Cash and Cash Equivalents	 (677,215)	 911,119	 (3,930,169)
Cash and Cash Equivalents, at beginning of period	2,467,023	1,555,904	5,486,073
 Cash and Cash Equivalents, at end of period	 \$ 1,789,808	 \$ 2,467,023	 \$ 1,555,904

2004 Compared to 2003

Net cash declined \$677,215 during the year ended December 31, 2004 while net cash increased \$911,119 during the year ended December 31, 2003.

Operating Activities

The cash consumed by operating activities increased \$1,208,941 or 42.7% to \$4,039,058 during the twelve-month period ended December 31, 2004 as compared to consuming \$2,830,117 during the twelve-month period ended December 31, 2003. The cash consumed by operating activities in both periods are largely the result of losses from

operations. The increase in cash used in operating activities during 2004 was primarily attributable to the increase in SG&A expense and lower gross profit realized during the year, partially offset by the elimination of the loss from discontinued operations.

Investing Activities

Investing activities consumed \$149,603 during the 2004 compared to generating cash of \$896,728 during 2003. The increase in investing activities for 2004 primarily reflects the costs of building and installing equipment for the ComEd VNPP program. These capitalized costs will be amortized over the term of the underlying contract with ComEd. During 2003, we sold certain assets and transferred certain liabilities of our Power Management business, generating cash proceeds of \$929,032.

Financing Activities

Financing activities generated cash of \$3,511,446 during 2004 as compared to generating cash of \$2,844,508 during 2003. During 2004, we raised \$11,000,000 through the issuance of a package of securities that included shares of our common stock and common stock warrants. We used \$7,000,006 of the net proceeds from this issuance to effectuate a redemption and exchange offer for our Series A, Series C and Series D Convertible Preferred Stock. We incurred expenses related to these transactions of \$910,393. During the period we also made scheduled principal payments on our mortgage and auto loan of \$39,155 and received \$461,000 in net proceeds from the exercise of warrants to purchase shares of our common and preferred stock.

During 2003 we raised \$1,000,000 in gross proceeds through the issuance of a convertible term note to Laurus Funds. These proceeds were partially offset by issuance costs totaling \$308,228. In November 2003 Laurus converted \$52,346 in principal of the note into shares of our common stock. We also raised gross proceeds of \$1.5 million from the issuance of our Series D Convertible Preferred Stock and \$1,669,914 from the issuance of 1,815,125 shares of our common stock in three separate private placements during 2003. The proceeds from these private placements of our common stock were partially offset by issuance costs of \$297,462. During 2003, various holders of warrants exercised their rights under the warrants generating \$197,000 in cash. We used a portion of the proceeds generated from the sale of our Power Management segment to repay \$298,000 in equipment loans and to pay down to zero the outstanding balance on our revolving line of credit of \$500,000. We also prepaid \$47,000 on our mortgage as an inducement for the lender to refinance the mortgage and extend the maturity until February 1, 2005. We made scheduled payments during 2003 of \$33,000 on our mortgage, \$51,500 on our equipment loan, and \$7,014 on various auto loans. We also received a payment of \$798 from a board member that represented the short-swing profit inadvertently earned when he purchased shares of our stock within six months of selling shares, which is a violation of section 16(b) of the Securities Exchange Act of 1934.

2003 Compared to 2002

Operating Activities

The cash consumed by operating activities declined \$4,050,394 or 58.9% to \$2,830,117 during the twelve-month period ended December 31, 2003 as compared to \$6,880,511 consumed during the twelve-month period ended December 31, 2002. Cash used to fund the net loss, calculated at the net loss less non-cash charges declined \$2,262,673 or 36.5% in 2003 to \$3,928,847 from \$6,191,520 in 2002. The improvement in cash used to fund the net loss was primarily due to a \$1.8 million reduction in SG&A expense, and the \$755,394 reduction in the loss from discontinued operations.

Changes in net working capital generated \$1,098,730 in cash during 2003 as compared to consuming \$688,991 during 2002. Most of the improvement in cash used for working capital purposes was due to reductions in inventory, the result of continued focus on better inventory management, and the receipt of a significant customer deposits related to the ComEd VNPP program. These improvements

were partially offset by a reduction in accrued expenses during 2003 as amounts owed to subcontractors on building automation control projects were paid during the year.

Investing Activities

Investing activities generated cash of \$896,728 during 2003 as compared to consuming cash of \$6,987 during 2002. In June 2003, we sold certain assets and transferred certain liabilities of our Power Management business, generating cash proceeds of \$929,032. This source of cash was partially offset by the purchase of equipment during 2003 totaling \$32,304. During 2002 we spent \$17,487 on new equipment, but this use of cash was partially offset by \$10,500 generated through the sale of equipment we no longer used.

Financing Activities

Financing activities generated cash of \$2,844,508 and \$2,957,329 during 2003 and 2002, respectively. In September 2003 we raised \$1,000,000 in gross proceeds through the issuance of a convertible term note. These proceeds were partially offset by issuance costs totaling \$308,228. In November 2003 holder of the Convertible Term Note converted \$52,346 in principal into shares of our common stock. We also raised gross proceeds of \$1.5 million from the issuance of our Series D Convertible Preferred Stock and \$1,669,914 from the issuance of 1,815,125 shares of our common stock in three separate private placements during 2003. The proceeds from these private placements of our common stock were partially offset by issuance costs of \$297,462. During 2003, various holders of warrants exercised their rights under the warrants to purchase 197,000 shares of common stock for \$197,000 in cash. We used a portion of the proceeds generated from the sale of our Power Management segment to repay \$298,000 in equipment loans and to pay down the outstanding balance on our revolving line of credit of \$500,000. We also prepaid \$47,000 on our mortgage as an inducement for the lender to refinance the mortgage and extend the maturity until February 1, 2005. During 2003 we made scheduled payments of \$33,000 on our mortgage, \$51,500 on our equipment loan, and \$7,014 on various auto loans. During 2003 we also received a payment of \$798 from a board member that represented the short-swing profit inadvertently earned when he purchased shares of our stock within six months of selling shares, which is a violation of section 16(b) of the Securities Exchange Act of 1934.

During 2002 we issued preferred and common stock which generated net proceeds of \$2,800,257. We also refinanced the mortgage on our building and our equipment loan, generating \$22,000 after the repayment of the existing loans, and borrowed \$500,000 on our line of credit. Offsetting these sources of cash were scheduled payments of \$147,000 on our long-term debt and \$219,067 on the Marino Sellers note. During 2002 we also received \$1,300 from one of our 10% stockholders, which represented the short-swing profit inadvertently earned when he purchased shares of our stock within six months of selling shares, which is a violation of section 16(b) of the Securities Exchange Act of 1934.

LIQUIDITY

Our primary sources of liquidity are our available cash reserves and borrowing capacity under our working capital line.

During fiscal 2005, we anticipate our cash usage will be similar to fiscal 2004 in which the Company used approximately \$4 million. We anticipate that our cash needs will be funded primarily by financing activities including its \$2 million line of credit and additional sales of its preferred and common stock. There can be no assurance that the Company will be successful in raising required funds through the sale of its preferred and common stock.

We currently have a \$2 million secured convertible working capital line with Laurus Master Fund, Ltd. (Laurus). As of December 31, 2004 we had not borrowed under the facility. The shift in our focus away from commercial sales

to utility programs has resulted in a significant reduction in the amount of receivables generated. As of December 31, 2004 eligible receivables would have supported borrowings of approximately \$89,000 under the facility. To address the problem created by our low borrowing base, we negotiated an amendment to the Laurus credit facility in February 2005, which

among other things granted us an overadvance on the working capital line though December 2005. Since then, on February 28, 2005 we borrowed the full \$2 million available under the facility without the requirement that we have eligible receivables to support the advance. For a more detailed description of this credit facility and the recent amendment, please see note 9 of our consolidated financial statements.

Our ability to continue the development, manufacturing and expansion of sales of our products, including the EnergySaver and the GlobalCommander, will require the continued commitment of significant funds. The actual timing and amount of our future funding requirements will depend on many factors, including the amount and timing of future revenues, the level and amount of product marketing and sales efforts, the magnitude of research and development, and our ability to improve margins on our products.

During the last four fiscal years we have raised net proceeds of \$28.6 million through the issuance of shares of our common and preferred stock, which has allowed us to continue to execute our business plan. Most of these funds have been consumed by operating activities, either to fund our losses or for working capital requirements. As of December 31, 2004 our cash balance was \$1,789,808. In an attempt to move the Company to a position where it can start to generate positive cash flow our management has set the following key objectives for cash flow improvement in 2005:

- § Successfully execute on the ComEd and Pacificorp contracts. We believe that this is important from several different perspectives. We believe the contracts will establish Electric City as the leader in negative power development, thereby supporting VNPP opportunities with other utilities. And we also believe the contracts will lead to increased commercial sales of the EnergySaver as customers who participate in the VNPP programs with operations outside the territories covered by the VNPPs gain exposure to the technology. Both of these projects are currently under contract, therefore we are focusing a great deal of our resources on these projects and will be hiring additional personnel in an attempt to keep the projects on schedule.
- § Increase the profitability of EnergySaver sales and increase direct sales of EnergySavers to customers who gain familiarity with the technology through their participation in VNPP programs. Increasing the margins earned on EnergySaver sales will also have an immediate and positive impact on our cash flow. We have seen improvements in EnergySaver margins at times over the past three years with increases in volume. We believe that increased volumes that will result from the VNPP programs will lead to consistently higher margins as a result of increased capacity utilization. We have already seen VNPP customers proceed to a point whereby they will place large scale direct orders for EnergySaver systems.
- § Secure additional VNPP projects. We are currently in discussions with several utilities regarding implementing VNPP programs in their service territories. Recent legislative actions by various states are encouraging or mandating utilities to include demand reduction goals in their long term energy plans. We believe we are well positioned to take advantage of these new requirements. Securing one or two additional VNPP contracts during 2005 should lead to improvements in cash flow beginning in 2006 and we hope, to increased profitability.
- § Expand and improve the product line through internal development or acquisition. We would like to develop or acquire additional cost effective demand response technology that we can incorporate into our VNPP offering and find ways to reduce the cost of our current technology. Our ability to do this will expand our opportunities with utilities, increase the rate of VNPP development by allowing us to control additional load with existing customers and increase our profitability. In March 2005, we signed a non-binding letter of intent to acquire Maximum Performance Group a maker of air conditioning control technology.

- § Build on the recent project successes at Great Lakes Controlled Energy to make the Building Controls and Automation business grow and become profitable. Great Lakes has recently or will soon successfully complete several projects which have contributed to improvements in the segment's profitability and cash flow. Great Lakes' successful execution on these projects has led to opportunities to bid on other significant projects. If this segment continues to improve as it has during the last two years, we believe it will turn profitable during 2005.
- § Continue to aggressively manage our costs in order to conserve cash. While we made significant progress in reducing our costs during the last several years, we must continue to effectively manage all of our costs so that they do not negate the improvements in profitability we are working to create in our Energy Technology and Building Automation and Control segments.
- § Secure additional capital to continue to fund operations until the business turns cash flow positive. Our ability to raise additional capital in the future will depend a great deal on our ability to make progress toward the goals outline above.

We believe that if we are successful in achieving these priorities we should have sufficient liquidity to allow us to operate until our operations turn cash flow positive. If we are not able to achieve some or all of these priorities we may begin to experience a liquidity shortage in the latter half of 2005 which could force us to scale back our growth plans, or in the worst case cease operations.

If we raise additional capital (which may require stockholder approval), our existing stockholders will likely experience dilution of their present equity ownership position and voting rights, depending upon the number of shares issued and the terms and conditions of the issuance. The new equity securities will likely have rights, preferences or privileges senior to those of our common stock.

Contractual Obligations

Our obligations to make future payments under contracts as of December 31, 2004 are as follows:

		Payments due by period			
		Less than	1 to 3	3 to 5	More than 5
<u>Contractual Obligations</u>	Total	1 year	years	years	years
Long-term debt	\$ 1,280,401	\$ 424,451	\$ 855,950	\$	\$
Capital leases					
Operating leases	98,600	69,600	29,000		
Purchase obligations					
Employment agreements	610,000	610,000			

Total	\$ 1,989,001	\$ 1,104,051	\$ 884,950	\$	\$
-------	--------------	--------------	------------	----	----

Recent Accounting Pronouncements

In January 2003, the Financial Accounting Standards Board (FASB) issued Interpretation No. 46, Consolidation of Variable Interest Entities (FIN 46). In general, a variable interest entity is a corporation, partnership, trust or any other legal structure used for business purposes that either (a) does not have equity investors with voting rights or (b) has equity investors that do not provide sufficient financial resources for the entity to support its activities. FIN 46 requires certain variable interest entities to be consolidated by the primary beneficiary of the entity if the investors do not have the characteristics of a controlling financial interest or do not have sufficient equity at risk for the entity to finance its

activities without additional subordinated financial support from other parties. The consolidation requirements of FIN 46 apply immediately to variable interest entities created after January 31, 2003. We adopted the provisions of FIN 46 effective February 1, 2003 and such adoption did not have a material impact on our consolidated financial statements since we currently have no variable interest entities. In December 2003, the FASB issued FIN 46R with respect to variable interest entities created before January 31, 2003, which among other things, revised the implementation date to the first fiscal year or interim period ending after March 15, 2004, with the exception of Special Purpose Entities (SPE). The consolidation requirements apply to all SPEs in the first fiscal year or interim period ending after December 15, 2003. We adopted the provisions of FIN 46R effective January 1, 2004 and such adoption did not have a material impact on our consolidated financial statements since we currently have no SPEs.

In December 2004, the FASB issued Statement of Financial Accounting Standards (SFAS) No. 123(R), Share-Based Payment. This statement revises FASB Statement No. 123, Accounting for Stock-Based Compensation and supersedes APB Opinion No. 25, Accounting for Stock Issued to Employees. SFAS No. 123(R) focuses primarily on the accounting for transactions in which an entity obtains employee services in share-based payment transactions. SFAS No. 123(R) requires companies to recognize in the statement of operations the cost of employee services received in exchange for awards of equity instruments based on the grant-date fair value of those awards (with limited exceptions). This Statement is effective as of the first reporting period that begins after June 15, 2005. Accordingly, we will adopt SFAS 123(R) in the third quarter of fiscal 2005. We are currently evaluating the provisions of SFAS 123(R) and have not yet determined the impact that this Statement will have on our results of operations or financial position.

In November 2004, the FASB issued SFAS No. 151, Inventory Costs, an amendment of ARB No. 43, Chapter 4. SFAS No. 151 clarifies the accounting for abnormal amounts of idle facility expense, freight, handling costs and wasted material and requires that such items be recognized as current-period charges regardless of whether they meet the so abnormal criterion outlined in ARB No. 43. SFAS No. 151 also introduces the concept of normal capacity and requires the allocation of fixed production overheads to inventory based on the normal capacity of the production facilities. Unallocated overheads must be recognized as an expense in the period incurred. SFAS No. 151 is effective for inventory costs incurred during fiscal years beginning after June 15, 2005. While we are still evaluating the impact of this statement, we do not currently believe it will have a material impact on our consolidated financial statements.

Item 7A. Quantitative and Qualitative Disclosures

The only significant exposure the Company has to market risk is the risk of changes in market interest rates. The interest rates on the Company's debt facilities are variable and change with changes in the prime rate. The interest rate on the Company's convertible term loan is equal to the prime rate plus 1.75% or 6%, whichever is greater. The interest rate on the revolving loan is equal to prime plus 1.75%. As of December 31, 2004, the prime rate was 5.25% and the rate on the term loan was 7.0%. The interest rate on the Company's mortgage is equal to the prime rate plus 1/2%. If the prime rate were to increase 1 percentage point, the aggregate annual interest cost on the mortgage, the term loan and revolving loan (which was borrowed on February 28, 2005) would increase by approximately \$33,000.

Item 9 Change in and Disagreements with Accountants on Accounting and Financial Disclosure

None

Item 9A. Controls and Procedures

- (a) ***Explanation of disclosure controls and procedures.*** Our chief executive officer and chief financial officer, after evaluating the effectiveness of the Company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (the "Exchange Act")) as of the end of the period covered by this report, have concluded that our disclosure controls and procedures were effective and designed to ensure that material information relating to the Company and its consolidated subsidiaries would be made known to them by others within those entities.
- (b) ***Changes in internal controls.*** During the fourth quarter of 2004 there were no significant changes in the Company's internal controls or in other factors which materially affected or are reasonably likely to materially affect our internal controls over financial reporting.

Item 9B. Other Information

None

PART III

Certain information required by Part III is omitted from this report because we intend to file a definitive Proxy Statement pursuant to Regulation 14A (the Proxy Statement) no later than 120 days after the end of the fiscal year covered by this report, and certain information to be included therein is incorporated herein by reference.

Item 10. Directors and Executive Officers of the Registrant

The information required by this Item is incorporated by reference to the Proxy Statement under the sections captioned Proposal 1- Election of Directors, Executive Compensation and Compliance with Section 16(a) of the Securities Exchange Act of 1934.

Item 11. Executive Compensation

Information regarding compensation of the Company's named executive officers is set forth under Executive Compensation in the Proxy Statement, which information is incorporated herein by reference. Information regarding compensation of the Company's directors is set forth under Compensation of Directors in the Proxy Statement, which information is incorporated herein by reference.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

Information regarding security ownership of certain beneficial owners, directors and executive officers is set forth under Security Ownership of Principal Stockholders and Management in the Proxy Statement, which information is incorporated herein by reference.

Information regarding the Company's equity compensation plans, including both stockholder approved plans and plans not approved by stockholders, is set forth in the section entitled Executive Compensation in the Proxy Statement, which information is incorporated herein by reference.

Item 13. Certain Relationships and Related Transactions

Information regarding certain relationships and related transactions is set forth under Certain Relationships and Related Transactions in the Proxy Statement, which information is incorporated herein by reference.

Item 14. Principal Accountant Fees and Services

Information regarding principal auditor fees and services is set forth under Principal Accountant Fees and Services in the Proxy Statement, which information is incorporated herein by reference.

Report of Independent Registered Public Accounting Firm

Electric City Corp.
Elk Grove Village, Illinois

We have audited the accompanying consolidated balance sheets of Electric City Corp. as of December 31, 2004 and 2003, and the related consolidated statements of operations, stockholders' equity and cash flows for each of the three years in the period ended December 31, 2004. We have also audited the schedule in the accompanying index. These financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and schedule are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements and schedule, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements and schedule. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Electric City Corp. at December 31, 2004 and 2003, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2004, in conformity with accounting principles generally accepted in the United States of America.

The accompanying consolidated financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note 2 to the consolidated financial statements, the Company has suffered recurring losses and negative cash flow from operations that raise substantial doubt about its ability to continue as a going concern. Management's plans in regard to these matters are also described in Note 2. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

As discussed in Note 3 to the consolidated financial statements, the Company adopted Statement of Financial Accounting Standards No. 142, "Goodwill and Other Intangible Assets," on January 1, 2002.

Chicago, Illinois
February 11, 2005, except
