NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(In thousands of dollars, except for share data)

A. Management Representation
The consolidated
financial
statements at
December 31,
2000 and 1999,
and for the three
month periods
then ended have
not been
examined by
independent

accountants, but in the opinion of the management of Keithley Instruments, Inc., all adjustments necessary to a fair statement of the consolidated balance sheet, consolidated statement of income and consolidated statement of cash flows for those periods have been included. All adjustments included are of a normal recurring nature. B.

Earnings per share

denominator The weighted average number of shares and share equivalents used in determining basic earnings per share and diluted earnings per share was 15,574,631 and 16,570,709 for the quarter ended December 31, 2000, respectively, and 14,188,578 and 15,291,458 for the quarter ended December 31, 1999, respectively.

Both Common Shares and Class B Common Shares are included in calculating the weighted average number of shares outstanding. C.

Sale of assets

During the first quarter of fiscal 2000, the

company recorded an additional adjustment to the gain on previously disposed businesses of \$477 pretax, or \$0.02 per share after taxes. At the time of the sales of the businesses, the company established liabilities for certain items that were to be settled at future dates. The additional adjustment represents the settlement of certain of these issues. D. Stock repurchase programs On December 11, 2000, the company announced its Board of Directors had approved an open market stock repurchase program to replace the existing program, which expired in December 2000. Under the new program, the company may purchase up to 2,000,000 Common Shares, or approximately 13 percent of shares outstanding, over a three-year period. The purpose of the repurchase program is to offset the dilutive effect of stock option and

stock purchase plans. Common Shares held in treasury may be reissued in settlement of stock purchases under these plans. The company did not purchase shares during the first quarter of fiscal 2001. During the first quarter of fiscal 2000, the company bought back 304,800 Common Shares at an average cost of \$9.89 per share including commissions. At December 31, 2000, 255,850 Common Shares purchased under the company's share repurchase programs remained in treasury at an average cost of \$5.36 per share including commissions. Also, included in the Common shares held in treasury, at cost caption of the Consolidated Balance Sheets are shares repurchased to settle non-employee Directors' fees deferred pursuant to the Keithley Instruments, Inc. 1996 Outside Directors' Deferred Stock Plan. The total number of shares held in treasury at December 31, 2000 was 373,467.

Table of Contents

E Accounting for Derivatives and Hedging Activities

The company adopted Statement of Financial Accounting Standards No. 133, Accounting for Derivative Instruments and Hedging Activities (SFAS 133) on October 1, 2000. The transition amount recorded upon adoption of SFAS 133 was not material to the consolidated financial results or financial position of the company. In accordance with the provisions of SFAS 133, all of the company s derivative instruments are recognized on the balance sheet at their fair value. To hedge sales, the company currently utilizes foreign exchange forward contracts or option contracts to sell foreign currencies to fix the exchange rates related to near-term sales and effectively fix the company s margins. Underlying hedged transactions are recorded at hedged rates, therefore realized

and unrealized gains and losses are recorded when the operating revenues and expenses are recorded. The company also currently utilizes an interest rate swap instrument to mitigate the risk of interest rate changes. The estimated fair value of the swap instrument is determined through quotes from the related financial institutions. On the date the derivative contract is entered into, the company designates its derivative as either a hedge of the fair value of a recognized asset or liability (fair value hedge), as a hedge of the variability of cash flows to be received (cash flow hedge), or as a foreign-currency cash flow hedge (foreign currency hedge). Changes in the fair value of a derivative that is highly effective as, and that is designated and qualifies as, a fair value hedge, along with the gain or loss on the hedged asset or liability that is attributable to the hedged risk are recorded in current-period earnings. Changes in the

fair value of a derivative that is highly effective and that is designed and qualifies as a cash flow hedge are recorded in other comprehensive income until earnings are affected by the transaction in the underlying asset. Changes in the fair value of derivatives that are highly effective and that qualify as foreign currency hedges are recorded in either current period income or other comprehensive income, depending on whether the hedge transaction is a fair value hedge or a cash flow hedge. At December 31, 2000, all the company's derivative instruments were designed as cash flow hedges. The company documents all relationships between hedging instruments and hedged items, as well as its risk-management objective and strategy for undertaking various hedge transactions. The company also assesses whether the derivatives that are used in hedging transactions are highly effective in offsetting changes in cash

flows of hedged items. When it is determined that a derivative is not highly effective as a hedge, the company discontinues hedge accounting prospectively.

Table of Contents

F Comprehensive Income

On October 1, 1998, the company adopted Statement of Financial Accounting Standards No. 130, Reporting Comprehensive Income (SFAS 130), which establishes rules for reporting comprehensive income and its components. The adoption of SFAS 130 did not impact the company's net income or total shareholders equity. Comprehensive income for the three months ended December 31, 2000 and 1999 is as follows:

	<u>December 31,</u>	
	<u>2000</u>	<u>1999</u>
Net income	\$6,901	\$3,510
Unrealized losses on value of derivative securities(212) Foreign currency translation adjustments459(288)		

Comprehensive income\$7,148\$3,222

G

Segment and Geographic Information

The company's business is to develop measurement-based solutions to verify customers' product performance. All the company's products are computer based (multi-point) systems operating under software control. The company's customers are engineers, technicians and scientists in manufacturing, product development and research functions within a range of industries. The company's advanced hardware and software is used for process monitoring, production test and basic research. Although the company's products vary in capability, sophistication, use, size and price, they basically test, measure and analyze electrical and physical properties. As such, the company's management determined the company operates in a single industry segment. The operations by geographic area are presented below. The basis for attributing revenues from external

customers to a geographic area is the location of the customer.

H
In
December 1999,
the Securities
and Exchange
Commission
issued Staff
Accounting
Bulletin No. 101,
Revenue
Recognition in
Financial
Statements (SAB
101). SAB 101
provides

Accounting for Derivatives and Hedging Activities

guidance for public companies on the recognition, presentation and disclosure of revenue in their financial statements. It requires that an entity recognize revenue at the time a product has been accepted by a customer, as defined by certain criteria. SAB 101 is effective no later than the company's fourth quarter of fiscal year 2001, and would have to be adopted retroactively to the beginning of the fiscal year. The company does not believe SAB 101 will have a material impact on its consolidated results or financial position.

Table of Contents

ITEM 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

Results of Operations — In Thousands of Dollars Except for Per Share Data

First Quarter Fiscal 2001 Compared with First Quarter Fiscal 2000

Net income for the first quarter of fiscal 2001 was \$6,901, or \$0.42 per share, a 115 percent increase from \$3,207 or \$0.21 per share, before a \$0.02 per share adjustment to gains on previously disposed businesses. Net income as reported for the first quarter of fiscal 2000 was \$3,510, or \$0.23 per share. (See Note C.)

Net sales of \$44,508 increased 50 percent from \$29,760 in the prior year's first quarter, and were a record high for the sixth consecutive quarter. A stronger U.S. dollar versus foreign currencies had a negative effect on sales growth by 4 percentage points. Sales increased in all major geographic regions. Orders for the first quarter of \$49,782 increased

32 percent from the prior year's orders of \$37,735, and were a new record high for the sixth consecutive quarter. Orders for the company's products serving the optoelectronics industry were at record levels and grew over 200 percent from the prior year's first quarter. Orders from semiconductor customers were the second highest in the company's history and increased approximately 25 percent from the prior year's quarter. Orders from telecommunications customers remained strong with growth of approximately 60 percent. Orders increased from the prior year in all major geographic regions, with the Pacific Basin region particularly strong, up 92 percent. Sequentially, orders increased 6 percent from the record fourth quarter fiscal 2000. Order backlog increased to a record \$35,298 at December 31, 2000.

Cost of goods sold as a percentage of net sales decreased to 37.2 percent from 39.5 percent in the prior year's first quarter. Improved manufacturing efficiencies as a result of higher sales, favorable product and geography mix and price increases more than offset the unfavorable impact of a stronger U.S. dollar. The effect of foreign exchange hedging on cost of goods sold was immaterial in both periods.

Selling, general and administrative expenses decreased to 30.2 percent of net sales compared to 34.8 percent in last year's quarter, a 4.6 percentage point improvement. However, selling, general and administrative expense dollars increased \$3,095, or 30 percent, from the prior year's quarter. The increase in dollars is due to higher commissions and incentives related to increased sales and earnings, and higher personnel costs due to increased headcount.

Product development expenses for the quarter were \$3,883, or 8.7 percent of sales, up 37 percent from \$2,828, or 9.5 percent of net sales, last year. The company has hired approximately 27 employees in the product development area since last year's first quarter to take advantage of the opportunities management sees in the optoelectronics and telecommunications industries.

Table of Contents

Overall, the company has added approximately 115 employees, a 21 percent increase, from December 31, 1999 to December 31, 2000. Significant investments have been made in the Pacific Basin by adding people in China and Taiwan and by opening a direct sales office in Korea. Of the 115 additions, approximately two-thirds of the new hires are in marketing, sales, application support and product development areas.

On November 9, 1998, the company sold certain assets used in the operation of its Quantox product line to KLA-Tencor Corporation. During the first quarter of fiscal 2000, an additional pretax gain of \$477, or \$0.02 per share after taxes, was recorded for the sale. At the time of the sale of this business, the company established liabilities for certain items that were to be settled at future dates. The additional adjustment recorded in the first quarter of fiscal 2000 represents the settlement of certain of these issues. (See Note C.)

The company generated net financing income during the quarter of \$297 versus \$90 in the prior year. Higher levels of cash and cash equivalents, combined with better rates on income earned on cash and cash equivalents accounted for the improvement.

The effective tax rate for the quarter was 37.0 percent versus 35.0 percent last year. The increase in the rate is due to higher profits, as well as increased state and local taxes resulting from higher U.S. earnings.

Liquidity and Capital Resources

During the first quarter, net cash provided by operations was \$9,756. The company purchased \$778 of capital equipment during the quarter and paid \$418 in dividends. Total cash and cash equivalents increased \$9,337 during the

quarter to \$30,745 at December 31, 2000. Total debt of \$3,000 at December 31, 2000, decreased \$225 during the quarter, and the total debt-to-capital ratio was 3.4 percent at December 31, 2000.

The company expects to finance debt service, capital spending, and working capital requirements through cash on hand and cash provided by operations. At December 31, 2000, the company had available unused lines of credit with domestic and foreign banks aggregating \$26,963 of which \$4,963 were short-term and \$22,000 were long-term.

Outlook

The following statements regarding the results for fiscal year 2001 are based on current expectations:

Quarter to quarter results will always be order dependent, but the company's record backlog along with current business activities lead management to believe that sales and pretax earnings for the second quarter will exceed those of the first quarter.

The company is estimating sales growth for fiscal 2001 in excess of 25 percent over fiscal year 2000 sales of \$150,561 based on continued growth in its optoelectronics, semiconductor and telecommunications businesses.

Table of Contents

Gross margins as a percentage of net sales for fiscal 2001 are expected to range between 60 and 62 percent depending on foreign currency fluctuations, as well as product and geographic mix.

Selling, general and administrative expenses as a percentage of net sales are expected to range between 29 and 32 percent for fiscal 2001, depending on the rate of sales growth.

Product development costs are expected to range between 8 and 9 percent of net sales.

The tax rate for fiscal 2001 is expected to range between 36.5 and 37.5 percent.

As of the date of this filing, the company has begun to see some softening in order rates, particularly in its semiconductor business. Based on the current U.S. economy, some of its customers are becoming more cautious with their capital expansion plans. However, management is encouraged by potential orders in the pipeline, and by new product introductions planned over the next several quarters, and continues to see very good opportunities especially for its optoelectronics business.

Factors That May Affect Future Results

Statements included in the Liquidity and Capital Resources section and the Outlook Section of Management's Discussion and Analysis of Financial Condition and Results of Operations constitute forward-looking statements, as that term is defined in the Private Securities Litigation Reform Act of 1995. Such statements are subject to certain risks and uncertainties that could cause actual results to differ materially from those projected. Some of the factors that may affect future results are discussed below.

Although the company operates in a single industry segment, certain of its products and product lines are targeted for specific industries including the semiconductor, telecommunications, optoelectronics, and other electronic industries. These industries, particularly the semiconductor industry, can be cyclical in nature. Growth in demand for semiconductors, new technology and pricing drive the demand for new semiconductor capital equipment. Historically, sales and order levels for this business have been volatile which can affect revenue and earnings for the company.

The company's business relies on the development of new high technology products and services to provide solutions to customer's complex measurement needs. This requires anticipation of customer's changing needs and emerging technology trends. The company must make long-term investments and commit significant resources before knowing whether its expectations will eventually result in products that achieve market acceptance. The company incurs significant expenses developing new products that may or may not result in significant sources of revenue and earnings in the future.

In many cases the company's products compete directly with those offered by other manufacturers. If any of the company's competitors were to develop products or services that are more cost-effective or technically superior, demand for the company's product offerings could slow.

Table of Contents

The company's success depends to a significant degree upon the continued service of its key executive, sales, development, marketing and operational personnel. The company also believes its future success will depend upon its ability to attract and retain additional highly skilled personnel in these areas. The competition for qualified personnel in the technology area is intense. Although management believes the company offers competitive salaries and benefits, there can be no assurance that it will be successful in retaining its existing key personnel or attracting and retaining additional key resources. Failure to attract and retain personnel could have a material adverse effect on the company's results of operations.

The company's products contain large volumes of electronic components and subassemblies that in some cases are supplied through sole or limited source third-party suppliers. Although the company does not anticipate any problems procuring supplies in the near-term, there can never be any assurance that parts and supplies will be available in a timely manner and at reasonable prices. Additionally, the company's inventory is subject to risk due to changes in market demand for particular products. The resulting excess and/or obsolete inventory could have an adverse impact on the company's results of operations.

The company's cost structure is comprised of costs that are directly related to the level of sales, as well as costs that are fixed and do not fluctuate based on sales levels. The company's quality of earnings depends on its ability to control those costs that are fixed or semi-variable.

The company currently has eleven subsidiaries or sales offices located outside the United States, and non-U.S. sales accounted for approximately 53 percent of the company's revenue during the first quarter of fiscal 2001. The company's future results could be adversely affected by several factors, including changes in foreign currency exchange rates, changes in a country's or region's political or economic conditions, trade protection measures, import or export licensing requirements, unexpected changes in regulatory requirements and natural disasters.

The company pays taxes in several jurisdictions throughout the world. The company utilizes available tax credits and other tax planning strategies in an effort to minimize the company's overall tax liability. The company's actual tax rate for fiscal 2001 could change from what is currently anticipated due to changes in various country's tax laws or changes in the company's overall tax planning strategy.

The company has modified its systems to accommodate the Euro. The cost of these modifications was immaterial to the company's results of operations. Although difficult to predict, any competitive implications and any impact on existing financial instruments are expected to be immaterial to the company's results of operations, financial condition or cash flows of future periods.
