FOR IMMEDIATE RELEASE

Mitsubishi Electric Co. Selects Camtek's Dragon and Pegasus AOI Systems for IC Substrate Line

Migdal Ha'Emek, Israel, June 13, 2007 Camtek Ltd. (NASDAQ: CAMT; TASE: CAMT), announced today that Mitsubishi Electric Corporation, a leading Japanese manufacturer of electronic equipment, has purchased Camtek's Dragon FL and Pegasus 200S automated optical inspection systems for its plant in Sagami-hara. This Mitsubishi Electric's plant specializes in ultra-thin, high-density substrates. The Dragon FL is used for in-process inspection of fine-line substrates in panel form, while the Pegasus inspects finished substrates in strip form.

This is the first sale in Japan of the Pegasus 200S, a new model Camtek introduced in December 2006

Avishai Shklar, general manager of Camtek Japan, commented, "Naturally we are excited about the opportunity to serve a prominent customer such as Mitsubishi Electric. We believe that the concept of implementing along the production line compatible inspection systems from the same manufacturer can maximize efficiency and productivity in particular in demanding applications such as Mitsubishi's advanced substrates.

About Camtek

With headquarters in Migdal Ha'Emek Israel, Camtek Ltd., designs, develops, manufactures, and markets automatic optical inspection systems and related products. Camtek's automatic inspection systems are used to enhance both production processes and yield for manufacturers in the printed circuit board industry, the high density interconnect substrate industry and the semiconductor manufacturing and packaging industry. This press release is available at www.camtek.co.il.

About Mitsubishi Electric Corporation

With over 80 years of experience in providing reliable, high-quality products to both corporate clients and general consumers all over the world, Mitsubishi Electric Corporation (TSE:6503) is a recognized world leader in the manufacture, marketing and sales of electrical and electronic equipment used in information processing and communications, space development and satellite communications, consumer electronics, industrial technology, energy, transportation and building equipment.

Mitsubishi's Sagami-hara's plant produces ultra-thin, high density substrates made of glass epoxy in buildup technology. These substrates are used in thin, high-definition semiconductor packaging and in modules for the latest mobile devices.
