Enclosure: Press release

AngloGold Ashanti Report for the quarter and six months ended 30 June 2013.

#### Quarter 2 2013

#### Report

for the quarter and six months ended 30 June 2013

#### **Group results for the quarter....**

Solid gold production of 935koz, in-line with guidance provided for the period of 900-950k oz up 4% from the first quarter.

Total cash costs of \$898/oz, better than the adjusted guidance range for the period of \$900/oz and \$920/oz.

\$1.25bn bond issue provides additional liquidity in volatile operating environment; improves debt maturity profile.

Net debt at 30 June 2013 was \$2.78bn, reflecting a net debt to EBITDA ratio of 1.56 times.

Capital expenditure for 2013 reduced by \$100m to \$150m, from \$2.1bn to \$1.95bn.

2014 expensed exploration target of \$150m-\$175m (2012:\$461m).

Corporate reorganization underway; 2014 corporate cost target of \$120m to \$140m. (2012: \$291m, 2013: \$240m forecast).

Tropicana is ahead of schedule and remains within budget; commissioning underway.

Kibali is progressing well and remains on budget and on schedule for production as early as October.

No second-quarter dividend declared given volatile environment; dividend to be reviewed at year-end; reverting to bi-annual dividend schedule.

All Injury Frequency Rate (AIFR) in the quarter was 7.61 per million hours worked, 11% year-on-year improvement.

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry,

expectations regarding gold prices, production, cash costs, cost savings and other operating results, return on equity, productivity improvements, growth prospects and outlook of AngloGold

Ashanti's operations, individually or in the aggregate, including the achievement of project milestones, commencement

and completion of commercial operations of certain of AngloGold

Ashanti's exploration and production projects and the completion of acquisitions and dispositions, AngloGold Ashanti's liquidity and capital resources and capital expenditures and the

outcome and consequence of any potential or pending litigation or regulatory proceedings or environmental issues, are forward-looking statements regarding AngloGold Ashanti's

operations, economic performance and financial condition. These forward-looking statements or forecasts involve known and unknown risks, uncertainties and other factors that may cause

AngloGold Ashanti's actual results, performance or achievements to differ materially from the anticipated results, performance or achievements expressed or implied in these forward-

looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements and forecasts are reasonable, no assurance can be given that

such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors,

changes in economic, social and political and market conditions, the success of business and operating initiatives, changes in the regulatory environment and other government actions,

including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, and business and operational risk management.

For a discussion of such risk factors, refer to the prospectus supplement to AngloGold Ashanti's prospectus dated 17 July 2012 that was filed with the Securities and Exchange Commission

("SEC") on 26 July 2013. These factors are not necessarily all of the important factors that could cause AngloGold Ashanti's actual results to differ materially from those expressed in any

forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on future results. Consequently, readers are cautioned not to place undue

reliance on forward-looking statements. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or

circumstances after the date hereof or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-looking

statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

This communication may contain certain "Non-GAAP" financial measures. AngloGold Ashanti utilises certain Non-GAAP performance measures and ratios in managing its business. Non-

GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measures of performance

prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies may use. AngloGold Ashanti posts

information that is important to investors on the main page of its website at www.anglogoldashanti.com and under the "Investors" tab on the main page. This information is updated regularly.

Financial and Operating Report

# OVERVIEW FOR THE QUARTER AND SIX MONTHS CEO STATEMENT

"I am exceptionally pleased to report a solid operational quarter against our guidance, with gold production of 935,000oz up 4%

on the first quarter, at a total cash cost of \$898/oz," said Chief Executive Officer Srinivasan Venkatakrishnan. "While we

recorded an adjusted headline loss over the period, this was due largely to the write-down of ore stockpiles due to the sharply

lower gold price, which has declined by some 25% this year. We have adopted a decisive, two-pronged response to this weaker

price environment focused on revenue enhancement and improving efficiencies by addressing costs at a number of levels.

"Importantly, while we remain positive on the prospects for the gold price in the long term, we've taken the decision to prepare

our business for a volatile gold-price environment where we believe there may be downside risk in the medium term. Graham

Ehm, Executive Vice President Group Technical and Planning, is now using a more prudent gold price of \$1,100/oz as the

planning assumption, with various scenarios above and below that benchmark. This will give us flexibility in a weak market

while providing us the opportunity to benefit from widening margins if the price surprises on the upside. While this more

conservative approach to planning may have an impact on output levels, we remain steadfastly committed to prioritising cash

flow and returns over production levels. Similarly, we continue to carefully review our portfolio to identify assets that no longer

meet our investment criteria and may be sold or closed, and for others that may be amenable to partnerships.

"Our revenue enhancement efforts are focused on stripping out unprofitable production and bringing our Tropicana and Kibali

projects to production in the coming months. These two important new mines are expected to contribute approximately

550,000oz to 600,000oz of new annual production next year at below our current average cost, improving the group's cash cost

profile.

"Our cost efficiency programme has already yielded results. In looking at improving the overall efficiency of our business, we're

addressing expenditure on several fronts: corporate costs, exploration spending, project and sustaining capital, and direct

operating costs. At each step in this cost rationalisation process we've taken care to ensure we retain core skills and keep our

key long term options intact, at a reasonable cost.

"We have completed an extensive organisation redesign that started at the beginning of this year, which aimed to remove

duplication and waste, and to create a cleaner leadership structure with more direct accountabilities. We're now implementing

the recommendations of that review, which called for us to remove about 40% of all non-mining roles from our global corporate

structure. In addition, we are attacking all areas of indirect spend outside of payroll, in order to bank savings going into next

year. We're now targeting corporate costs of \$120m to \$140m next year, around half the \$240m initially forecast for

2013, and

an even greater saving from the \$291m spent last year.

"There will also be a narrowing of the focus for our exploration programme, which includes a global drilling programme as well

as investment in our Technology Innovation Consortium in South Africa. We will withdraw from more than a dozen countries and

will focus on our three most prospective regions – Tropicana, Colombia and the Siguiri region in Guinea – while also continuing

to aggressively advance the underground technology push in South Africa. Expensed exploration and evaluation in 2013 is now

anticipated to be \$327m, from the \$377m initially forecast, a saving of approximately \$50m for this year. In 2014, we're now

targeting expensed exploration and evaluation spend at between \$150m to \$175m.

That takes the targeted annual savings from these exploration and corporate cost initiatives together to as much as

#### \$437m to \$482m next year, as compared to 2012 levels, or more than \$100/oz.

"In addition to addressing these overhead costs, we're phasing some of our expenditure on projects in South Africa and have

reduced this year's total capital budget by about \$150m, to \$1.95bn (which includes about \$1bn of project capital). As we move

into next year we will aim to realise further reductions in sustaining capital by seeking out efficiencies in our planning process,

while looking to capture savings in a more benign operating cost environment. We also anticipate a drop in our project capital as

a natural consequence of the completion of our Tropicana project and the commissioning of the open-pit mine at the Kibali joint

venture.

"This improvement will be complemented by our Project 500 initiative, which aims to realise cost savings of some \$500m from

across our portfolio by the end of next year. The Project 500 team, overseen by Ron Largent, chief operating officer of our

Americas and Continental African portfolio, has already visited four pilot sites – Siguiri, Geita, Cuiaba and Moab Khotsong – and

identified a range of significant opportunities that will contribute toward realising this goal.

"In keeping with our prudent approach to balance sheet management and proactively reducing risk, particularly in the prevailing

uncertain market conditions, we took advantage of a slightly firmer market in July to raise \$1.25bn though a the sale of seven-

year bonds. The proceeds will be used to refinance our \$732.5m convertible bond which matures in May of next year and the

surplus will provide the comfort of additional liquidity. The debt issue removes refinancing risk and improves our debt maturity

profile, while only modestly raising annual interest costs, given that we have a 6% mandatory convertible bond that matures in

September and a tender offer to redeem the 3.5% convertible notes that would otherwise mature in May.

"While this work to refocus the business continues at a strong pace and in a challenging environment, our first priority remains

to operate safely as we work to deliver value to our stakeholders. We have made great strides in recent years to improve the

culture of safety in our business, with our Continental Africa business recording the commendable achievement of logging not a

single lost time injury in June. All of our four regions, Americas, Australia, Continental Africa, South Africa (save for West Wits)

and our exploration sites, were also free of fatalities in the first half of this year. While these achievements are our most

important, we recognise that there remains much room for improvement and we will continue to look for innovative ways to

reach our ultimate goal of zero harm in the workplace."

Quarterly Report June 2013 - www.AngloGoldAshanti.com

#### FINANCIAL AND CORPORATE REVIEW

Adjusted headline earnings (AHE) was a loss of \$135m and 35 US cents per share in the three months to 30 June 2013.

compared with \$113m or 29 US cents per share the previous quarter, and \$270m or 70 US cents per share a year earlier, in the

second quarter of 2012. This figure includes a \$144m loss associated with stockpile inventory write-downs, indirect tax

provisions and corporate restructuring.

Net loss attributable to equity shareholders for the second quarter of 2013 was \$2,165m, compared to a profit of \$239m in the

previous quarter, negatively impacted by a post-tax impairment of tangible and intangible assets and investments and inventory

write-downs aggregating \$2.4bn. The impairment largely consisted of a write-down of assets in Continental Africa and the

Americas and arose primarily from using lower gold price assumptions and higher discount rates.

Operational performance for the second quarter was solid with production within market guidance provided at first quarter of

2013 results, and costs marginally better. Production was 935,000oz at an average total cash cost of \$898/oz, compared to

899,000oz at \$894/oz the previous quarter and benefitted from a strong ramp up at Geita following a mill replacement in the first

quarter of 2013. Total cash costs were slightly better than initial market guidance of \$900-950/oz.

Cash flow from operating activities declined from \$356m the previous quarter to \$140m, reflecting the 13% decline in average

realised gold price in the quarter. Total capital expenditure during the second quarter was \$556m (including equity accounted

joint ventures), compared with \$512m the previous quarter and \$495m in the second quarter of last year. Of the total capital

spent, project capital expenditure during the quarter amounted to \$285m. As a result of relatively high project capital levels

associated with the advanced Tropicana and Kibali projects, and a weaker gold price in the second quarter of 2013, free cash

flow was negative at \$497m.

At the end of the second quarter of 2013, net debt was \$2.78bn, and the twelve month EBITDA to 30 June 2013 was \$1.79bn,

resulting in a Net Debt to EBITDA ratio of 1.56 times. This is despite taking on the impact of the South African strike last year

and, more recently, a decline in the gold price. The principal factors that accounted for the increase in net debt level during the

quarter were:

Capital expenditures on projects of \$285m, the majority of which was spent on key projects at Tropicana and Kibali, and

the expansion of CC&V, which is scheduled to contribute additional production from 2015;

Sustaining capital expenditures, including ore-reserve development expenditure, of \$271m.

On 30 July 2013, AngloGold Ashanti issued a seven-year bond due 2020 for an aggregate principal amount of \$1.25bn and an

annual interest rate of 8.5%.

The bond issue attracted significant interest from fixed income investors and provided the funds for AngloGold Ashanti to launch

a tender offer for the repurchase of its \$732.5m, 3.5% Guaranteed Convertible Bonds due May 2014. We believe that these

transactions will significantly improve the company's debt profile, introducing longer-term debt maturity to the balance sheet and

providing additional liquidity in what remains a volatile market and operating environment for global gold producers. Given that

the \$789m, 6% mandatory convertible bond will be redeemed for shares in September, and the tender offer is currently open to

redeem the \$732.5m, 3.5% convertible bond, the additional incremental annual interest payments to be incurred by the new

bond issue is modest at around \$30m.

#### **UPDATE ON CAPITAL PROJECTS**

**Tropicana is ahead of schedule.** The company remains committed to ensuring that its two new gold projects – Tropicana and

Kibali – commence commercial production before the end of this year. The Tropicana gold project (AngloGold Ashanti 70% and

Independence Group NL 30%) is progressing well, and is ahead of schedule to commission in the third quarter of 2013 and

ramp up during the fourth quarter of 2013. The estimated capital expenditure remains unchanged at between A\$820-A\$845m

on a 100% basis. As mentioned by joint venture partner and operator Randgold Resources, on 23 July 2013, Kibali may

produce gold as early as October of this year. Together, these projects are expected to add attributable production of approximately 550,000oz to 600,000oz in 2014 at a combined average total cash cost of less than our current average total

cash costs.

By the end of June, structural steel, plate work installation, mechanical installation and tailings storage facility construction were

complete at Tropicana. The powerhouse was commissioned during the second quarter of 2013 along with the dry plant. First

ore was sent to the crushing plant on 26 July. Site activities are now focused on completion of plant sub-systems and the

crushing and screening areas to enable pre-commissioning and commissioning to begin, with the commissioning team mobilised on site for a little over two months.

The full operating team is now in place and has been mobilised to the site. The mining department celebrated the first year of

operation in July, and mobilisation of the third mining fleet is in progress.

Cash operating cost estimates for the project remain within the previously announced range of A\$590/oz to A\$630/oz. Average

annual production estimates during the first three years also remains in line with previous guidance at between 470,000-

490,000oz on a 100% basis.

The **Kibali project**, a joint venture between state-owned Sokimo (10%), AngloGold Ashanti (45%) and operator Randgold

Resources (45%), remains on track for production by the end of the year. By the end of June 2013, AngloGold Ashanti spent

\$447m towards Kibali's development. Significant progress continues to be made towards commissioning. The Process Plant is

making progress in preparation of producing first gold in the final quarter of 2013. Completion of the Sulphide circuit is expected

in early 2014, which is in-line with the mining schedule. A revised schedule for Kibali has production from underground

commencing later mitigated by bringing forward additional open pit ore.

Quarterly Report June 2013 - www.AngloGoldAshanti.com

The CC&V Mine Life Extension 2 (MLE2) project, an expansion of our CC&V mine in Colorado, continues to progress well. To

date, we have spent \$118m. The design work on the HG Mill is complete and the facility is on track for completion in the second

half of 2014. Construction work for the re-routing of Highway 67 is underway. Construction of the water pumping facility

necessary to deliver the required water for the mill is now complete, along with temporary construction warehouses and offices

required for the project are all complete and in use. The budget and schedule continue to be well within the plans.

#### UPDATE ON COST OPTIMISATION AND PORTFOLIO REVIEW

#### Cost optimisation and portfolio review:

In order to optimise cash flow from the business, AngloGold Ashanti is working to reduce all costs (direct operating costs,

corporate and exploration costs, and capital expenditure), while enhancing revenue by removing unprofitable production from

the portfolio and improving the overall quality of its asset base by completing development of its two new projects (Tropicana

and Kibali) in the coming months.

On direct operating costs, the previously announced Project 500 initiative is currently underway to remove approximately \$500m

of operating costs within an 18 month period. This approach has been piloted at four global sites (Siguiri – Guinea, Geita –

Tanzania, Moab Khotsong – South Africa and Cuiabá – Brazil), which were selected on the basis of being among the largest

long-term producers in the company. Project 500 was well received by the site management teams and potential savings of

approximately \$235m have been identified. Detailed planning to realise those opportunities and ensure they are integrated into

budgets, is currently underway.

Progress has also been made in reducing corporate overhead costs by rationalising corporate structures, reducing the use of

consultants and eliminating duplication, redundant management and administrative functions. The operating support structure

has been further simplified with operations now falling under the two Chief Operating Officers and the reduction in the size of the

executive committee. The process of effecting redundancies has commenced in AngloGold Ashanti's global corporate and

exploration structures and we expect that during the last quarter of this year, after taking into account the notice periods that

need to be provided to affected employees, approximately 35-40% of these roles will have been removed. Indirect spend, such

as travel, communication and IT costs are being rationalised with a view to further sustainable cost savings. In 2014, corporate

costs are anticipated to fall from the \$240m forecast for this year, to between \$120m and \$140m. ERP project has also been

suspended for Continental Africa region (\$113m saving over 3 years).

In light of the lower and more volatile gold price, capital expenditure is also being rationalised with a view of focusing expenditure on higher quality assets and curtailing expenditure or suspending operations on other projects. For example,

AngloGold Ashanti announced in November 2012 that capital expenditure significantly slowed at Sadiola in Mali. In addition,

Project Zaaiplaats at the Moab Khotsong mine in South Africa has been postponed while alternative development options for

the project are being evaluated. The deepening project at Mponeng in the West Wits region of South Africa has also been

slowed to optimise expenditure. Capital expenditure for 2013 is now expected to \$1.95bn-\$2bn, compared to previous guidance

of \$2.1bn, reflecting a savings of \$100m-\$150m. Given that both Kibali and Tropicana will go into production later this year, we

expect that the level of project capital expenditure in 2014 will be lower than the current year, whilst the Group will also see the

added benefit of free cash flow from these two new projects.

AngloGold Ashanti's industry-leading exploration programme has already been significantly refocused to further optimise

expenditure, with key areas of emphasis now in Colombia, Australia and Guinea, as well as continuing the investment in the

Technology Innovation Consortium, which is developing a production system to help improve underground mining in South

Africa. In effecting this more concentrated exploration strategy, AngloGold Ashanti is withdrawing from 13 countries. Management has already reduced this year's residual exploration and evaluation budget by around \$50m and will make significantly greater savings next year. Total spending on expensed exploration (greenfield, brownfield, Colombia, SA Technology and evaluation studies) for this year is now expected to total about \$327m, compared to the previous guidance of

\$377m. This number is expected to reduce further in 2014 to \$150m - \$175m, \$30m of which will be allocated to the SA

Technology Project.

Although the steps which are outlined above are expected to improve the company's cost base and focus capital expenditure,

there will likely be a time lag before some of these measures take effect. It is expected that these measures will result in an

improvement in performance which will be reflected in results for the full year 2014. In the interim, however, aggressive moves

to reduce discretionary spending and immediate changes to expenditures for the remainder of the year are expected to support

the business in the event of any unforeseen operational disruptions and/or a further sharp fall in the gold price.

#### WAGE NEGOTIATIONS UPDATE

AngloGold Ashanti continues to engage with its employees, through their organised labour representatives, as part of the gold

industry's collective bargaining process overseen by the Chamber of Mines. The South African gold industry finds itself in a

challenging operating environment, given sharply lower gold prices, lower productivity levels and rising costs and has shed a

significant number of jobs over the past decade as these pressures have mounted. Against this backdrop, it is difficult to

contemplate wage increases of any kind in the current round of wage talks. Notwithstanding, the gold producers participating in

the central bargaining forum have offered a 5% adjustment to salaries as a sign of good faith in the current wage negotiations.

While these discussions with organised labour did not initially yield a positive outcome and have entered a process of third-party

mediation, through an established legal framework, AngloGold Ashanti remains committed to finding a solution to benefit all

parties and not further jeopardise the long-term viability of South Africa's gold industry.

#### TECHNOLOGY AND INNOVATION UPDATE

During the second quarter of 2013, the Technology Innovation Consortium progressed significantly in prototype development

pertaining to the three key technologies that aim to establish the base for a safe, more efficient mining method intended for use

at AngloGold Ashanti's deep-level underground mining operations. It is anticipated that this new improved mining method, if

successful, will significantly enhance productivity levels of AngloGold Ashanti's South African mining operations: Quarterly Report June 2013 - www.AngloGoldAshanti.com

**Orebody Knowledge & Exploration (RC Drilling):** A new diamond-enhanced drill bit has been tested, which has resulted in

reduced mechanical issues. Further tests have indicated that as the hole deepened, drilling efficiency decreased and declining

penetration rates were experienced. New drill rods, designed to ensure increased air flow within the tubes, and thus faster

penetration rates at depth, have now been procured and testing of the new rods will commence at the beginning of the third

quarter.

**Reef Boring (Stoping):** The focus in the second quarter was to further enhance drilling effectiveness by applying improved

reamer geometries. A newly-designed cutter head (reamer) of 660mm in diameter was manufactured and delivered during the

second quarter of 2013. The first 660mm double-pass hole was drilled successfully with increased drilling efficiency: this test hole

was completed within 3.9 days compared to the previous rate of 4.4 days using the double-pass method. The final test for the

new reamer will be to complete a single pass hole in the shortest possible timeframe and further improve on previous rates of 3.2

days for a 30m hole. Negotiations and processes have commenced for the design and manufacture of the first production

machines, with the intention to start manufacturing mid-range machines (40-80cm channel width reefs) as well as small diameter

machines (<40cm channel width reefs) during the third quarter. The machines are intended for deployment to the production

environment towards the end of the first quarter in 2014.

**Ultra High Strength Backfill (UHSB):** During the second quarter, an additional five holes were filled at the reef boring test site at

TauTona Mine. Three of the holes were fitted with instruments to monitor the performance of the UHSB, as well as the ground

conditions of holes being drilled in close proximity. Encouraging advancements in the mixing process have been achieved,

leading to reduced times and increased flexibility in the application of the product. Development of the prototype mixer will

continue in the third quarter as the Consortium seeks to transform the current system, suitable for niche small volume applications, to a bulk application.

#### **DIVIDEND**

The Board has elected to pass on the quarterly dividend given the current market conditions and will review this decision again at

year-end. The company will also revert to a bi-annual dividend schedule.

#### **SAFETY**

The business experienced two fatalities during the quarter, both in the South Africa Region; at Mponeng and TauTona mines. The

TauTona and Mponeng fatalities were caused by a fall of ground and a tramming related incident, respectively. Year-on-year and

quarterly Fatal Injury Frequency Rate performance improved 40% and 43%, respectively. The All Injury Frequency Rate for the

quarter was at 7.61 per million hours worked, an improvement of 4% quarter-on-quarter and 7% year-on-year.

Safety continues to remain the critical focus area in South Africa through the use of regular safety meetings and the Chencha

Nqondo (where focus is placed on changing people's mind-set regarding rules, regulations and people's behaviour)

campaign at

TauTona. Measures to mitigate the risk of trucks and tramming incidents at Mponeng are currently being implemented. A new

safety theme "Safe Gold Our Future" was launched at Mponeng to address the poor safety performance. The implementation of

this safety-related initiative will lead to a more conducive working environment that will aid the production performance.

Elsewhere in the business, there has been excellent progress on safety. The Vaal River region in South Africa, as well as

Continental Africa, Australia, Americas, Exploration – had no fatalities in the first half of the year. In addition, Continental Africa,

which comprises eight mines across five countries, recorded not a single lost time injury during June. This is a significant

achievement which shows what progress is possible as we continue to make continuous improvements to our systems and

procedures and overall safety culture.

#### **OPERATING HIGHLIGHTS**

The **South African** operations produced 307,000oz at a total unit cash cost of \$890/oz in the three months to 30 June 2013,

compared with 362,000oz at a total cash cost of \$779/oz in the same quarter last year. In the West Wits operations, TauTona

faced increased costs related to improved safety measures to curtail fall of ground incidents, these include additional steel support

in certain areas. At Mponeng, the aftermath of the lightning strike at a major Eskom regional substation towards the end of the first

quarter of 2013 further impacted production in the second quarter of 2013 as repairs and maintenance to the damaged infrastructure were performed. Safety-related disruptions, which resulted in lost production of approximately 24,000oz coupled

with deteriorating grades, continued to hinder production levels across the region.

At the Vaal River operations, an illegal strike embarked on by employees at the Moab Khotsong mine and the subsequent

ramifications had an adverse impact on production. Five hundred and thirty nine employees who participated in the illegal strike

were dismissed subsequent to disciplinary processes. Of those dismissed, one hundred and eighty seven were machine operators and this required stoping teams to be reconfigured to make provision for the lost skill set.

Acquisition of Mine Waste Solutions has proved beneficial to the region as planned, as tonnage ramp-up using the Business

Process Framework has helped ensure that significantly higher tonnages are now being treated than in the past. Improvements to

recoveries are evident as our team manages the process carefully, through the recently established Remote Operations Center

Grades continue to improve as Vaal River tailings now supplement the acquired tailings. Completion of the uranium circuit is

expected to allow uranium production to commence in the fourth quarter, and is also expected to improve gold recovery rates.

In **Tanzania**, Geita's production was 113,000oz in the second quarter of 2013 compared to 66,000oz in the previous quarter. This

was an increase of 71% as a result of a 90% increase in tonnage throughput following the extended planned downtime in the

previous quarter for the replacement of the SAG Mill, partly offset by a planned 10% decrease in recovered grade for the current

quarter. Total cash costs increased by 22% to \$514/oz compared to the same period last year. The quarter-on-quarter comparison reflects a 32% increase in total cash costs which is due to the fact that stockpiles were processed during the first

quarter. In addition, AngloGold Ashanti is in dialogue with Tanzanian authorities and various other groups to find a sustainable

solution to a recent increase in illegal mining activity in and around its Geita operation. This activity not only poses a threat to the

safety of AngloGold Ashanti's staff, police officials and these illegal miners, but also creates environmental damage and may

affect production if left unchecked.

Quarterly Report June 2013 - www.AngloGoldAshanti.com

In **Ghana**, production at Obuasi increased 18% quarter-on-quarter due to a 10% increase in tonnes treated and a 6% increase

in recovered grade largely as a result of the transition to owner mining. Total cash costs decreased by 10% to \$1,560/oz from

\$1,742/oz the previous quarter. We believe that significant potential exists in the Obuasi orebody and our strategy revolves

around the transformation of the underground mine as the key driver. In detail, this plan entails:

Mining of the Obuasi Deeps Decline to gain appropriate mechanised access to each mining block (except those with only

2-3 years of life remaining) and then ultimately down to the 'Deeps';

As each new mining area and each existing mining block is reached, it is taken 'off line' in order to allow work to be undertaken that will allow it to be re-established as a highly mechanised and more productive block;

Investment in Pastefill, primary ventilation and underground infrastructure;

Mining of surface sources (pits and tailings) to generate further revenue;

Development of appropriate surface infrastructure based around the south mine, including security fencing, new Tailings

Storage Facility and a comprehensive water management system;

Significant reduction of overhead costs;

Significant organisational redesign built around a highly mechanised and productive operation; and

Continuing to address legacy issues associated with the mining operation.

In the medium term, Obuasi needs to self-sustain itself in order to be viable. In the short-term, the intention is to ensure the

operation has the appropriate cost structure to sustain itself. The transition to mechanisation will regrettably result in a phased

process of retrenchments over the next two years. The Board will assess the progress at Obuasi on a quarterly basis to

that the mine is on track to meet its critical milestones.

In **Guinea**, Siguiri's production (85% attributable) was unchanged from the previous quarter at 62,000oz as a result of a 5%

increase in tonnage throughput offset by a 6% decrease in recovered grade due to planned treatment of lower grade ore from

different ore sources. Siguiri has consistently exceeded its gold production target for the last six quarters, with throughput

sustained at record levels achieved in the previous year. Total cash costs were \$850/oz, 15% lower than the previous quarter

mainly due to the reduced cost of electricity provided to the local community and lower royalty payments due to the lower

received price. The implementation of Project 500 is proceeding well with significant and sustainable cost saving opportunities

identified.

At Sunrise Dam, in **Australia**, the total cash costs at \$1,713/oz was inclusive of additional costs of \$350/oz attributable to

recommencing mining of high grade ore in the base of the existing open pit, also referred to as the "Crown Pillar" which

we

expect will provide high grade mill feed for the remainder of the year. Mining in the Crown Pillar was delayed to ensure the wall

above the working area was sufficiently stabilised.

At Cerro Vanguardia, in **Argentina**, production (92.5% attributable) at 62,000oz was 13% higher than last quarter mainly due to

higher treated tonnes. Silver production (92.5% attributable) at 735,000oz represents a 2% increase when compared to the

previous quarter. Import restrictions continue to be a challenge within the country, particularly relating to the lead time in

obtaining spare parts, however, this did not have a significant impact on output during the quarter. Rising costs were partially

offset by a more favourable exchange rate and lower heap leach costs due to the effect of additional contracts and maintenance

expenses which impacted on the previous quarter. Regarding the operational landscape for the second half of the year, several

initiatives are being analysed to reduce operational costs and capital expenditures as well. Additionally, the use of an external

contractor to increase Cerro Vanguardia's production profile is under consideration.

In **Brazil**, at AngloGold Ashanti Mineração, production was 17% lower than previous quarter at 76,000oz reflecting mine plan

changes at Cuiabá as a result of topographic and geotechnical issues and lower production from Córrego do Sítio complex due

to lower than planned feed grades at sulphide operations. Despite some relief from the Brazilian Real depreciation, total cash

cost was 25% higher at \$858/oz as a consequence of lower gold produced and lower by-product credits. At Serra Grande,

production was 16% higher than previous quarter at 37,000oz as a result of higher feed grades and metallurgical recovery. Total

cash cost was 14% lower at \$675/oz as a result of higher gold produced and the depreciation of the Brazilian Real. The Project 500 team visited Cuiabá in early June. A visit to Serra Grande is planned in August.

In the United States, at **Cripple Creek & Victor**, gold production was 60,000oz which was 10% higher than previous quarter

due to improvements to stacking and recovery methods which helped to drawdown inventory. Cash costs increased by 13% to

\$726/oz versus the previous quarter partially due to higher costs associated with longer waste hauls and more component parts,

emulsion, tyres and contract services.

#### **EXPLORATION**

Total exploration expenditure during the second quarter of 2013, inclusive of expenditure at equity accounted joint ventures

was \$107m (\$52m on brownfield, \$30m on greenfield and \$25m on pre-feasibilty studies), compared with \$118m during the

same quarter the previous year (\$43m on brownfield, \$38m on greenfield and \$37m on pre-feasibility studies).

At Geita in **Tanzania**, drilling focused on the infill drilling programmes at Nyankanga (Cut 10 & Cut 7) while Mineral Resource

delineation drilling was conducted at Nyankanga Deeps, Star & Comet Deeps and Matandani. A total of 4,827m and 4,115m

were drilled in Expensed and Capitalised drilling projects. Assay results from holes drilled in the first half of the year from

Nyankanga (Cut 7 & 8 OP, Cut 10, Block 1, and Block 2 & Block 4 and Deeps), Geita Hill West, Ridge 8, Star &

Comet-Ridge 8

Gap and Matandani were received. Significant intersections were reported from each of these programmes, which continued to

confirm their prospectivity.

At Siguiri in **Guinea**, a total of 402 holes for 34,571m of drilling were completed. Infill drilling (1,031m RC) focused mainly on

upgrading oxide Mineral Resources at Kossise SW (773m) and Sokunu L3 pits (258m) to the NW of the Sokunu main pit. As

anticipated, the drilling at Kossise SW returned some good intersections while the results from the infill programme at Sokunu

L3 pits have not yet been received.

Quarterly Report June 2013 - www.AngloGoldAshanti.com

Reconnaissance drilling (27,035m), centred on geochemical and geophysical targets at the Kourouda SE (10,419m), Sintroko

Southwest (13,107m) and Niono (3,509m) prospects. The results reported for these projects have been generally disappointing,

with no significant intercepts reported from Niono and Kourouda SE. Sintroko Southwest returned some good values. Reconnaissance diamond drilling of 612m was conducted at Komatiguiya into the fresh rock to check and confirm lithologic-

stratigraphic information.

Fresh rock drilling (3 DD holes & 41 RCDD holes) for 6,505m, focused on the rock beneath the current pits of Bidini (1,527m),

Seguelen (2,711m) and Kami (1,656m). This drilling was designed to test the fresh rock potential and depth extent of the ore

zones. The exploration to date below the Seguelen and Kami pits confirmed the continuation of the mineralised ore zones below

the oxide – fresh rock interface.

Geochemical soil sampling stopped at the end of the second quarter. The soil sampling was conducted on a 200m x 50m grid

on the NW of Block 1. During the period 1,377 soil samples were collected, and 832 results were received from the lab with

some high values reported. Geophysical surveys are on-going, focused on IP and resistivity gradient surveys at Kintinian Village

and Seguelen pit for water supply and dewatering.

In Colombia, greenfield exploration continued at the Nuevo Chaquiro target, Quebradona project, in joint venture with B2Gold

(AGA 70%). A total of 3,937m of diamond drilling was completed during the quarter and returned further significant results that

have extended the known mineralised envelope to the east and north-east. The latest results include 402m @ 0.26g/t Au and

0.53% Cu in CHA-032, 189m @ 0.40g/t Au and 0.48% Cu in CHA-047 and potentially indicate the presence of a higher-grade

mineralised core.

Drilling to support the Pre-feasibility study continued at the Gramalote Joint Venture. This included 14,966m completed in

programmes directed toward Mineral Resource infill drilling and opportunities for Mineral Resource addition. Drilling also

continued for facility condemnation, geotechnical and hydrology studies.

At La Colosa, drilling activities resumed with 1,210m completed for Mineral Resource extensions. Hydrology and geotechnical

drilling programmes continued.

In **Australia**, aircore drilling progressed solidly at the Tropicana JV (AngloGold Ashanti 70%) during the quarter with 30,675m

drilled on several prospects in the south-western end of the Tropicana JV package. Recent results from the Beetle Juice and

Madras Prospects, within 15km to 40km of the Tropicana Gold Mine have returned encouraging gold and base-metals results

and are scheduled for further work in the next quarter. At the Viking project (AngloGold Ashanti 100%) RC drilling was

completed for 2,208m and follows up significant results previously returned in diamond drilling. At the Nyngan JV (AngloGold

Ashanti earning 70%), a gravity survey commenced late in the quarter, while in South Australia, AngloGold Ashanti withdrew

from the Gawler JV.

In **Guinea**, exploration work continued on the Kounkoun trend in Block 3, with infill and delineation drilling at KK1, KK3 and KK6

targets with a total of 12,649m of combined aircore, RC and diamond completed. Encouragingly, mineralisation continues to remain

open down-dip and along strike with the best results for the second quarter including, but not limited to (true widths), 52.2m @

2.11g/t Au in KKRC361, 18.7m @ 4.21g/t Au in KKRC362, 29.5m @ 2.94g/t Au in KKRC363 and 57.1m @ 1.95g/t Au in KKRC370.

Within Block 2, reconnaissance RC drilling, totalling 5,498m commenced at the highly-prospective Danaya prospect, with

preliminary results returning encouraging intersections requiring further follow-up work.

Detailed information on the exploration activities and studies both for brownfields and greenfields is available on the AngloGold

Ashanti website (www.anglogoldashanti.com).

#### **OUTLOOK**

Gold production for the third quarter of 2013 is estimated at 950koz to 1,000koz. Total cash costs are estimated at between

\$860/oz-\$890/oz at an average exchange rate of R9.85/\$, BRL2.15/\$, A\$0.92/\$ and AP5.39/\$ and fuel at \$105/barrel. This includes the ongoing impact of annual power tariff increases and winter power tariffs in South Africa. Both cost and

production estimates may be impacted by work stoppages in South Africa.

Other unknown or unpredictable factors could also have material adverse effects on our future results and no assurance can be

given that any expectations expressed by AngloGold Ashanti will prove to have been correct. Please refer to the Risk Factors

section in AngloGold Ashanti's prospectus supplement to its prospectus dated 17 July 2012 filed with the SEC on 26 July 2013

and available on the SEC's homepage at http://www.sec.gov.

#### **Notes**

#### for the quarter and six months ended 30 June 2013

1.

#### **Basis of preparation**

The financial statements in this quarterly report have been prepared in accordance with the historic cost convention except for

certain financial instruments which are stated at fair value. The group's accounting policies used in the preparation of these

financial statements are consistent with those used in the annual financial statements for the year ended 31 December 2012

except for the adoption of new standards and interpretations effective 1 January 2013 (Refer note 13).

The financial statements of AngloGold Ashanti Limited have been prepared in compliance with IAS 34, IFRS as issued by the

International Accounting Standards Board, The Financial Reporting Guidelines as issued by the South African Institute of

Chartered Accountants, JSE Listings Requirements and in the manner required by the South African Companies Act, 2008 (as

amended) for the preparation of financial information of the group for the quarter and six months ended 30 June 2013.

# Impairment, derecognition of assets and write-down of inventories to net realisable value includes the following:

The group reviews and tests the carrying value of its mining assets (including ore-stock piles) when events or changes in

circumstances suggest that the carrying amount may not be recoverable.

Consideration was given to a range of indicators including a decline in gold price, increase in discount rates and reduction in market

capitalisation. As a result, certain cash generating units' recoverable amounts, including Obuasi and Geita in Continental Africa,

Moab Khotsong in South Africa and CC&V and AGA Mineração in the Americas, did not support their carrying values at 30 June

2013 and impairment losses were recognised. The impairment for these cash generating units represents 80% of the total

impairment and range between \$200m and \$700m per cash generating unit on a post taxation basis.

#### Impairment calculation assumptions – goodwill, tangible and intangible assets

Management assumptions for the value in use of tangible assets and goodwill include:

the gold price assumption represents management's best estimate of the future price of gold. A long-term real gold price of \$1,252/oz

(2012: \$1,584/oz) is based on a range of economic and market conditions that will exist over the remaining useful life of the assets.

Annual life of mine plans take into account the following:

proved and probable Ore Reserve;

value beyond proved and probable reserves (including exploration potential) determined using the gold price assumption referred to above;

the real pre-tax discount rate, per cash generating unit which ranged from 6.21% to 18.07% is derived from the group's weighted

average cost of capital (WACC) and risk factors which was consistent with the basis used in 2012. The group WACC of 6.54% (real,

post-tax) which is 128 basis points higher than in 2012 of 5.26%, is based on the average capital structure of the group and three

major gold companies considered to be appropriate peers. In determining the WACC for each cash generating unit, sovereign and

mining risk factors are considered to determine country specific risks. Project risk has been applied to cash flows relating to certain

mines that are deep level underground mining projects in South Africa and Continental Africa region;

foreign currency cash flows translated at estimated forward exchange rates and then discounted using appropriate discount rates for that currency;

cash flows used in impairment calculations are based on life of mine plans which range from 3 years to 47 years;

under International Financial Reporting Standards it is clear that in preparing interim financial reports, companies make more use of

estimation methods than they do in the process of annual financial reporting. AngloGold Ashanti's estimates of a range of factors,

including its reserve and resource inventory and future production and cost levels, are premised on an extensive annual planning

process (the last of which was completed at the end of 2012). AngloGold Ashanti's impairments totalling \$2.4bn were calculated using

these most recent planning estimates from the end of 2012, along with adjustments to elements that are known. They do not include

information from optimised mine plans, which are currently being prepared and will include measures to mitigate the effects of the

recent decline in the gold price. Bearing in mind the assumptions made and the information used, these estimates of impairments

necessarily contain a greater element of uncertainty than those traditionally completed at year-end and will be updated in our fourth-

quarter results, scheduled for release in February of 2014; and

variable operating cash flows are increased at local Consumer Price Index rates.

Quarterly Report June 2013 - www.AngloGoldAshanti.com

#### Impairment calculation assumptions – Investments in equity-accounted associates and joint ventures

The impairment indicators considered the quoted share price, current financial position and decline in anticipated operating results.

Included in share of equity-accounted investments' loss of \$183m is an impairment of \$187m.

### Net realisable value calculation assumptions – Inventory

The decline in the spot gold price to \$1,200/oz resulted in a net realisable value decrease below carrying value of the stockpiles and

heap leaches at certain operations. The practice of writing down inventories to the lower of cost or net realisable value is consistent

with the view that assets should not be carried in excess of amounts expected to be realised from their sale or use.

Includes capital commitments relating to equity-accounted joint ventures.

Rounding of figures may result in computational discrepancies.

Quarterly Report June 2013 - www.AngloGoldAshanti.com

#### Liquidity and capital resources

To service these capital commitments and other operational requirements, the group is dependent on existing cash resources, cash generated from operations and borrowing facilities.

Cash generated from operations is subject to operational, market and other risks. Distributions from operations may be subject to foreign investment, exchange control laws and regulations and the quantity of foreign exchange available in offshore countries. In addition, distributions from joint ventures are subject to the relevant board approval.

The credit facilities and other finance arrangements contain financial covenants and other similar undertakings. To the extent that external borrowings are required, the group's covenant performance indicates that existing financing facilities

will be available to meet the above commitments. To the extent that any of the financing facilities mature in the near future.

the group believes that sufficient measures are in place to ensure that these facilities can be refinanced.

#### 13. Change in accounting policies

The following accounting standards, amendments to standards and new interpretations have been adopted with effect from

1 January 2013:

IFRS 7

Amendment – Disclosures –Offsetting Financial Assets and Financial Liabilities

IFRS 10

**IAS 28** 

Investments in Associates and Joint Ventures (Revised 2011)

IFRIC 20

Stripping Costs in the Production Phase of a Surface Mine

New standards and amendments which have an impact on the interim consolidated financial statements of the group are

described below:

IAS 1 Presentation of Financial Statements. The group adopted the amendments to IAS 1 which required it to group other

comprehensive income items by those that will be reclassified and those that will not be subsequently reclassified to profit and

loss. The amendment affected presentation and had no impact on the group's financial position or performance. The accounting policies adopted are significantly consistent with those of the previous financial year, except for the changes arising due to the adoption of IFRIC 20 "Stripping Costs in the Production Phase of a Surface Mine" and the adoption of IAS 19 "Employee Benefits" (revised) (IAS 19) which became effective for annual reporting periods beginning

on or after 1 January 2013. IFRIC 20 clarifies when an entity should recognise waste removal costs that are incurred

in

surface mining activity during the production phase of the mine ("production stripping costs") as an asset. The interpretation impacts the way in which the group accounts for production stripping costs.

IAS 19 includes a number of amendments to the accounting for defined benefit plans, including actuarial gains and losses

that are now recognised in other comprehensive income (OCI) and permanently excluded from profit and loss; expected

returns on plan assets that are no longer recognised in profit or loss, instead, there is a requirement to recognise interest on

the net defined benefit liability (asset) in profit or loss, calculated using the discount rate used to measure the defined benefit

obligation, and; unvested past service costs are now recognised in profit or loss at the earlier of when the amendment occurs

or when the related restructuring or termination costs are recognised. Other amendments include new disclosures. In case of the group, the transition to IAS 19 had no impact on the net defined benefit plan obligations due to the difference in

accounting for interest on plan assets. The effect of the adoption of IAS 19 is explained in Note 13.2.

#### 13.1 IFRIC 20 "Stripping Costs in the Production Phase of a Surface Mine"

Prior to the issuance of IFRIC 20, the accounting for production stripping costs have been based on general IFRS principles and the Framework, as IFRS had no specific guidance.

Previously for group accounting purposes stripping costs incurred in open-pit operations during the production phase to

remove additional waste were either capitalised to mine development costs or charged to operating costs on the basis of

the average life of mine stripping ratio and the average life of mine costs per tonne. The cost of stripping in any period reflected the average stripping rates for the orebody as a whole.

IFRIC 20 provides specific guidance for accounting of production stripping costs in the production phase of a surface mine. IFRIC 20 differs from the life of mine average strip ratio approach as follows:

The level at which production stripping costs are to be assessed, i.e. at a component level rather than a life of mine level; and

The way in which any stripping activity assets are to be depreciated.

In addition, specific transitional rules are provided to deal with any opening deferred stripping balances the group may have recognised under its previous accounting policy. The impact as a consequence of moving from a life of mine strip

ratio to a strip ratio applicable to a component of an orebody is as follows:

Quarterly Report June 2013 - www.AngloGoldAshanti.com

**Transition** 

IFRIC 20 has been applied retrospectively to production stripping costs incurred on or after the beginning of the earliest

period presented, which for the group, for the year ending 31 December 2013, is 1 January 2011. Any previously recognised asset balance(s) that resulted from stripping activity is to be reclassified as part of an existing asset to which

the stripping activity related, to the extent that there remains an identifiable component of the orebody with which the predecessor stripping asset can be associated.

If there is no identifiable component of the orebody to which the predecessor asset relates, the asset is written off via opening accumulated losses at the beginning of the earliest periods presented, i.e. 1 January 2011.

Impact of IFRIC 20

For purposes of the quarterly results, the adoption of IFRIC 20 at the transition date of 1 January 2011; the adjustments

required for the financial reporting period from the transition date until the beginning of the preceding period presented, i.e.

1 January 2011 to 31 December 2011; and the adjustments required for the financial reporting period 1 January 2012 to

31 December 2012, had the following cumulative impact on accumulated losses as at 1 January 2012 and 31 December

2012:

#### 14. Non-current assets and liabilities held for sale

Effective 30 April 2013, AngloGold Ashanti announced its plan to sell the Navachab mine in Namibia. The Navachab gold

mine is situated close to Karibib, about 170 kilometres northwest of the Namibian capital, Windhoek. It is included in the

Continental Africa reporting segment. The open-pit mine, which began operations in 1989, has a processing plant that handles 120,000 metric tons a month. The mine produced 74,000 ounces of gold in 2012.

Management has selected a number of potential bidders who meet management's qualifying criteria and have asked them to

submit binding bids. Navachab is not a discontinued operation but is not viewed as part of the core assets of the company.

#### 15. Financial risk management activities

#### **Borrowings**

The mandatory convertible bonds are carried at fair value. The convertible and rated bonds are carried at amortised cost and

their fair values are their closing market values at the reporting date. The interest rate on the remaining borrowings is reset on

a short-term floating rate basis, and accordingly the carrying amount is considered to approximate fair value.

Quarterly Report June 2013 - www.AngloGoldAshanti.com

(1)

Groundwater pollution – AngloGold Ashanti has identified groundwater contamination plumes at certain of its operations, which have

occurred primarily as a result of seepage. Numerous scientific, technical and legal studies have been undertaken to assist in

determining the magnitude of the contamination and to find sustainable remediation solutions. The group has instituted processes to

reduce future potential seepage and it has been demonstrated that Monitored Natural Attenuation (MNA) by the existing environment

will contribute to improvements in some instances. Furthermore, literature reviews, field trials and base line modelling techniques

suggest, but are not yet proven, that the use of phyto-technologies can address the soil and groundwater contamination. Subject to

the completion of trials and the technology being a proven remediation technique, no reasonable estimate can be made for the

obligation.

(2)

Deep groundwater pollution – The group has identified a flooding and future pollution risk posed by deep groundwater in certain

underground mines in Africa. Various studies have been undertaken by AngloGold Ashanti since 1999. Due to the interconnected

nature of mining operations, any proposed solution needs to be a combined one supported by all the mines located in these gold

fields. As a result, in South Africa, the Department of Mineral Resources and affected mining companies are now involved in the

development of a "Regional Mine Closure Strategy". In view of the limitation of current information for the accurate estimation of a

liability, no reasonable estimate can be made for the obligation.

(3)

Indirect taxes – AngloGold Ashanti (Ghana) Limited received a tax assessment for the 2006 to 2008 and for the 2009 to 2011 tax

years following audits by the tax authorities which related to various indirect taxes amounting to \$25m (2012: \$23m). Management is

of the opinion that the indirect taxes are not payable and the company has lodged an objection.

(4)

Litigation - On 11 October 2011, AngloGold Ashanti (Ghana) Limited (AGAG) terminated its commercial arrangements with Mining

and Building Contractors Limited (MBC) relating to certain underground development, construction on bulkheads and diamond drilling

services provided by MBC in respect of the Obuasi mine. On 8 November 2012, as a result of this termination, AGAG and MBC

concluded a separation agreement that specified the terms on which the parties agreed to sever their commercial relationship. On

23 July 2013, MBC commenced proceedings against AGAG in the High Court of Justice (Commercial Division) in Accra, Ghana, and

served a writ of summons that claimed a total of approximately \$97m in damages. MBC asserts various claims for damages,

including, among others, as a result of the breach of contract, non-payment of outstanding historical indebtedness by AGAG and the

demobilisation of equipment, spare parts and material acquired by MBC for the benefit of AGAG in connection with operations at the

Obuasi mine in Ghana. MBC has also asserted various labour claims on behalf of itself and certain of its former contractors and

employees at the Obuasi mine. AGAG intends to vigorously defend this claim.

(5)

Litigation – AGAG received a summons on 2 April 2013 from Abdul Waliyu and 152 others in which the plaintiffs allege that they were

or are residents of the Obuasi municipality or its suburbs and that their health has been adversely affected by emission and/or other

environmental impacts arising in connection with the current and/or historical operations of the Pompora Treatment Plant (PTP) which

was decommissioned in 2000. The claim is to award general damages, special damages for medical treatment and punitive

damages, as well as several orders relating to the operation of the PTP. AGAG has filed a notice of intention to defend. In view of the

limitation of current information for the accurate estimation of a liability, no reasonable estimate can be made for the obligation.

(6)

Occupational Diseases in Mines and Works Act (ODMWA) litigation – On 3 March 2011, in Mankayi vs. AngloGold Ashanti, the

Constitutional Court of South Africa held that section 35(1) of the Compensation for Occupational Injuries and Diseases Act, 1993

does not cover an "employee" who qualifies for compensation in respect of "compensable diseases" under the Occupational Diseases

in Mines and Works Act, 1973 (ODMWA). This judgement allows such qualifying employee to pursue a civil claim for damages

against the employer. Following the Constitutional Court decision, AngloGold Ashanti has become subject to numerous claims

relating to silicosis and other Occupational Lung Diseases (OLD), including several potential class actions and individual claims.

For example, on or about 21 August 2012, AngloGold Ashanti was served with an application instituted by Bangumzi Bennet Balakazi

and others in which the applicants seek an order declaring that all mine workers (former or current) who previously worked or continue

to work in specified South African gold mines for the period owned by AngloGold Ashanti and who have silicosis or other OLD

constitute members of a class for the purpose of proceedings for declaratory relief and claims for damages. In the event the class is

certified, such class of workers would be permitted to institute actions by way of a summons against AngloGold Ashanti for amounts

as yet unspecified. On 4 September 2012, AngloGold Ashanti delivered its notice of intention to defend this application. AngloGold

Ashanti has also delivered a formal request for additional information that it requires to prepare its affidavits in respect to the

allegations and the request for certification of a class.

In addition, on or about 8 January 2013, AngloGold Ashanti and its subsidiary Free State Consolidated Gold Mines (Operations) Limited,

alongside other mining companies operating in South Africa, were served with another application to certify a class. The applicants in the

case seek to have the court certify two classes namely: (i) current and former mineworkers who have silicosis (whether or not

accompanied by any other disease) and who work or have worked on certain specified gold mines at any time from 1

January 1965 to

date; and (ii) the dependants of mineworkers who died as a result of silicosis (whether or not accompanied by any other disease) and who

worked on these gold mines at any time after 1 January 1965. AngloGold Ashanti has filed a notice of intention to oppose the application.

In October 2012, a further 31 individual summonses and particulars of claim have been received relating to silicosis and/or other OLD.

The total amount being claimed in the 31 summonses is approximately \$8m. On 22 October 2012, AngloGold Ashanti filed a notice of

intention to oppose these claims. AngloGold Ashanti has also served a notice of exception to the summonses which, if successful, is

expected to require the plaintiffs to redraft the particulars of claim to correct certain errors.

It is possible that additional class actions and/or individual claims relating to silicosis and/or other OLD will be filed against AngloGold

Ashanti in the future. AngloGold Ashanti will defend all current and subsequently filed claims on their merits. Should AngloGold Ashanti be

unsuccessful in defending any such claims, or in otherwise favourably resolving perceived deficiencies in the national occupational

disease compensation framework that were identified in the earlier decision by the Constitutional Court, such matters would have an

adverse effect on its financial position, which could be material. The group is unable to estimate its share of the amounts claimed.

(7)

Other tax disputes - In November 2007, the Departamento Nacional de Produção Mineral (DNPM), a Brazilian federal mining authority,

issued a tax assessment against AngloGold Ashanti Brazil Mineração (AABM) in the amount of \$20m (2012: \$21m) relating to the

calculation and payment by AABM of the financial contribution on mining exploitation (CFEM) in the period from 1991 to 2006. AngloGold

Ashanti Limited's subsidiaries in Brazil are involved in various other disputes with tax authorities. These disputes involve federal tax

assessments including income tax, royalties, social contributions and annual property tax. The amount involved is approximately \$18m

(2012: \$17m). Management is of the opinion that these taxes are not payable.

(8)

Sales tax on gold deliveries – In 2006, Mineração Serra Grande S.A. (MSG), received two tax assessments from the State of Goiás

related to payments of state sales taxes at the rate of 12% on gold deliveries for export from one Brazilian state to another during the

period from February 2004 to the end of May 2006. The first and second assessments are approximately \$63m (2012: \$96m) and \$39m

(2012: \$60m) respectively. In November 2006, the administrative council's second chamber ruled in favour of MSG and fully cancelled the

tax liability related to the first period. In July 2011, the administrative council's second chamber ruled in favour of MSG and fully cancelled

the tax liability related to the second period. The State of Goiás has appealed to the full board of the State of Goiás tax administrative

Quarterly Report June 2013 - www.AngloGoldAshanti.com

council. In November 2011 (first case) and June 2012 (second case), the administrative council's full board approved the suspension of

proceedings and the remittance of the matter to the Department of Supervision of Foreign Trade (COMEX) for review and verification. On

28 May 2013, the Full Board of the State of Goiás Tax Administrative Council ruled in favour of the State of Goiás, however reduced the

penalties of the two tax assessments from 200% to 80%. The company is considering legal options available in this matter, since it

believes that both assessments are in violation of federal legislation on sales taxes. MSG will be required to provide a bank guarantee to

the tax authorities for the possible taxes payable. The company believes both assessments are in violation of federal legislation on sales

taxes.

(9)

Other tax disputes - MSG received a tax assessment in October 2003 from the State of Minas Gerais related to sales taxes on gold. The

tax administrators rejected the company's appeal against the assessment. The company is now appealing the dismissal of the case. The

assessment is approximately \$18m (2012: \$19m).

(10) Tax dispute – AngloGold Ashanti Colombia S.A. (AGAC) received notice from the Colombian Tax Office (DIAN) that it disagreed with the

company's tax treatment of certain items in the 2011 and 2010 income tax returns. The company believes that it has applied the tax

legislation correctly. The company is considering defending AGAC's position. An estimated additional tax of \$24m will be payable if the

tax returns are amended. Penalties and interest for the additional tax are expected to be \$150m, based on Colombian tax law.

(11) Tax dispute - On 12 July 2013, Cerro Vanguardia S.A. received a notification from the Argentina Tax Authority requesting corrections to

the 2007, 2008 and 2009 income tax returns of about \$22m relating to the non-deduction of tax losses previously claimed on hedge

contracts. Penalties and interest on the disputed amounts are estimated at a further \$50m. Management is of the opinion that the taxes

are not payable and is preparing a response.

(12) Indemnity - As part of the acquisition by AngloGold Ashanti of the remaining 50% interest in MSG during June 2012, Kinross Gold

Corporation (Kinross) has provided an indemnity to a maximum amount of BRL255m (\$116m at 30 June 2013 exchange rates) against

the specific exposures discussed in items 7 and 8 above. At 30 June 2013, the company has estimated that the maximum contingent

asset is \$62m (2012: \$90m).

(13) Royalty – As a result of the sale of the interest in the Boddington Gold Mine during 2009, the group is entitled to receive a royalty on any

gold recovered or produced by the Boddington Gold Mine, where the gold price is in excess of Boddington Gold Mine's cash cost plus

\$600/oz. The royalty commenced on 1 July 2010 and is capped at a total amount of \$100m, of which \$73m (2012: \$60m) have been

recorded to date.

(14) Royalty – As a result of the sale of the interest in the Tau Lekoa Gold Mine during 2010, the group is entitled to receive a royalty on the

production of a total of 1.5Moz by the Tau Lekoa Gold Mine and in the event that the average monthly rand price of gold exceeds

R180,000/kg (subject to an inflation adjustment). Where the average monthly rand price of gold does not exceed R180,000/kg (subject to

an inflation adjustment), the ounces produced in that quarter do not count towards the total 1.5Moz upon which the royalty is payable.

The royalty will be determined at 3% of the net revenue (being gross revenue less state royalties) generated by the Tau Lekoa assets.

Royalties on 352,214oz produced have been received to date.

(15) Provision of surety – The company has provided surety in favour of a lender on a gold loan facility with its associate Oro Group (Pty)

Limited and one of its subsidiaries to a maximum value of \$10m (2012: \$12m). The probability of the non-performance under the

suretyships is considered minimal. The suretyship agreements have a termination notice period of 90 days.

#### 17. Concentration of risk

There is a concentration of risk in respect of recoverable value added tax, fuel duties and appeal deposits from the Tanzanian government. The outstanding amounts have been discounted to their present value at a rate of 7.82%. The recoverable value added tax, fuel duties and appeal deposits are summarised as follows:

#### 2013

#### **US Dollar million**

Recoverable value added tax

17

Recoverable fuel duties

(1)

43

Appeal deposits

4

(1)

Fuel duty claims are required to be submitted after consumption of the related fuel and are subject to authorisation by the Customs and Excise

authorities.

### 18. Borrowings

AngloGold Ashanti's borrowings are interest bearing.

#### 19. Announcements

On 8 May 2013, AngloGold Ashanti announced the appointment of Mr Srinivasan Venkatakrishnan as Chief Executive

Officer (CEO) to replace the former CEO, Mr Mark Cutifani, who left the Company at the end of March 2013.

On 21 May 2013, AngloGold Ashanti announced the appointment of Mr Richard Duffy as the Chief Financial Officer (CFO)

with effect from 15 June 2013 to replace Mr Srinivasan Venkatakrishnan, the former CFO. On the same day, the Company

announced changes to its executive leadership team.

On 1 August 2013, AngloGold Ashanti announced that the Tropicana gold project has commenced its commissioning phase and it expected to produce its first gold in the September quarter.

#### 20. Subsequent events

On 12 July 2013, Moody's Investors Service downgraded AngloGold Ashanti's credit rating to Baa3 from Baa2. Moody's

also downgraded the company's senior unsecured debt.

On 15 July 2013, AngloGold Ashanti notified shareholders of the resignation of Mr Anthony Martin O'Neill as an executive

director from the Board of Directors with effect from 19 July 2013. In addition the company announced that Mr

### O'Neill had

decided to take early retirement and will be relinquishing his position as Executive Vice President: Business and Technical

Development of the company with his last day of work being 19 July 2013.

Quarterly Report June 2013 - www.AngloGoldAshanti.com

On 17 July 2013, Standard & Poor's (S&P) cut its long-term corporate credit rating on AngloGold Ashanti to BB+ from

BBB- and its long and short-term South Africa national-scale ratings on AngloGold Ashanti to zaA/zaA-2 from zaAA-/zaA-

1. It also lowered its issue rating on AngloGold's senior unsecured notes to BB+ from BBB-.

On 25 July 2013, AngloGold Ashanti Holdings plc commenced a cash tender offer to purchase any and all of the outstanding 3.5% Guaranteed Convertible Bonds due May 2014 of AngloGold Ashanti Holdings Finance plc at a purchase

price of \$1,015 for each \$1,000 principal amount of Bonds validly tendered. In addition, holders will receive, in respect of

their Bonds that are accepted for purchase, accrued and unpaid interest on such Bonds up to, but excluding, the settlement date of the tender offer. Completion of the tender offer will be conditioned upon, among other things, the completion of one or more financing transactions. As of 24 July 2013, there was \$732.5m aggregate principal amount of

Bonds outstanding.

On 30 July 2013, AngloGold Ashanti raised a corporate bond of \$1,250m at 8.5% interest per annum to replace the 3.5%

Guaranteed Convertible Bond due May 2014. The funds raised over and above the settlement of the convertible bond will

be used for capital purposes and to provide flexibility for an expiring revolving credit facility.
