#### **Table of Contents**

- (1) Senior floating-rate interests (Senior Loans) often require prepayments from excess cash flows or permit the borrowers to repay at their election. The degree to which borrowers repay, whether as a contractual requirement or at their election, cannot be predicted with accuracy. As a result, the actual remaining maturity may be substantially less than the stated maturities shown. However, Senior Loans will have an expected average life of approximately two to four years. The stated interest rate represents the weighted average interest rate of all contracts within the senior loan facility. Senior Loans typically have rates of interest which are redetermined either daily, monthly, quarterly or semi-annually by reference to a base lending rate, plus a premium. These base lending rates are primarily the London-Interbank Offered Rate ( LIBOR ), and secondarily the prime rate offered by one or more major United States banks (the Prime Rate ) and the certificate of deposit ( CD ) rate or other base lending rates used by commercial lenders.
- (2) Security valued at fair value using methods determined in good faith by or at the direction of the Trustees.
- (3) This Senior Loan will settle after January 31, 2009, at which time the interest rate will be determined.
- (4) Unfunded or partially unfunded loan commitments. The Fund may enter into certain credit agreements all or a portion of which may be unfunded. The Fund is obligated to fund these commitments at the borrower s discretion.
- (5) Defaulted security. Currently the issuer is in default with respect to interest payments.
- (6) Represents a payment-in-kind security which may pay all or a portion of interest in additional par.
- (7) Security (or a portion thereof) has been segregated to cover margin requirements on open financial futures contracts.
- (8) Adjustable rate security. Rate shown is the rate at January 31, 2009.
- (9) Security exempt from registration under Rule 144A of the Securities Act of 1933. These securities may be sold in transactions exempt from registration, normally to qualified institutional buyers. At January 31, 2009, the aggregate value of the securities is \$64,550 or less than 0.005% of the Fund s net assets.
- (10) Bond pays a coupon of 3.8% on the face at the end of the payment period. Principal is adjusted based on changes in the Chilean UF (Unidad de Fomento) Rate. The original face is \$2,000,000 and the current face is \$2,371,205.
- (11) Bond pays a coupon of 6% on the face at the end of the payment period. Principal is adjusted based on the ICPA (Amplified Consumer Price Index) as determined by the Brazilian Institute of Geography and Statistics. The original face is BRL 1,569,000 and the current face is BRL 2,816,881.
- (12) Bond pays a coupon of 5% on the face at the end of the payment period. Principal is adjusted with the Uruguayan inflation rate. The original face is UYU 38,030,000 and the current face is UYU 45,534,054.
- (13) Affiliated investment company available to Eaton Vance portfolios and funds which invests in high quality, U.S. dollar denominated money market instruments. The rate shown is the annualized seven-day yield as of January 31, 2009. Net income allocated from the investment in Cash Management Portfolio for the fiscal year to date ended January 31, 2009 was \$28,311.

#### **Credit Default Swaps**

The Fund may enter into credit default swap contracts to manage its credit risk, to gain exposure to a credit in which the Fund may otherwise invest, or to enhance return. When the Fund is the buyer of a credit default swap contract, the Fund is entitled to receive the par (or other agreed-upon) value of a referenced debt obligation (or basket of debt obligations) from the counterparty to the contract if a credit event by a third party, such as a U.S. or foreign corporate issuer or sovereign issuer, on the debt obligation occurs. In return, the Fund pays the counterparty a periodic stream of payments over the term of the contract provided that no credit event has occurred. If no credit event occurs, the Fund would have spent the stream of payments and received no benefits from the contract. When the Fund is the seller of a credit default swap contract, it receives the stream of payments, but is obligated to pay to the buyer of the protection an amount up to the notional amount of the swap and in certain instances take delivery of securities of the reference entity upon the occurrence of a credit event, as defined under the terms of that particular swap agreement. Credit events are contract specific but may include bankruptcy, failure to pay, restructuring, obligation acceleration and repudiation/moratorium. If the Fund is a seller of protection and a credit event occurs, the maximum potential amount of future payments that the Fund could be required to make would be an amount equal to the notional amount of the agreement. This potential amount would be partially offset by any recovery value of the respective referenced obligation, or net amount received from the settlement of a buy protection credit default swap agreement entered into by the Fund for the same referenced obligation. As the seller, the Fund effectively adds leverage to its portfolio because, in addition to its total net assets, the Fund is subject to investment exposure on the notional amount of the swap. The interest fee paid or received on the swap contract, which is based on a specified interest rate on a fixed notional amount, is accrued daily as a component of unrealized appreciation (depreciation) and is recorded as realized gain upon receipt or realized loss upon payment. The Fund also records an increase or decrease to unrealized appreciation (depreciation) in an amount equal to the daily valuation. Upfront payments or receipts, if any, are recorded as other assets or other liabilities, respectively, and amortized over the life of the swap contract as realized gains or losses. The Fund segregates assets in the form of cash or liquid securities in an amount equal to the notional amount of the credit default swaps of which it is the seller. The Fund segregates assets in the form of cash or liquid securities in an amount equal to any unrealized depreciation of the credit default swaps of which it is the buyer, marked to market on a daily basis. These transactions involve certain risks, including the risk that the seller may be unable to fulfill the transaction.

At January 31, 2009, the Fund had the following credit default swap contracts outstanding:

If the Fund is the seller of credit protection, the notional amount is the maximum potential amount of future payments the Fund could be required to make if a credit event, as defined in the credit default swap agreement, were to occur. At January 31, 2009, such maximum potential amount for all open credit default swaps in which the Fund is the seller was \$21,300,000.

** The contract annual fixed rate represents the fixed rate of

interest received by the Fund (as a seller of protection) or paid by the Fund (as a buyer of protection) annually on the notional amount of the credit default swap contract.

At January 31, 2009, the Fund had sufficient cash and/or securities to cover commitments under these contracts. The cost and unrealized appreciation (depreciation) of investments of the Fund at January 31, 2009, as determined on a federal income tax basis, were as follows:

Aggregate cost	\$409,681,199					
Gross unrealized appreciation Gross unrealized depreciation	\$ 5,753,145 (70,450,767)					
Net unrealized depreciation	\$ (64,697,622)					

The Fund adopted Financial Accounting Standards Board Statement of Financial Accounting Standards No. 157 (FAS 157), Fair Value Measurements, effective November 1, 2008. FAS 157 established a three-tier hierarchy to prioritize the assumptions, referred to as inputs, used in valuation techniques to measure fair value. The three-tier hierarchy of inputs is summarized in the three broad levels listed below.

Level 1 - quoted prices in active markets for identical investments

Level 2 - other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)

Level 3 - significant unobservable inputs (including a fund s own assumptions in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities.

At January 31, 2009, the inputs used in valuing the Fund s investments, which are carried at value, were as follows:

	Valuation Inputs		vestments in Securities	Other Financial Instruments*		
Level 1	Quoted Prices	\$	15,506,694	\$	291,725	
	Other Significant Observable					
Level 2	Inputs		327,756,476		967,432	
Level 3	Significant Unobservable Inputs		1,720,407			
Total		\$	344.983.577	\$	1,259,157	

* Other financial instruments are financial futures contracts, swap contracts and forward foreign currency exchange contracts not reflected in the Portfolio of Investments, which are valued at the unrealized

appreciation (depreciation) on the instrument.

The following is a reconciliation of Level 3 assets for which significant unobservable inputs were used to determine fair value:

	Investments in Securities				
Balance as of October 31, 2008	\$	2,004,855			
Realized gains (losses)		(42)			
Change in net unrealized appreciation (depreciation)		(282,867)			
Net purchases (sales)		(1,539)			
Accrued discount (premium)					
Net transfers to (from) Level 3					
Balance as of January 31, 2009	\$	1,720,407

#### **Table of Contents**

Debt obligations, including listed securities and securities for which quotations are available, will normally be valued on the basis of reported trades or market quotations provided by independent pricing services, where in the services judgment, these prices are representative of the securities market values. For debt securities where market quotations are not readily available, the pricing services will use various techniques that consider factors including, but not limited to, prices or yields of securities with similar characteristics, benchmark yields, broker/dealer quotes, issuer spreads, as well as industry and economic events.

Credit default swaps are normally valued using valuations provided by pricing vendors. The pricing vendors employ electronic data processing techniques to determine the present value based on credit spread quotations obtained from broker/dealers and expected default recovery rates determined by the pricing vendor using proprietary models. Investments for which valuations or market quotations are not readily available are valued at fair value using methods determined in good faith by or at the direction of the Trustees of the Fund in a manner that most fairly reflects the security s value, or at the amount that the Fund might reasonably expect to receive for the security upon its current sale in the ordinary course. Each such determination is based on a consideration of all relevant factors, which are likely to vary from one pricing context to another. These factors may include, but are not limited to, the type of security, the existence of any contractual restrictions on the security s disposition, the price and extent of public trading in similar securities of the issuer or of comparable companies, quotations or relevant information obtained from broker-dealers or other market participants, information obtained from the issuer, analysts, and/or the appropriate stock exchange (for exchange-traded securities), an analysis of the company s financial condition, and an evaluation of the forces that influence the issuer and the market(s) in which the security is purchased and sold.

For additional information on the Fund s policy regarding the valuation of investments and other significant accounting policies, please refer to the Fund s most recent financial statements included in its semiannual or annual report to shareholders.
